It is perceived that the foregoing estimates include no account of interest of capital invested, decay of works, expense of management, taxes, &c.; nor is any provision made for risks or losses, although the business is greatly exposed to the hazards of both. Were these items estimated, there should be an addition of $10 to $15 per ton to each of the foregoing estimates. It will also be perceived that in this statement no estimate has been submitted of the amount of capital invested in mines, or the cost of opening them, from the impossibility of arriving at anything satisfactory respecting them. It can only be stated that there are 50 mines in this district already opened, 15 of which are at present worked, and that the quantity of good ore is presumed to be inexhaustible.

This statement is, moreover, strictly confined to facts and estimates, in relation to manufacturing of bar iron, without any allusion to furnaces, of which there are several, or to rolling-mills, of which there are four in the district—three situated at Dover, and owned by Messrs. Blackwell & McFarlan, of the city of New York, which annually convert into rolled iron 1,000 tons of the manufactures of the district; and the other at Rockaway, owned by Colonel Joseph Jackson, is capable of rolling about 400 tons more.

These estimates state that there are three rolling-mills situated at Dover. In reference to them, in my examination, I have considered these three mills only as one, as they all belong to the same owners and are connected with our establishment.

Question. Will you give the committee the alterations which you think judicious in the present rates of duty upon the different descriptions of iron upon which, in your opinion, an alteration of duty is required?

Answer. The following, in my opinion, are the alterations which should be made in the present rates of duty:

On iron, in bars or bolts, not manufactured, in whole or in part, by rolling, one cent per pound.

On round iron or braziers' rods of three-sixteenths to twelve-sixteenths of an inch diameter, inclusive, and on square iron, rolled or slit, of one-fourth to three-fourths of an inch diameter, inclusive; on iron in sheets, and hoop iron, and on iron rolled or slit for band iron, scroll iron, or casement rods, three cents per pound.

On all other kinds of iron, in bars, flat, square, or round, manufactured, in whole or in part, by rolling, two cents per pound.

Testimony in relation to steel.

THURSDAY, *January* 10.

By the Hon. Richard Keese:

Question. Have you any knowledge of the manufacture of steel?

Answer. The duty on steel should be increased, but I do not personally know anything about the manufacture of the article. I think it the policy of the Government to protect the article, although I think it would raise the price at first.

FRIDAY, *January* 11.

By the Hon. John Mitchell:

Question. Would it be beneficial or injurious to the manufacturing interests of the country to increase the duty on steel?

Answer. I should say that it would be injudicious to increase the duty until it is better ascertained whether the quality necessary for use can be made here, and I doubt whether the quality of iron be such as will make it so good as that imported; if it be, we have not yet acquired proficiency in making it.

TUESDAY, *January* 22.

By Mr. Joseph Jackson:

Question. Have you any knowledge of the manufacture of steel?

Answer. No; I have no practical knowledge upon the subject.

Question. Would it be good policy to increase the duty on steel?

Answer. My opinion is that the duty on steel is at present sufficient. I speak with reference to my section of country, and I do not think it would benefit that section to increase the duty. I cannot judge of the policy of doing it.

Testimony in relation to wool.

TUESDAY, *January* 15, 1828.

Present: The honorables Rollin C. Mallary, chairman; James S. Stevenson, Lewis Condict, Thomas P. Moore, Silas Wright, jr., William Stanberry, and William D. Martin.

Hon. Nathaniel Garrow admitted and sworn:

Question. Is the growing of wool a considerable business with the farmers in your section of the country?

Answer. It is.

Question. Where is the surplus of their wool marketed?

Answer. It is sold partly at Oriskany factory, and some is sent to Rhode Island; but there is no good market for it. Many farmers now have on hand the fleeces of the last year.

Question. Is the number of sheep increasing or diminishing in your section of the country?

Answer. I should think the stock is rather on the decline.

WEDNESDAY, *January* 16, 1828.

Simon N. Dexter admitted and sworn:

Question. What has been the average number of pounds of wool manufactured annually in the factory referred to for the last three years?

Answer. About sixty thousand pounds annually for the last three years. I know this from my knowledge of the purchases, all of which have been manufactured, except a deduction for some sent to the Clinton factory.

Question. What proportion of this wool was imported, and what of domestic growth; and is it usually purchased in the fleece?

Answer. We have worked no foreign wool in that time, except one lot of Saxony, which was probably from three to six thousand pounds. Our purchases have been made exclusively from the farmers and in the fleece. The Saxony wool cost more than a dollar per pound.

Question. What has been the quality of the wool mostly purchased for the use of your factory, and what have been the average prices per pound paid at the factory for the last three years?

Answer. The wool has been generally from three-quarters to full-blooded merino; some little of the half-blood may have been purchased three years ago; it was, however, but little. In 1825 the wool averaged sixty-five cents, but it was not so good as some bought since, for wool has been constantly improving. In 1826 the average may be set down at fifty cents per pound. During 1827 I would say the average has been thirty-five cents for a better quality than that which cost sixty-five cents in 1825.

Question. Into how many parcels or qualities is each fleece of wool assorted at the factory for the purpose of manufacture, and what will be the difference in value between the best and poorest quality from the same fleece?

Answer. I am not an operator in wool and cannot speak positively, but I think there are six distinct qualities or classes into which the wool is assorted after it is purchased. To suppose a lot of one hundred pounds of prime wool, at thirty-five cents, there is probably five pounds of the best quality, called pick-lock, and this is worth $1 40 per pound. The second quality is called superfine, and of this there will be something like twelve pounds, and this I presume to be worth sixty-five cents per pound. Of the third quality, called fine wool, there will probably be forty pounds, and this is worth about forty cents per pound. The fourth class or quality is, I think, called downright; of this there will be about forty pounds, and worth about twenty cents per pound. The small remainder is very inferior, worth from six to eight cents per pound, and is exclusively used for listing, &c. I now speak in reference to the prices and value in 1827.

Question. Are you in possession of the fact that there are large quantities of wool annually imported?

Answer. I am aware that there are large quantities of wool imported.

Question. Does not the importation of foreign wool give an advantage to the woolen manufacturers situated near the seaports over those situated more in the interior, like yours, by enabling them to procure foreign wool at lower rates than you can?

Answer. I think those situated on the seacoast have advantages in that particular, but they are not very important.

Question. If wool can be imported so low as materially to diminish the wool-growing business in your region of country, will not this operate injuriously to the interest of your factory?

Answer. It is certainly to the interest of the factories generally in the interior to encourage the growing of domestic wool.

Question. Do you find any difficulty in procuring as much domestic wool as is wanted at your factory, or have you a surplus?

Answer. There is a surplus of domestic growth.

Question. What is the average price of the common domestic wool of your section of country?

Answer. Very little is raised which is not crossed, in a degree; but the lowest prices of that brought to the factory for the last year has been from eighteen to twenty cents per pound. There is some grown among the farmers even coarser than this, but I do not know that its price would vary materially from this. This wool forms only a small share of the wool raised in the country, and most of it is raised in the back settlements, and for domestic use. About one-eighth of the wool purchased at the Oriskany factory is of this quality.

THURSDAY, *January* 17.

Simon N. Dexter, in continuation:

Question. Of the wool imported is the largest quantity of the coarse or fine qualities?

Answer. Of the coarser qualities, I believe.

FRIDAY, *January* 18, 1828.

Hon. Aaron Tufts admitted and sworn:

Question. What has been the average number of pounds of wool manufactured annually in the factory referred to for the last three years?

Answer. The quantity has been about 40,000 pounds annually since we commenced operations. I find that we purchased from 1st June, 1826, to 1st July, 1827, 45,532 pounds of wool.

Question. What proportion of this wool has been imported, and what proportion of domestic growth, and is it usually purchased in the fleece?

Answer. Of the last purchase there were of domestic wool 34,938 pounds, of foreign wool there were 10,594 pounds. The domestic wool is all purchased in the fleece. The foreign wool is partially assorted, but not sufficiently so to work up.

Question. What has been the quality of wool mostly purchased for the use of your factory, and what has been the average prices per pound paid at the factory for the last three years?

Answer. Between June, 1826, and July, 1827, the average price of American wool purchased by us was thirty-seven and three-quarters cents. It was the intention to purchase none inferior to three-quarters merino, though it is likely all was not so good as that. We intended to purchase from three-quarters to full-blood, or the best quality. During the same period the average cost of foreign wool was thirty-eight and a half cents. I do not think the foreign purchase so fair as the domestic growth, but there was less waste in cleansing it.

Question. Into how many parcels or qualities is each fleece of wool usually assorted at the factory for the purpose of manufacture, and what will be the difference in value between the best and the poorest quality from the same fleece?

Answer. Some fleeces make more parcels than others. We never make more than nine parcels at our factory. Some fleeces make not more than two. The finest parcel, which is called picklock, is worth a dollar and twenty cents per pound; of this there is but little. The ninth or lowest quality would not be worth more than ten cents. I am not sufficiently acquainted with the character or quantity of the intermediate qualities to fix their respective prices, for I am not a practical operator.

SATURDAY, *January* 19.

Hon. Aaron Tufts, in continuation:

Question. Is the growing of wool a considerable business with the farmers in the neighborhood of your factory; and is there a surplus of domestic wool in your neighborhood over and above what is demanded by the manufacturers in the same section of country?

Answer. The growing of wool is a considerable business with the farmers of my neighborhood, but they do not furnish a twentieth part of what is demanded by the manufactories in the vicinity. The factories in that section of country are generally supplied with wool from Connecticut, the western part of Massachusetts, New Hampshire, Vermont, New York, and a small quantity from Pennsylvania. I have seen large quantities of wool from Ohio in the Boston market, but I never bought any of it.

Question. Are you a wool-grower; and if you are, what number of sheep do you own, and what number of pounds do your flocks yield?

Answer. I am a wool-grower, and own about 509 sheep. My flock consists of fine-wooled sheep, but do not yield quite 2½ pounds wool per head, on the back, well washed.

Question. Has wool depreciated materially in price within the last three years; if so, to what is the depreciation to be attributed?

Answer. It has depreciated very considerably. I attribute the depreciation to the low price of woolen goods.

Question. Are you apprised of the fact that large quantities of wool are annually imported; and does not this tend to depreciate the price of the domestic wool?

Answer. I am. I do not think this tends, in the least, to depreciate the price of domestic wool. The reason I assign for this opinion is, that the manufacturer now pays so high a price for wool as to render his business unprofitable and bad, and, of consequence, if none was imported, we could pay no higher price.

Question. What are the usual qualities of wool imported?

Answer. Various qualities are imported. Some has been sold in Boston as low as 6 cents per pound, and from that to the finest Saxony wool, which has sold as high as $1 60. Considerable quantities of the intermediate grades are also imported. The largest quantity imported sells from 10 to 16 cents per pound in Boston.

Question. Is the number of sheep increasing or diminishing in your section of country?

Answer. They increased very rapidly until the year 1826; since which time many of the farmers have disposed of their flocks, and others seem disposed to do so, in consequence of the low price of wool. On the whole, I think the stock is diminishing.

Question. Is there as much wool grown in Massachusetts as is consumed in the woolen manufactories of that State; if not, what proportion of the whole quantity do you think is imported, and what proportion is grown in the State?

Answer. All the wool grown in Massachusetts furnishes but a small proportion of what is manufactured in that State. I think fully one-fourth of what is there manufactured is imported. The State may furnish one-twelfth, but this is mere conjecture. As I have already stated, the principal supply is from the neighboring States.

Question. Is it, in your opinion, important to the farming interest of your State to discourage the importation of foreign wool?

Answer. It is, in my opinion, of no consequence, unless you can enable the manufacturer to furnish the farmer a market.

Question. What quantity of the domestic wool, stated by you to have been purchased in 1827 by the factory in which you are concerned, was supplied from sheep owned by you?

Answer. My own shearing of 1827 formed no part of what was furnished to the factory in which I am concerned. I have it still in hand. I supplied the factory in 1826 with 800 or 1,000 pounds.

Question. Where manufacturers of woolens are wool-growers also, but grow less wool than they manufacture, are they not interested in keeping down the price of wool, as they are buyers, not sellers of wool?

Answer. To a sole proprietor of a manufactory it would be; but to a joint proprietor it would depend upon the preponderance of interest in the one branch of business or in the other.

Question. What proportion in cash does raw wool bear to the present price of the fabric, estimating that cost at 35 cents per pound?

Answer. My opinion is, about one-half.

Question. What is the present difference between the price of wool in Europe and the United States, of the same quality?

Answer. I am not an importer, and therefore derive my information from those who are, and I have often understood from them that the prices are from 60 to 70 per cent. higher in this country than in Europe, of wool costing over 10 cents per pound in Europe. This would not apply to the wool under 10 cents.

Question. What is the price, in the American market, of the common domestic wool, in the fleece?

Answer. The common domestic, native wool, in the fleece, is worth, in our markets, or delivered at our factories, from 20 to 25 cents per pound. We do not purchase that kind of wool.

Question. From your knowledge of the different qualities of wool used by the American manufacturers, will foreign wool, costing abroad 8 cents and under, come in competition with domestic wool?

Answer. I should think not. [The witness presented to the committee several samples of wool, with the following explanation:

Barbary wool, present price in Boston, 6 cents per pound.
1. Smyrna wool.....do.....12.....do.
2. Smyrna wool.....do.....9½.....do.
Russia wool .....do.....13½.....do.
Adrianople wool .....do.....14.....do.

The Russian sample and No. 1 parcel of the Smyrna he thinks have been washed, the others not.]

Question. Of what kind of wool are the fabrics made commonly called negro cloths, and where is it produced?

Answer. They are usually made of the Smyrna, Buenos Ayres, and Adrianople wool, I think, though I have never made any of these cloths.

Question. Did the deputation of which you were a member advocate an increase of duty on imported wool, or did they discourage such increase?

Answer. I believe that a majority of the deputation, and I do not know but that all of them were in favor of an increased duty, provided such an increase of duty could be imposed upon the manufacturers of wool as to afford a market for the wool; and also provided the duty on wool should not take place immediately. This was my wish, and I think it was that of Mr. Bates, and upon these conditions we did advocate an increased duty on imported wool.

Question. Have you not understood that at the time Great Britain repealed her duty on imported wool she also repealed her duty on the exportation of wool; and are not our manufacturers now able to obtain wool from Great Britain cheaper than they could whilst her import and export duties stood as they did prior to the repeal in 1824, independent of the change in our duty?

Answer. I am aware that England, when she repealed her duty on imported wool, also repealed, in whole or in part, the duty on wool exported. I think the repeal of the British duty on exported wool cannot affect the price of wool imported here, because we can obtain it from other European countries, and because the United States have increased their duties on imported wool. Other things being equal, we could have imported wool cheaper from England after the export duty was repealed. I believe that not a pound of wool of British growth is ever brought into the United States. I never saw any. Great Britain sends here wool of Saxony, Spain, and other countries.

Question. Why is German and Spanish wool imported from England, in preference to importing it from the countries where produced?

Answer. It is likely that the repeal of their duty caused larger shipments to England than were necessary for their consumption, and it was, of consequence, exported to this country.

MONDAY, *January* 21, 1828.

James Shepherd admitted and sworn:

Question. What has been the average of pounds of wool manufactured annually in the factory referred to for the last three years?

Answer. I cannot state as to any time previous to January 1, 1826. From January 1, 1826, to July 1, 1827, the quantity manufactured was 102,159 pounds of wool of all descriptions.

Question. What proportion of this wool has been imported, and what proportion of domestic growth; and is it usually purchased in the fleece?

Answer. Our purchases for the period of time mentioned in the last answer were as follows:

Of American wool.....	13,500 at 65 cents.	Saxony wool.....	8,104 at 114 cents.
Of American wool.....	53,714 at 53 cents.	Saxony wool.....	11,386 at 95 cents.
Of American wool.....	3,205 at 45 cents.	Spanish wool.....	12,250 at 85 cents.
Making a total of.....	70,419 pounds.	Total of foreign wool...	31,740 pounds.

The prices as above stated are the average prices of the purchases, both as to quantity and price, and in the order of time during the several half years embraced within the period of eighteen months, except the Spanish wool which was purchased at one time and cost the price set down. My purchases of American wool have always been in the fleece.

Question. What has been the quality of the wool mostly purchased for the use of your factory, and what have been the average prices per pound paid at the factory for the last three years?

Answer. It has always been my object to purchase the finest wool, foreign and domestic, which the market would afford. I have purchased very little native wool of the low or inferior quality. The quality and average prices have been stated in my answer to the last interrogatory.

Question. Into how many parcels or qualities is the wool usually assorted at the factory for the purpose of manufacture, and what will be the difference in value between the best and poorest qualities?

Answer. I have divided the American wool into the following parcels, viz: picklock, prime, and Nos. 1, 2, 3, 4, 5, 6; then livery, listing, head, neck, fribs, and skirting. Some foreign wool we purchase assorted and some in the fleece, Saxony particularly. Of this, such as is bought in the fleece is assorted into four parcels, denominated 1, 2, 3, 4 qualities. Spanish wool is purchased assorted into qualities, marked R, F, T, and S. Since the 1st of July last I have been in the habit of buying American wool, assorting, and selling it assorted, picklocks, at $1 per pound; prime, at 90 cents; No. 1, at 80 cents; No. 2, at 70 cents; No. 3, at 55 cents; No. 4, at 40 cents; No. 5, at 35 cents; No. 6, at 25 cents, and listing, at 20 cents. The profits upon this business have netted me about five per cent. for the last six months. The relative quantity of the several parcels, when assorted, depends on the quality of the wools.

Question. Is the growing of wool a considerable business with the farmers in the neighborhood of your factory, and is there a surplus of domestic wool in your neighborhood over and above what is demanded by the manufacturers in the same section of country?

Answer. It is a very extensive business, but there is a large deficiency in the section of country in

which I reside in the quantity grown and what is wanted for manufacturing. That part of the country is supplied partly by imported wool from other parts of Massachusetts, from others of the New England States, and from New York.

Question. Are you a wool-grower; and if you are, what number of sheep do you own, and what number of pounds of wool do your flocks yield?

Answer. I am a wool-grower, and have now from 1,200 to 1,400 sheep, yielding about three pounds of wool each, on the average.

Question. Has wool depreciated materially in price within the last three years; if so, to what is the depreciation to be attributed?

Answer. It has depreciated in price during that time. In 1825 I sold my wool to our factory at 75 cents per pound. In 1826 I sold to the same at 62½ cents per pound; and in 1827 I sold in the Boston market at 55 cents per pound. The wool was well washed and in good order, and shorn from a mixture of some Saxony, some full-blooded merino, and some crossed breed, constituting, on the whole, as good a flock as any other in the country. This depreciation in the price of wool has been occasioned, I believe, by a diminution in the price of cloths.

Question. Are you apprised of the fact that large quantities of wool are annually imported; and does not this tend to depreciate the price of the domestic wool?

Answer. I am aware that large quantities of foreign wool are imported. I considered the duty laid on foreign wool by the act of 1824 as striking at the foundation of the manufacturing system. I am of opinion that, if the duty laid on foreign wool had not been more than one-fourth what it was, wool-growers and manufacturers would have both done better. I am of opinion, also, that the imported wool has no effect on the price of domestic wool. I prefer the latter, whenever I can procure it, to any that is imported.

Question. What are the usual qualities of wool imported?

Answer. Of late the importations have been more of the coarsest quality than of any other. The coarse wools are for carpet work, negro cloths, &c. Fine wools are also imported from Germany and Spain. Middlings are from Portugal, the Netherlands, Russia, and South America. I bought at the auction sales this fall a quantity of coarse Russia wool at 13 cents per pound, and would sell it at the same price.

Question. Is the number of sheep increasing or diminishing in your section of country?

Answer. The number is diminishing fast.

Question. Is there as much wool grown in Massachusetts as is consumed in the woolen manufactories of that State? If not, what proportion of the whole quantity do you think is imported, and what proportion is grown in the State?

Answer. There is not, nor can I form an idea what proportion is brought from other places, compared with what is grown there. I doubt whether Massachusetts furnishes more than one-third of the domestic wool which she manufactures.

Question Is it, in your opinion, important to the farming interests of your State to discourage the importations of foreign wool?

Answer. I do not think it is.

Question. What quantity of the domestic wool, stated by you to have been purchased in 1827 by the factory in which you are concerned, was supplied from sheep owned by you?

Answer. I furnished none in 1827. I supplied the factory with my whole crop in 1826, which was about 3,200 pounds.

Question. Where manufacturers of woolens are wool-growers also, but grow less wool than they manufacture, are they not interested in keeping down the price of wool, as they are buyers not sellers of wool?

Answer. No; I consider not.

Question. What proportion in cash does raw wool bear to the present price of the fabric, estimating that fabric at $1 per yard?

Answer. Wool costing from 20 to 75 cents is half the price of the fabric. When it costs more than 75 cents, the price of labor does not increase, and the value of the fabric is increased in proportion to the price of the wool.

Question. What do you understand to be the present difference between the price of wool in England and the United States of the same quality?

Answer. If wool be sold here, it commands 50 per cent. in addition to its price in England, and this is the lowest price at which it can be sold to cover all expenses. Some sales have been made here at a higher price. I cannot say what is the comparative price of American wool to an American manufacturer, compared with the price which an English manufacturer would have to pay for it there, because the wool manufactured by them severally is never the same.

Question. Do you know the relative prices at which wool can be furnished from the port of Cadiz, in Spain, to the manufacturer in Manchester, in England, compared with the prices at which it can be furnished to the manufacturer of Boston, in Massachusetts?

Answer. I do not know.

Question. What is the price in the American market of the common domestic wool of native growth?

Answer. The price is about 25 cents per pound.

Question. From your knowledge of the different qualities of wool used by the American manufacturers, will foreign wool, costing abroad eight cents and under, come into competition with domestic wool?

Answer. No; it cannot.

Question. Of what kind of wool are the fabrics made commonly called negro cloths; and where is it produced?

Answer. A great proportion of that kind of cloth is made of wool from the Netherlands; some from South American wool, but this is not found as good.

Question. What was the average annual expense of keeping your sheep during the years 1825, 1826, and 1827?

Answer. One dollar and fifty cents per head. This would be the fair average for the last three years.

Question. Having stated that the average price paid by you for American wool was forty-five cents, what was the highest and what the lowest prices you gave in 1827 for domestic wool?

Answer. The highest price was fifty-five cents and the lowest thirty cents. This was all clean washed wool. We bought none of the native wool.

Question. Do you believe that laying a considerable duty on imported wool would be injurious to the interests of the woolen manufactures of your section of country; would it tend to force the woolen manufactures into those sections of the United States where wool can be grown to more advantage than in Massachusetts?

Answer. I do believe a considerable duty on imported wool would be injurious to the manufacturers of woolens in my section of country; but I do not think it would tend to force the American manufacturing establishments from us to other sections of the country.

TUESDAY, *January* 28, 1828.

William Phillips admitted and sworn:

Question. What has been the average number of pounds of wool manufactured annually, in the factory referred to, for the last three years?

Answer. I cannot state the precise amount during that period. Previous to 1827 we usually manufactured from 8,000 to 12,000 pounds. The operations of the present year, commencing in July last, will consume about 25,000 pounds.

Question. What proportion of this wool has been imported and what proportion of domestic growth; and is it usually purchased in the fleece?

Answer. We have worked no imported wool within the last three years. Our consumption has been exclusively of domestic growth, purchased in the fleece most usually.

Question. What has been the quality of the wool mostly purchased for the use of your factory; and what have been the average prices, per pound, paid at the factory for the last three years?

Answer. We have worked full-blooded merino, and from that down to half-blood. A small quantity of native wool only has been used. In 1825 the average price was fifty-three cents, or nearly that. In 1826 it cost about thirty-eight cents. In 1827 we procured it for thirty-seven cents. These prices were paid for wool washed on the sheep and delivered at the factory.

Question. Into how many parcels or qualities is the wool usually assorted at the factory for the purpose of manufacture; and what will be the difference in value between the best and poorest qualities?

Answer. We generally divide it into five parcels. I will not undertake to fix the prices or value of the several parcels when assorted.

Question. Is the growing of wool a considerable business with the farmers in the neighborhood of your factory; and is there a surplus of domestic wool in your neighborhood over and above what is demanded by the manufacturers in the same section of country?

Answer. It is an extensive business in Orange county.

Question. Are you a wool-grower; and if you are, what number of sheep do you own; and what number of pounds do your flocks yield?

Answer. I am a wool-grower, and have between six and seven hundred sheep. It is generally estimated that they will yield three pounds each; but I think two and three-quarters pounds is a more correct one. My brother, who has some connexion with me in business, has from a thousand to twelve hundred head of sheep. They yield in wool, I presume, about the same proportion, and the wool of both flocks is worked up in our factories.

Question. Has wool depreciated materially in price within the last three years; and if so, to what is the depreciation to be attributed?

Answer. It has depreciated, and I attribute it to the low price of cloths.

Question. Are you apprised of the fact that large quantities of wool are annually imported; and does not this tend to depreciate the price of the domestic wool?

Answer. I am aware that large quantities of wool are imported, and it must have a decided effect on the price of the wool grown in this country. But until cloths sell better we could give no more for domestic wool than we now give; yet the manufacturers generally would consume a much greater quantity of domestic wool if there was a sufficient supply, and if there were no importations of foreign wool.

Question. Is the number of sheep increasing or diminishing in your section of country?

Answer. I am of opinion that they are decreasing. Those who have small flocks will not keep them.

Question. Is it, in your opinion, important to the farming interest of your State to discourage the importations of foreign wool?

Answer. I think it important to the farming interests of New York to discourage the importations of foreign wool.

Question. Where manufacturers of woolens are wool-growers also, but grow less wool than they manufacture, are they not interested in keeping down the price of wool, as they are buyers not sellers of wool?

Answer. I think not; for the manufacturer is interested in keeping wool at a fair price, or he cannot procure it.

Question. What proportion in cash does raw wool bear to the present price of the fabric?

Answer. It costs something less than the price of manufacturing it.

Question. What is the price in the American market of the common domestic wool of native growth?

Answer. I think the price is from 18 to 25 cents. It is used principally in families.

Question. Could you afford to pay the farmer a higher price for wool should the foreign fabric be admitted into our markets, as it has been for two years past?

Answer. I could not.

Question. What was the average annual expense of keeping your sheep during the years 1825, 1826, and 1827?

Answer. It is worth $1 50 per head for the grown sheep, and 75 cents for the lambs.

Question. Having stated that the average price paid by you for American wool was 37 cents, what was the highest and what the lowest prices you gave in 1827 for domestic wool?

Answer. The highest was 41 cents; the lowest 28 cents.

WEDNESDAY, *January* 23.

Abraham Marland admitted and sworn:

Question. What has been the average number of pounds of wool manufactured annually in the factory referred to, for the last three years?

Answer. In 1825 I manufactured about 34,000 pounds of wool; in 1826 I manufactured about 34,000 pounds of wool; and in 1827 I manufactured about 51,000 pounds of wool.

Question. What proportion of this wool has been imported, and what proportion of domestic growth; and is it usually purchased in the fleece?

Answer. In 1825 one-half was imported; in 1826 a very small share, say one-fourth; and in 1827 none was imported. About one-fourth of the domestic wool I use is purchased in the fleece, the residue is pulled wool assorted; but none of the pulled wool I use is suitable for making broadcloths or kerseymeres, and not so good for satinets as fleece wool; but the relative prices of it in the market are usually higher than fleece wool.

Question. What has been the quality of the wool mostly purchased for the use of your factory; and what have been the average prices per pound paid at the factory for the last three years?

Answer. My intention has been to purchase various qualities of wool; about one-half of the whole has been first quality lambs' wool, and the price of this in 1825 was, on the average, about 52 to 55 cents per pound. In 1826 the same quality was about 40 cents; and in 1827 the same quality was about 35 to 37½ cents per pound. The next kind is what we call first quality spinning wool; then second quality lambs' wool; and then fleece wool sheared. These last three qualities are used in about equal quantities. The price of the spinning wool was, in 1825, from 40 to 42 cents per pound; that of the second quality lambs' wool was from 30 to 33 cents per pound, and the fleece wool was about 40 cents per pound. In 1826 the first quality of spinning wool was about 35 to 37½ cents per pound; second quality of lambs' wool, 28 to 30 cents per pound; and the fleece wool about 37 cents. In 1827 the first quality of spinning wool was about 30 cents per pound; lambs' wool 25 cents per pound; and fleece wool from 25 to 27 cents, native fleeces.

Question. Can you state the species of wool of which worsted stuff goods are made?

Answer. In England they use a long staple wool called "combing wool," some of it 14 inches long, and mostly grown in Lincolnshire. The long part of this wool is almost exclusively used in the manufacture of worsted stuff goods. The short part of it is combed out and called "niles," and, being mixed with other wool, is used for blankets and other coarse goods. I have always understood that the English are much averse to sending any of this breed of sheep to other countries, and strive to keep them exclusively at home. I have never heard of this breed of sheep being in this country; nor are worsted stuff goods manufactured in this country, to my knowledge.

Question. Can you give correct information as to the species of wool most suitable for the manufacture of good blankets; and have we in the United States a suitable wool for making them?

Answer. There is no wool more suitable for the making of blankets than the native wool of this country; but it has always borne too high a price to warrant the manufacture from it. During the late war I manufactured blankets for the United States Army, together with coarse kerseys, and other coarse fabrics, from the native wool of this country, because the blankets and other fabrics bore a good price, and would warrant the business. I do not think the manufacture of blankets is carried on to any extent in this country at present. The process of making blankets is very simple, easy, and cheap, the cost of the wool being a considerable share of the cost of the fabric.

Question. If you could get native wool at ten cents a pound, could you afford to make and sell blankets equal in quality to the imported, at their present selling price?

Answer. If I could get native wool now at ten cents per pound, I could make blankets at this time, and compete with the foreign article at the present selling prices, and make a fortune by it. But, at the present prices of the native wool, which I think may be stated at from 25 to 28 cents per pound, I cannot compete with foreign blankets.

Question. Is the growing of wool a considerable business with the farmers in the neighborhood of your factory; and is there a surplus of domestic wool in your neighborhood over and above what is demanded by the manufacturers in the same section of country?

Answer. It is not in the neighborhood where I live, and there is no surplus of wood beyond what is demanded by the manufacturer; on the contrary, there is a very large deficiency.

Question. Are you a wool-grower; and if you are, what number of sheep do you own, and what number of pounds do your flocks yield?

Answer. I am not a wool-grower.

Question. Has wool depreciated materially in price within the last three years; and if so, to what is the depeciation to be attributed?

Answer. It has depreciated in price; and the reason I would assign is, that the large importations of foreign woolen goods have reduced the prices of cloths, and disabled our manufacturers to pay higher prices for the article. We have always paid as high prices for our wool as we could afford.

Question. Are you apprised of the fact that large quantities of wool are annually imported; and does not this tend to depreciate the price of the domestic wool?

Answer. I do not think that any imported wool comes into competition with the wool I use at this time. I formerly bought for the same use wool imported from Jutland, until the same kind of American wool fell in price. There is now Jutland wool of the same kind in the Boston market, which does not sell readily; but I think that the importation of this Jutland wool assisted to reduce the price of the American, and that this would again be purchased if American wool of this kind should rise in price. If it does not, I think this Jutland wool will remain on hand. I should also think that there are other kinds of wool imported which come into competition with some kinds of domestic wool.

Question. What are the usual qualities of wool imported?

Answer. I am not much acquainted with the qualities of imported wools at this time.

Question. Is the number of sheep increasing or diminishing in your section of country?

Answer. I should think they are diminishing; and I would assign, as one reason of the fall in the price of pulled wool, that so many sheep and lambs are killed; and this is the wool pulled from the skin after the sheep are killed.

Question. Is there as much wool grown in Massachusetts as is consumed in the woolen manufactories

of that State? If not, what proportion of the whole quantity do you think is imported; and what proportion is grown in the State?

Answer. There is not anything like it. I cannot tell the proportions of foreign and domestic wool worked in the State. The larger share of the wool I use is grown in the States of New York and Vermont, and a smaller share in Massachusetts and New Hampshire.

Question. Is it, in your opinion, important to the farming interest of your State to discourage the importations of foreign wool?

Answer. I should think it was a matter of interest to the farmers of my State. But, at the same time, I should think it important to the country that a corresponding duty should be imposed upon imported woolen goods.

Question. Where manufacturers of woolens are wool-growers also, but grow less wool than they manufacture, are they not interested in keeping down the prices of wool, as they are buyers and not sellers of wool?

Answer. I should think they were.

Question. What proportion in cash does raw wool bear to the present price of your fabric?

Answer. In the coarse goods I make, the cost of the wool is about one-half the cost of the fabric; in the finer fabrics, it is not quite so much.

Question. What do you understand to be the difference between the price of wool in England and the United States of the same quality?

Answer. I am unable to say. I understand it is much lower in England.

Question. Could you afford to pay the farmer a higher price for wool, should the foreign fabric be admitted into our markets as it has been for two years past?

Answer. We could not under the present duties.

Question. What were the highest and lowest prices which you paid for wool in 1827?

Answer. The highest price I paid last year was about 37½ cents per pound, and the lowest price 20 cents per pound.

Question. Do you think that laying a considerable duty on imported wool would be injurious to the interest of the woolen manufacturers in your section of country? Would it tend to force the manufactories into those sections of the United States where wool can be grown to more advantage than in Massachusetts?

Answer. It would, unless there was a corresponding increased duty on imported cloths; if this should be the case, I think an increased duty on wool would not injure the manufacturer; and if at all, it would injure him but a very short time, as there would very soon be a domestic supply. I think an increased duty on wool would not have a tendency to remove the manufacturers from Massachusetts, because the transportation of wool from the different parts of the country is so cheap.

FRIDAY, *January* 25, 1828.

William W. Young admitted and sworn:

Question. What has been the average quantity of wool consumed for the last three years in your factory?

Answer. The greatest quantity of clean wool used by us in any one year has been about 30,000 pounds, and this was previous to 1825. In 1825 I do not think we worked more than 15,000 pounds. In 1826 and 1827 not more than 12,000 pounds in each year, but with the capacity to consume double that amount. At the close of the year 1825 we began to feel a depression in the business, and to curtail it, as we anticipated a further depression. We should have closed our business entirely, but we did not like to discharge our hands and turn them out of doors without employment. During the time subsequent to the close of the year 1825 we made it part of our business to put our mill gearing into complete repair. The machinery we did not repair. We then contemplated turning our mills to some more profitable use, in case the woolen business should not improve.

Question. What proportion of this raw material was imported; and what proportion was of domestic production?

Answer. We have never kept an exact register of purchases, so as to distinguish between foreign and domestic wool, but I believe the wool worked at the factory during the whole time, since 1813, has been about half foreign and half domestic wool.

Question. What were the relative qualities and prices of the raw material consumed in your factory?

Answer. It has always been our intention to purchase the finer qualities of wool, and we have adhered to that intention as far as practicable. In 1825 we paid for what is called full-blooded American merino in the fleece, entirely unwashed, or in the yolk, an average of 40 cents per pound; for coarse German wools, cleaned upon the sheep, in the fleece, from 16 to 20 cents per pound. These last were very coarse wool. The 40 cents for the merino in this state is equal to 80 cents per pound for the same wool cleaned. In the same year we purchased a lot of merino wool from one particular flock, which was considered better than the average lots, and for which we paid in the same state 50 cents per pound. The merino wool generally wastes about one-half in weight by cleaning. In 1826 we purchased a very small proportion of merino wool, and for that we paid an average price of about 33⅓ cents per pound. In the same year we purchased some Saxony wool, for which we paid on the average, for the whole year, about $1 05, making the purchases at auction and at private sale. These wools would loose about 25 per cent. in cleaning. In the same year we purchased some Spanish R wool, and paid an average of about 66½ cents, taking the whole year. These purchases were also made at auction and at private sale. These wools would loose about 12½ per cent. in cleaning. In 1827 we purchased no unwashed merino wool of any extent, but we purchased a considerable proportion of merino wool, washed upon the sheep, for which we paid 35 cents per pound. The wool would lose in cleaning about 33 per cent. We purchased also Spanish R wool, for which we paid, on the average, 57½ cents per pound. This would lose about 12½ per cent. in cleaning. We also purchased Portugal R wool, for which we paid 31½ cents per pound. This would lose in cleaning, according to our estimate, 40 per cent. We purchased also from Pennsylvania a lot of merino wool of two qualities—1st and 4th, called clean and assorted, for which we paid, 1st quality, $1 25 per pound, and for 4th quality, 37 cents per pound.

Question. Are you a wool-grower; and if so, what does it cost you per head, per annum, for keeping your sheep?

Answer. We do grow wool, and keep one hundred and fifty head of merino sheep. We give the use

of one hundred acres of land to an individual for keeping, taking care of, and shearing our sheep, but cannot say what the use of the land is worth. This person pays the taxes upon the land, and is bound to keep the flock equal to its present number; and is entitled, as compensation, to one-third of the increase. To us the keeping of sheep is a losing business.

Question. Is the growing of wool a considerable business with the farmers in your section of country?

Answer. It is not a principal business with our farmers.

Question. Is there, in your section of country, a surplus of domestic wool over and above what is required by the manufactories in the same district?

Answer. There is not a sufficiency grow for consumption.

Question. What proportion of the wool manufactured in your district of country is foreign, and what proportion is wool of the growth of the United States?

Answer. I think they are manufactured in the proportions of three pounds of American to one of foreign.

Question. From what States in the Union is the deficiency of domestic wool manufactured in your section of country obtained?

Answer. That which is not supplied from our own neighborhood is obtained mostly from Pennsylvania and Maryland; some is also obtained from New Jersey.

Question. Has domestic wool materially depreciated in price within the last three years; if yea, to what causes do you attribute the depreciation?

Answer. American wool has certainly depreciated in price, and the cause I take to be the want of demand, because the manufacturer cannot buy.

Question. Is the number of sheep increasing or diminishing in your neighborhood?

Answer. I think there has not been much alteration, but I think rather decreasing for the last three years.

Question. What proportion in cash does the present cost of wool bear to the present cost of the fabric as manufactured at your factory?

Answer. The calculation is, that cassimeres of all colors, except blue, must bring double the price of the raw material to secure the manufacturer against loss; blues must bring from twenty-five to thirty-five cents, according to the price of indigo, the yard, more than double the raw material, to prevent loss.

Question. What is the present price in the American markets of common domestic wool of native growth?

Answer. I am not able to state the price.

Question. Do you know the present difference in price of wool of the same quality in the British and in the American markets?

Answer. Relying upon the best information I have received from England, the price of wool in 1826 was, for English merino, from one shilling to one shilling and nine pence; the same in grease, one shilling; South Downs, one shilling; best Spanish, two shillings and nine pence to four shillings; Spanish Segovia, one shilling and nine pence to three shillings; Spanish Seville, from one shilling and two pence to one shilling and six pence; best Saxony, from three shillings to seven shillings; second and third Saxony, one shilling and six pence to three shillings; Austrian, fine, two shillings and nine pence to six shillings. These were the prices in July, 1826. If large purchases were made, there would be a deduction of something like twenty per cent. Scotch lay wool, from three and a half pence to four pence; Cheviot wool, mixed, six pence to seven pence; white, eight pence to ten pence; York wool, grown in England, nine pence to ten pence; next quality, eight pence to nine pence; wet, seven pence to eight pence. These prices are taken from the letter of an English manufacturer of late date. The difference in price is from sixty to seventy per cent.

Question. Is it important to the farming interest of your State to discourage the importation of foreign wool?

Answer. I do not think it important to the farming interests of the State of Delaware to discourage, at present, the importation of foreign wool, although it may be so in future.

Question. Can the American manufacturer afford to pay a higher price for domestic wool than that article now commands, while the present price of cloth continues?

Answer. They cannot.

Question. Does the importation of foreign wool contribute to depress the price of domestic wool in our markets?

Answer. I do not feel competent to give a definitive answer; but if cloth brought a good price, wool would be in demand.

Question. Are you in possession of the fact that considerable quantities of wool are imported?

Answer. There are large quantities of coarse and other wools imported, but the quantity I cannot tell.

Question. Does not the importation of wool give an advantage to the woolen manufacturers having establishments near the seaports over those situated in the interior districts where wool is grown?

Answer. I should think not.

Question. What are the usual qualities of wool imported into Philadelphia?

Answer. German, Saxony, Spanish, Portuguese, Smyrna, South American, of high and low prices. I do not recollect any other kinds.

Question. Do you believe that laying a considerable duty on imported wool would be injurious to the woolen manufacturers near the seaports?

Answer. It would be injurious unless they are protected; but if they are perfectly protected so as to give them the whole market, it would be of no consequence what duty was imposed on wool.

Question. Where woolen manufacturers are wool-growers also, but manufacture considerably more than they procure from their own flocks, is it not advantageous to them that the price of wool should be low, as they are buyers and not sellers of wool?

Answer. It is advantageous to every manufacturer to obtain his raw material as low, and to sell his fabric as high as he can; but I believe the growing of the wool and the manufacture of it are incompatible in the same person.

William R. Dickinson admitted and sworn:

Question. What has been the average quantity of wool consumed for the last three years in your factory?

Answer. We have used about 35,000 pounds of wool each year for the last three years, washed upon

the sheep's back, as an average of the whole time, though the amount consumed by us has been somewhat increased in each year.

Question. What proportion of this raw material was imported, and what proportion was of domestic production?

Answer. All domestic.

Question. What were the relative qualities and prices of the raw material consumed in your factory?

Answer. In the quantity before supposed to be the average consumed, the qualities would be about the following, viz:

3,000 pounds of common native wool;
8,000 pounds of common and half merino;
12,000 pounds of three-fourths and seven-eighths merino;
15,000 pounds of full-blooded merino.

These aggregate amounts are greater than the proposed average, but the proportions I believe to be about correct.

In 1825 the price we paid at our factory for native common wool in the fleece, washed upon the sheep's back, was 30 cents per pound; for one-fourth blood merino, 30 cents per pound; for one-half blood, 35 cents per pound; for three-fourths blood, 45 cents per pound; for seven-eighths blood, 60 cents per pound; for second rate full blood, 95 cents per pound; and for first rate full blood, $1 25 per pound. In 1826 we paid, for common wool, 30 cents per pound; for one-fourth blood, 30 cents per pound; for one-half blood, 35 cents per pound; for three-fourths blood, 40 cents per pound; for seven-eighths blood, 50 cents per pound; for second rate full blood, 95 cents per pound; and for first rate full blood, $1 25 per pound. In 1827 we paid, for common wool, 20 cents per pound; for one-fourth blood, 25 cents per pound; for one-half blood, 30 cents per pound; for three-fourths blood, 35 cents per pound; for seven-eighths blood, 45 cents per pound; for second rate full blood, 60 cents per pound; and for first rate full blood, 85 cents per pound. During these years we have been in the habit of manufacturing the finer qualities of the wool, and of marketing the coarser qualities in the eastern markets.

Question. Are you a wool-grower; and if so, what does it cost you a head per annum for keeping your sheep?

Answer. I am a wool-grower, and so is my partner in the woolen manufactory. I own between three thousand and four thousand sheep. My partner owns about the same number that I do, but his flocks are not connected with mine. I estimate the cost, per head, of keeping sheep in the part of the country where I live, at one dollar. I feel sure that it does not exceed that sum. The farmers of the country can keep sheep cheaper than I can.

Question. Is the growing of wool a considerable business with the farmers in your section of country?

Answer. It is with a great number of the farmers in my neighborhood, and especially since the passage of the tariff bill of 1824.

Question. Is there in your section of country a surplus of domestic wool over and above what is required by the manufactories in the same section?

Answer. There is an excess, which has been constantly increasing until the last year. My partner and myself have, for the last three years, sent to the eastern markets from 30,000 to 50,000 pounds annually. I speak from recollection, not having any data to refer to for this statement. Most of this wool has been sent to Boston, and has been of the coarser qualities, upon which we have invariably lost money until the last year, when I think we shall have saved ourselves. This wool is grown in Western Virginia, Western Pennsylvania, Ohio, and a small share in Kentucky.

Question. Has domestic wool materially depreciated in price within the last three years; if yea, to what cause do you attribute the depreciation?

Answer. It has depreciated materially, and particularly the finer qualities. I ascribe the depreciation to the large importations of foreign woolen goods and foreign wool; also to the depression of the woolen business in England, and to the increase of woolen manufactures in countries other than England, including our own. I speak more particularly with reference to what I think has affected the price of wool in my section of country.

Question. Is the number of sheep increasing or diminishing in your neighborhood?

Answer. The number of sheep was rapidly increasing in my section of the country for the last three years until the last year; but some of the owners of sheep seem now to be disposed to diminish their flocks. The whole number of sheep, at the present time, is greater than it was one year ago.

Question. What proportion in cash does the present cost of wool bear to the present cost of the fabric as manufactured at your factory?

Answer. I am not myself a practical manufacturer, but am familiarly conversant with the details of the business; from that acquaintance, and from the best of my judgment, I would estimate the cost of the wool to be one-half of the cost of the common and middling qualities of cloths when prepared for the market, and as you go to the finer cloths the proportionate cost of the wool increases.

Question. What is the present price, in the American markets, of common domestic wool of native growth?

Answer. It is worth twenty cents per pound when washed upon the sheep's back.

Question. Do you know the present difference in price of wool, of the same quality, in the British and in the American markets?

Answer. I do not.

Question. Is it important to the farming interests of your State to discourage the importation of foreign wool?

Answer. In my opinion it is important, by laying an effective duty upon foreign woolen cloths and foreign wool; and, without such a duty upon woolen fabrics, an increased duty upon wool would be of no benefit to the wool-growers of our State.

Question. Can the American manufacturer afford to pay a higher price for domestic wool than that article now commands, while the present price of cloth continues?

Answer. I think not.

Question. Does the importation of foreign wool contribute to depress the price of domestic wool in our markets?

Answer. It certainly does, in a great measure, inasmuch as the quantity of any article in the market and the demand regulate the price.

Question. Are you in possession of the fact that considerable quantities of wool are imported?

Answer. I believe the fact to be so.

Question. Does not the importation of wool give an advantage to the woolen manufacturers having establishments near the seaports over those situated in the interior districts where wool is grown?

Answer. I cannot make up a correct opinion upon the question.

Question. Do you believe that laying a considerable duty on imported wool would be injurious to the woolen manufacturers near the seaports?

Answer. I think it would be a serious disadvantage, unless a corresponding protection was given to the manufacturer; but, if that should be done, the injury would be temporary. In the west these alterations would not, in my opinion, be so much felt.

Question. Where woolen manufacturers are wool-growers also, but manufacture considerably more than they procure from their own flocks, is it not advantageous to them that the price of wool should be low, as they are buyers, not sellers of wool?

Answer. It certainly is not the interest of any American manufacturer to so depress the price of domestic wool as to drive the farmer from due attention to his sheep. His flocks should increase (to say the least) with the manufactories—the same principles of national independence being involved in both cases. We ought, at all times, to have a full supply of the raw material at home, to guard against the contingency of war.

Question. Can you speak with confidence as to what section of the United States is best adapted to the growing of wool to the greatest advantage?

Answer. My opinion is, that the finer wools can be most plentifully and cheaply grown in Western Virginia, Western Pennsylvania, in parts of New York, and in the northern part of Ohio.

Question. Have you any wool grown in your section of country equal to the best imported Saxony or merino wool?

Answer. For my own part, I have no hesitation in saying that we have merino wool in the west as fine as the best Saxony wool which I have ever seen, and I have examined many fine parcels. I have the testimony, too, of Mr. Woods, our wool stapler, who served a regular apprenticeship in England of seven years, and who has continued in the business of wool stapling in England (where he handled the finest Saxony samples) and in the United States for the last twenty years. The quantity, however, is small, not amounting to more than three or four thousand pounds, out of a parcel of eighty or a hundred thousand pounds. It is increasing annually, and will increase if the business is properly encouraged. The Saxony sheep is but an improvement on Spanish merino by climate and attention; and the climate of my section of country is equally favorable to the improvement of our merino breed. Within the last thirteen years I have discovered a decided improvement in the staple of our wool from our full-blooded merinos.

Abraham Schenck admitted and sworn:

Question. What has been the average quantity of wool consumed for the last three years in your factory?

Answer. I cannot tell the quantity of wool we have used for the last three years; but, from the 3d June 1826, to 3d June, 1827, by the account from our books, it appears that we consumed 70,400 pounds of merino fleece wool, as washed upon the sheep. In the same time we consumed about 5,000 pounds of coarse Buenos Ayres wool for listings, headings, and the like.

Question. What proportion of this raw material was imported, and what proportion was of domestic production?

Answer. It was all domestic wool, except the 5,000 pounds of coarse wool mentioned in the last answer.

Question. What were the relative qualities and prices of the raw material consumed in this factory?

Answer. The quality of the wool we use is purchased as full-blooded merino, and for which we pay an average price of 40 cents per pound. This wool is assorted at our factory into the following qualities, and valued at the following relative prices, viz:

Taking 80,000 pounds, which we have actually purchased at this average price, it will stand as follows:

400 pounds	picklock, valued at $1 20, amounts to	$480 00
11,600 pounds	No. 1, valued at 60 cents, amounts to	6,960 00
36,000 pounds	No. 2, valued at 40 cents, amounts to	14,400 00
24,000 pounds	No. 3, valued at 34 cents, amounts to	8,160 00
8,000 pounds	No. 4, or livery, valued at 25 cents, amounts to	2,000 00
		32,000 00

The 70,000 pounds used between the 3d June, 1826, and the 3d June, 1827, was purchased at higher prices, and cost us an average price of 42½ cents per pound. The average cost of the Buenos Ayres wool was from 8 to 12 cents per pound, according to my best recollection. I have no data from which to speak on this point, but upon the others I speak from certain information.

Question. Are you a wool-grower; and if so, what does it cost you per head, per annum, for keeping your sheep?

Answer. I am not.

Question. Is the growing of wool a considerable business with the farmers in your section of country?

Answer. It is. I think the county in which I reside has 300,000 sheep, from the best information I have been able to obtain.

Question. Is there, in your section of country, a surplus of domestic wool over and above what is required by the manufactories in the same section?

Answer. There is in my county a very large one. I have been informed, and believe it to be true, that some of the farmers have now four crops on hand unsold.

Question. What proportion of the wool manufactured in your district of country is foreign, and what proportion is wool of the growth of the United States?

Answer. I can only answer in relation to our own factory. All the wool we consumed between the 3d June, 1826, and 3d June, 1827, was domestic, except about 5,000 pounds of very coarse wool. We have lately purchased a quantity of Spanish wool in the New York market to be worked in our factory.

Question. Has domestic wool materially depreciated in price within the last three years; if yea, to what causes do you attribute the depreciation?

Answer. It has depreciated in price materially; and the reason I assign is, that the low price of wool in foreign markets enables the foreign manufacturer to send his manufactured articles into our markets at a lower price than formerly; and also to send foreign wool at a lower price than domestic wool of the same quality has been selling at.

Question. Is the number of sheep increasing or diminishing in your neighborhood?

Answer. I should think they were rather diminishing than otherwise; but they may be about stationary.

Question. What proportion in cash does the present cost of wool bear to the present cost of the fabric as manufactured at your factory?

Answer. I have not the data with me to furnish a satisfactory answer to this question.

Question. What is the present price in the American markets of common domestic wool of native growth?

Answer. I do not know; but, from the best information I have, it is from 20 to 25 cents per pound.

Question. Do you know the present difference in price of wool of the same quality in the British and in the American markets?

Answer. The only information I have is the fact that, in October last, we purchased in the New York market 30 bales of Spanish wool at 72 cents per pound, which cost in London, in the preceding August, two shillings and a penny sterling, or 46 cents, per pound; making a difference of 26 cents per pound upon the very same wool.

Question. Are you in possession of the fact that considerable quantities of wool are imported?

Answer. I know there were large quantities imported the last year.

Question. Is it important to the farming interests of your State to discourage the importation of foreign wool?

Answer. I think it would be.

Question. Can the American manufacturer afford to pay a higher price for domestic wool than that article now commands, while the present price of cloth continues?

Answer. No; he cannot afford to pay the price now asked for it.

SATURDAY, *January* 26, 1828.

James Wolcott, jr., admitted and sworn:

Question. What has been the average quantity of wool consumed for the last three years in your factory?

Answer. In 1825 we consumed about 70,000 pounds of wool; in 1826 about 72,569 pounds; and in 1827 about 60,000 pounds.

Question. What proportion of this raw material was imported, and what proportion was of domestic production?

Answer. In 1825 I think about one-fourth of the wool consumed was imported. In 1826 we used 54,767 pounds of American wool, which averaged us about 45 cents per pound; 9,688 pounds of Saxony, the average cost of which was 80½ cents; 7,211 pounds of Spanish, the average cost of which was 35 cents; and 903 pounds of Italian, the average cost of which was 32¼ cents per pound; the whole averaging 48½ cents.

Question. What were the relative qualities and prices of the raw material consumed in your factory?

Answer. In 1825 wool cost us higher than stated in my answer to the last question; but I cannot give the rate with accuracy. In 1827, commencing in July, better wool than we gave 45 cents for in 1826 was purchased by us at 40 cents. The same quality of wool is now worth, in the Boston market, at least 50 cents per pound.

Question. Is the growing of wool a considerable business in your State with the farmers?

Answer. In some of the western counties of the State it is, but not generally so.

Question. Has wool materially depreciated in price during the last three years? To what is the depreciation to be attributed? And is it owing, in any material degree, to importations?

Answer. It has depreciated since 1825. I attribute this to the depreciation in the price of woolens. The importations of wool effect the reduction in part.

Question. Are you apprised of the fact that large quantities of wool are imported? And does not this tend to depreciate the price of the domestic wool?

Answer. I am apprised of the fact. The importation of wool does tend to reduce the price of domestic wool.

Question. Is there as much wool grown in Massachusetts as is consumed in the woolen manufactories of that State; if not, what proportion of the whole quantity do you think is imported, and what proportion is grown in the State?

Answer. There is but a small part of the wool grown in the State of Massachusetts manufactured there. I cannot answer the other part of the question satisfactorily.

Question. Is it important, in your opinion, to the farming interests of your State to discourage, by further duties, the importation of foreign wool?

Answer. It is important to them, and to our farmers generally. The nation ought to encourage the growth of wool which can only be done by efficient duties on wool and woolens.

Question. What is the price in the eastern markets of the common domestic wool of native growth?

Answer. At this time from 20 to 25 cents.

Question. Do you believe that laying a considerable duty on imported wool would be injurious to the interest of the woolen manufacturers in your section of country; and would it tend to force the woolen manufacture into those sections of the United States where wool can be grown to more advantage than in Massachusetts?

Answer. It would be if the manufactured articles were not further protected. The latter part of the question I cannot satisfactorily answer.

Jonas B. Brown admitted and sworn:

Question. What has been the average quantity of wool consumed for the last three years in your factory?

Answer. In 1825 we used about 70,000 pounds of wool; in 1826 about 90,000 pounds; in 1827 we used about 124,000 pounds of wool. In 1826 we finished a new factory, which was commenced in 1824.

Question. What proportion of this raw material was imported, and what proportion was of domestic production?

Answer. In 1825 about one-fourth of the quantity used was foreign wool; in 1826 and 1827 about the same proportion; the remainder was of domestic growth.

Question. What were the relative qualities and prices of the raw material consumed in your factory?

Answer. We consumed wool varying in price from 37½ cents to $1 65; about three-fourths of the whole we used was of American growth, and varied from 37½ to 60 cents. The foreign wool cost us from 60 cents to $1 65.

Question. Are you a wool-grower?

Answer. I am not.

Question. Is the growing of wool a considerable business with the farmers of your State?

Answer. Among the western portion of them it is.

Question. Has wool materially depreciated in price during the last three years; if yea, to what is the depreciation to be attributed, and is it owing, in any material degree, to importations?

Answer. It is considerably lower than in 1825. There are two causes: one is the depreciation of the price abroad, and the other the unprofitable condition of the woolen manufacture at home. It is in part owing to importations, because if there were none imported it would be something higher, unless the manufacturer could not buy at all.

Question. Are you apprised of the fact that large quantities of wool are imported, and does not this tend to depreciate the price of the domestic wool?

Answer. I am apprized of the fact that large quantities are imported, and I have previously said it does.

Question. What are the usual qualities of the wool imported?

Answer. Coarse and fine wools are imported principally. The coarse wools are worth from 10 to 15 cents. In the Boston market the usual prices of the fine wool are from 60 cents to $1 65.

Question. Is the number of sheep increasing or diminishing in your section of the country?

Answer. I am not able to determine.

Question. Is there as much wool grown in Massachusetts as is consumed in the woolen manufactures of that State? If not, what proportion of the whole quantity do you think is imported, and what proportion is grown in the State?

Answer. There is not as much grown in the State as is consumed. I do not know the proportion, but think it inconsiderable compared with the whole quantity consumed in Massachusetts. Of the quantity manufactured in the State, I should think not quite one-fourth part is imported. I cannot state what proportion is grown in the State.

Question. Is it important, in your opinion, to the farming interests of your State to discourage, by further duties, the importation of foreign wool?

Answer. I think it is.

Question. Where manufacturers of woolens are growers of wool also, but grow less wool than they manufacture, are they not interested, on a financial calculation, in keeping down the price of wool, as they are buyers, not sellers of wool?

Answer. They are not so much interested to keep down the price of wool as those who grow no wool; and those who grow no wool think their interest lies in protection to the wool-growers as well as to themselves.

Question. What do you understand to be the present difference between the price of wool in England and the United States of the same quality?

Answer. I have not been concerned in any importations myself, but I believe the general difference is about 60 per cent. between the cost in England and the sale price in the Boston market.

Question. Do you know the relative prices at which wool can be furnished from the port of Cadiz, in Spain, to the manufacturer in Manchester, in England, compared with the prices at which it can be furnished to the manufacturer at Boston, in Massachusetts?

Answer. I cannot tell.

Question. What is the price in the eastern market of the common domestic wool of native growth?

Answer. From 20 to 24 cents; quarter blood about 30 cents; half blood, 37½; three-quarters blood, 42⅞; and full blood, 50 cents per pound.

Question. From your knowledge of the different qualities of wool used by the American manufacturers, will foreign wool, costing abroad 10 cents and under, come into competition with the domestic wool?

Answer. I think not.

Question. Do you believe that laying a considereble duty on imported wool would be injurious to the interest of the woolen manufacturers of your section of country? Would it tend to force the woolen manufacture into those sections of the United States where wool can be grown to more advantage than in Massachusetts?

Answer. I think it would be injurious, unless there should be a considerable duty also laid on manufacture of woolens. The circumstance alone of wool being cheaper in one section of country than in another would not, I think, force the manufacturer from one section to another of the country.

Joshua Clapp admitted and sworn:

Question. What is the average quantity of wool consumed for each of the last three years?

Answer. I cannot speak for a longer term than two years. From November 12, 1825, to November 12, 1826, we used 41,602 pounds of wool. During the same time the succeeding year we consumed 43,729 pounds.

Question. What proportion of the wool used was imported, and what part of domestic growth?

Answer. In the first of the years spoken of in the last answer we used 10,176 pounds of American wool, and of Saxony, 31,426 pounds. In the second year we used 39,863 pounds of American wool, and of Saxony and Spanish, 3,886 pounds.

Question. What were the relative qualities and prices of the raw material consumed in your factory?

Answer. In the first year we paid, on an average, about 62 cents for the foreign wool, and about 50 cents for the American. In the second year the foreign wool averaged 50 cents, and the domestic 34 cents.

Question. Is there a sufficient quantity of domestic wool grown in the United States to supply the wants of the domestic manufacturer?

Answer. So far as I am able to form an opinion, I do not think the quantity grown is sufficient.

Question. In what sections of country is the domestic wool grown that is sold in the Boston market?

Answer. It is grown in Vermont, Massachusetts, Connecticut, New York, Pennsylvania, and Ohio; considerable quantities have been received from the latter State of late years.

Question. Has domestic wool materially depreciated in price within the last three years; if so, to what causes do you attribute that depreciation?

Answer. The price has fallen; and I attribute the fact to the embarrassed state of the manufactures, and to the importation of foreign wool. I think the diminution in price has been about 33⅓ per cent.

Question. Is the number of sheep increasing or diminishing in your neighborhood?

Answer. I think they have remained for some time at about the same number.

Question. What proportion, in cash, does the present cost of wool bear to the present cost of fabrics made at your factory?

Answer. I think the cost of the wool constitutes about one-half the cost of the cloth.

Question. What is the present price in the United States markets of common domestic wool of native growth?

Answer. I take it to be from twenty to twenty-five cents.

Question. Do you know the present difference in price of wool of the same quality in the British and American markets?

Answer. I think wool of the same quality is from 60 to 75 per cent. higher in America than in England.

Question. Is it important to the farming interest in your State to discourage the importation of foreign wool?

Answer. I think it is important to that interest that importation of foreign wool be discouraged.

Question. If foreign wool should be excluded, would domestic wool bring a better price, if foreign fabrics are admitted under the present duties?

Answer. I should think not.

Question. Do you know that considerable quantities of foreign wool are imported?

Answer. I am aware that large quantities are imported. I am myself a large importer of that article.

Question. What kinds of wool are imported, and from what places?

Answer. Almost every kind of wool is imported. Very coarse wools are received from South America and Smyrna, and these form the largest proportion. Fine wools are brought from Germany, Spain, and England. I cannot pretend to speak distinctly of the different proportions.

Question. Do the coarse wools, costing under eight cents per pound in the foreign market, come in competition with any kind of domestic wool?

Answer. They do not.

Question. Do you know of any manufacturing establishment using exclusively the coarsest foreign wool; and what kind of fabrics do they produce?

Answer. I know of one establishment at Canton, Massachusetts, which uses that wool exclusively, and there may be others. The cloth which they make is called and known as negro cloths.

Question. Does not the importation of wool give an advantage to the woolen manufacturers having establishments near the seaports over those situated in the interior, where wool is grown?

Answer. So long as they use foreign wool, I think the manufacturer near the seacoast has an advantage over him in the country. If domestic wool be used, I think the advantage is in favor of the factory in the interior, because that wool is generally cheaper in the country than in the market towns.

Question. Do you believe that laying a considerable duty on imported wool would be injurious to the woolen manufacturer near the seaports?

Answer. I do not think it would affect him as to purchases; because, at the present price of fabrics, he would not buy it at all.

Benjamin Poor admitted and sworn:

Question. What is the average quantity of wool consumed for the last three years?

Answer. I cannot answer as to the quantity used with sufficient certainty to answer any valuable purpose.

Question. What proportion of the wool used was imported, and what was of domestic growth?

Answer. We used a fraction more than half of foreign wool in 1827. I cannot speak as to any other year.

Question. Are you engaged in the importation of foreign wool and woolen goods; if so, from what places?

Answer. We have been engaged in the importation of foreign wool from Germany. We have not imported any from any other place.

Question. What has been the price of wool in foreign countries for the year 1827 compared with the prices of the same quality of wool in the American market?

Answer. It has, in my opinion, been from 70 to 80 per cent. higher in the American market than in Europe during the past year.

Question. Do you know that American wool has been sent to England to be manufactured, and what was the result?

Answer. A quantity of wool was sent to England for manufacture. A part of the same had been sold in Boston at 50 cents. The original accounts of manufacturing it are in my possession, and I found the same wool was valued in England at 23½ cents.

Question. Is importing wool a profitable business; and do the importers find ready sale for it?

Answer. It has been a profitable business for some time past, say at least for 1827. But it is attended with uncertainty, like other mercantile pursuits. During the past year the sales have been very ready. We have sold, as auctioneers, about 360,000 pounds of foreign wool, and about 108,000 pounds of domestic wool.

Eleuterre Irenee Dupont admitted and sworn:

Question. What has been the average quantity of wool consumed in this factory for the last three years?

Answer. According to the best estimate I can make, (not having the books to refer to,) we have consumed for the last three years, on the average, about 40,000 pounds of wool each year. Formerly we carried on the business more extensively than we now do, and consumed a larger value of wool each year, the wool we then used being finer.

Question. What proportion of this wool is of foreign, and what of domestic growth?

Answer. The wool used in our factory for the three last years has been almost all domestic wool.

We have, during this time, used some Smyrna and some South American wool for negro cloths, this wool being of the coarsest kind.

Question. What is the general quality of the wool you work, and what have been the average prices paid for it for the last three years?

Answer. The most of the wool we have used has been the native wool of this country, and the residue coarse Smyrna and South American wool. In 1825 we paid about 35 cents for pulled wool, which we mostly used. In 1826 I cannot say what price we paid. In 1827 we paid for the same kind of wool from about 25 to 30 cents per pound. I think the price has gradually fallen from 1825 to this time. I think we have paid from 16 to 22 cents for the Smyrna wool, and about the same for the South American wool.

Question. Are you a wool-grower; if yea, what is the average expense to you per head of keeping your sheep, and what number do you keep?

Answer. I am a wool-grower, and now keep about a hundred sheep. I formerly had about 1,200 sheep. I purchased a farm to keep them upon, and have never estimated, therefore cannot state, the expense per head of keeping them. The raising of the sheep has been to me a losing business to a great extent.

Question. Is the growing of wool a considerable business with the farmers of your section of country?

Answer. It is very limited.

Question. Is there in your section of country a surplus of wool over and above what is required for the manufactories in your section of country?

Answer. I think there is no surplus; but there is, on the contrary, a deficiency.

Question. What proportion of wool manufactured in your section of the country is of foreign growth, and what of the growth of the United States?

Answer. I cannot tell.

Question. From what States in the Union is obtained the deficiency, if any, of the domestic wool manufactured in your section of country?

Answer. We get our own from Baltimore and New York, as we use principally the pulled wool; but we have also obtained fleece wool from the western parts of Pennsylvania. The wool purchased in Baltimore and New York is of domestic growth.

Question. Has domestic wool materially depreciated in price within the last three years; if yea, to what cause do you attribute that depreciation?

Answer. It has depreciated in price, and I consider the cause to be the depressed situation of the woolen manufactories.

Question. Is the number of sheep in your section of country increasing or diminishing at the present time?

Answer. It is decreasing. The discouragement is so great that the farmers pay very little attention to their flocks.

Question. What proportion does the present cost of wool bear to the present cost of the cloth or fabric, as a general average?

Answer. I am not a sufficiently practical manufacturer of wool to answer that question.

Question. What is the present price in the American market of common domestic wool of native growth?

Answer. As near as I can tell, without reference to our books, I should say from 20 to 25 cents per pound for the fleece wool, and from 25 to 30 cents per pound for the pulled or skin wool.

Question. Do you know the present difference in price of wool of the same quality in the British and in the American markets?

Answer. I have no knowledge on the subject.

Question. Are you in possession of the fact that large importations of raw wool are annually made into this country?

Answer. It is a fact generally known.

Question. Does not the importation of foreign wool give an advantage to the manufacturer who is located near the seaboard over those located in the interior, where wool is grown?

Answer. I think it may give a small advantage, but that advantage is fully counterbalanced by others which the interior manufacturers possess, of other descriptions, over those situated upon the seaboard.

Joshua W. Pierce admitted and sworn:

Question. What has been the average quantity of wool consumed in this factory for the last three years?

Answer. Our books are not made up to a later date than 24th November, 1826, but from the average consumption before that date, and from my acquaintance with the business, I should say, including the whole of the year 1827, we have consumed on the average for the last three years 100,000 pounds of wool each year.

Question. What proportion of this wool is of foreign, and what of domestic growth?

Answer. From the best calculation I can make from facts now within my knowledge, I should judge that the foreign wool consumed in our factory, on an average for the last three years, would be 43 per cent. upon the whole consumption. It cannot vary materially from that ratio.

Question. What is the general quality of the wool you work, and what have been the average prices paid for it for the last three years?

Answer. We have, for the three last years, purchased and used a variety of qualities of wool, and our extremes in price in 1825 were from 90 cents to 22 cents per pound for foreign wool, as nearly as my memory will enable me to speak. In this year our fine wool was Spanish, and the coarse was (I think) Adrianople. We paid this year for our domestic wool from 25 to 62½ cents per pound, according to my recollection. In 1826 we paid from 12½ to 96 cents for our foreign wool. The fine this year was Saxony, and the coarse, Portuguese. For our domestic this year we paid from 20 to 55 cents per pound. The domestic wool which we purchased this year at 55 cents was better than that we purchased the preceding year at 62½ cents per pound. In 1827 we paid for our foreign wools from 61 to 74 cents per pound, it being all fine Saxony wool. For our domestic wool this year we paid from 17 to 45 cents per pound.

Question. Are you a wool-grower; if yea, what is the average expense to you per head of keeping your sheep, and what number do you keep?

Answer. I am not.

Question. Is the growing of wool a considerable business with the farmers in your section of country?

Answer. Not in our immediate neighborhood, but a good deal so in the upper counties of the State in which I reside.

Question. Is there, in your section of country, a surplus of wool over and above what is required for the manufactories in that section of country?

Answer. There is not a surplus, but a very great deficiency.

Question. What proportion of the wool manufactured in your section of country is of foreign growth, and what of the growth of the United States?

Answer. I should judge the quantity consumed in that neighborhood is more than half of it imported from foreign countries.

Question. From what States of the Union is obtained the deficiency, if any, of the domestic wool manufactured in your section of country?

Answer. Principally Vermont and New York, except such part of it which comes from our own State, and a very little from Maine.

Question. Has domestic wool materially depreciated in price within the last three years; if yea, to what cause do you attribute that depreciation?

Answer. It has, very considerably; I should say from 25 to 30 per cent. I attribute the depreciation to the overstock of foreign cloths in our markets, and to the consequent depressed price of woolen cloths.

Question. Is the number of sheep in your section of country increasing or diminishing at the present time?

Answer. I have no means of judging with accuracy, but, from what I have heard, I should think they were decreasing.

Question. What proportion does the present cost of wool bear to the present cost of the cloth or fabric, as a general average?

Answer. My judgment would be, that on the bulk of cloths, similar to those we make, the cost of the wool would be about one-half of the cost of the cloth when finished.

Question. What is the price in the American market of common domestic wool of native growth?

Answer. I have no means of judging, except by the prices which we pay. They are from 17 to 20 cents at this time.

Question. Do you know the present difference in the price of wool of the same quality in the British and in the American markets?

Answer. I do not know, except from information. But from information, upon which I can rely, I believe the difference of price to be about one-half. As part of this information, I refer to facts detailed in papers now in possession of Benjamin Poor, a witness now before the committee.

Question. Are you in possession of the fact that large importations of raw wool are annually made into this country?

Answer. I do not know the fact as a subject of general notoriety.

Question. Does not the importation of foreign wool give an advantage to the manufacturer who is located near the seaboard over those located in the interior, where wool is grown?

Answer. In the mere cost of his wool I think it does; but that advantage is more than counterbalanced by the facility of procuring labor, and the cheapness of living in the interior.

Testimony in relation to woolens.

FRIDAY, *January* 11, 1828.

Hon. John Mitchell further examined:

Question. Are the woolen cloths used in your section of the country mostly foreign or domestic?

Answer. They are mostly imported.

Question. Why are they preferred?

Answer. They are considered the cheapest.

Question. Would an advance on the cost of low price cloth, such as is used by the laboring classes in the iron districts, be injurious to the owners and workmen of those districts?

Answer. I do not know that it would affect the owners or proprietors of those works, because they would secure that additional cost by an increased price on the goods; but I think it would be prejudicial to the workmen, because it would enhance the price which they now pay. This state of things might not exist when the quantity manufactured at home becomes sufficient to answer the demand. The price of labor is now fixed, and that price would not be raised in proportion to the increased price of goods.

WEDNESDAY, *January* 16, 1828.

Simon N. Dexter further examined:

Question. Where do you reside?

Answer. At Whitesborough, Oneida county, State of New York.

Question. Are you now, or have you lately been, concerned in the manufacture of wool; and if yea, for what length of time and in what capacity?

Answer. I have been for seven or eight years engaged in the manufacture of wool at Oriskany, Whitestown, New York, as an acting director of an incorporated company For about four years of that time I have been the administrator of John Sharp, who left, at his death, a very considerable wool factory, called the Clinton factory, which, in my character of administrator, has been partially under my care. This last is situated in Paris, Oneida county. Mr. George Hutton was copartner of Mr. Sharp, and is still interested, as a partner, in the business, but owns no part of the factory. He is the acting man in the factory. I administered on the estate of Mr. Sharp as a creditor.

Question. What is the name of the establishment in which you are or have been concerned; where is it situated; and is it an incorporated company or an individual interest?

Answer. The factory in which I am concerned, and of which I am a director, belongs to an incorporated company, by the corporate name, I think, of the "Oriskany Woolen Manufacturing Company."

Question. What is the amount of capital invested in the manufactory of which you speak?

Answer. There were two thousand shares, at one hundred dollars each; this was the nominal capital. The last payment on the shares was made about three years ago, and that payment increased the sum

paid in to forty-seven dollars and fifty cents, making the capital actually vested amount to ninety-five thousand dollars. The company purchased a water privilege from the Oneida Manufacturing Company, for which they gave $3,000, and for this, stock was issued to that amount. It had cost the Oneida Company $1,000. Three hundred shares (speaking in round numbers) were forfeited, after paying about ten dollars on each share. This leaves the capital paid in eighty-three thousand seven hundred and fifty dollars. Some wool may have been taken in payment of the last instalment at cash price. The charter was renewed two or three years ago, and the stock, by that act, was reduced to fifty dollars per share.

Question. When was the manufactory first put into operation; or, if an incorporated company, under its present charter?

Answer. The company commenced its operation some two or three years previous to the late war; I think in 1810.

Question. Has it continued in operation from the time it was first started to the present time; if no, at what times, and for what causes, has it ceased its operations?

Answer. It has continued constantly in operation since its first establishment, except at short periods for the purpose of making repairs.

Question. What is the average expense per pound of cleaning, assorting, picking, oiling, carding, and converting the wool, from the state in which it is purchased, into rolls or batts?

Answer. I am not sufficiently acquainted with the detailed operations of a factory to give a satisfactory answer to this question.

Question. What is the average expense per pound of converting the rolls or batts into yarn, and of cleansing, sizing, and preparing the yarn for weaving?

Answer. I am obliged to give the same answer to this as to the last question.

Question. What kinds of cloth do you usually manufacture?

Answer. We manufacture, principally, narrow cloth called kerseymeres, of about thirty-one inches wide when finished. We also make some broadcloths from the two higher qualities of the wool.

Question. What quantity of wool is required to make one yard of each of the descriptions of cloth made at your factory; and what is the width in the flannel of each description of cloth?

Answer. It requires from fourteen to sixteen ounces of wool, well washed, (and it is in this state we buy it,) to make a yard of kerseymere. This is made of the third and fourth qualities, called fine and downrights. Sometimes a small proportion of this same species of cloth is made of the superfine or second quality. It requires about two pounds of wool to make a running yard of broadcloth. This cloth, when it comes from the loom, is from two and a quarter to two and a half yards in width, and it shrinks to one and a half and one and three-quarters yard in fulling and finishing. The weight of the cloth when finished, including the listing, is about the same as the quantity of wool necessary to make it, exclusive of the weight of the wool used in making the list.

Question. What is the cost of weaving each yard of each description of cloth at the works referred to?

Answer. We hire female weavers, (girls,) who board themselves, and are paid three dollars per week. Each one attends to one power loom, and perhaps to two. Each loom weaves about 75 yards per week of kerseymere.

Question. What is the cost per yard of washing, fulling, dyeing, and dressing, and otherwise fitting for the market, each yard of each description of cloth before described?

Answer. I cannot answer this question.

Question. What is, and has been for the three years last past, the value per yard, at the factory, of each description of cloth so made?

Answer. I cannot say that we have any market price at the factory. In 1825 our best kerseymeres brought at auction, in New York, (where we sell almost exclusively,) $2 per yard. I speak of blues made of the third quality of wool. Some did sell as high as $2 30. None sold for less than $2. The net proceeds did not exceed $2 per yard. The second quality of mixtures and drabs, and other colors, (not blue,) varied from $1 35 to $1 65 the yard, sold in the same manner, netting us, on an average, about $1 45. In 1826 the best quality brought from $1 30 to $1 55, and netted us about $1 40. The second quality sold at from 80 to 90 cents, and netted us about 80 cents. In 1827 the best quality sold, in the same manner, from $1 55 to $1 75, but few were sold at the price last mentioned, and the net sales may be put down at $1 60. The second quality sold, in the same manner, at from 82 cents to $1 20, and netted about 95 cents. It may have been 97½ cents.

Question. Would you now contract to furnish a quantity of second quality kerseymeres, described by you, at 95 cents per yard?

Answer. I would not feel authorized to make a contract at that price; but I would undertake to furnish the article at $1 per yard, to a limited extent. At 95 cents per yard I would not contract to furnish a single yard. I believe there would be a loss at that price. At $2 there would be some profit, say about five per cent., enough, perhaps, to pay expenses, &c., but not enough to cover wear and tear, and pay interest on the capital invested. I would contract at this price only because we want money.

Question. Do you expect to sell your kerseymeres of the second quality at a price higher than $1 per yard under the present rates of duty?

Answer. I do not expect to sell the second quality at more than $1 under the existing duty on the imported article.

Question. How may hands do you employ in the Oriskany factory, on the average?

Answer. I think we have from 80 to 100 commonly employed, but cannot speak with certainty as to the precise number.

Question. Have you ever made any dividends on the capital employed in your factory?

Answer. One was made about five years ago. It was a dividend of $2 upon a share, payable in goods. There may have been one other, but I am not positive whether there was or not.

Question. Have you known any dividends made on the stock of the Clinton factory?

Answer. I have not known any, and am very certain there has been none. That was an incorporated company, and was sold by the original owners to Mr. Sharp, and the stock was pledged for the payment. The stock of that company originally consisted of 1,000 shares of $100 each, nominally, upon which either $35 or $40 had been paid in, all of which was expended in the water privilege, buildings, and machinery, as I am informed by the old stockholders. About seven or eight years ago Sharp bought all these shares for $5 each, except about forty, owned by Thomas Hart, and was to pay in goods for

all the shares, except the stock of Ephraim Hart, for which he was to pay in money, on a long credit, and, perhaps, also to two other persons.

Question. Do you know the cause of the depression of the stock of the Clinton factory?

Answer. I do not know any other cause than the general depression of the woolen business; but I had not then been connected with that factory, and my information is derived from casual observation, and the information of the then stockholders. I know of no mismanagement or losses by bad debts to that factory, nor have I heard of any.

Question. Taking the factory at what it cost Mr. Sharp, do you consider the carrying it on an advantage or a loss to the persons now owning it?

Answer. They have not realized much profit. When Mr. Sharp died he left a large stock on hand. The terms on which that stock was laid in have operated to their disadvantage. Another cause why they have not done well is the want of capital. But they have been enabled to pay considerable debts. If Mr. Hutton, who is an active and judicious man, were there, with a small capital, the concern would do better. It is even now advantageous to the parties, because it enables them to keep everything ready for better times. They have worked wool on shares, and I think that a better business than buying the material.

Question. Do you believe that, under the existing revenue laws, a factory, located as the Clinton factory is, possessed of fair capital, and conducted with skill, judgment, and industry, would yield seven per cent. for the capital employed?

Answer. I do not believe it would yield any interest at all.

Question. What officers or agents are employed by the Oriskany Woolen Manufacturing Company; and at what wages to each officer or agent?

Answer. The officers of the company are five directors, who receive, each, $2 for every attendance at the meetings of the board. The number of these meetings averages about four annually. The board appoints, from its own body, a president, secretary, and treasurer. The president and secretary receive nothing as compensation. The treasurer receives $50 per annum over and above his pay as a director. A superintending agent, who is paid $800 per annum, and is furnished with a house and garden, rent free; and a clerk of the store, who receives about $10 per month, and is boarded.

Question. What is the average number of hands, other than those named in the last answer, employed in the Oriskany factory? What are the descriptions—as men, women, boys, girls; and what their wages?

Answer. That company employs in its service one head carder, at a salary of $400 per annum, who boards himself, as do all the hands employed in the factory, except three apprentices, who receive board and clothing; one machinist, at $1 50 per working day; one superintending weaver, at $1 37½ cents per working day; one principal fuller, one presser, &c., two hands in the finishing room, and one dyer, each, at $1 25 per working day; ten hands in the spinning and carding rooms, two assistant carders, and one assistant in and about the dyeing house, each, at $1 per working day; and one watchman, also at $1 per day for *every day;* one fireman, at about 80 cents per day, and two or three other laborers, getting wood, &c., at about 75 cents per day, each. These include all the laboring men I can now recollect. One girl to letter the cloth, at $4 per week; twenty-four women and girls, at $3 each per week; and eighteen or twenty women and girls, at $2 50 each per week. The residue of the hands are young boys and girls, whose wages will vary from $1 25 to $2 per week, each. The whole number employed will range from eighty to one hundred. Also, an assorter of wool, at about $30 per month, and an assistant assorter, at about $20 per month. These I did not before recollect.

Question. What are the usual working hours of the hands employed in the Oriskany factory?

Answer. The working hours, summer and winter, are, I think, eleven in number. They commence work at 5 o'clock in the morning in winter, and, I think, in summer also. The leisure for breakfast and dinner is thirty minutes each; but at what hour they break off for breakfast I cannot say; for dinner, it is at 12 m. Each person employed is held to work eleven hours for a day's work; if any work less time, it is deducted; if more time, he is paid extra in proportion to the time. When there is a hurry the hands are induced to work one or two hours over the regular time, each day, for which they are compensated.

Question. Should there be no change in the present duties on imports, do you believe that the owners of the woolen manufactory at Oriskany, of which you have spoken, would stop their factory?

Answer. No; I do not believe they would stop unless compelled to do so; I think they would struggle on in hope of better times.

Question. Can you readily increase your machinery so as to require an additional supply of wool?

Answer. We have an abundance of water-power, and can readily put in operation machinery to make double the quantity of cloth we now make, if the market would warrant it.

Question. At what distance in the interior is your factory from the city of New York?

Answer. About two hundred and fifty miles.

Adjourned until to-morrow morning at 10 o'clock.

THURSDAY, *January* 17, 1828.

Mr. Simon N. Dexter again admitted and further examined:

Question. Has any of the capital paid by the stockholders of the Oriskany Manufacturing Company, as appears from your former answers, been withdrawn from the business of manufacturing at any time and for any purpose?

Answer. None of the capital paid in has been withdrawn.

Question. Were you and the other directors of the Oriskany factory of opinion, when the tariff of 1824 was adopted, that it afforded a sufficient protection to woolen goods?

Answer. I was not of that opinion, and I believe the directors generally were not. I thought at the time that the amendments in the Senate of the United States to the tariff bill rendered the protection insufficient to the cloths we were manufacturing.

Question. Did the directors of that factory, immediately after the passage of that act, invest an extensive amount of capital in the raw material and increase the number of their laborers?

Answer. They did not. We called for an instalment upon the shares that year to pay our debts, but we did not buy an unusual quantity of wool. Generally, in the summer, soon after shearing, we buy a supply for the year; we did no more that year to my recollection. The instalment above mentioned, I

think, was called for before the passage of the tariff bill of 1824, and, I think, in July or August, 1823, and made payable in or about January, 1824; but it might have been the year after.

Question. Can you state what was the cost of the establishment at Oriskany when it was put into operation, and also the net amount of sales annually?

Answer. I cannot state the cost of the establishment when it went into operation. The first call upon the shares, of $37 50, had been paid in when I became a stockholder, which was from eight to ten years since. The factory was then in full operation. I cannot tell the precise net amount of sales of the factory annually. We sell a great many cloths for wool; the residue of our cloths are nearly all sold in New York. From November 1, 1826, to November 1, 1827, I believe the whole amount of sales would be from $45,000 to $50,000. I think the amount of sales was probably $10,000 less the preceding year; the quantity of cloth sold being about the same, but the quality rather better in the latter year. In 1827 the wool bore a less price, but labor, dye-stuffs, &c., were about the same in these two years.

Question. Has it always been under the same management and direction that it is now; and have the stockholders in this company generally expressed themselves satisfied with its management?

Answer. The stockholders did complain of the management of the affairs of the company, and about seven or eight years ago the direction was changed, when I came in as a director; and soon after that time the agent was changed. Since then there has been no change of the direction, except by resignation. In or about August, 1825, the agent was again changed, from a conviction on the part of the directors that he had not sufficient energy or skill to promote the interests of the company.

Question. You have said that the company kept a store at the factory. Do they sell largely of their own fabrics to their laborers and to others at good profit, and to what extent?

Answer. A large proportion of the labor at the factory has heretofore been paid at their store. The company keep a general dry goods and grocery store, and have sold to the laborers at the usual profit of country trading stores. The company are now endeavoring to change this practice, and to pay cash for labor, but have not yet effected it. The practice is, to give the laborer a due bill, which is current at some of the neighboring stores for goods, as well as at the company's store, which bills are redeemed at the factory in their cloths. The company do not now pay any more cash for labor than formerly. The agreement with the hands generally is to pay one-half cash; but the proportion of cash paid is usually not more than from one-third to two-fifths. The profits, if any, made by the company at the store, go into and form a part of the profits of the factory.

Question. Are there different patents or descriptions of machinery for spinning wool; if yea, what patent or description is used in the Oriskany factory, and what patent or description is considered preferable?

Answer. We have a patent machine for spinning at Oriskany, called a "Brewster." We spin warp on this machine, and consider the mode a very good one. The machine, however, is subject to get out of repair. We also spin a part of the warp and all the filling in the usual mode.

The honorable Mr. Storrs, a member of the House of Representatives from the State of New York, appeared in the committee room and signified a wish to the committee to propound to the witness, then under examination, (Mr. Dexter,) before he should be finally dismissed by the committee, certain interrogatories relating to subjects before the committee; whereupon it was

Resolved, That the chairman be directed to address a note to Mr. Storrs, informing him that any interrogatories which he should please to deliver in writing to the chairman, by 10 o'clock to-morrow morning, to be propounded to Mr. Dexter, would be considered by the committee, and be put to the witness, if the committee should so order.

The examination of Mr. Dexter was then resumed:

Question. Have not manufactories which have been put into operation of late years commenced with machinery improved very far beyond the machinery of those factories which commenced ten or twelve years ago, and have the former great advantages over the latter from that cause?

Answer. They certainly have advantages. At the Oriskany manufactory we have made several improvements, and have in some instances discarded old machinery to make room for other of a more improved sort.

Mr. Benjamin Bakewell admitted and sworn:

Question. Would such an increase of duty as would cause a material rise on low-priced cloths and other low-priced woolen goods injuriously affect the interests of the manufacturing classes, the artisans, mechanics, and laborers of your city?

Answer. A heavy duty on the lowest priced woolen goods would operate oppressively upon the poorer classes of persons referred to in the city of Pittsburg, as woolens are indispensable for clothing in that climate. The reasons for my opinion are, that the person who has worn a fine coat may pay the same price and obtain a coarser one, but that the man who has worn that of the lowest price, must pay more to procure a coat, or have none.

Question. Have there been, and are there now, any woolen manufactories at or near Pittsburg?

Answer. There are none in the city of Pittsburg of any considerable extent. There is one of consequence at Steubenville, at about forty miles from Pittsburg. There is one small woolen factory in the city, and one at about four miles distance. There is also one of considerable extent at Economy, about eighteen miles from Pittsburg.

Question. Has the price of cotton and woolen goods varied for six or seven years past?

Answer. Being entirely out of the line of either business, I cannot answer the question. We are governed in our prices of these articles by the eastern prices; and if these articles have, during the time, varied in price at the east, they would, as a consequence, have varied with us.

Question. Who would be most likely to be benefitted to the greatest extent by an increase of duty on woolen goods—the manufacturer, the workmen, or the community generally?

Answer. If it be accompanied with an increase of the duty on wool, I think the farmer would be benefitted. As to the duty on woolen goods alone, I should think the manufacturer would reap the most of the benefit, although the business becoming better, it would benefit the workmen also; as, by the success of the master, the workmen would also do well.

FRIDAY, *January* 18, 1828.

Hon. Aaron Tufts admitted and further examined:

Question. Where do you reside?

Answer. In the town of Dudley, county of Worcester, State of Massachusetts.

Question. Are you now, or have you lately been, concerned in the manufacture of wool; and if yea, when, for how long a time, and in what capacity?

Answer. I am now and have been concerned in the manufacture of wool. I began the business in which I am now engaged in 1824, and have been interested ever since as a proprietor and agent of our establishment.

Question. What is the name of the establishment in which you are or have been concerned, where is it situated, and is it an incorporated company or an individual interest?

Answer. It is usually called the "Tufts' Manufactory," and is situated in the said town of Dudley. It was not an incorporated company practically until the first of July last, though we obtained an act of incorporation the last winter. On the first of July last we assumed the name of the "Tufts' Manufacturing Company," which is the corporate name, and since that time should be considered a corporate company.

Question. What is the amount of capital employed in the manufactory of which you speak?

Answer. The capital actually employed is $40,000. Previous to the first of July last the capital employed by the persons interested was about $40,000, of which about two-thirds was property actually paid in by the individuals interested, and the remaining one-third was by a loan to the company, paying an annual interest of six per cent.

Question. When was the manufactory first put into operation; or, if an incorporated company, under its present charter?

Answer. In the summer of 1824. The latter part of this question I have answered in my answer to the third interrogatory.

Question. Has it continued in operation from the time it was first started to the present time; if no, at what times and for what causes has it ceased its operations?

Answer. It has; but from June, 1826, to June, 1827, it was not carried on so extensively. During 1825 we had a contract with a contractor to supply clothing for the Navy, and then found it necessary to employ others to do a portion of the work. After that time we used our own machinery.

Question. What is the average expense per pound of cleaning, assorting, picking, oiling, carding, and converting the wool from the state in which it is purchased into rolls or bats?

Answer. I am not prepared to answer this question for the reason assigned in the latter part of my last answer. I believe no separate accounts of these processes are kept.

Question. What is the average expense per pound of converting the rolls or bats into yarn, and of cleansing, sizing, and preparing the yarn for weaving?

Answer. I am, for the same reason, unable to answer the question.

Question. What kinds of cloth do you usually manufacture?

Answer. Cassimeres and broadcloths exclusively, except when engaged in the contract for furnishing the Navy contractor, as before mentioned.

Question. What quantity of wool is required to make one yard of each of the descriptions of cloth made at your factory; and what is the width, in the flannel, of each description of cloth?

Answer. We estimate 2½ pounds of wool (in the state we purchase it) for a yard of broadcloth. One-half the quantity is estimated for the yard of cassimere. It would be more likely to require less for the cassimere than go over that estimate. When the broadcloth comes from the loom it varies in width from 10½ to 11¾ quarters. The cassimeres from the loom average from 5½ to 6 quarters. The broadcloths, when finished, are usually from 6 to 7 quarters. The cassimeres from 3 to 3½ quarters.

Question. What is the cost of weaving each yard of each description of cloth manufactured at the works referred to?

Answer. We hire weavers by the yard, and pay according to the quality: broadcloths from 9 to 15 cents; cassimeres from 6 to 11 cents per yard; the weaver finding himself, and his duty is to attend exclusively to the loom. Our broadcloths are wove partly by the hand and partly by the power loom. The cassimeres are all wove in the hand loom.

And then the committee adjourned until to-morrow morning, 10 o'clock.

SATURDAY, *January* 19, 1828.

Hon. Aaron Tufts again admitted and further examined:

Question. What is the cost per yard of scouring, fulling, dyeing, dressing, and otherwise preparing for the market each yard for each description of cloth before described?

Answer. I cannot answer this question, for the reason heretofore assigned.

Question. What is, and has been for the last three years, the value per yard, at the factory, of each description of cloth so made?

Answer. We never sell any of consequence at the factory, and there are no settled prices at that place. Our sales are generally made in Boston at private sale. The goods we sold in 1825 were from 25 to 30 per cent. higher than the sales at any time since. I speak from memory entirely. My impression is that our broadcloths sold, on the average, in 1825, at $3 per yard, net, after deducting the commissions on the sales. The cassimeres, in the same year, sold, after the same deductions, at from $1 25 to $1 30 per yard. From June 1, 1826, to July 1, 1827, the broadcloths average about $2, net sales, and the cassimeres about 80 cents, net sales. The qualities and colors did not vary materially from the cloths sold in 1825. The sales spoken of were at the wholesale prices.

Question. Are there different patents or descriptions of machinery for spinning wool; if yea, what patent or description is used in the factory of which you speak, and what patent or description is considered preferable?

Answer. There are different kinds of machinery used in spinning wool. One is called Brewster's, the other are jennies. We use the latter, and they are generally considered preferable. We have never used the Brewster, and they have been laid aside by many as inferior to the other.

Question. What officers, agents, clerks, and superintendents are employed in the factory of which you speak, and what wages or salaries to each?

Answer. We employ a clerk, whose wages, beside his board, in 1825 were $200, and in 1826 were $250. I have acted as agent myself, and I shall charge the company $1,000 annually for my services. The three other proprietors are constantly employed in the business, and should, in my opinion, charge the company, each, $500 annually. No adjustment has actually taken place, but this, in my opinion, would be the just rate of compensation.

Question. What number of hands are employed in the same factory; what are their descriptions—as men, women, boys, and girls, and what wages are paid for their services?

Answer. The number has varied from fifty to sixty. At this time there are 27 able-bodied men, including the three proprietors, 19 women, and 7 children from 11 to 15 years of age. Most of the men work by the piece, and there is some difficulty in fixing their daily wages; but, in estimating their monthly wages I find that the average of their daily wages is not far from 73 cents, and they find themselves. In the same way I come to the conclusion that the women and children receive for their labor $2 33⅓ per week, and they board themselves.

Question. What are the usual working hours of the hands in your factory?

Answer. In the summer they usually work from sunrise until sundown, except when at their meals, which consume about 1½ hour. This continues about six months. During the other six months they usually work from sunrise in the morning until 8 o'clock in the evening, allowing the same time as before for meals.

Question. Have there been any dividends made upon the stock of your manufacturing company at any time; if yea, at what times, and to what amount?

Answer. We have made no dividends, nor has anything been withdrawn as profits; but, in bringing up our accounts of manufacturing to July 1, 1827, we found we had sustained a loss of a little rising $5,000, without any allowance for interest upon the capital. The factory does some custom business, which is not taken into the manufacturing account. This business done by the factory would diminish to some extent the loss before stated, but to what extent I have no means of ascertaining. The above loss is ascertained from the balance of the accounts of wool purchased by the company, and manufactured on their own account, and the whole loss, I think, occurred during the year 1826, and that part of 1827 up to 1st of July. I think no loss was sustained prior to January 1, 1826. The custom business we do is a fair business. The interest upon that part of the capital borrowed by the company is paid out of the business, and is brought into the account to make the sum before stated. The factory is kept insured, which we charge; and there was a loss from bad debts of about $700. The residue of the loss cannot be accounted for, but by the badness of the business.

Question. Did you attend the Committee on Manufactures, at the last session of Congress, as one of a deputation; if so, by whom were you deputed; who were associated with you; and for what purpose was the deputation sent here?

Answer. I did attend at the last session of Congress, as one of a deputation from the manufacturers of wool and wool-growers of Massachusetts. Mr. Bates, now of the House of Representatives, and Mr. Brown, of Boston, were my only associates. The deputation was sent to represent to the Congress of the United States the depressed state of the woolen manufacture, the consequent low price of wool, the great influx of foreign woolen goods, as connected with that subject, and to obtain further protection to the wool-growers and manufacturers of woolens. The deputation did appear before the Committee on Manufactures of the House of Representatives.

Question. Is your machinery moved by water-power; and if so, does it ever fail from drought or frost?

Answer. It is; and we have no impediment from drought or frost. The reason I assign for our freedom from trouble by frost is, that our factory is situated at the outlet of a pond formed mostly by springs, and the wheel does not collect frost.

Question. Is there in your vicinity any machinery for the manufacture of wool now unemployed, and to what extent?

Answer. I believe there is; but I have no means of ascertaining to what extent. I think, however, to a considerable extent.

Question. Of the capital employed in your establishment, what proportion did the real estate, buildings, and machinery form?

Answer. I should think the real estate, buildings, and machinery were, when we commenced business, worth rising $10,000, of which the machinery probably constituted $5,000.

Question. Has not real estate generally suffered a great deterioration in value, as well as every other species of property, within the last two, three, or four years?

Answer. I should not think that, within the time referred to, there had been a deterioration of the property mentioned in the question in my section of the country. The reason I assign is, that there are in that neighborhood a large number of cotton and woolen manufactories, which consume the produce of the farmers in that section of country, as well as large quantities of flour and other provisions brought from the southern and middle States.

Question. In making your estimate of losses do you value your real estate, buildings, &c., at what they cost, or at what would be a fair price for them now, compared with the relative value of other property?

Answer. We value the buildings at what would be their depreciated value by natural decay; and we also value the machinery with reference to its natural wear. Our manner of valuation is to deduct the estimated wear, casualties, and natural decay, from the cost, to arrive at the present value. These estimates enter into the account in making up the profit and loss account.

Question. What quantity have you usually manufactured in the year; and do you generally find ready sales at those prices which the articles command?

Answer. It would vary from 5,000 to 6,000 yards of broadcloths, and from 15,000 to 17,000 yards of cassimeres. In 1825 the sales were quite ready; in 1826 they were very dull; in 1827, at the prices the articles commanded, they were pretty ready, but the prices were no better, except that, in some instances, the sales were made upon shorter credits. The profits in 1827 have been better than in 1826. In 1827 we did more work on contract than we did in 1826, which further mended the business.

Question. Did you manufacture the same articles the last year as the first year of your operations, or did you manufacture yarn, &c., in 1826 and 1827?

Answer. They were of the same kind.

Question. Were not manufacturers of woolens doing a better business previous to 1824 than they have done since?

Answer. I am not competent to answer the question; as at that time I was not engaged in the business. On the passage of the tariff bill of 1824 I thought the business would be placed on a permanent footing, not anticipating that the British would repeal their wool laws or evade the payment of duties, and so deprive us of the benefits of that bill; and but for the repeal of their laws and the evasions of the duties, my opinion is that the present duties would furnish sufficient protection.

Question. Are there not many manufacturers who began at an unfortunate period, and whose investments have been so injudicious that no increase of duty can restore their losses?

Answer. I am not personally acquainted with any in my section of country who are in that situation.

Question. Are not many of the factories which are now suffering and complaining founded on borrowed capital?

Answer. I do not know that fact. I think, generally, that in Massachusetts it is otherwise.

Question. Can you say what number of companies have been incorporated in Massachusetts within the last four years, and the extent of their capital?

Answer. I cannot. There have been some incorporations during that time of woolen manufacturing companies, but I cannot state the number. I should think it has been small. A number of companies, before concerned in manufacturing as joint partners, have within a few years obtained acts of incorporation for the convenience of doing their business.

Question. Are there not at this time many, and if yea, how many, applications before the Legislature of Massachusetts for the incorporation of cotton or woolen manufacturing companies?

Answer. I was, when I left Massachusetts, chairman of the Committee on Manufactures of the Senate of that State, and had in my hands as such, I think, four applications for new charters for manufacturing companies, one of which was for the manufacturing of carpets; the other three were for manufactures of cotton. The woolen application was from a company who had been some time engaged in the carpet manufacture.

Question. Did you sign any petition to the last Congress on the subject of woolen goods; if you did, was that petition for an *increase* of duty, or did it only pray for the *security* of the *present* duty, by changing it from an *ad valorem* to a *square yard* duty?

Answer. If I signed any, and I think it probable I did, it was for a square yard instead of an ad valorem duty; and my impression is that it was intended for the purpose of securing the payment of the existing duties principally. The effect of a change from an ad valorem to a square yard duty would, in my opinion, necessarily be to increase the duties, and, so far as that consequence would follow, I was last winter in favor of an increase of duty, as I believed this to be the only effectual mode of securing the payment of the present duties. I did also think that a further increase should be made equal to the effect of the repeal of the British import and export duties upon wool.

Question. How long have the oldest woolen factories within your knowledge been in operation; and have they, from time to time, increased their capital?

Answer. I believe the oldest woolen factory of any considerable extent in Massachusetts is Colonel Shepherd's, of Northampton. Colonel Shepherd himself is here, and can give an account of this establishment.

Question. Is it not a fact that small establishments, under the immediate care of the proprietors themselves, have generally done better business than incorporated or joint stock companies?

Answer. My opinion is that woolen manufactories, like all other branches of business, do best under the immediate superintendence of the proprietor. I do not now recollect but one in Massachusetts which is not superintended by some person interested as part proprietor, if not sole owner. I think woolen manufactories of medium size and capital generally do the best.

Question. Do the Massachusetts manufacturers of coarse cloths and cassimeres feel the effect of mutual competition?

Answer. I should think not to any great extent. In the article of satinets domestic competition has been felt, and the reason I would assign is that the square yard duty upon cottons has excluded the foreign article, and hence the domestic costs but about one-third of the former price.

Question. Has any part of the machinery added to your factory since you commenced operations been paid for out of the business of the factory; and if so, to what extent?

Answer. None of it has been paid for out of the business of manufacturing to any considerable extent.

Question. Can you form any opinion what quantity of woolens are consumed in the United States; or have you any opinion of their estimated value compared with what is imported?

Answer. I think that four-fifths at least of all the woolen goods consumed in the country are of domestic manufacture. I should think the whole value of consumption in the United States would be equal to $50,000,000.

Question. Can you form any opinion as to the relative value between the amount manufactured and that imported?

Answer. I think that the relative values and quantities of domestic woolen goods and those imported will not materially vary from each other.

MONDAY, *January* 21, 1828.

Colonel James Shepherd admitted and further examined:

Question. Where do you reside?

Answer. In the town of Northampton, Hampshire county, Massachusetts.

Question. Are you now, and have you lately been, concerned in the manufacture of wool?

Answer. I am now concerned in that manufacture, and have been so concerned since the year 1809; in the first place as principal owner, afterwards as a member of a company; then for a time again as sole owner, and in 1826 as a member of a company, but during the whole period as the active superintendent of the manufactory.

Question. What is the name of the establishment in which you are or have been concerned; where is it situated; and is it an incorporated company or an individual interest?

Answer. The company was incorporated in 1809 or 1810, by the name of the "Northampton Cotton

and Woolen Manufacturing Company;" but the business was not carried on under that charter at all, either as an individual or copartnership interest, until 1826, when the charter was renewed, the capital increased, and the name changed to "The Shepherd Woolen Manufacturing Company;" since which time the business has been done under the charter.

Question. What is the amount of capital invested in the manufactory of which you speak?

Answer. The capital now actually employed is $130,000, of which $80,000 is vested in real estate and machinery, and $50,000 is active capital.

Question. When was the manufactory first put into operation; or, if an incorporated company, under its present charter?

Answer. We acted under the present charter first on the 1st of January, 1826; but the same establishment, without a charter, has been in operation since 1809.

Question. Has it continued in operation from the time it was first started to the present time; if no, at what times and for what causes has it ceased its operations?

Answer. It has until 1st January, 1827; but for about fifteen or eighteen months immediately after the close of the late war the factory ceased to manufacture cloths from its own stock, and manufactured the wool of others upon contract. On the 1st January, 1827, on bringing up our account, we found we had sustained great losses, but we concluded to go on for six months longer, to see if there would not be a change. We therefore continued to the 1st July, 1827, and found there was a continued loss; and we then determined to suspend operations, and did so, except to close the then existing business and contracts.

Question. What is the average expense per pound of cleaning, assorting, picking, carding, and converting the wool from the state in which it is purchased into rolls or bats?

Answer. We make no such division of labor, and therefore have no account for these separate charges. Our process is, first, assorting, for which we pay the man who assorts it one and one-half cent per pound; but as there is a superintendent of this branch who is paid, we estimate the whole cost of assorting at two cents per pound. The expense of roving, which comprises oiling, carding, roping, &c., comprises all the expense from sorting to its delivery to the spinner, for which we pay six cents per pound for fine work, and for middling five cents. We do no coarse work. Spinning is the next process, and for this we pay for the finest of warp fourteen cents per pound, and for filling, of the same quality, seven cents per pound. For the second quality of wool, twelve cents per pound; and for the filling of the same quality, six cents per pound. For the third quality of warp, ten cents per pound; and for the filling of the same quality, five cents per pound. For the fourth quality, which is the lowest we spin, eight cents for warp, and four cents for the filling. Some machinery has of late been brought into operation which diminishes the expense of spinning the third and fourth qualities, as here classed, fifty per cent. or more. We have for some five or six years past used these machines to spin these qualities. Others have used them for the finer qualities of spinning, and think well of them. Our machines are five or six years old, and great improvements have since been made. The machinery in use at our establishment, although good, is more expensive than that which is used by many others, because the one requires the labor of a man, whose wages are higher than the wages of girls, who attend the others. Machinery for the lower sorts are called the "Brewster." We use the jennies for the finer qualities.

Question. What is the average expense per pound of converting the rolls or bats into yarn, and of cleansing, sizing, and preparing the yarn for weaving?

Answer. The last answer has given the whole expense to the yarn. Warping and dressing follow next after spinning, and for these we have put into use newly invented machinery, which has lessened the expense 75 per cent. and reduced these items, collectively, to 1½ cent per pound for fine broadcloth twelve quarters wide.

Question. What kinds of cloth do you usually manufacture?

Answer. Broadcloths and cassimeres.

Question. What quantity of wool is required to make one yard of each of the descriptions of cloth made at your factory; and what is the width, in the flannel, of each description of cloth?

Answer. During a period of six months I find the average quantity of American and Saxony wool to be 2¼ pounds to a yard of broadcloth. When made of Spanish wool, two pounds is sufficient. We make a finer and lighter quality of cloth than many other manufacturers. It requires about half the quantity of wool to the yard of cassimere, which is about 5½ quarters in width, when it comes from the loom. The broadcloth, when ready for market, is 7 quarters wide; the cassimere from 26 to 28 inches.

Question. What is the cost of weaving each yard of each description of cloth manufactured at the works referred to?

Answer. We have paid two prices. Before the power looms came into use we paid from 18 to 28 cents per yard. Since the power looms have been put into operation the weaving in these looms costs but ten cents per yard for weaving broadcloth. The cassimeres cost half that price.

Question. What is the cost per yard of scouring, fulling, dyeing, dressing, and otherwise preparing for the market each yard of each description of cloth before described?

Answer. One man is able to scour all the cloth of our establishment, and we pay him $21 per month, including his board. It formerly cost double that sum. The fulling requires a man and a boy; the man is paid $32 per month, and the boy $16 per month, including their board. Raising or napping, which is commonly called gigging, comes next in the operation. This requires one superintendent, who receives $26 per month, and $6 per month for his board; and nine young men, who receive on an average $14 per month, and their board included. There is also a teazle setter, whose duty it is to prepare the teazles for napping, who receives $10 per month, and his board, which is $6. The cloth is then ready for shearing, which requires one superintendent, at $32, and seven girls, at $8 per month, including board; and these attend to 20 pair of shears. There are seven other girls employed in burling, linting, and marking the cloth, who receive also $8 per month, board included. A pressman and a boy are also necessary; the man receives $24, the boy $14 per month, inclusive of board. All colors, except black, are dyed as soon as the wool is assorted; black is dyed after the cloth undergoes the process of fulling. The prices for dyeing vary. Blue costs 60 cents per yard; blacks and all other colors ten cents per yard.

Question. What are, and have been for the last three years, the values per yard, at the factory, of each description of cloth so made?

Answer. Our cloths are not sold at the factory, but in the Boston market. I have not an account of our sales with me, and therefore cannot speak with accuracy; but, from recollection, I should think we sold our first quality blue broadcloths, of Saxony wool, at from $6 to $7 per yard, in 1825. The

same quality blacks were sold at the same prices that year. In 1826 the same qualities and colors were sold at about $5 50 to $6 50 per yard. In 1827 the sales were at about the same prices, but more ready sales, and on shorter credits. The finest cloths of the above description, made of American wool, will average about $1 per yard less than those made of Saxony, for each year. These cloths are made of the first and second qualities in the assorting. Prime and picklock are worked together, and are about equal to Saxony. The prices of cassimeres are generally about half those of broadcloths, of the same qualities and descriptions of wool, at the same times. The lowest quality of blue broadcloths made at our factory sold in 1825 at about $3 per yard, and the lowest blacks at about $2 50 per yard. In 1826 the same cloths sold at about $2 75 for blue, and about $2 25 for blacks. All the coarse cloths are made of American wool. In 1827 the same coarse blues were worth $2 50, and the blacks about $1 75.

Question. Are there different patents or descriptions of machinery for spinning wool; if yea, what patent or description is used in the factory of which you speak, and what patent or description is considered preferable?

Answer. There are two descriptions of machinery, the one called the "jenny," the other a patent called the "Brewster." We spin about two-thirds of our yarn upon the jenny, and one-third upon the Brewster. As to which is preferable there is a great variety of opinion. It is generally conceded that the Brewster is preferable for coarse yarns, but for fine yarns I consider the jenny preferable.

Question. What officers, agents, clerks, and superintendents are employed in the factory of which you speak; and at what wages or salaries to each?

Answer. Myself and brother are the superintending agents of our factory, and we jointly receive 2½ per cent. upon the gross amount of the sales as our compensation for these services. This has been the case only from the 1st January, 1826. I cannot tell the amount this per centage will come to annually, as I have not the account of sales; but as nearly as I can calculate for the 18 months from 1st January, 1826, to 1st July, 1827, the whole we shall receive for superintendence will be about $2,300 or $2,400. We also employ a clerk, at a salary of $500 annually, and he boards himself; a superintendent of the cards, at $39 per month, including board; and two superintendents of looms, at $24 each per month, including board. These are all who can be considered as officers.

Question. What number of hands are employed in the same factory; what are their descriptions—as men, women, boys, and girls; and what wages are paid for their services?

Answer. The whole number employed is 120. Of these, 32 are men, the average price of whose labor is $21 per month; 16 young men, from 18 to 20 years of age, at $14 per month; 16 boys, from 8 to 12 years of age, at $6 per month; and 54 girls, or young women, at $13 per month. In all these instances, board is included in the prices given, at the rate of $1 50 per week for men and $1 per week for boys and girls.

Question. What are the usual working hours of the hands in your factory?

Answer. In the summer the hands work from sunrise until sunset, deducting one hour for the two meals of breakfast and dinner; this continues for six months. In the six succeeding months we begin at daylight, and work until eight o'clock at night, deducting one hour for the same two meals.

Question. Have there been any dividends made upon the stock of your manufacturing company at any time; if yea, at what times and to what amount?

Answer. There have been no dividends made since the company was incorporated in 1826. Before that period Mr. Robbins and myself were alone concerned, and we made it a very fair business from 1809 to 1824, and 1825 was also a tolerable year. Since that time it has been a losing concern.

Question. Was your machinery moved by water-power; and if so, did it ever fail from drought or frost?

Answer. It was moved by water-power. We never experienced any considerable inconvenience, either by drought or frost.

Question. Is there in your vicinity any machinery for the manufacture of wool now unemployed; and to what extent?

Answer. My own is idle, but I know of no other in that neighborhood. We manufactured 250 pounds of wool a day when in full operation.

Question. What quantity of cloths have you usually manufactured in the year; and do you generally find ready sales at those prices which the articles command?

Answer. During the year 1826 we wove a number of yards equal to 39,600 of broadcloth. Of this quantity about nine-tenths were broadcloths in fact; the other tenth was of cassimere. Two yards of cassimere is called equal to one yard of broadcloth. In 1825 the sales were ready; in 1826 they were dull; in 1827 the sales were quick, but without an advance of price. On the whole, business was better in the year 1827 than in 1826. The low prices of 1826 induced us to hold back, and we did not sell more than one-fourth of what was wove, and, in consequence of it, the sales of 1827 were much larger than those of the preceding year; and we have now nearly sold off the stock.

Question. Were not manufacturers of woolens generally doing a better business previous to 1824 than they have done since; and were they not then doing well?

Answer. They were, as far as my knowledge extends. We were doing a better business previous to the tariff of 1824 than we have done since. Previous to the tariff of 1824 I think the business was a fair business, and nothing more, for some years.

Question. Are there not many manufacturers who began at an unfortunate period, and whose investments have been so injudicious that no increase of duty can restore their losses?

Answer. I know but one only.

Question. Are not many of the factories which are now suffering and complaining founded on borrowed capital?

Answer. Most of the factories on an extensive scale are incorporated; and I think their stock has generally been paid in. Whether the stockholders borrowed the money paid in I cannot pretend to know.

Question. Can you say what number of companies have been incorporated in Massachusetts within the last four years, and the extent of their capital?

Answer. I cannot. In the woolen business I know of but two or three.

Question. Did you sign any petition to the last Congress on the subject of woolen goods; and if you did, was that petition for an increase of duty, or did it only pray for the security of the present duty by changing it from an ad valorem to a square yard duty?

Answer. I signed a petition last year, which will best speak for itself; but I suppose it prayed for a specific or square yard duty, as my opinion is that no other duty will be available to the manufacturers. The reason of this opinion is the difficulty, if not impossibility, of determining the quality of goods by appraisers. We did think the present duty sufficient, if collected; but the increase of duty on wool in this country, and the repeal of the British duties, destroyed to the manufacturers all the benefit of the tariff of 1824. The duty upon imported wool, by the tariff of 1824, was very injurious to manufacturers.

Question. Is it not a fact that small establishments, under the immediate care of the proprietors themselves, have generally done better business than incorporated or joint stock companies?

Answer. I cannot say it is, from my observation. The companies with large capitals, in many respects, have advantages over the small establishments, and are generally able to go into the market and do better.

Question. Do the Massachusetts manufacturers of coarse cloths and cassimeres feel the effect of competition?

Answer. They do, so as far as they are nearly able to supply the market; and if a small amount of the foreign article is thrown into market, making a surplus, the whole price is depressed, and our manufacturers lose largely, while the foreign manufacturer loses but little.

Question. Do purchasers generally prefer English goods, of the same quality and prices, to the American manufacture?

Answer. They do. I consider the prejudices more than 25 per cent. against the domestic article.

Question. What is the reason given by them for that preference; do they not complain of the inferiority of your dyes compared with the English colors?

Answer. No complaint is now made against our dyes, other than against the blues, by good judges. Our other dyes are as good or better than the English.

Question. Was the depression in the price of woolens in the years 1825 and 1826 in any great degree occasioned by excessive importations of the merchants in anticipation of the expected increase of price in cloths from the provisions of the tariff passed in 1824, but going into effect in 1825?

Answer. I cannot say that the depression arose from the cause suggested in the question.

Question. Of an equal quality of wool, at present prices in England and the United States, can the English manufacturer make a cheaper fabric than can be made in the United States; if so, how much cheaper?

Answer. The difference in the price of the fabric would be the difference of the price of wool, in my opinion, as I think we can manufacture it as cheap as they can.

Question. Are you acquainted with Josiah Pomeroy, of Pittsfield, Massachusetts; does he manufacture woolen goods, and where does he sell them?

Answer. I am acquainted with Josiah Pomeroy, of Pittsfield, Massachusetts, and know that he does manufacture woolen goods. The majority of his goods, as I am informed, is sold at West Point, as clothing for the cadets at the military school. I understand that the amount he sells there is about $6,000 annually, which he sells at $4 25 or $4 50 per yard. The same quality of goods are worth at New York or Boston about $2 75 per yard.

Question. In what sections of the country are your woolens generally consumed?

Answer. I should think that three-fourths of all the goods I manufacture are bought by the merchants and merchant tailors of Boston, and sold in that neighborhood. We sell a few in Philadelphia, and also a few in New York.

Question. Is the ad valorem duty on woolen goods evaded, and in what way?

Answer. I cannot answer.

Question. Will cloths well finished, and well baled or boxed, on arriving in New York or Boston, require to be brushed or finished over to give them a better appearance?

Answer. They do not require any brushing over. They will retain all their finish, and often are supposed by the voyage to assume a softer and finer feeling.

Question. Can you state the amount of your losses from the 1st of January, 1826, to the time of your stopping business; and what part of that loss, if any, is to be attributed to the closing of your business at that time?

Answer. We lost between those periods, or rather from 1st January to the present time, $30,000. None of that loss is to be attributed to the closing of our business. I know of many others who have sustained as great and even greater losses; but I do not know of any person in the woolen manufacture who has made anything within the same period. The cause of these losses I assign to be the low price of our cloths in the market. Five hundred dollars would cover all our bad debts.

Question. You say that you began to manufacture in the year 1809; have you been engaged in any other business, and what was it, during that time?

Answer. My whole time has been devoted to the manufacturing business, and to keeping my flocks of sheep.

Question. What proportion does your present property bear to what you were worth when you began business in 1809.

Answer. I have gained in property during that time, but I have made most of the gain by the rise in the value of real estate I had bought, and by my sheep. I believe that I am now worth double what I was when I began manufacturing; but I have made more from lands and sheep than from manufacturing during the whole time. I sold a share of my stock to my present partners, in 1825, at its par value, when, a short time afterward, it would not have sold for near as much.

Question. What is the relative weight between the scoured wool, as delivered for manufacture, and the product when finished in cloth?

Answer. To make broadcloth of thick felt, of the usual width of 7-4, I give out eighty pounds of scoured wool; this yields forty-four yards of finished cloth, which weighs fifty pounds with its listing. The cloth of thin felt requires seventy-five pounds of wool, which makes forty-four yards of cloth, and weighs from forty-four to forty-six pounds when finished. One hundred pounds of unwashed merino wool, as shorn unwashed from the sheep, usually loses, in the processes of washing and scouring, about fifty pounds. When washed on the sheep's back it loses about twenty-five pounds in the scouring.

Question. What other materials, except wool, do you use in manufacturing, and in what quantities?

Answer. In the manufacture of 46,084 yards of broadcloth we made use of the following articles, viz:

102,159 pounds wool.	
2,056 gallons of olive oil, at 100 cents	$2,056 00
8,050 pounds Castile soap, at 14 cents	1,127 00
58,450 pounds dye-wood, copperas, vitriol, &c., cost	2,403 75
4,705½ pounds Bengal indigo, at $2 40	11,293 20
9,163½ pounds woad, at 10 cents	916 35
82,425 pounds	17,796 30
31,740 pounds of foreign wool used.	
114,165 pounds of articles imported	

52,354 weight of cloth manufactured from the above foreign wool, and 70,419 pounds of American wool.

The witness here desired that his answer to the 26th interrogatory may be corrected so as to read "one-half," instead of "one-fourth," as stated in that answer, in relation to the duty imposed by the tariff of 1824 on imported wool.

TUESDAY, *January* 22, 1828.

William Phillips admitted and further examined:

Question. Where do you reside?

Answer. I reside in Wallkill, Orange county, New York.

Question. Are you now and have you lately been concerned in the manufacture of wool? And if yea, when, for how long a time, and in what capacity?

Answer. I am now and have been engaged in the manufacture of wool since 1810 or 1811. I began on a small scale, but increased the establishment from time to time since the late war. I own three-fourths and my brother one-fourth. I have the general superintendence. The son of my brother is engaged in the same character, to a more limited extent.

Question. What is the name of the establishment in which you are or have been concerned? Where is it situated; and is it an incorporated company or an individual interest?

Answer. We have not been incorporated. The factory is known as the "Phillipsburg Factory."

Question. What is the amount of the capital invested in the manufactory of which you speak?

Answer. We estimate the whole capital employed at $20,000. This estimate embraces the real estate, water privilege, buildings, and machinery. In addition to this, we estimate the active capital at $11,000.

Question. When was the manufactory first put into operation; or, if an incorporated company, under its present charter?

Answer. I have already said in the year 1810 or 1811.

Question. Has it continued in operation from the time it was started to the present time? If no, at what times and for what causes has it ceased its operations?

Answer. It has been continued in the manner referred to in my answer to the second interrogatory. The principal extension or enlargements were first made in 1815, and again in 1825, 1826, and 1827.

Question. What kinds of cloth do you generally manufacture?

Answer. We have made little or nothing else except broadcloth within the last three years.

Question. What quantity of wool is required to make one yard of each of the descriptions of cloth made at your factory; and what is the width, in the flannel, of each description of cloth?

Answer. It requires 2¾ pounds of the wool, when washed on the sheep, to make a yard of broadcloth, including the listing. When the cloth leaves the loom it is from 10 to 11½ quarters in width. When finished it is from six to seven quarters wide.

Question. What is, and has been for the last three years, the value per yard, at the factory, of each description of cloth so made?

Answer. We sell but little at the factory. In 1825 we sold, in New York, our fancy colors at from $2 25 to $2 75 per yard. The blues from $3 25 to $3 50. These were the prices at auction, and we considered them fair sales. In the spring of 1826 I sold some at auction for $2 25, when I stopped the sales. In the September following, some of the same kinds of cloths were again offered at auction, and brought only from $1 37 to $1 81 per yard. There was a loss that year from 75 to 100 cents on the yard of blue. In 1827 the blues sold from $2 25 to $2 50, and the fancy colors from $1 75 to $2, and these are the prices which they now command at auction.

Question. Are there different patents or descriptions of machinery for spinning wool? If yea, what patent or description is used in the factory of which you speak; and what patent or description is considered preferable?

Answer. We use the jenny for spinning. I am unable to say whether it is preferable to the Brewster, having never used the latter.

Question What officers, agents, clerks, and superintendents are used in the factory of which you speak; and at what wages or salaries to each?

Answer. I am the superintendent, together with my nephew. I charge nothing to the establishment for my services; but, in the estimate of the value of profit or loss of the establishment, I put them down at $600 or $700. No clerk or agent is employed.

Question. What number of hands is employed in the same factory? What are their descriptions—as men, women, boys, and girls—and what wages are paid for their services?

Answer. We usually employed twenty-five persons during the last summer, and I believe we have now twenty-six. Of these, eleven are men, at an average of $26 per month; two men, at $20 per month; four boys, at $7 per month; three women, at $7 per month; one man, at $30; two, at $20; and three others, at $18 per month—board included in all cases.

Question. What are the usual working hours of the hands in your factory?

Answer. In the summer we begin work at about sunrise, and continue until about sunset, allowing half an hour for breakfast, and from one hour to one and a half hour for dinner. In the winter we begin as soon as possible after light, and work until about 9 o'clock at night, allowing about half an hour for meals.

Question. Is there in your vicinity any machinery for the manufacture of wool now unemployed; and to what extent?

Answer. I believe that there are some establishments which have curtailed their business, but I do not know to what extent.

Question. Have you made any profits or sustained any losses by your establishment for each of the last three years?

Answer. I considered the business a fair one. In 1826 it was intolerably bad. In 1827 I suffered loss by the business, but it was better than in 1826, by reason that the price of wool was lower, and the fabric sold at nearly the same prices. My losses have not been from any bad debts. Should I continue business, at present prices of the raw material, and prices of the fabric, I must wholly fail.

Question. Has not real estate suffered a great deterioration in value, as well as every other species of property, within the last two, three, or four years?

Answer. I cannot say that it has in Orange county.

Question. What quantity of cloths have you usually manufactured in the year; and do you generally find ready sales at those prices which the articles command?

Answer. I will not pretend to state the quantity precisely; but I think, in 1825 and 1826, we made about 5,000 yards each year. We are now making at the rate of 10,000 or 11,000 yards per annum. The sales, at the prices which the articles commanded, were ready.

Question. Were not manufacturers of woolens generally doing a better business previous to 1824 than they have done since?

Answer. I considered the business fair, or profitable, in 1815. In 1816 it grew worse, and continued to decline until 1818. From this latter period until 1824 the variation was not considerable, and was generally during that time about in the same situation.

Question. Is it not a fact that small establishments, under the immediate care of the proprietors themselves, have generally done better business than incorporated or joint stock companies?

Answer. I cannot say that I know of any material success attending the one or the other.

Question. Do the New York manufacturers of coarse cloths and cassimeres feel the effect of mutual competition?

Answer. The domestic manufacture, as well as the importations, affect the price of the articles manufactured.

Question. Do purchasers generally prefer English goods, of the same quality and prices, to the American manufacture?

Answer. In the country I hear of no particular preference. In the cities the preference is given to imported cloths, as I believe, by the industry of foreigners endeavoring to excite prejudices against American manufactures.

Question. What is the reason given by them for that preference? Did they not complain of the inferiority of your dyes compared with the English colors?

Answer. I am not aware of any objection of this sort by the country people who wear the cloths. There are objections in the cities, proceeding from the same quarter that I have referred to in the last answer.

Question. Of an equal quality of wool, at present prices in England and the United States, can the English manufacturer make a cheaper fabric than can be made in the United States? If so, how much cheaper?

Answer. I cannot answer that question.

Question. Is the ad valorem duty on woolen goods evaded; and in what way?

Answer. I have no certain knowledge on this subject?

Question. Will cloths well finished, and well baled or boxed, on arriving in New York or Boston, require to be brushed or finished over to give them a better appearance?

Answer. They will not.

WEDNESDAY, *January* 23, 1828.

Abraham Marland, of Andover, Essex county, Massachusetts, admitted and further examined:

Question. Are you now and have you lately been concerned in the manufacture of wool? If yea, when, for how long a time, and in what capacity?

Answer. I am a manufacturer of wool, and in a small way; have been ever since 1808 or 1809, principally as sole proprietor of my own works, and on my own account.

Question. What is the name of the establishment in which you are or have been concerned; where is it situated; and is it an incorporated company or an individual interest?

Answer. It is an individual interest; and situated at Andover aforesaid. I have no particular name for my factory.

Question. What is the amount of capital invested in the manufactory of which you speak?

Answer. The capital which I have invested in this establishment amounts to $42,000, of which $11,000 are partly in real estate, in buildings and in machinery, the residue is active capital. The other part of the real estate, the water privilege, and some of the buildings, belong to another person, under whom I hold by a lease.

Question. Has your factory been in operation from the time it was first started to the present time; if no, at what times, and for what causes, has it ceased its operations?

Answer. It has been constantly in operation.

Question. What kinds of cloth do you usually manufacture?

Answer. Flannels altogether. In 1825 and 1826 I made a few green bockings, but none before or since of any consequence.

Question. What quantity of wool is required to make one yard of the cloth made at your factory; and what is the width of the flannel when finished?

Answer. It requires about 17 pounds of wool, as purchased, washed on the skin or on the sheep, to make 46 yards of the flannel, averaging all my qualities of cloth. My flannels are, four-fifths of them, three-fourths wide, and the residue one yard wide.

Question. What are, and have been for the last three years, the values per yard, at the factory, of the cloth so made?

Answer. We make very few sales at the factory, and have no market price for them there. Our sales are mostly made in Boston and New York. In 1825 the average of the sales made was at about $10 50 for the piece of 46 yards; in 1826 the average of the sales was $11 the piece of 46 yards; in these two years the qualities of my flannels were about the same. In 1827 the sales were made at an average of about $13 the piece of 46 yards; in this year I made more of the fine flannels, and more of the

different descriptions of flannel were a yard wide. A year ago last fall myself, with a number of the manufacturers of flannels at the east, concluded to try an experiment, and to satisfy the merchants that we could supply the country with flannels. We sent to New York, in one lot, upwards of 400 bales of flannels, averaging about 16 pieces, of 46 yards, in each bale. An auctioneer was employed, who sold them at auction as rapidly as could be done. These flannels were sold at some loss; but the effect evidently was what we intended, to discourage the importations of the next fall, and to make a better market for our own flannels. I now expect a reaction will be produced. I am already informed that large importations are to be made the next season, and I intend to reduce my business at least one-third the next year on that account.

Question. What proportion does the cost of labor bear to the cost of raw material in the manufacture of blankets?

Answer. Every pound of wool, on an average, can be manufactured into blankets at 6 cents per pound. In this calculation nothing is included but the labor; nothing is allowed for profit or use of machinery. I take the wool as purchased in the fleece, washed upon the sheep.

Question. If additional duties on coarse wools of Smyrna, Buenos Ayres, and Russia, of which blankets are made in Europe, were imposed, could the American manufacturer of blankets, at the present duties, enter into successful competition with the European manufacturer?

Answer. I should think not, because I cannot, at the present rates of duty and present prices of native wool suitable for the purpose, compete with the foreign manufacturer of blankets in our own market.

Question. What number of hands are employed in your factory; what are their descriptions—as men, women, boys, and girls—and what wages are paid for their services?

Answer. I believe I employ about 70 hands in my factory, beside myself. About 30 are men, who are paid wages which will average $1 each per day. About 14 or 15 are women, who are paid the average wages of from $2 25 to $2 50 per week; the residue are boys and girls, from 8 to 12 years of age, who are paid the average wages of 25 cents per day, except about ten apprentices, who are paid about $130 per year. The above prices, in each instance, include board. The above includes my hired help of every kind. Myself and two sons do all the superintendence ourselves.

Question. What are the usual working hours of the hands in your factory?

Answer. In the summer time we work 12 hours over and above the time allowed for meals, and we fall but little short of that in the winter.

Question. What quantity of flannels and baizes have you usually manufactured in the year; and do you generally find ready sales at those prices which the articles command?

Answer. In 1825 I made about 2,200 pieces, of 46 yards in a piece, and the sales were dull. In 1826 I made about the same quantity, and the sales were also dull. In 1827 I made about 3,200 pieces of the same length, and the sales were readier and better.

Question. Were not manufacturers generally doing a better business previous to 1824 than they have done since?

Answer. I think the business previous to 1824 was better than it was in 1825 and 1826. My business certainly was.

Question. Are there not many manufacturers whose investments have been so injudicious that no increase of duty can restore their loss?

Answer. I cannot say that investments have been so injudiciously made; but I know the large establishments have been doing a very bad business, and an increase of duty would help them; and I think it would be wise to lay a duty which would amount to a prohibition, and give the market to the American manufacturer; but I do not think that such a duty would restore all these losses, as some are entirely ruined and out of the business. I think it would restore those who are yet in business.

Question. Are not many of the factories which are now suffering and complaining founded on borrowed capital?

Answer. I am unable to answer the question.

Question. Did you sign any petition to the last Congress on the subject of woolen goods; and if you did, was that petition for an increase of duty, or did it only pray for the *security* of the *present* duty, by changing it from an *ad valorem* to a *square yard* duty?

Answer. I think I did sign a petition to the last Congress, praying a change of the duty from an ad valorem to a square yard duty; and I believe that the petition also prayed an increase of the duty, as well as to secure the collection of the present duty.

Question. Is it not a fact that small establishments, under the immediate care of the proprietors themselves, have generally done better business than incorporated or joint stock companies?

Answer. I should think the small companies, judiciously conducted, would be likely to do better business than the large companies; but I know of none who are making money.

Question. Do the Massachusetts manufacturers of coarse cloths and cassimeres feel the effect of mutual competition?

Answer. I do not think that domestic competition is felt among the Massachusetts manufacturers. When there were very few manufacturers in this country, the very few goods taken into the market from our factories did not reduce the price of the foreign goods, and, consequently, our articles sold better than they now do. The effect of an extension of our manufactories has been to reduce the prices both of the foreign and domestic article, and it is between them the competition exists.

Question. Supposing the raw material remains at the present prices, can the American woolen manufacturer compete with the foreign manufacturer under the present rate of duties?

Answer. He cannot.

Question. Do not the fluctuations in the price of woolen goods, arising from foreign importations, add greatly to the embarrassment of the American manufacturer?

Answer. Very much, indeed.

Question. Would not a sufficient protection enable the American manufacturer to supply our own markets to the full demand, at steady prices and at the lowest rate?

Answer. There is no doubt of it in my mind.

Question. Do you know of any factory, carried on either by a single individual owner, or by joint partnership, or by an incorporated company, making a profitable business?

Answer. I do not know a single one which has been doing a profitable business since 1824, taking the whole time to the present.

Question. Taking the year 1827, do you know of any woolen manufacturers that have made a profit?

Answer. I do think the flannel manufacturers made something in 1827, but I do not think any of the other woolen manufacturers have in that year made anything. On the contrary, I believe they all lost money.

Question. Have Messrs. Johnson & Sewall a flannel or cassimere factory at Andover, Massachusetts; and do they manufacture extensively?

Answer. They have a cassimere factory, but not a very extensive one.

Question. Have they never told you they wished no further protection on woolen goods, and expressed to you the opinion that foreign goods cannot interfere with them, and that they could now sell more goods than they make?

Answer. I think I have heard Mr. Johnson say so. I have also heard him say he wished his factory had been burned before it had fallen into his hands, as he had lost money by it. At the time he said he wished no further protection on woolen goods he was, as he is now, an importer of British goods of all kinds. They have not lately told me they could sell their goods as fast as they could make them.

Question. What is the highest price you have paid for weaving a piece of flannel, and what do you pay now?

Answer. I have paid as high as $3 for weaving a piece of flannel for which I now pay $1. If I hire females to weave, I pay 83 cents for what I pay men $1.

Question. What did it cost you to make the flannels, per piece, which averaged $13 last fall?

Answer. I cannot tell what these flannels cost me by the piece, because my accounts have not been made up, but I think I made something on them.

Question. Do you not get more for your flannel now than when you paid a higher price for wool, and a higher price for weaving?

Answer. There have been times when I did not get as much for cloths, when I was paying higher prices for wool and weaving than I now do, but I then sold at a great loss.

Question. If wool be the same price here and in England, can the American manufacturer make the fabric as cheap as it is made in England?

Answer. I think we can manufacture wool in this country about as cheap as they can in England, wool being at the same price.

Question. Do you get as much for your goods now as when the duties were lower; and what were the duties when you made most by your factory?

Answer. I do not get so much for my goods now as when the duties were lower, but we got the highest prices for our goods when the duties were highest, during the war.

Question. Did not the foreign woolen fabric bring a much higher price in the market of this country when our duties were lower than they now are?

Answer. It did.

FRIDAY, *January* 25, 1828.

William W. Young, of Brandywine Hundred, Newcastle county, State of Delaware, admitted and further examined:

Question. Are you now and have you lately been engaged in manufactures of wool? If yea, in what branch, for how long a time, and at what place?

Answer. I am now engaged in the manufacture of wool and cotton at the place of my residence, and have been so engaged since the year 1813. The cotton manufactory was commenced in 1821; before that time we manufactured wool alone.

Question. Is the establishment for the manufacture of wool in which you are interested an incorporated company? If yea, by what name? If not incorporated, is it a copartnership or an individual interest?

Answer. At present it is an incorporated company. The charter was granted in 1825. Before that time it was a copartnership interest. The reasons for obtaining a charter were that William Young, the sole proprietor, wished to divide his interest in the establishment, being the greatest share of his estate, among his heirs, and that he could do it better in stock than in the property as it before existed; and because, also, if the company was not incorporated the necessity would arise of stopping business to settle the estate in case of the death of either partner; whereas by the incorporation this necessity would be obviated. The establishment is now entirely owned by the Young family, and the proprietors have not changed by the incorporation.

Question. What is the whole amount of capital actually invested in the woolen factory of which you speak? What part of that capital is invested in real estate, buildings, and machinery, and what part is active capital?

Answer. The whole capital invested in the woolen manufactory is rising $100,000. Of this about $20,000 at the present time is in raw material and manufactured articles. Upwards of $21,000 is vested in machinery alone. The residue is in real estate, mill-gearing, and buildings. Of this residue as much as $25,000 is in dwelling-houses and other buildings for the workmen of the factory and hands connected with it.

Question. Has the factory you speak of been in continued operation since it was first erected?

Answer. It has been in continued operation since 1813, with one exception of about two months in the years 1815 and 1816, during the discussion of the tariff bill of that time before Congress. During these two months we did not work to any extent, but we discharged no hands.

Question. What kinds of fabrics do you produce, and what has been the whole quantity of fabrics made, on the average, for the last three years?

Answer. We confine ourselves principally to the manufacture of cassimeres and mostly to blue cassimeres. We sometimes make a few pieces of broadcloth to accommodate friends, but not as a business. We also work up our coarse wools into satinets. These we consider deviations from our regular business. I cannot tell the whole quantity of cloths made in each year for the last three years, but we estimate that every pound of clean wool will make one yard of double milled cassimeres, and lighter goods in the same proportion. For the last three years we have been every year regularly curtailing our business as far as practicable, in consequence of the continued diminutions in the prices of cloth.

Question. What has been the average market prices of the several fabrics so made in the markets where you have sold for the last three years?

Answer. I can only speak with reference to our principal manufacture, which is blue cassimere. The

average price of these in 1825 was about $1 50 per yard, as well as I can now recollect. In 1826 the prices were not more than $1 30, on an average, for the same quality. In 1827 the average was about $1 25 per yard for the same quality of cloths. The sales were more brisk in the fall than in 1826 or in the spring of 1827, but our prices for that article were no better. The coarse cloths, called satinets, which we manufactured also, but to no very great extent, sold in the fall of 1827 at a fair price compared with their prices in 1825 and in 1826; the prices for which years I do not now recollect distinctly. The reason of the better sales in 1827 I take to be that the very low prices of these articles in 1825 and 1826 caused a depression of their manufacture to a considerable extent, and therefore the market in the early part of 1827 was not crowded, but these are an article soon produced, and before the close of the season the large supply in the market again brought down the price; this, I think, was entirely the effect of domestic competition.

Question. What kind or description of machinery is used in this factory, and is it propelled by water or steam power?

Answer. We have used the jenny and the Brewster, but in 1826 and 1827 we laid aside the Brewster, because it was out of order, and used the jenny alone. I should prefer the Brewster for spinning warp and the jenny for spinning woof. All our other machinery is of the usual and most approved descriptions, and the whole is moved by water-power.

Question. What is the whole number of persons employed in the business of this factory; and how many are officers or agents; and at what wages or salaries, and how many are hands; what are their relative classes, and what their average wages?

Answer. The smallest number we have ever employed since the business has been fairly in operation has been fifty; that is the number now engaged. We employ no officer or agents. My father, Mr. William Young, attends to the purchases, for which he receives nothing, and also to the sales, upon which, when he makes the sales himself, he receives five per cent.; but when the sales are made at auction he receives nothing; and it is at auction most of our sales are effected. I attend to the internal concerns of the establishment in person, and am allowed $800 for my services. We have a clerk, who receives about one dollar per day for his services in both establishments. There are no other persons employed except laborers; of those employed in the factory twelve are men, who receive from five dollars to seven dollars per week; but there is only one who receives seven dollars, and the average does not exceed six dollars. One of those who receives six dollars per week has, in addition to that price, a house furnished him. There are males who receive from sixty-two and a half cents to three dollars per week; and in this classification are embraced all the male hands under twenty-one years of age. The females receive from fifty cents to three dollars and fifty cents per week, and in this are included all the females in the establishment. I cannot at this time distinguish the numbers or ages of the males and females. There are some females who are widows, and have been in the establishment since 1793, and are allowed a house free of rent. We have always extended this privilege to the widows of hands who have been a long time employed, and all are compensated who meet with injuries in the factory.

Question. What are the usual working hours of the hands in your factory?

Answer. We expect to get sixty-eight hours per week the year round, and this is all we insist on.

Question. Are additional duties, in your opinion, necessary upon imported woolen goods, to enable the American manufacturers of woolen goods to compete with the foreign in our markets?

Answer. My opinion is, that additional duties are required, and that the duty must be changed from an ad valorem to a specific square yard duty, and that no other mode of imposing the duty will be effectual. So well convinced am I of the necessity of this change that I will not buy a single pound of wool until this question is decided; and I will not purchase at all unless some material change takes place in the market. I think it also a national object, that a proportionate protection should be extended to wool; but this duty, in my opinion, should be moderately increased. Wool below ten cents ought to be admitted under a mere nominal duty. The duty on woolen goods may be immediate and considerable, without danger to other interests. With capital, I can immediately erect buildings and machinery; but it requires considerable time to procure flocks of merino and other sheep.

Question. Were the manufacturers of woolens in this country doing a better business previous to the year 1824 than they have done since?

Answer. I have considered that the tariff of 1824 placed the woolen manufacturers in a worse situation than they were before its passage. My reasons for this belief are founded upon the alterations in the British duties on wool, and upon the want of sufficient protection at home. I do not think that the tariff of 1824 was sufficient, if there had been no change in the British duties. The duty should have been a specific square yard duty, and the duty imposed on imported wool by the same act rendered the protection of the manufacturer insufficient. I have lost more since the tariff of 1824 than I lost in the same space of time before that act.

Question. Does the importation of foreign woolen cloths produce the present depressed price of those cloths in our markets; or is the depression owing in part to domestic competition?

Answer. The depressed price of cloths in the American market is to be attributed as well to the foreign importation as to domestic competition.

Question. Do manufactories with moderate capitals, and under the immediate superintendence of the proprietors, do better than incorporated companies with large capitals, managed by officers and agents?

Answer. I am unable to speak positively on this subject, but suppose that this, like every other business, will prosper most when managed by the proprietor.

Question. Do the manufacturers of woolens in this country feel the effect of domestic competition?

Answer. They have already felt it in the satinet manufacture; as in this article we have no foreign competition. The low price of satinets is wholly owing to domestic competition. I do not know any other branch of the woolen manufacture in which domestic competition is felt to any considerable extent, except so far as is referred to in my answer to the 27th interrogatory.

Question. Are the fluctuations in the prices of woolen goods occasioned by foreign importations; and do they add to the embarrassments of the domestic manufacturer?

Answer. There are great fluctuations from that cause as regards certain articles, and they do add to the embarrassments of the manufacturer.

Question. You state that in 1825 you foresaw an approaching depression and prepared against it; what were the evidences of the approach of the evils you foresaw?

Answer. It was the decline of my sales, the letters from my agents, and some information received from a correspondent in Europe.

Question. Have you made any dividends on your capital invested in your establishment, or have you lost money by the manufacture of wool?

Answer. We commenced business in 1813 and continued it until 1825, under the firm of William Young, Son & Co. A dissolution of the firm then took place, when I gave up all my share in the business upon being discharged from all responsibility. What I had before received did not amount to fair wages for my services in the factory, and I had been employed the whole time. On the close of the business, the other partners did not receive two per cent. upon the capital they had invested, and there were not $500 lost by bad debts. Since 1825 the woolen business had been a continual drain upon our mental and pecuniary resources. The losses in bad debts since 1825 have been very small, but since that time the business has been a losing one; and without resources other than the woolen manufacture to rely upon, we could not have sustained ourselves.

Question. Did you do a good business from 1818 to 1824? If you did, at what time was your business most profitable?

Answer. I cannot say. I have not here the means of determining.

Question. When did the elder copartner or proprietor of the establishment in which you are interested commence business?

Answer. In 1813.

Question. Has there been a general depression in the price of property or in the value of labor within the last three or four years; if so, what is the cause of it?

Answer. Landed property has been nearly stationary during the time referred to, but may have been improving a little in my vicinity. I have paid about the same prices for labor for the last three or four years, except in the factories, where we have reduced them in a small degree.

Question. Do you pay the same prices for weaving now that you formerly did?

Answer. We do not pay as much now for weaving as formerly, as the power loom has been introduced, and we now employ women instead of men to do the work. We now pay for weaving cassimere from six to ten cents per yard, dependent upon the descriptions and qualities of the cloth.

Question. Is labor as cheap here as in England; and can the fabric be manufactured here as cheap as there, except as to the cost of the wool?

Answer. I think it can. I believe if I can have the raw material at the same price, I can manufacture cassimere as cheap as it can be done in England. To the foregoing I will add, that our village consists of a population of about 300 souls, more or less; and since the establishment of our manufactory the moral and pecuniary condition of its inhabitants have materially improved.

William R. Dickinson, of Steubenville, Ohio, admitted and further examined:

Question. Are you now and have you lately been engaged in the manufacture of wool; if yea, in what branch, for how long a time, and at what place?

Answer. I am engaged exclusively in the business of manufacturing wool, and have been since May, 1819, at my now place of residence.

Question. What is the whole amount of capital actually invested in the woolen factory of which you speak; and what part of that capital is invested in real estate, buildings, and machinery, and what part is active capital?

Answer. We rate our whole capital vested in real estate, buildings, and machinery, at $100,000. It has cost us more than that sum, but we now give it that valuation. I am not perfectly conversant with the relative cost of the different erections, but I should judge from my best knowledge that, of the $100,000 above mentioned, $50,000 are in machinery. I should value the active capital employed at from $40,000 to $50,000.

Question. What kinds of fabrics do you produce, and what has been the whole quantity made, on the average, for the last three years?

Answer. We manufacture broadcloths altogether, and which we estimate as being worth from $2 50 to $10 per yard. These cloths are, when finished, from six to seven quarters wide. We manufacture a few flannels for our store from the common wool. The principal part of our cloths is from $2 50 to $4 per yard, at our trading prices. We do not, perhaps, make more than 100 yards of the $10 cloth in a year. Our late determination has been to make mostly coarser cloths. Our annual yield of broadcloths will be from about 13,500 to 15,000 yards. We work about 3,000 pounds of coarse wool into flannels annually.

Question. What has been the average market prices of the several fabrics so made in the markets where you have sold for the last three years?

Answer. The average prices for the cloths sold at our store are the following: For picklock, $10; prime, $7; No. 1, $5; No. 2, $4; No. 3, $3 50; No. 4, $3; and No. 5, $2 50. On cash sales made at the store we deduct five per cent. from these prices. The prices at which our cloths sold in Baltimore and Philadelphia were, in 1825, from $1 to $10; in 1826, from $1 30 to $13 50; and in 1827, from $1 10 to $4 35.

Question. Are additional duties, in your opinion, necessary upon imported woolen goods to enable the American manufacturers of woolens to compete with the foreign in our own markets?

Answer. Yes.

Question. Were the manufacturers of woolens in this country doing a better business previous to the year 1824 than they have done since?

Answer. I believe they were.

Question. Does the importation of foreign woolen cloths produce the present depressed price of those cloths in our markets, or is the depression owing in part to domestic competition?

Answer. Both causes operate to produce the effect.

Question. Do manufactories with moderate capitals, and under the immediate superintendence of the proprietor, usually do better than incorporated companies, with large capitals, managed by officers and agents?

Answer. I cannot speak understandingly upon the subject, but my opinion is that moderate capitals, under the management of the proprietors, do succeed the best.

Question. Do the woolen manufacturers of this country feel the effects of domestic competition?

Answer. Domestic competition is a mere drop; but as the price of an article will always be regulated by demand and supply, and inasmuch as our market is now flooded with foreign woolen goods, the domestic woolen manufacturers are certainly adding every day to the quantity, and assist in reducing prices.

Question. Are there fluctuations in the prices of woolen goods occasioned by foreign importations; and do they add to the embarrassments of the domestic manufacturer?

Answer. There are fluctuations arising from the importations of woolen goods, and these add greatly to the embarrassment of domestic manufacturers.

Question. Did you do a good business from 1818 to 1824? If you did, at what time was your business most profitable?

Answer. We have never found our manufacturing profitable, although we have been reducing the price of the raw material and of labor, and introducing improved machinery every year. I have not the means of determining at what period of time it was the least unprofitable.

Question. Has there been a general depression in the price of property or the value of labor within the last three or four years? If so, what is the cause of it?

Answer. There has been a general depression in the value of property in my section of country; and there has also been a general depression in the price of labor in the same section within the last four years. I ascribe these depressions to the flood of foreign goods imported into the country which might have been manufactured in it.

Question. Do you pay the same prices for weaving now that you did formerly?

Answer. We do not pay, in my opinion, one-half as much as we paid four years ago.

Question. Is labor as cheap here as in England; and can the fabric be manufactured here as cheap as there, except as to the cost of the wool?

Answer. I do not know the prices of labor in England.

Question. Have you made any dividends on your capital invested in your establishment, or have you lost money by the manufacture of wool?

Answer. By examining the papers referred to in the memorial of my partner, Mr. Wells, and sworn to by our bookkeeper, whose statements I believe to be true, it will be found that the actual cost of those goods amounts to $47,695 02
That the net proceeds amount to..... 39,871 48

Showing a loss of 7,823 54

Their different qualities, their relative actual cost and sales, without any deductions for commissions, in the Baltimore and Philadelphia markets, are shown in the following table, viz:

Average cost.	Sold for in 1825, from—	Sold for in 1826, from—	Sold for in 1827, from—
Picklock, $6 80.....	$10 00 to $3 50	$13 50 to $3 50	(None sold.)
Prime, 5 70.....	10 00 to 3 50	10 00 to 3 87	$4 35 to $2 50
No. 1, 4 50.....	6 00 to 2 37	6 00 to 2 50	4 35 to 2 50
No. 2, 3 30.....	4 75 to 2 55	5 00 to 2 25	3 87 to 2 00
No. 3, 2 80.....	3 50 to 1 25	3 50 to 1 87	2 62 to 1 85
No. 4, 2 50.....	3 50 to 1 20	3 00 to 2 00	2 50 to 1 95
No. 5, 2 30.....	3 50 to 2 00	3 00 to 1 12	2 25 to 1 25
Nos. 6 & 7, 2 00.....	2 50 to 1 00	2 50 to 1 30	1 80 to 1 10

I cannot withhold the fact that many of these cloths were very inferior goods, being old and badly manufactured in all respects. Those which we are now making are not only vastly superior, but, owing to our retrenchments and great improvements in machinery, (being the latest and most approved,) will be fabricated and offered upon much better terms hereafter should we continue our operations. Again: we have certainly paid too much commissions, and we shall regulate that matter better for the time to come. We have still further accounts to receive of sales in 1827, which, I know, will exhibit further losses in our eastern sales. They will amount, probably, upon the woolen manufactory for the last three years, (without any allowance for the services of Mr. Wells and myself,) to at least $8,000. To countervail this, however, we have found our flocks of merino sheep profitable until within the last year; and we have an extensive, well-assorted retail store, where we sell and barter goods to the amount of $30,000 or $40,000 per annum.

Question. What number of agents, clerks, superintendents, and ordinary hands do you employ in your factory? What are their classes, as men, boys, women, and girls? What are the average wages paid, including board; and what are the regulations, moral and otherwise, of the hands?

Answer. We employ somewhat more than 100 hands, chiefly females, all of whom find themselves. There are about 20 boys, from ten to fourteen years old. We have a foreman in each department. To the latter we pay from eighteen to twenty-eight dollars per month; to the females, from five to seven dollars per month; and to the boys about four dollars per month. We have a clerk employed, to whom we give $300 per annum, and a manager, who superintends all, (under the direction of my partner, Mr. Wells,) at a salary of $500 per annum. To common work hands we pay from twelve to fourteen dollars per month. It is made the duty of the boys to attend Sunday school, otherwise to be discharged; and the strictest attention is paid to the order, morals, and general conduct of every person about the establishment.

Question. Do you use water or steam power to move the machinery of your factory? If steam, what are the advantages which induce you to give it a preference?

Answer. We employ steam. There are various opinions on this subject. My partner, Mr. Wells, who is a practical man, prefers the steam power, all things considered, after an experiment of twelve or fourteen years; and I believe that we should continue to employ it, even if we now had a good stream at our door. We use it for various purposes. We warm our establishment by steam; and we find it particularly useful in giving the last finish to our finest fabrics, whilst under the operation of the brush. Our hills are full of the best coal, which we can have delivered at our door for from 3½ to 4 cents per bushel; and by the employment of steam we obviate the difficulties incident to cold, freezing weather, as well as to freshets.

Abraham Schenck, of Matteawan, Dutchess county, State of New York, admitted and further examined:

Question. Are you now and have you lately been engaged in manufactures of wool? If yea, in what branch, for how long a time, and at what place?

Answer. I am engaged in the manufacture of wool, and have been since 1823, though our company was not incorporated and did very little business until 1824, when we obtained an act of incorporation, by the name of the "Glenham Company." During the same year we filled our factory with machinery, and began business upon a more extended scale. In 1825 we made other extensive additions to our buildings, and have since gone on, as fast as convenient, to fill up with machinery, though our buildings are not yet full.

Question. What is the whole amount of capital actually invested in the woolen factory of which you speak; and what part of that capital is invested in real estate, buildings, and machinery; and what part is active capital?

Answer. The capital invested on the 3d June last in the factory site, buildings, machinery, and necessary tools, was $91,531. I cannot say how much of this sum is in buildings and real estate, and how much is in machinery and tools. At the same time, our capital invested in cloth, yarn, wool, dye-stuffs, and other materials on hand, was $43,383 98. These statements are made from data, now in my possession, of actual estimates made at that time.

Question. What kinds of fabrics do you produce, and what has been the whole quantity made on the average for the last three years?

Answer. I can only answer for one year. Between June 3, 1826, and June 3, 1827, we made 30,640 yards of broadcloths, of an average width of full six quarters when finished. The fine cloths we make are seven quarters wide, but there are few of them. This quantity was greater than that made by us in the previous year, but how much greater I cannot say.

Question. What has been the average market price of the several fabrics so made, in the markets where you have sold, for the last three years?

Answer. We sell very few cloths at our factory; nearly all are sold in the New York market. In 1825 and 1827 they bore in that market the following comparative prices, viz: In 1825, at $2 50, $3 25, $4, and $5. In 1827 cloths of the same quality sold at $1 50, $2, $2 50, and $3 50.

Question. Has there been a general depression in the price of property or the value of labor within the last three or four years; and if so, what is the cause of it?

Answer. As far as my information extends, the price of labor in my country has fallen within four years last past; and my impression also is, that the general value of property has depreciated within the same time. The reason I would assign is the depreciation in value of the surplus products of that section of country, of which wool is one, which has heretofore sustained the population.

Question. Have you made any dividends on the capital invested in your establishment?

Answer. We have never made any dividends upon our stock; but from June 3, 1826, to June 3, 1827, we actually lost, from the principal of the capital invested, $5,501 93, which has been assessed upon the stockholders in proportion to their respective shares, and has been paid in to supply the deficiency thus created in the capital. Between June 3, 1825, and June 3, 1826, we lost, in the same way, $1,795. This sum, with the loss of the following year, was also assessed upon the stockholders at the same time with that loss, and was paid in July, 1827. These losses have been sustained, exclusive of any allowance to myself as general superintendent of the factory, which has occupied a large share of my time, and without any allowance, either by way of commissions or otherwise to my brother, Peter H. Schenck, who is a stockholder, and who has made the principal purchases of materials and most of the sales of our cloths.

Question. Have you adopted the most approved machinery in use in Europe and the United States?

Answer. We have, and some I think better than any heretofore used.

Question. Has any of the machinery added to your factory, or have any of the additional buildings erected since 1824 been paid for out of the earnings of the factory?

Answer. No; but all these expenditures have been paid for by calls upon the stockholders.

Question. Can you give the committee an accurate statement of the cost to your company of a single piece, of any quality, of your broadcloths in the years 1825–'26, and also in 1826–'27, and the prices at which that piece of cloth, in each of those years, sold in the New York market?

Answer. I have not the documents with me to answer this question accurately, but can state that broadcloths are now made at a much less expense of labor than in 1825, by the introduction of a variety of improved and labor-saving machinery, amongst which may be named the "dressing machine" and the "broad power loom," of American invention. The quality, style, and finish of the cloths are vastly improved since that period. The value of cloths the last year, ending the 3d June, 1827, appears by our books to have been: for grade No. 4, $1 50 per yard; No. 3, $2; No. 2, $2 50; No. 1, $3 50. Cloths of the same grades or numbers, as before stated, sold in the New York market at $2 50, $3 25, $4, and $5, in the year ending June 3, 1825.

Question. Have you not also been extensively engaged in the manufacture of machinery? If so, is that manufactory carried on by the same company and the same stock as the woolen factory?

Answer. We are extensively engaged in the manufacture of machinery. We made between $30,000 and $40,000 worth in the year ending the 3d June last. It was principally cotton and woolen machinery. The same stockholders, with one or two exceptions, own the woolen manufactory and the machinery manufactory, but they are distinct establishments, and under different acts of incorporation. The capital of this latter is totally independent of that which I stated as belonging to the woolen establishment.

Question. Has the manufacture of machinery been also a losing concern?

Answer. No; but affording a very small profit.

Question. Did you or the company at any time, and when, sell to Mr. Hone, of the city of New York, a number of shares in your capital stock; and if so, was the price given above or below the par value; and how much?

Answer. Messrs. John Hone and Philip Hone joined with us in forming the "Glenham Company."

Question. Is Mr. Hone now a proprietor in the capital stock?

Answer. Yes; John Hone and Philip Hone.

Question. Have you had any conversation with Mr. Hone, at any time within the last twelve months, on the subject of increasing the duties on foreign goods? If you have, be pleased to state whether he has not expressed his entire approbation with the present duties, or declared his willingness to acquiesce in the present duties? Or what did he say on these subjects?

Answer. I have had conversations with both gentlemen relative to the present rate of duties, and my impressions have always been that they are in favor of further protection.

Question. Were the prices at which you sold your goods during the last fall better, and the sales more ready, than in 1825?

Answer. The prices were not better last fall than they were in 1826. I do not know that the sales have been more ready.

SATURDAY, *January* 26, 1828.

James Wolcott, jr., of Southbridge, State of Massachusetts, admitted and further examined:

Question. Are you now and have you lately been engaged in the manufacture of wool? If yea, in what branch, for how long a time, and at what place?

Answer. I am now and have been so engaged for twelve years at Southbridge; and for the last six years have been engaged altogether in the making of broadcloths.

Question. Is the establishment for the manufacture of wool, in which you are interested, an incorporated company? If yea, by what name? If not incorporated, is it a copartnership or an individual interest?

Answer. It is now an incorporated company, and has been so for about seven years, under the name of the "Wolcott Woolen Manufacturing Company." It is now conducted by an agent who has a general superintendence over the whole concern, and this agent receives $1,200 per annum. We have an accountant who receives $700 per year.

Question. What is the whole amount of capital actually invested in the woolen factory of which you speak; what part of that capital is invested in real estate, buildings, and machinery; and what part is active capital?

Answer. The stock generally will not sell at more than $50 for $100 paid. The whole amount of the capital is $126,000, all of which is absorbed in the real estate, buildings, and machinery; of this there are about 150 acres with a water-power on it. The machinery cost from $30,000 to $40,000; we have no active capital, but we borrow money on which we pay interest.

Question. Has the factory you speak of been in continued operation since it was erected?

Answer. The factory has at no time entirely suspended business.

Question. What kinds of fabrics do you produce; and what has been the whole quantity of fabrics, on the average, for the last three years?

Answer. We make broadcloths only, and the number of yards produced in 1826 was 30,995, of which we sold 25,454 yards, netting us $58,774 18, the average per yard $2 30½. From the 1st of January to July 31, 1827, seven months, we sold 12,534 yards, which netted us $26,553 95, the average per yard being $2 12. The greater part of these cloths were indigo blues. The qualities of the fabrics and proportion of costly colors were about the same in the respective sales.

Question. What quantity of wool, washed on the sheep's back, is required to make one yard of the cloth made at your factory, and what is its width when finished?

Answer. About two pounds six ounces, as washed on the sheep's back; when well washed on the sheep's back, I have found this nearly correct. The cloth we make is six and a half quarters wide.

Question. What number of hands are employed in the same factory; what are their descriptions—as men, women, boys, and girls?

Answer. The number of persons employed at the factory is 121; of these 71 are men, 38 young women grown, and 12 children. The average wages of the men is 75 cents per day. That of the young women, 40 cents. The children, 25 cents per day. They all find themselves in board, &c.

Question. Were not the manufacturers of wool generally doing a better business previous to 1824 than they have done since?

Answer. Our business has been worse since 1824, except in 1825, as woolen goods have fallen very much in price, say from 25 to 33⅓ per cent.

Question. Can you say what number of companies have been incorporated in Massachusetts within the last three years, and the extent of their capital?

Answer. I cannot tell.

Question. Of an equal quality of wool at present prices in England and the United States, can the English manufacturer make a cheaper fabric than can be made in the United States?

Answer. We can do the mere labor of the manufacture as cheap as it is done in England.

Question. Can you state the loss or gain of your establishment for the years 1825, 1826, and 1827?

Answer. I can state our loss for 1826, which was an aggregate amount of $23,095 31, from which deduct $500 for bad debts, &c., not properly belonging to the manufacturing loss. This loss was exclusive of interest on capital, in machinery, real estate, and buildings, but not exclusive of the borrowed active capital. In 1827 and 1828 we still have found it a losing business, and that no economy can sustain it. The business will not pay its expense, exclusive of interest on the capital.

Jonas B. Brown, of Boston, Massachusetts, admitted and further examined:

Question. Are you now and have you lately been engaged in manufactures of wool? If yea, in what branch, for how long a time, and at what place?

Answer. I have been engaged in the manufacture of broadcloths since 1821 at Millbury, and am now engaged in the business.

Question. Is the establishment for the manufacture of wool, in which you are interested, an incorporated company? If yea, by what name? If not incorporated, is it a copartnership or an individual interest?

Answer. It is, by the name of the "Goodell Manufacturing Company."

Question. What is the whole amount of capital actually invested in the woolen factory of which you speak; what part of that capital is invested in real estate, buildings, and machinery; and what part is active capital?

Answer. The amount of capital invested in real estate and machinery is $80,460 77; about $30,000 of this amount is machinery, and the remainder in real estate and buildings; besides the above, we employ more or less of active capital, ranging not below thirty thousand nor above fifty thousand dollars.

Question. Has the factory you speak of been in continued operation since it was first erected?

Answer. It has been in continued operation, but we have not constantly run all our machinery.

Question. What kinds of fabrics do you produce; and what has been the whole quantity of fabrics, on the average, for the last three years?

Answer. In 1827 we made 58,903 yards of broadcloth. In 1826 we made about 42,000; and in 1825 about 31,000. In 1825 we made about 12,000 yards of satinets. In 1826 and 1827 we did not make satinets, because we found it a losing business, owing to domestic and foreign competition.

Question. What quantity of wool, washed on the sheep's back, is required to make one yard of the cloth made at your factory, and what is its width when finished?

Answer. From two and a quarter to two and a half pounds. The cloth is over six quarters wide.

Question. What are, and what have been for the last three years, the values per yard, at the factory, of the cloth so made?

Answer. We make several qualities of cloth. In 1825 about three-fourths of the quantities we made sold at from $2 25 to $3 25. In 1826, at from $1 75 to $2 50. In 1827 the same colors and qualities sold at from $1 75 to $2 50. About one-fourth of the cloth we made was of much finer quality, and the finest brought, in 1825, $6; in 1826, $5; and in 1827, $5.

Question. What number of officers, clerks, and superintendents are employed in the factory of which you speak, and what wages or salaries to each?

Answer. We have one agent as a general superintendent, whose wages are $1,000 per annum.

Question. What number of hands is employed in the same factory; what are their descriptions—as men, women, boys, and girls?

Answer. We give direct employment to 150 persons. Of these, 72 are men; 53 are boys above 16 years, and 25 are under 16 years of age. We employ no children except boys.

Question. Were not manufacturers of wool generally doing a better business previous to 1824 than they have done since?

Answer. I did better from 1821 to 1824 than I have done since.

Question. Can you say what number of companies have been incorporated in Massachusetts within the last three years, and the extent of their capital?

Answer. I think there have been some incorporated since that time, but cannot say how many.

Question. Was the depression in price of woolens in the year 1826 in any great degree occasioned by excessive importations of the merchants in anticipation of the expected increase of price in cloths from the provisions of the tariff of 1824?

Answer. There was no depression of price in 1825. I do not think the depression in 1826 was owing to excessive importations in anticipation of higher prices from the provisions of the tariff of 1824, but that it was partly owing to the revulsion of trade in Europe, and consequent large importation into the United States, added to our increased supply from our home manufacturers.

Question. Of an equal quality of wool at the present prices in England and the United States, can the English manufacturer make a cheaper fabric than can be made in the United States?

Answer. I cannot state.

Mr. Joshua Clapp, of Boston, Massachusetts, admitted and further examined:

Question. Are you now and have you for some time past been engaged in the manufacture of wool, and at what place or places?

Answer. I have a woolen factory at Litchfield, in Connecticut, which I rented in November, 1821, for five years. On the expiration of my lease I declined renewing it, and the owners have allowed me to use it free of rent, rather than suffer it to lie idle, and the hands to be dispersed. I am also interested in a woolen factory at Northampton, in Massachusetts. The results are about the same in each.

Question. What is the amount of capital actually invested in the factory of which you speak; what part is real estate, what part is in machinery, and what part is actively employed?

Answer. I have no capital invested in real estate at Litchfield, and I am to be understood hereafter as confining myself exclusively to that establishment, unless when I speak expressly of the other. I have invested six thousand dollars in machinery, which is in operation with that which I rented and which I now have free of rent.

Question. What kind of fabrics do you produce; and what has been the whole quantity of fabrics so made, on the average, for the last two years?

Answer. We manufactured broadcloths exclusively. In the first year of which I speak we made 17,293 yards; in the second year, 15,551 yards.

Question. Have you made any dividend on the capital invested in your establishments; or have you lost money by the manufacture of wool?

Answer. I still speak of the last two years. From 12th November, 1825, to 12th November, 1826, I sold to the amount of $50,987 50, upon which there was a loss of $8,985 35, including commissions. From November 12, 1826, to November 12, 1827, my sales were $53,397 76, and on these there was a loss of $3,895 82. In the first year the sales of my cloth averaged $3 26 per yard, and in the second, $2 90.

Question. Have you examined the Boston remonstrance, presented this session to Congress, against further duties on imports?

Answer. I have examined it.

Question. Are there any manufacturers of wool who have signed this remonstrance? If so, who, and where are their manufacturing establishments?

Answer. No one who has signed it is a manufacturer of wool in the United States. One of them, William Taylor, receives large supplies of woolen goods from England, and I believe he is interested in a factory in England. George Bond, an auctioneer, who has also signed the petition, it is said has an interest in a factory in the United States to the extent of five shares. I know of no other person who has signed the petition that has an interest in any American woolen factory.

Question. Does that petition contain the names of many merchants of Boston who are importers of woolen goods?

Answer. It does not. It may, perhaps, contain the names of some two or three. I do not recollect more than that number.

Question. What has been the decline in the price of woolen fabrics, such as are usually manufactured in the United States, from the years 1823 and 1824 to 1827?

Answer. I think the decline in broadcloths has been from 33⅓ to 40 per cent.

Question. What do you consider the cause of such decline?

Answer. The cause I consider to be the great quantities of domestic and foreign fabrics meeting in the domestic market.

Question. What is the difference in the price of labor in the manufacture of broadcloths between Great Britain and this country?

Answer. As far as it regards labor, I believe we can manufacture wool as cheap in the United States as in Great Britain.

Question. What is the value of the best investments in the broadcloth manufactories in this country?

Answer. Not over fifty cents in the dollar, and generally less.

Question. Are you still progressing in your manufactory in Litchfield; and what will be the extent of your operations this year?

Answer. I still use it, but probably shall relinquish it in six or eight months if there is no further protection afforded to manufacturers. That is my present intention.

Question. Did you find sales more ready in the fall of 1827 than in 1826; and were not the prices better in the fall than in the spring of 1827?

Answer. The sales were more ready in 1827 than in 1826, but there was no improvement in prices. My sales of the last year were made principally in the fall. I am not aware that there was much improvement over the prices of the spring. There might have been an advance of five per cent., but certainly not more than that.

Question. What officers, agents, or superintendents have you employed in your establishment, and at what prices?

Answer. I have an agent or superintendent, to whom I pay eight hundred dollars per annum, and one clerk, to whom I pay three hundred dollars. I have no other of the character mentioned in the interrogatory.

Question. Were manufacturers doing a good business previous to 1824, or was it better than it has been since that time?

Answer. It was certainly a better business before than since 1825; but it never has been a profitable business since I commenced it. There were periods in which I made, perhaps, the interest of the money; but that will not do for manufacturers. The best business since I have had any connexion with it was a period of time embracing one-half of each of the years 1824 and 1825.

Question. Do you pay more or less now than formerly for weaving? What were the highest prices paid for weaving; and what do you now pay?

Answer. We have paid as high as thirty cents a yard for weaving, but we do not now pay more than ten cents a yard.

Question. What is the comparative state of morals in New England between the agricultural and manufacturing population?

Answer. I think the opportunities for moral and religious instruction are decidedly in favor of the manufacturing community, it being one of the first objects of the proprietors of the large establishments to provide schools and houses for religious worship.

Benjamin Poor, of Boston, State of Massachusetts, admitted and further examined:

Question. Are you now or have you been interested in the manufacture of woolen fabrics?

Answer. I am interested as a stockholder in a company for the manufacture of wool. They have two factories, called the Saxon and Leicester factories, in Worcester and Middlesex counties. They were commenced in 1824, and were incorporated in 1825.

Question. What is the capital actually invested in the factory of which you speak; what part is real estate, and what part is machinery; and what is actively employed?

Answer. The capital is $150,000, and has all been paid in, except a small sum, upon which the company receive interest, as I believe. I cannot give a particular detail of the different investments.

Question. Can you give any further detailed statement of the operations of the factory to which you refer?

Answer. I am not particularly acquainted with all the internal operations and management of the factory. I live in Boston, and the principal relations in which I stand to the establishment are as purchaser of the raw materials and salesman of the product. As to its financial concerns, most that I know will be found in the paper now presented, which is a letter written and sworn to by Henry H. Jones, who is treasurer of the corporation, and which I believe is entitled to full credit.

"BOSTON, *January* 8, 1828.

"DEAR SIR: Your letter of the 5th instant I duly received, in which you request of me, as treasurer of the Saxon and Leicester factory, a statement respecting the affairs of that corporation.

"The Saxon factory at Farmingham was incorporated February 4, 1824, and the Leicester manufactory was purchased in July, 1824, by several of the proprietors of the Saxon factory and others, and united, by an act of incorporation, February 8, 1825, under the name of the "Saxon and Leicester Factory," for the purpose of manufacturing wool.

"The amount of capital was one hundred and fifty thousand dollars. From the time the factory commenced, in 1824, until the 1st of July, 1827, there has been a loss by manufacturing of ($26,394 28) twenty-six thousand three hundred and ninety-four dollars and twenty-eight cents. In addition to this actual depreciation of capital by manufacturing, the stockholders have lost the interest on their amount of stock. In the above loss no allowance has been made for wear of machinery, which you know is considerable. The last public sale of some of our stock was in June, 1827, at $505 the share of $1,000; private sales of seven shares have since been made at $429 the share.

"The result of our six months' business, ending the 1st instant, has not yet been ascertained. I cannot, therefore, furnish you with anything decisive respecting it. The number of persons employed by the Saxon and Leicester factory are from two hundred and thirty to two hundred and forty, and the monthly labor is from $3,300 to $3,500 at the present time.

Yours, respectfully,

"HENRY H. JONES,
"*Treasurer Saxon and Leicester Factory.*

"MR. BENJAMIN POOR."

"SUFFOLK, BOSTON, *Commonwealth of Massachusetts.*

"Personally appeared Henry H. Jones, and made solemn oath to the truth of the several statements contained in the foregoing letter, according to his best knowledge and belief.

"Before me.

"CHARLES HAYWARD, *Justice of the Peace.*"

Question. What agents, superintendents, and other officers have the company, who receive pay, other than laborers; and what are their salaries?

Answer. The company have two agents, who receive $1,200 and $600. We usually have two clerks, who receive $300 each, and a treasurer, who receives $700. The house in which I am a partner is allowed two and a half per cent. commission on purchases and sales.

Question. Do you find, in selling the goods you make, that domestic competition has a tendency to affect the prices?

Answer. Domestic competition certainly has an effect; but the principal competition is with the foreign article.

Question. When were your prices best; when did your goods sell lowest?

Answer. I think the best prices were obtained in 1824–'25; they were lowest in 1826 by 25 per cent.

Question. Were your sales more ready in 1827 than in 1826, and were the prices better in the fall than in the spring of 1827?

Answer. The prices were lower in 1826 than in 1827; but those who thought proper to meet the market in 1826 found no difficulty in effecting sales. Taking an average, I am not aware of any material variation between the prices in the spring and fall of 1827. Some cloths did sell better in the fall than in the spring.

Question. Do the sales of woolens at auction materially affect the market, as well as other causes?

Answer. I do not think that auction sales produce any material effect on the Boston market, unless there be a large surplus on hand.

Question. If the stock of your company be estimated at the selling prices of the share, would or would it not be profitable stock?

Answer. I do not think it profitable even at the selling prices, which are $429 for $1,000 paid in. Nor do I think a manufacturer would act prudently in carrying on the business, if the whole stock was *given* to him, unless there be further duties laid on foreign goods.

Theodore Chase, of Portsmouth, New Hampshire, admitted and sworn:

Question. Are you interested in any establishment for the manufacture of wool?

Answer. I am a proprietor in a factory established at Great Falls, and also in the Salmon Falls Factory, at Somersworth, Strafford county, New Hampshire.

Question. What is the amount of capital invested in those or either of those factories; do you superintend their management, or can you give a circumstantial account of their operations?

Answer. I am not practically acquainted with the operations of either of the establishments. I. W. Pierce has the management of one, to whose testimony I would refer as to its situation. That at Somersworth is under the care of C. C. Wolcott. The paper herewith presented, signed and sworn to by him, exhibits all that I know of the establishment which could be of service, and to that paper I would refer, believing it to be entitled to full credit.*

Eleuterre Irenee Dupont, of Newcastle county, near Wilmington, Delaware, admitted and further examined:

Question. Are you now and have you been engaged in the manufacture of woolens? If yea, at what place, and for how long a time?

Answer. I am concerned with my nephew in the manufacture of woolens at the place of my present residence, and have been so concerned with him, and with my brother, now deceased, since 1810. We are copartners, but not incorporated.

Question. What is the amount of capital invested in the factory of which you speak; what share of that capital is active, and what share is vested in real estate, buildings, and machinery?

Answer. Our capital invested is upwards of $70,000; of which I should value the real estate, buildings, and machinery, at from $40,000 to $45,000; but as I am not at this time the active superintendent of the factory, and have not at this place access to the books, I cannot give a precise statement of the stock in trade. My partner is now the active superintendent of the establishment, and keeps the books of account of the business.

Question. What kinds of cloths or fabrics are made of the wool so used, and what the average number of yards made in each year for the last three years?

Answer. Of the common country wool we make coarse cloths and kerseys, principally for the Army. We purchase some wool of merino, of which we make satinets. Of the Smyrna wool, of the South American wool, and of the coarsest kind of country wool, we make coarse cloths, and a cloth called "linsey," for negro clothing. I think, on an average of the last three years, we have made from 20,000 to 25,000 yards of all kinds of these cloths in each year; but I cannot tell the relative quantities of each without reference to our books. The coarse cloths and kerseys, called Army cloths, are about a yard and a half wide when finished. The satinets and the negro clothing are generally about three-quarters of a yard wide, but the "linsey" is much wider.

Question. What has been the average price for the last three years of these cloths or fabrics in the markets where you have sold?

Answer. I think in 1825 the indigo blue Army clothing brought us about $2 30 per yard; in 1826 about $2 24; and in 1827 I know the price was just $2 12½. The grey kersey, in 1855, I think, brought $1 35; in 1826, $1 25; and in 1827 I know it brought us $1 10 per yard. During all the years both kinds of these cloths were of the same quality. The satinets, I think, as an average, were, in 1825, in the market, from 62½ cents to 75 cents per yard. In 1826 I do not recollect at all the prices of these cloths. In 1827 the satinets, I know, were from 40 to 50 cents in the market. The negro clothing, in 1825, brought us from 35 to 40 cents the yard, and in 1827, from 25 to 30 cents the yard. In 1826 I cannot tell the price it brought. We make little of the "linsey," and I cannot state the price at any time.

Question. Were the manufacturers of woolens in this country doing a better business previous to the year 1824 than they have done since?

Answer. I am not perfectly able to say. The business has always been a losing one; but my

* The committee, on consultation, did not conceive themselves justified, under the order of the House, to publish the statement referred to in this answer, because Mr. Wolcott was neither summoned nor interrogated, and never appeared before them for examination. The evidence of Mr. Pierce is herewith published, and the paper referred to by Mr. Chase will be found among the papers of the Clerk of the House.

impression is, that there were fewer discouragements to the woolen manufacturer previous to the year 1824 than there are at the present time.

Question. Do the woolen manufacturers of this country feel the effects of domestic competition?

Answer. No; but I wish we might. We dread the foreign, but would be glad to encounter domestic competition.

Question. Do manufactories with moderate capitals, and under the immediate superintendence of the proprietors, usually succeed better than incorporated companies with large capitals, and managed by officers and agents?

Answer. I should not consider a large capital any disadvantage, but the contrary. But if this is managed by the immediate proprietor, I think it usually does better than when managed by officers or agents.

Question. Are there fluctuations in the prices of woolen goods in our markets occasioned by foreign importations? If yea, do these fluctuations add much to the embarrassment of the American manufacturer?

Answer. I have no doubt there are; and these fluctuations are the great cause of the embarrassment to our manufacturers. I am confident, if we had competent protection, we should effectually be able to manufacture woolens much cheaper than we now do, and should afford them even below the present prices.

Question. Is the machinery used in the factory of which you speak of the most approved patterns used in this country?

Answer. We have not adopted the late improvements in machinery. The discouragements have been so great that we have not dared to encounter the expense. Our weaving is done by hand looms principally. We had one of the spinning machines, called the Brewster, but it got out of order, and we have not put it in repair. We use the jenny entirely.

Question. Have any dividends been made upon the stock of the factory of which you speak? If no, have there been any, and what, losses sustained for the last three years?

Answer. Ours is not a stock company, but a joint partnership between my nephew and myself. We have not, within the time alluded to, made anything as profits from our woolen manufactory, but, on the contrary, the business for those three years has been a losing one, and we could not have continued it but for the fact that we were at the same time carrying on other business which enabled us to sustain our losses.

Question. In which of the last three years have the sales of cloth been best; and were they better in 1826 than in 1827?

Answer. My impression is, that the sales were better in 1825 than in 1826. I cannot make a comparison between the sales of 1826 and 1827, as I have no books or papers to refer to; but I know the prices and sales in 1827 have been worse than they were in 1825 or before.

Question. Without reference to the difference in the price of wool, can the fabric be manufactured as cheap in the United States as in England?

Answer. The woolen manufactory is not yet fairly established in this country, but I know no reason why we cannot manufacture as well and as cheap as they can in England, except the difference in the price of labor, for which, in my opinion, we are fully compensated by other advantages. Our difficulties are not the cost of manufacturing, but the great fluctuations in our home market, caused by the excessive and irregular foreign importations. The high prices we pay for labor are, in my opinion, beneficial to the American manufacturer, as for those wages he gets a much better selection of hands, and those capable of and willing to perform a much greater amount of labor in a given time. The American manufacturer also uses a larger share of labor-saving machinery than is used in the English manufactories, which very much diminishes the effect of the higher rate of wages upon the actual cost of our goods.

Question. Were your sales more ready and at better prices in the autumn of 1827 than in 1826?

Answer. They were not at better prices; and we have not at any time found ready sales within the last five or six years.

Question. With the present price of real estate, the diminution in the cost of building, and the price of machinery, would a new establishment, founded on capital judiciously invested at this time, be likely to do a better or worse business than those erected in 1824, 1825, or 1826?

Answer. The less capital which is required to procure a site, and erect and put in operation the same machinery, the better it would be to the proprietor, by the difference in that capital; but I know of no other difference which could exist between a factory erected now and one erected in 1824, 1825, or 1826; nor am I able to say that the prices of real estate, buildings, and machinery, in my section of country, are reduced, since 1824, to such an extent as materially to vary the capital required for the same factory.

Question. Was not the opinion very generally entertained, on the passing of the act of 1824, that it afforded a sufficient protection to manufacturers?

Answer. I do not think it has ever been the opinion of a practical man. I have always thought that no other than a specific duty would answer the purpose; because an ad valorem duty is so subject to evasion that the intention of the law will never be carried into effect.

Question. What is the general character and description of the woolen goods shipped from Great Britain to this country, as compared to their other goods made for British home consumption?

Answer. Formerly the importations of woolen goods from England were made by our merchants in the regular course of trade; now these importations are mostly made on British account, and a very large share of them are made from the following causes: 1st, that their home market is overstocked, and they had rather sell the surplus at a loss than to keep it on hand; and 2d, that the British manufacturer has on hand articles not suited to his home market, or which are of inferior quality, or which are made from secondary materials, and which he presses off his hands because they will not sell at home, or because he will not hazard the reputation of his factory by putting them into those markets. Those goods, brought to our markets for these causes, and sold at the auctions for what they will command, regulate the price of our own woolen goods.

Question. Have the effects of employment, and the congregation of a large number of hands in manufacturing establishments in this country, from your experience, been injurious to the morals of the laborers?

Answer. It has not; but, on the contrary, from an experience of 26 years in different branches of manufacturing, I can say that I believe the moral and pecuniary condition of the laborers I have employed has, as a general rule, been materially improved; and this I believe will continue to be the case so long

as this country offers to labor a safe employment, in the purchase of unimproved lands at a low price, and so long as the Constitution of the Government remains free as it now is. All the children employed in and dependent on our factories are regularly taught in Sunday schools until they acquire the rudiments of a tolerable education.

Joshua W. Pierce, of Somersworth, Strafford county, New Hampshire, admitted and further examined:

Question. Are you now, and have you been engaged in the manufacture of woolens? If yea, at what place, and for how long a time?

Answer. I am now and have for the three years last past been engaged in the manufacture of woolens at the place of my residence. I am a large proprietor and sole agent of an incorporated company by the name of the "Salmon Falls Manufacturing Company."

Question. What is the amount of capital invested in the manufactory of which you speak; what share of that capital is active, and what share is vested in real estate, buildings, and machinery?

Answer. The capital of our company was, by actual appraisement on the 24th November, 1826, $362,000. Of that, $140,000 is vested in real estate and manufacturing buildings; $30,000 in a farm, dwelling-houses, store, grist-mill, saw-mill, and oil-mill; $60,000 in machinery, furniture, tools, &c; $131,000 in materials used for manufacturing, stock in the store, cash, provisions, wool, yarn, and cloths. I speak from the inventory of the appraisal taken at the time, in all cases omitting fractions.

Question. What kind of cloths or fabrics are made of the wool so used, and what the average number of yards made in each year, for the last three years?

Answer. We make broadcloths only. I should say the average quantity of cloths made for the last three years would be 40,000 yards each year; but the quantity would be less in 1825, more in 1826, and still more in 1827. I cannot state exactly the quantity for each year.

Question. What has been the average price for the last three years of these cloths or fabrics in the markets where you have sold?

Answer. The same quality of cloth which, in 1825, we sold in the Boston market at $4 per yard we sell now at $3 per yard in the same market; and the sale in 1827 has been decidedly lower than it was in 1826. In like manner, the same qualities of cloth which we sold in 1825 at $3 in the Boston market now sells for $2 in the same market, and now sells lower than it did in 1826. These statements are about a fair sample of the depression in price of all our cloths. Our sales are almost entirely made in Boston. We sell very little cloth at the factory, and have made small sales at New York and Philadelphia. The sales at the now reduced prices are more dull than they were in 1825 at the then prices. Our cloths, finished, will average 6¼ quarter-yards wide. The various descriptions of cloths we make range from $2 to $5 per yard, as we value them. As nearly as we can make the estimate, the cloth which in 1825 we sold at $4, and which we now sell at $3, dull sales, actually costs us, when ready for the market, an average of $3 50 the yard. And the cloth selling in 1825 at $3, and now selling at $2, actually costs us that sum. Our cloths are sold by commission merchants, and the sales referred to in this answer are the gross sales.

Question. Were the manufacturers of woolens in this country doing a better business previous to the year 1824 than they have done since?

Answer. I have no means of judging, as I was not engaged in the business until the close of that year.

Question. Do the woolen manufacturers of this country feel the effect of domestic competition?

Answer. I do not think they do. The only competition which they experience or dread is that of the importation of foreign woolen goods.

Question. Do manufactories with moderate capitals, and under the immediate superintendence of the proprietors, usually succeed better than incorporated companies with large capitals, and managed by officers and agents?

Answer. I do not think a large capital a disadvantage, but, on the contrary, a decided advantage; but I believe all kinds of business usually succeeds best when under the management and superintendence of those interested in it.

Question. Are there fluctuations in the prices of woolen goods occasioned by foreign importations? If yea, do these fluctuations add much to the embarrassment of the American manufacturer?

Answer. There are, and these fluctuations form the principal embarrassment which the American manufacturer has to contend with.

Question. Is the machinery used in the factory of which you speak of the most approved patterns used in this country?

Answer. So far as I am acquainted, it is.

Question. Have any dividends been made upon the stock of the company of which you speak? If no, have there been any, and what, losses sustained for the last three years?

Answer. No. There has never been a dividend made upon our stock. On the contrary, we have sustained losses, as follows:

In 1825 the books of our company show a gain, between the cost of all the materials used, and all the labor, and the whole amount of sales, of $6,772 78. There were purchased by the company, when they purchased the site of the factory, one grist-mill, one saw-mill, and one oil-mill. These the company do not use, but they are rented at the best terms that can be procured; and in 1825 they received in rents for these, and for dwelling-houses, the sum of $1,041 69. These sums together make the sum of $7,814 47. The interest on the capital actually paid in and employed by the company that year, at six per cent., was $16,313 15. Showing in that year an actual loss of $8,498 68, without any allowance for wear and use of machinery, generally calculated to be worth nine or ten per cent.; and of which the company had in actual use that year what cost them, at fair prices, $37,000. In 1826 the books of the company showed a balance against the factory, after paying for all the materials and all the labor, of $18,103 16
Deduct from this the rents for that year upon the property mentioned above, amounting to .. 1,043 82

And the clear loss will be 17,059 34

This is without any allowance for interest upon the capital, which was considerably increased in that year, or for the wear and tear of machinery, the value of which in actual use that year was $60,000.

In 1827 our books have not been made up, but the same qualities of cloths have sold in this year

considerably lower than they did in 1826, and there must be a large loss beyond that of the interest upon our capital and the wear and tear of our machinery.

None of these losses have originated from bad debts; and all our sales are guarantied to us by the commission merchant, for which we pay him 2½ per cent. This item is taken into the account and forms part of the loss. Our store is kept for the accommodation of the factory and the hands, and has afforded, on its own business, a small profit.

Question. In which of the last three years have the sales of cloth been the best; and were they better in 1826 than in 1827?

Answer. In 1825 they were best; in 1826 they were lower; and in 1827 they were still lower, as will be seen from my former answers.

Question. Without reference to the price of wool, can the fabric be manufactured as cheap in the United States as in England?

Answer. I think it can. All my information brings me to this conclusion, and one reason I would assign is, that we substitute a much larger share of the labor of females than they do in England in the woolen manufacture.

Question. Were your sales more ready and at better prices in the fall of 1827 than in 1826?

Answer. They were more dull and at lower prices in 1827 than in 1826; and I do not recollect that they altered materially in the fall of that year.

Question. With the present price of real estate, the diminution in the cost of buildings, and the cost of machinery, would a new establishment, found on capital judiciously invested at this time, be likely to do a better or worse business than those erected in 1824, 1825, or 1826?

Answer. I was unacquainted with the business until the latter part of 1824; but I am not aware of any material diminution of the value of real estate in my section of country, or in the cost of buildings and machinery since that time; and I cannot say that the investments made since that time have not been as judiciously and advantageously made as they now could be.

Question. Was not the opinion very generally entertained, on the passing of the act of 1824, that it afforded sufficient protection to manufacturers?

Answer. Not having been interested in the woolen business until after the passage of that act, I cannot give a very satisfactory answer as to what public opinion was at the time of its passage. I did think myself, when I became interested in the factory in which I am now interested, that that tariff bill would furnish fair protection; but I very soon found myself disappointed in this expectation. The method in which the duty is laid, to wit, an ad valorem duty, cannot, in my opinion, furnish sufficient protection, from the facility with which woolen goods are invoiced at a price far less than their cost, and from the difficulty, if not impossibility, of detecting the fraud, and arriving at a fair appraisal in this country. I therefore think that the same form of duty, if considerably increased, would not reach the object; but that a specific square yard duty only will give the protection required. I do not think the present duty sufficient, even if no evasions had taken place.

Question. What is the general character and description of the woolen goods shipped from Great Britain to this country, as compared with their other goods made for British home consumption?

Answer. I have no means of answering the question.

Question. Can you give the whole number of hands employed in your factory; their classes into men, boys, and girls, and the average of the wages of the whole?

Answer. In 1826 we employed about 200 persons, of whom 60 were men; 15 boys, from 10 to 15 years of age; 21 girls, from 10 to 15 years of age, and 104 women. An average of the wages of the whole, including superintendents, clerks, and all other officers and hands who receive wages, is 68 cents per working day for the year; this includes board. I cannot give an exact account of the number of hands or wages paid in 1827, but I think the whole number has been somewhat reduced, and women have been, in several instances, substituted for men, which will reduce the average of this year, but how much I cannot say.

Question. What is the whole value of materials you consume in your factory annually; what part of that value is of foreign, and what of domestic productions; and what is the value of the provisions consumed annually by the hands employed in the business of your establishment?

Answer. Of imported *raw* materials we consume annually the value of $33,612; of imported manufactured articles we consume annually the value of $391; of domestic products, including lamp oil, we consume $28,525; making an aggregate of $62,528. The provisions consumed annually by the hands employed in our factory, and their families, amount to the value of $12,500; these persons also use domestic cotton goods to the amount of $7,000, and imported goods to the amount of $5,500; making, together, $25,000.

There are annually consumed in the factory, of imported raw materials—

40,000	pounds of wool, averaging 60 cents	$24,000 00	
2,500	pounds of Bengal indigo, at $2 50	6,250 00	
4,000	pounds of madder, at 14 cents	560 00	
11,000	pounds of ground logwood, at 2¼ cents	247 00	
2,000	pounds of camwood, at 5 cents.	100 00	
6,000	pounds of fustic, at 2¼ cents	135 00	
2,500	gallons of olive oil, at 90 cents	2,850 00	
20	dozen flasks of olive oil, at $3 50	70 00	
			$33,612 00
	Of imported manufactured articles—		
150	pounds of hempen twine, at 20 cents	30 00	
150	pounds of worsted harness twine, at $1 60	240 00	
10	pounds of sewing silk, at $6	60 00	
40	pounds of sewing thread, at 92 cents	36 00	
50	dozen of linen tape, at 50 cents	25 00	
			391 00
	Of domestic products—		
60,000	pounds of wool, averaging 34 cents	20,400 00	
6,000	pounds of woad, at 5 cents	300 00	
	Carried forward	20,700 00	34,003 00

	Brought forward	$20,700 00	$34,003 00
65	bushels of bran, at 30 cents	20 00	
900,000	teazles, at $3	2,700 00	
2,000	pounds of quercitron bark, at 2¼ cents	45 00	
350	cords of wood for fuel, at $3 50	1,225 00	
3,000	pounds of copperas, at 3 cents	90 00	
900	pounds of red argol, at 14 cents	126 00	
500	pounds of blue vitriol, at 12 cents	60 00	
600	pounds of alum, at 5½ cents	33 00	
200	pounds of aqua fortis, at 12 cents	24 00	
200	pounds of oil of vitriol, at 8 cents	16 00	
8,000	pounds of hard soap, at 10 cents	800 00	
300	barrels of soft soap, at $2 50	750 00	
9,000	pounds of glue, at 14 cents	1,260 00	
500	pounds of harness leather, at 26 cents	130 00	
35	sides of thin leather, at $1 75	61 00	
20	dozen corn brooms, at $1 50	30 00	
650	gallons of lamp oil, at 70 cents	455 00	
			28,525 00
			62,528 00

There are annually consumed by persons employed at the factory, and their families, the following articles:

Corn, flour, rice, sugar, tobacco, and fish, amounting to	$7,500 00
Domestic cotton goods	7,000 00
Other domestic provisions and fuel	5,000 00
Of other imported goods, consisting of groceries, cutlery, hardware, silk, and other goods	5,500 00
	25,000 00

In the above estimate fractions are omitted.

Question. Have the books, from which you have taken the several facts and results stated in your foregoing answers, been kept under your immediate superintendence; are they the books of your factory; have they been correctly kept; and have the memoranda, from which you have testified, been taken from those books and other authentic sources?

Answer. The books of our factory have been kept by a clerk, whose sole business it is to keep and take care of them under my immediate superintendence; they have been accurately kept, and as often as they have been balanced they have been examined and approved by the directors of the company. From these books the extracts have been made from which I have testified when I have purported to speak from the books. The other estimates are derived from authentic sources, and are substantially correct.

Question. What is the state of the morals of the persons employed at your factory, and how does it compare with those of the same class of persons in other employments in life?

Answer. From all my observations, I believe the morals of those employed in manufacturing to be as good as those of any other class in society, and there is, perhaps, a less amount of crime and immorality than among the same number of persons engaged in the other common avocations of life. I believe that, in almost every instance, one of the first cares among the directors of manufacturing establishments has been to establish schools and places of public worship, and the good effects are everywhere apparent.

Testimony in relation to hemp, flax, and sail duck.

TUESDAY, *January* 15, 1828.

Hon. James Clark admitted and sworn:

Question. Where do you reside?

Answer. I reside near the village of Winchester, Clark county, Kentucky.

Question. Is the business of growing hemp an important business with the farmers in your Congressional district?

Answer. It is an important but not the principal business of those who reside in that Congressional district.

Question. What counties are included in your district?

Answer. The counties of Clark, Fayette, and Woodford.

Question. Are you not acquainted in the counties of Bourbon, Scott, and Jessamine, in the State of Kentucky; and do you not know that hemp-growing is an important part of the business of the agriculturists of these counties also?

Answer. I am well acquainted in Bourbon, and partially in Scott and Jessamine, and know it to be an important business in Bourbon; and, from information in which I have full confidence, believe it to be important in the other counties also.

Question. What has been the market price for hemp, cleaned ready for the manufactory, in your section of the State for the last three years?

Answer. I should say that, for the two years preceding the last, the average has been $4 per 112 pounds. During the last year it fluctuated considerably, but presume that the average has been about $5 per 112 pounds.

Question. Are not the counties above named, and also the counties of Mercer and Lincoln, capable of producing a much larger quantity of this article than they now do, if a steady and fair market was afforded?

Answer. The soil is well adapted to the culture of hemp, and I think these counties possess a capacity to produce a much greater quantity than they now produce, if a good market and fair prices were afforded.

Question. Is the manufacture of hemp, to any considerable extent, carried on in your district; and if so, into what fabrics principally?

Answer. It is manufactured to a considerable extent in Fayette, and to a lesser extent in the counties of Clarke and Woodford. The fabrics into which it is manufactured are cotton bagging, yarns, and cordage.

Question. Have you any means of knowing whether the manufacture of hemp in your district affords to the manufacturer a fair compensation for his labor and capital employed in the business?

Answer. I have no means of knowing, except what I have acquired in casual conversations with manufacturers, and my knowledge of the price of hemp. These conversations have impressed me with a firm belief that neither the grower nor the manufacturer receives a fair compensation for the labor and capital employed.

Question. Is it not important to the interests of the hemp-growers and the manufacturers of hemp in Kentucky, and particularly in the district you represent, to have an increase of duty on imported hemp?

Answer. I think it highly important, not only in the district of country of which I speak, but to every other part of Kentucky, to have an increase of duty on imported hemp.

Question. Have you been a hemp-grower or manufacturer of hemp; or are you now concerned in either of these branches of business?

Answer. I have not cultivated hemp to any considerable extent, and I have never been engaged in its manufacture. I did grow hemp, but have abandoned it for the last four or five years, because it did not yield a fair profit on the capital employed.

Question. Where is your market for cotton bagging?

Answer. It is generally sold in Tennessee, Alabama, and Mississippi.

Question. What price does it command in these markets?

Answer. I do not know.

Question. What is the quality of the Kentucky cotton bagging compared with that which is imported?

Answer. I know nothing of their qualities, of my own knowledge, never having seen any of the imported article; but from conversations which I have held with intelligent cotton-growers in the south-western States, the Kentucky bagging is esteemed from one and a half to two cents per yard better than that imported.

Question. Have you any knowledge of the quantity of cotton bagging imported; or is your opinion, as to the necessity of a further protection, formed from any information you possess as to the competition between the foreign and domestic article?

Answer. I have no precise information as to the quantity imported. My opinion, as to further protection to that article, arises from the low and unsteady price of hemp, and from the complaints I have heard made by the manufacturers of bagging, that they did not receive a fair return for the capital employed in its manufacture.

Question. Has there been a greater quantity of hemp grown in Kentucky in the year 1827 than in the average of former years?

Answer. I think there was a much greater quantity grown in 1827 than in any preceding year, and it is to be accounted for from the fact that the crop of 1826 bore a higher price, considerably, than any other crop of which I have any recollection, and because many of the hemp farmers were impressed with the belief that the enhancement of price was attributable to a failure of the hemp crops in Russia, and that no crop would be imported into the United States subsequently to that failure, before their crops would be carried to market. But I do not undertake to determine whether their calculations were well or ill founded.

Question. If your farmers have found the culture of hemp not affording a fair compensation for the labor and capital employed, have they found other objects of more profitable pursuit, and what are the most material of these pursuits?

Answer. I do not say that the culture of hemp has been abandoned; if other objects have been found more profitable than its cultivation, it has been on the large farms, by the cultivation of grain and the raising of stock.

TUESDAY, *January* 15.

The honorable Joseph Vance, being requested, appeared before the committee; and on the chairman's proposing to administer to him an oath to make true answers to such questions as should be propounded, the witness refused to be sworn, alleging as a reason that he had voted against the adoption of the resolution by the House because he thought it unconstitutional, and that he cannot, therefore, now submit to the operation of any rule which he believes to be of that character; but that he was willing to answer, as a member of the House, any questions without being sworn. And thereupon it was ordered that an entry be made of the foregoing facts on the journal of the committee.

The committee having considered the preceding subject, it was

Resolved, That this committee do not feel authorized, under the resolution of the House, to examine the witness, unless on oath; and that, as to any further proceedings thereon, the consideration thereof be postponed.

TUESDAY, *January* 22, 1828.

John Travers, of Paterson, Essex county, New Jersey, admitted and sworn:

Question. Are you engaged in the manufacture of sail duck; and if so, from what material?

Answer. I am engaged in the manufacture of sail duck from flax solely, but am well acquainted with the process of manufacture of the same article from cotton and hemp. I have made duck from hemp, but in very small quantities, and merely as matter of experiment, and believe that I am the only person in the United States who has spun hemp with machinery. The manufacture of duck from cotton is carried on in my immediate neighborhood.

Question. Where is your manufactory situated; what is the name by which it is known; and is it conducted by an incorporated company, or by or on individual account?

Answer. In Paterson, Essex county, New Jersey. It is an incorporated company, and its corporate name is the "Phœnix Manufacturing Company."

Question. What is the capital employed?

Answer. The capital actually paid in by the stockholders is about $170,000. The shares are $50 each, the whole of which has been paid in, except that the amount of the subscription originally was $200,000, of which some shares were abandoned, and the company purchased others, so as to reduce the capital to about the sum above named. The shares purchased by the company were at a very reduced price.

Question. How long has your factory been in operation, either by individuals or by the company?

Answer. The factory, I have understood, commenced under private individuals some time in 1814, making no duck, but other linens. These proprietors continued awhile and then failed. The factory was then sold under a mortgage and taken by one individual, who continued the business until 1821, making duck only one year, and that upon a contract with the Navy Department. In 1821 I became a partner. The former owner valued the factory at $37,500 in its then condition, and I paid that amount in cash to be employed as active capital, and upon which we proceeded in the business. Our contracts with the Navy were continued until 1822 or 1823, when we had no contract with the Government, and became embarrassed. When I advanced the money just mentioned, I took a conveyance of the whole establishment as a security for the advance, and under that security the whole factory fell into my hands. In 1824 the establishment was incorporated. Soon after the incorporation, other individuals joined in taking stock, paying me in shares of the company, the estimated value of the factory, and it has since been carried on for the benefit of the company, under my sole management.

Question. What is the number of officers engaged, and what the number of hands employed in your factory?

Answer. I am president of the company, and receive $1,500 per annum, discharging also the duties of superintendent; and one clerk, at $400, who keeps the books of the company. There are no other officers receiving pay. We have 265 hands employed, when in full operation, and we have that number now engaged. Of these, 109 are men, who receive, on an average, 65 cents per day; of boys there are 42, receiving $1 37½ per week, who are from eight to fourteen years of age There are 61 women, who receive $2 37½ per week; and 53 girls, from eight to twelve years of age, receiving $1 37½ per week—all of whom pay their own board.

Question. What kind of raw material is used; what is the quantity manufactured; and where is it produced?

Answer. We use flax exclusively; and during the year 1827 we employed 960 spindles and 200 twisting spindles. The quantity of flax wrought was 382,478 pounds. The whole of it was imported. The crown flax from Poland constituted the largest proportion; the remainder was imported from Ireland and Russia. From the gross amount of flax already mentioned, there were 237,093 pounds of clean or hackled flax, and 145,385 pounds of tow. The hackled flax is used exclusively for the warp of sail duck, and the tow for the filling.

Question. What are the different kinds of fabrics manufactured, and the quantity of each?

Answer. We made last year 7,010 bolts or pieces, which usually measure forty yards each. As I have not my books or papers to refer to at this moment, I cannot speak with certainty as to the relative quantities of duck, cotton bagging, and hammock cloth, which comprise all the articles we manufacture; but I presume it did not differ from 5,800 pieces of canvas, 1,000 of hammock cloth, and about 210 pieces of bagging. The cotton bagging is made of the most inferior quality of tow. The canvas is about twenty inches in width; the hammock cloths are not confined to any particular width, but depend on contract with the Government, which usually requires it to be about forty-four inches; the cotton bagging is forty-two inches wide.

Question. What is the cost of the raw material?

Answer. Irish flax usually costs about 13 cents per pound. Russian flax, called "twelve head St. Petersburg," which is the best quality, costs about 11 cents. The Polish "crown flax," which is better than Russian, but not so good as Irish, costs about 12 cents. I speak of the cost in New York. I have never used any but Irish flax until last year. The American flax sells at 8 cents. In 1822 I made duck of American flax; but I ascertained, from actual experiment, that it would not answer, and that my credit as a manufacturer was likely to suffer, and I abandoned it. I am satisfied that the superior quality of the foreign over the American flax is to be attributed, almost exclusively, to their preparing it by water-rotting, while in America it is prepared by dew-rotting. In this country, too, it is suffered to grow too long, with a view of saving seed; whilst the foreign is pulled when the bloom falls, and before the boll is formed. I conceive the difference between American flax, pulled when the blossom falls and water-rotted, and that which is pulled after it has seeded and dew-rotted, would be fifty per cent. better to the farmer and to the manufacturer, estimated upon the present prices. The one gains that much by the quantity and quality of the article, and the latter can afford to give that much more for it than it is now worth to him. Flax pulled at this time will weigh 33⅓ per cent. more than when suffered to go to seed.

Question. What is the cost of manufacturing a bolt of duck, exclusive of the cost of the raw material?

Answer. Of one kind of duck made at our factory, the flax required for each bolt is about 65 pounds. The cost of manufacturing from the flax, and preparing for the market, this bolt of duck will be on the average about $5 05; the value of the flax would be, at 13 cents per pound, $8 45; and our asking price in the market for this bolt of duck is $15 50; but we have great difficulties in making sales at this price. In this calculation of cost, nothing is included for commissions on sales, for transportation* to market, for interest of capital, for casualties, for the use of machinery, &c., &c.

Question. Where do you find a market for your different fabrics?

Answer. Contracts with the Navy Department have furnished our principal market, and without this demand we have become embarrassed. We have made limited sales in New York, Boston, and Philadelphia, for the merchant service. We have sold duck also in New Orleans. In 1826, the amount of our sales in New York was $12,036 96, as appears by an account current exhibited to the committee. I have not with me an account of our sales in 1827 in New York, and cannot, therefore, state them accurately. The last contract with the Government terminates in May next.

Question. As a business, can the manufacture of coarse goods from flax be conducted with any profit under the influence of the present duties on the foreign fabrics?

Answer. It cannot. The cost of the raw material, the excessive importations, and the mode of collecting the duty, render it absolutely necessary that the manufacturer of those articles should be

* After the witness had left Washington, on his return home, he wrote to the Hon. Mr. Condict, one of the committee, a letter, of which the following is an extract, and which, by permission of the committee, is here inserted, dated Baltimore, 24th January, 1828: "In my evidence before the committee, in the calculation of the cost of a bolt of duck, '*transportation*' was excepted. I meant it to be included. Will you cause the word 'transportation' to be stricken out."

protected by additional and specific duties, in order to enable him to do a fair and steady business; unless, indeed, he should succeed by contingencies, upon which no certain or continued reliance can be placed.

Question. Why did you not continue the manufacture of sail duck from hemp?

Answer. We discontinued it because the raw material costs as much as the flax, does not make as durable an article, and the waste is 25 per cent. greater than from flax. We cannot weave hemp without starching or sizing, the effect of which is to cause the cloth to mildew more rapidly, and we do not starch or size the flax duck at all.

Question. In the experiments made by you, did you use American or foreign hemp?

Answer. I used foreign hemp.

Question. Is there the same difference between the durability of dew-rotted and water-rotted hemp which you have before described between dew-rotted and water-rotted flax?

Answer. There is the same difference, and it exists not in the strength, but in the durability of articles manufactured. Those from dew-rotted hemp certainly decompose, when exposed to the weather, much sooner than those which are made from water-rotted hemp or flax.

Question. Do you believe if sufficient protection were by law extended to the American hemp, and the manufactures from it, sail duck and other fabrics usually made from hemp would be produced in this country, within a short period of time, in sufficient quantities and at fair prices?

Answer. I do not think a higher duty on raw hemp would benefit the grower of hemp or increase the consumption. If the foreign manufactured article paid a higher duty, it would increase the manufacture of the raw material, and thus afford a better price to the grower of the article, and, by increasing the consumption, afford a more certain market. If the American flax were pulled at a proper season, and water-rotted, like the foreign, there would now be a demand, if all the factories were in operation, for 950,000 pounds of flax, and for 5,000 tons of hemp annually, at a price fifty per cent. better than is now paid for the dew-rotted American hemp or flax.

Question. Have you any information to be relied on as to the probable importation of raw hemp and sail duck for the ensuing year; and if so, from whence is it expected, and of what qualities and material?

Answer. All the information I have on this subject is derived from two letters lately received from a gentleman in Boston, exclusively engaged in the Russia trade, who writes as follows: "We shall this year have ten thousand pieces more heavy duck, and twenty thousand more ravens, from Russia, than in 1826, besides the imperial and London *imitation* duck, both of which are now selling *here* at lower rates, and are much preferred to ours; therefore, what is here considered better duck can be had for more than ten per cent. less than your present prices, say $16 for No. 1."

"Russia duck is *now* coming out much lower than earlier in the season; the manufacturers there are shipping it on their own account; and a friend writes me that 'Brusgin says he will yet lay the Phœnix on the shelf.' Forty thousand bolts had been shipped, at last dates, to the United States, not including ravens duck. Every piece of 'imperial duck' has been bought on arrival, and large orders will be sent for it in future."

I have made it my business to inquire into the subject, and I know of but one house which is engaged in the importation of sail cloths from Russia, except in Boston, and that one is in New York. This trade is almost monopolized in Boston.

Question. What quantity of sail-cloth is made from cotton in the United States, so far as you know; what are its qualities, and what its cost?

Answer. There are about 1,500 bolts of sail-cloth manufactured annually in Paterson, New Jersey, from cotton, which usually contain about 60 yards each. There is also a factory in Baltimore, which, I have understood, made about the same quantity. The cloth, when manufactured, costs rather less than what is made here from hemp or flax, and the demand for it is somewhat better. Eleven hundred bolts of that made in New Jersey were sold in Philadelphia, and two hundred in New York, last year. I do not believe any of it was sold north or east of New York. The consumption of it must necessarily increase, and I think it will soon be exclusively used by all river craft and coasting vessels. If all the craft employed in the North river were to be refitted with sails, it would require 828,000 yards.

Question. Is it as good for sails, for any and what vessels, as sails made of hemp or flax?

Answer. It is preferred on board fore-and-aft rigged vessels, because they can sail from a half to three-fourths of a point nearer the wind with it than with hemp or flax sails; nor does it stretch or shrink so much as the flax canvas.

Question. Is it better than sails made of dew-rotted or water-rotted hemp?

Answer. It is better and cheaper than sails made of American dew-rotted hemp or flax.

Question. What are the relative prices per yard of the several species of sail-cloths of which you have been speaking in the markets where they are sold?

Answer. The imperial duck referred to in this extract is an imitation of duck made at the "Phœnix Mill," from samples procured for the purpose and sent to Russia.

Quality.	Weight.	Prices per yd., cottons.	Prices per yard, flax.	Prices per yard, hemp.
	Pounds.	*Cents.*	*Cents.*	
No. 1	37⅜	41	38⅜	
2	35	39	37⅛	
3	32½	37	36½	
4	30	35	35	
5	27	34	33⅛	
6	25	33	32¼	
7	22½	32	31¼	
8	20	31	30	
Russia U.	47	.....	.....	About fifty-six cents.
Ravens	16	.....	about 16	

The weight is estimated on the supposition that each bolt is forty yards in length, and this statement is believed to be nearly correct. The cotton and flax duck are neither starched nor sized. The Russia duck is all starched, as is also the English. The cotton duck is about 24 inches wide, the flax is 20 inches wide, and the Russia 30 inches wide.

Question. Is there any difficulty in manufacturing sail-cloth from cotton which will not be easily surmounted by fair and reasonable patronage or encouragement, or might it be made to an extent which would be limited only by the demand?

Answer. There are no difficulties. It is rather more simple in the manufacture than cotton shirting.

Question. Do you know how many sail-cloth factories and factories manufacturing hemp and flax are now in the United States, how many are now unemployed, and what amount of fabrics can they annually produce?

Answer. There are but three factories in operation; two of these are engaged in making sail-cloth for the United States Navy; the other manufactured various articles from flax, but I am unable to say what are its pursuits at present. There are six other factories in different States capable of making sail-cloths, which have been suspended. From what I have been told as to the number of spindles in the United States, they are capable of making 19,132 bolts, or 765,280 yards of heavy duck. If the duties were so increased as to insure a fair profit I could make nearly fifty per cent. more with the same machinery than I have heretofore done, and it is likely that there would be some increase at the other factories.

Question. Is it the practice of American vessels about sailing from America to foreign ports to clear out for their voyage with old and worn sails and to supply themselves with sails in foreign ports, thus avoiding the duty upon the hemp or the manufacture imposed by our laws?

Answer. I have no knowledge of my own upon the subject; but I once made application to a captain and owner of an American vessel to sell him sails for his vessel, and he informed me he was in the habit of supplying his vessel in foreign ports, and declined purchasing of me. I do not know the extent to which this practice prevails, but from what I have heard I should think it is very frequently done.

Question. Are Russia or other sail ducks, to your knowledge, brought to this country, and, after being re-exported with the benefit of drawback, actually worked up to make sails for the same vessels which take them from the American ports?

Answer. I cannot answer this question from my own knowledge, but I have often heard of instances of this kind, and do believe they are frequent.

Question. Have you ever known of samples of your cloth being sent to foreign countries to be imitated and returned to the United States?

Answer. Our cloth has been imitated in Russia and England from samples sent out for the purpose by a merchant of Philadelphia and a merchant of Salem, and the sample I now exhibit is from a bolt of duck made in England; a parcel of which was actually on sale in Philadelphia, from which I cut this strip as I passed through on my way to this city. I have no means of determining the relative durability of our duck and the Russian and English imitation, but the imitations are starched; and it is a known fact that the starch in duck facilitates the mildew and the consequent decomposition of the material of the cloth. Our duck is not starched.

For the quality, durability, and character of our duck I refer the committee to the following certificate from the Commissioners of the Navy of the United States, which was furnished by them to Mr. Vaughn, of Philadelphia, and I request that it may be appended to my answer:

"NAVY COMMISSIONERS' OFFICE, *January* 27, 1820.

"SIR: The Commissioners of the Navy have received your letter of the 22d instant.

"The sample of canvas received with it (herewith returned) is similar to the canvas which the Commissioners have annually contracted for at Paterson, New Jersey.

"In the year 1815 the Commissioners directed a main-topsail and main-topgallantsail for the Boxer to be made of Mr. Chapman's canvas, and they instructed Captain Porter, then commanding the Boxer, to wear these sails with others made of the English and Russia canvas, in order to test their relative durability. The result, as reported by Captain Porter, proved Mr. Chapman's canvas to be greatly superior to either English or Russia. It possessed twice the durability. The enclosed is a piece of the topsail of the Boxer, of Mr. Chapman's canvas, after wearing out the English and Russia canvas.

"The Commissioners of the Navy are decidedly of opinion that the American canvas tested by them is greatly superior to any ever imported into our country.

"I am, respectfully, sir, your obedient servant,

"JOHN ROGERS.

"JOHN VAUGHN, Esq., *Philadelphia.*"

Question. In what parts of the United States is hemp now produced, and from what sections of country is the best quality sent to market?

Answer. It is principally grown in Kentucky; but it is also produced in Pennsylvania, Ohio, and New York. The quality of hemp produced in different parts of the United States is generally the same. The present price of Kentucky hemp in market is about $125 per ton. The present price of Russia is $270. The usual price of the first is from $110 to $125. The latter is worth generally about $225. The difference in price is owing to the different manner of preparing it for market, as has been before stated.

Question. In what parts of the United States do you find flax grown to the greatest extent and of the best qualities?

Answer. It is grown more extensively in Pennsylvania, New Jersey, and Kentucky than in any other of the States. I think it is not grown extensively in any other of the States. I think the qualities would be equal to any grown in Europe, if the same time of pulling and the same manner of preparing was adopted in this country that is practiced in Europe. The sample of the largest flax that I have seen or read of was raised on the rice lands of South Carolina. A sample was sent to me of five feet eleven inches in the stalk. The flax was taken from the ground in time to admit of the sowing a crop of rice in the same season. The American flax is at present extensively used in making sail and other twine.

Question. What duties and changes in the mode of the collection thereof are, in your opinion, necessary to enable the manufacturer to pursue his business successfully?

Answer. The following scale of duties would, I believe, answer:

On all sail duck, nine cents per square yard, to increase one-half cent per square yard annually for four years.

On osnaburgs, ticklenburgs, and burlaps, five cents per square yard, to increase one-half cent per square yard annually for four years.

The drawback should not be allowed on less than 50 or 100 bolts of canvas to be exported. It would, perhaps, be just and proper that sails procured or made up out of the United States, whether in

use or not, on board of vessels belonging to citizens of the United States, should be subject to the same duty as may be imposed on sail duck imported into the United States.

Testimony in relation to spirits from grain.

MONDAY, *January* 14, 1828.

Hon. William Russell, of Adams county, Ohio, admitted and sworn:

Question. Have you been engaged in the purchase and sale of domestic spirits, and can you state the average price?

Answer. I have bought and sold the article for twenty years past. For the last five or six years the price has varied from sixteen to twenty cents. Sometimes it has exceeded twenty cents per gallon. I think eighteen cents would be a fair average price.

Question. To what market do you usually send the article?

Answer. To New Orleans.

Question. Does the distillation of that article afford a market to the agriculturist for his grain, and is it important to him to preserve that market?

Answer. It does afford a market for the surplus grain; and it is *very important* to him to preserve and increase it. It converts the grain into less bulk, and diminishes the cost of transportation.

Question. Does the price of whiskey regulate the price of grain, or that of grain control the price of whiskey?

Answer. As a general rule, the price of grain regulates that of whiskey; but there are exceptions to the rule.

Question. Do you suppose that the western States generally have capacity and facilities to produce a sufficiency of domestic spirits for the entire consumption of the United States?

Answer. I cannot speak with certainty, but think it probable they can distil a sufficiency for all of the United States, with sufficient encouragement, or at fair prices.

Question. Is it not part of the farming business of the west to grow corn for distillation into whiskey?

Answer. It is. They raise as much corn as they can.

Question. Is the raising of coarse grain for distillation a good business for the farmers of your State, at the present rates of whiskey?

Answer. I do not think he receives a fair price for his labor in that business at present prices.

Question. Do you consider the low price of whiskey and great abundance or ardent spirits as prejudicial to the industry and morals of the country?

Answer. I am not sensible that the diminution produces any sensible effect on the industry or morals of the country. It was as much used when that article sold at one dollar per gallon by retail as at this time. This state of things, however, may be attributable to the improved morals of the community.

Hon. James Findlay, of Cincinnati, Ohio, admitted and sworn:

Question. What has been the general price of whiskey at Cincinnati for the last four or five years?

Answer. The shipping price on an average does not exceed 20 cents per gallon.

Question. Is the quantity distilled increasing?

Answer. It is.

Question. Is Cincinnati the principal whiskey market for a considerable extent of country?

Answer. It is the market for large portions of Ohio and Kentucky.

Question. Is the distillation of grain into spirits important to the farming interests of Ohio?

Answer. It certainly is.

Hon. Charles A. Wickliffe, of Nelson county, Kentucky, admitted and sworn:

Question. What was the common or general price of whiskey at Louisville and in the interior of Kentucky for the last three years?

Answer. I think the price by wholesale has been from 16 to 20 cents at Louisville; the average may be fixed at about 18 cents. Much of it has been bought this year, deliverable in warehouses, on navigable streams, at 15 and 16 cents, without a charge for the barrel, which costs the distiller about 75 cents. I speak of merchantable proof whiskey.

Question. What quantity of whiskey will a bushel of good sound corn yield?

Answer. The average product is about two gallons; some make more, some make less.

Question. Is the distillation of spirits from grain important to the farming interests of your State?

Answer. It certainly is. In that section of the country in which I live, and with which I am best acquainted, it forms the largest article of exportation.

Question. What share of the whiskey distilled does the farmer receive for his bushel of corn when distilled?

Answer. He receives one-half of the product, which is ordinarily one gallon per bushel.

Question. What is the usual price of corn in your neighborhood?

Answer. The average may be set down at 18 cents.

Ordered, That the Hon. Nathaniel Garrow and the Hon. Jeromus Johnson, members of the House of Representatives, be requested to attend the committee to-morrow morning at 10 o'clock, to answer such questions as may be put to them in relation to the matters of inquiry before the committee.

TUESDAY, *January* 15, 1828.

Hon. Nathaniel Garrow admitted and sworn:

Question. Where do you reside?

Answer. I reside in Auburn, Cayuga county, New York.

Question. Are you now and have you for some years past been engaged in the distillation of spirits from grain?

Answer. I have been engaged in that business for about twenty-five of the last twenty-seven years.

Question. What kinds of grain do you use in your distilleries?

Answer. I use corn and rye principally. I have sometimes used wheat of the second quality.

Question. Do you use those kinds of grain separately or combined; and if combined, in what proportions?

Answer. I use those grains (corn and rye) combined, in the proportion of two parts of corn to one of rye. This has been the case for the last fifteen years. If it could be done conveniently, it would be preferable that they should be used in equal quantities, but the scarcity of rye prevents that practice extensively. I would not wish to use more than one-half rye.

Question. Do these grains thus combined yield more spirit than either would separately distilled?

Answer. I am of opinion that one-half corn will yield more spirit than corn or rye exclusively.

Question. Where is that part of the whiskey made in your section of the country, and which is not required for the home consumption, marketed?

Answer. New York is the principal market for all that is not consumed in the neighborhood.

Question. What has been the average price, in large quantities, for the last five years, in that market?

Answer. I cannot speak certainly as to the market price in New York, except for the last two years. During the last season I have sold, on contract, at 27½ to 30 cents. The average of my sales has been about 29 cents; perhaps that is somewhat above the market price. The season previous to the last I sold for 30 and some as high as 33 cents, but I made advantageous sales. The price generally was not so good, but I will not undertake to fix the average. My sales have been in casks of thirty-six gallons, which casks cost 87½ cents; and for these casks I received nothing. The whiskey was hydrometer proof. The cost of transportation, including the price of the cask, together with other incidental expenses, is about six cents per gallon.

Question. What has been the average selling prices where you reside, for the same time, in any considerable quantities?

Answer. I think the average price of this article in the country has been about 25 cents per gallon for the last five years; but this is what is called country proof, which is fully twelve and a half to fifteen per cent. below the hydrometer or market proof. I speak of large sales to merchants, and of my own whiskey, made in copper stills, which has generally commanded a better price than most of the distillations in that section of country. Other manufacturers have, during the same time, sold hydrometer proof at the same prices, and even a penny lower, at the same places.

Question. What have been the cash prices of rye and corn at your distilleries, on the average, during the same time?

Answer. The average cash price of corn for the last five years may be said to be 42 cents, though it has been sold as low as 34 cents, and sometimes as high as 50 cents. The average price of rye I take to have been 50 cents.

Question. Is there a large surplus of these grains in your neighborhood dependent upon the distilleries for a market?

Answer. There is.

Question. Is the business of distilling these grains at the present time sufficiently extensive to furnish a fair market for this surplus in your part of the country?

Answer. I should say not. Some of these grains are sent from my neighborhood to a market upon the canals; but I cannot say how much. The quantity depends very much on the price which corn or corn meal bears in New York.

Question. Has the farmer in your section of country for the last five years received a fair compensation for his time and capital in the prices at which his coarse grains have sold?

Answer. I think not. There is a general complaint on that subject; and my own experience, as a farmer, convinces me that the product is an inadequate return for the labor bestowed.

Question. Is your section of country capable of producing a much larger surplus of these grains, if a market was afforded, than it now does?

Answer. It is.

Question. What quantity of spirits have you distilled during the last year?

Answer. I have distilled within the last twelve months from 70,000 to 80,000 gallons. I shall probably distil as much the ensuing year. I have increased the quantity gradually from year to year.

Question. Do you consider the distillation of spirits from grain a fair business in your section of the country?

Answer. I do.

Question. Do you think a diminution of the price of whiskey will increase the consumption of it in any grain section of country?

Answer. I do not.

Testimony in relation to spirits from molasses and other materials.

MONDAY, *January* 14, 1828.

Hon. William Russell further examined:

Question. Is it not important to the farming interest of your State that the introduction of foreign spirits, and of foreign material, for the purpose of distillation, should be discouraged by additional duties?

Answer. I deem it so.

Question. Do you know the quantity of spirits distilled from foreign materials in the United States?

Answer. I do not.

Hon. James Findlay further examined:

Question. Is it important to the farming interests of Ohio that the introduction of foreign spirits, and of the foreign material for distillation into spirits, should be discouraged by additional duties?

Answer. There can be no doubt on that subject.

Hon. Charles A. Wickliffe further examined:

Question. Is it not important to the agriculturist of Kentucky that the duties on foreign spirts, and on foreign molasses, from which it is distilled, should be increased?

Answer. I think it highly important that the duties should be increased, because the increased demand

which would be produced by an exclusion of the foreign article would be supplied by the domestic production, and thus afford a more extended market.

TUESDAY, *January* 15, 1828.

Hon. Nathaniel Garrow further examined:

Question. Is it an object, in your opinion, important to the farming interests of your State, to discourage the importations of foreign spirits and of foreign materials for distillation by an increase of the present rates of duty?

Answer. That is my opinion.

Question. Are there any distilleries of spirits from foreign materials in your section of the country?

Answer. There are none.

Hon. Jeromus Johnson, of the city of New York, admitted and sworn:

Question. Are you now or have you ever been engaged in the distillation of spirits from imported molasses; and if so, when, and at what place?

Answer. I am not now engaged in that business, but was from the year 1805 to 1812. The distillery was at the city of Hudson, in the State of New York.

Question. What was the average price per gallon of imported molasses at your distillery during the time you were engaged in this kind of distillation?

Answer. Distillers have always to buy two or three qualities, in order to carry on their business profitably. The price of the most inferior was then from 28 to 32 cents. The best of that used for distilling usually costs from 33 to 36 cents. The quantity of inferior used is much greater than that which is good. In consequence of the inferior quality used in the hot season, the rum produced becomes soured, and so do the cisterns or vats; then the better molasses is used to prevent the acetous fermentation, and to raise the character of the rum.

Question. What is the average quantity of sprits, of hydrometer proof, distilled from a gallon of molasses?

Answer. A gallon of molasses, of good quality, will produce a gallon of spirits, hydrometer proof. That which is inferior produces less by 5 to 7½ per cent. Hydrometer proof is above the custom-house first proof 3 per cent.

Question. What was the difference of value between a gallon of rum made from molasses and the gallon of molasses?

Answer. The difference was 12½ cents per gallon. At this time the distiller can well afford to carry on the business, by receiving from 8 to 10 cents per gallon more for his spirits than he gave for his molasses.

Question. Have you the means of forming an opinion as to the quantity of spirits distilled from imported molasses in the United States at the present time?

Answer. The only opinion I can express is founded on my knowledge of the distilleries in the neighborhood of New York, at Hudson and at Albany. These distil about 350,000 gallons of molasses per year at this time. I think the quantity distilled in the section of country of which I speak, (including Hudson, Albany, Jersey City, and Staten Island,) is less by one-half now than in 1812, by reason of the greater quantity of whiskey brought into the market, and to the preference given to that over the rum. I have no means of forming an opinion as to the quantity of rum distilled from molasses in the United States, other than the facts before related.

Question. What is the average price of molasses, per gallon, in the city of New York?

Answer. The average price is from 28 to 32 cents.

Question. What is the value of a gallon of rum distilled from molasses in the city of New York?

Answer. New rum, said to be pure, is worth from 35 to 40 cents. Inferior qualities, made of whiskey and molasses, sell lower by 3 or 4 cents in the gallon.

Question. Are there not large quantities of whiskey used with molasses in the distillation of what is called new rum?

Answer. There are.

Question. What is the price of molasses in the West Indies?

Answer. The price varies from 5 to 12½ cents.

Question. What are the freight, charges, duties, and all other expenses of delivering such molasses in our ports, per gallon?

Answer. Including all expenses, it amounts to 20 cents per gallon over and above the purchase money. The average weight of 100 gallons of molasses, such as is used in distilling rum, is about 950 to 1,050 pounds.

Testimony in relation to window and other glass.

THURSDAY, *January* 17, 1828.

Benjamin Bakewell, of Pittsburg, Pennsylvania, admitted and sworn:

Question. Are you engaged in any branch of manufactures; and if so, what is that branch, and how long have you been concerned in it?

Answer. I am concerned in the manufacture of flint glass, and commenced it in the year 1808, and have been continually engaged in it since that time.

Question. Have you had many difficulties to encounter in establishing your manufactory, and have you surmounted them?

Answer. We had at first great difficulties in the labor of searching for the proper materials and in obtaining suitable workmen. We have surmounted all difficulties.

Question. What have you found by experience to be the great requisites to insure success in the establishment of American manufactures?

Answer. The requisites are capital, skill, industry, economy, judgment, and a market.

Question. Is your manufactory advantageously located as regards the obtaining materials; and have you facilities for distributing your products?

Answer. Our establishment is favorably situated for obtaining the requisite materials and for

distributing our products, having water transportation to the market for our manufactured glass. The materials are the product generally of the country. There is one exception, that of saltpetre, of which we use a small quantity. We use from 50,000 to 60,000 pounds of the Missouri pig lead annually; also considerable quantities of potash, say two-thirds as much as of the lead, in the manufacture of our flint glass. This latter we get principally from Ohio.

Question. To what sections of the Union is your product generally distributed?

Answer. To the southwest and west principally; some to the northeast part of Ohio.

Question. Do you employ many hands, and how many; and what proportion are men, and what boys?

Answer. We employ directly about 60 hands; of whom about 20 or 25 are boys. The residue are able-bodied men.

Question. Are you able to supply all the demands made on you for your manufactures?

Answer. We are.

Question. Are further protecting duties essential to sustain you against foreign competition in your branch of manufactures?

Answer. I think not.

Question. Are the manufacturing establishments of Pittsburg numerous and varied in their kind, and are they generally prosperous?

Answer. There are various manufactories in Pittsburg, and they are generally prosperous.

Question Do you require a power for moving machinery in your establishment; and if you do, what power do you use?

Answer. We do require power in the cutting of glass, and the power used is steam.

Question. Is steam-power extensively used in Pittsburg for driving heavy machinery; and is not its first cost and annual expense a great objection to its use?

Answer. Steam is in general use in Pittsburg in all manufactories where much power is required, and from the cheapness of fuel, and the skill and cheapness in making steam engines which our mechanics possess, it is considered the cheapest power, and forms little or no obstacle to the commencement of any establishment where a moving power is required. A steam engine, which formerly would have cost $2,000, may now be had for $800, although the demand for these engines is constantly increasing.

Question. Do your manufacturers, who require a great moving power for driving their machinery, find it more advantageous to locate themselves at Pittsburg, and adopt a steam-power, than to establish their manufactories by a water-power at some distance?

Answer. I believe they do. We have but one establishment (an iron manufactory) located in the country, and the proprietors have found the want of water in the summer season so great as to compel them to supply themselves with a steam engine, and they regret their location. I think steam-power has many advantages over water-power. One of the most important is, that in the use of that power you have a perfect choice of location; and another is, that in the western country nearly all the streams affording water-power fail in the dry seasons of summer, and are also subject to impediments by frost, which steam-power is not. Steam-power may be increased to any extent at pleasure; and in the neighborhood of Pittsburg there is no limitation to the amount of coal. The price of coal at that place is generally about four cents per bushel of about 84 pounds. You may get it by contract in advance at from 3½ to 3¾ cents per bushel. It is the heaviest kind of bituminous coal, and is equal in quality to any I ever saw in England or elsewhere.

Question. What has been the relative prices of flint glass during the periods referred to?

Answer. In 1808 we sold common flint half pint tumblers at two dollars per dozen; after the currency of the State became settled we sold them at one dollar per dozen; and now we sell them at about eighty-one cents per dozen. Plain quart decanters, which, in 1808, we sold at six dollars per dozen, we now sell at two dollars and twenty-five cents. Wine glasses, in 1808, were one dollar and fifty cents per dozen, and they now are seventy-five cents per dozen.

Question. Has the price of wages been uniform for the last six or seven years?

Answer. In our factory there has been a great uniformity in wages during the time referred to.

Question. Is window glass manufactured extensively at Pittsburg, and what is the price per box of one hundred square feet, of the sizes of 8 by 10 and 10 by 12 inches, of Pittsburg manufacture?

Answer. It is. The price per box, of 100 feet of 8 by 10 inches, is from $3 80 to $4. That of 10 by 12 inches is about from $4 75 to $5.

Question. Does window glass require further protection by duty, or is the low price owing to domestic competition?

Answer. An increase of duty cannot help it, as the low price is entirely owing to domestic competition.

Question. What was the price of window glass in Pittsburg in 1808, and at various periods to this time?

Answer. I cannot answer the question, as I am not concerned in the manufacture. Window glass, by the box of 100 feet, 8 by 10 inches, has been as high as $12; but I cannot fix the time. It was, however, when paper money of a depreciated character was in circulation.

SATURDAY, *January* 26.

Andrew Way, of Washington city, admitted and sworn:

Question. Are you engaged in the manufacture of window glass? If so, where is your manufactory?

Answer. I am engaged in the manufacture of window glass in this city.

Question. Do you manufacture window glass extensively; and if so, what are your present selling prices for the box of 100 square feet, of the sizes of from 6 by 8 to 10 by 12?

Answer. I make about 3,000 boxes annually. We sell for better prices in this city and Baltimore than elsewhere. The sales are about one-quarter in this city, one-quarter in Baltimore, the rest goes to Philadelphia, New York, and to the southward. The selling prices vary occasionally. A box of 100 feet, 6 by 8 and 7 by 9, will average about $5 50, and these kinds are most usually sold in New York. Boxes of 8 by 10, best quality, sell here and in Baltimore for $8; the second quality are sold at the same places for $6 50. In other markets the same glass will rarely command more than from $5 50 to $7. Boxes of 9 by 11 and 10 by 12 generally sell for the same prices, and bring about fifty cents, and from that to a dollar, over 8 by 10.

Question. Are you able to supply all the demands made on you for these qualities of glass?

Answer. I am able to execute all orders fully.

Question. Are the prices lower now than formerly; and if so, is it owing to importations, or to domestic competition?

Answer. They are very considerably lower, and it is owing almost wholly to domestic competition.

Question. Does your manufacture of window glass require further protecting duties, or are the low prices owing to domestic competition?

Answer. I do not conceive that additional duties are necessary or would be of any service, except to those who make 10 by 15 glass and larger. I make some of that description, but the quantity is not so large that the duty would be very important to me.

Testimony in relation to cotton cloth.

THURSDAY, *January* 17, 1828.

Simon N. Dexter further examined:

Question. Are you concerned in the manufacture of domestic cotton goods; and if so, of what quality?

Answer. I am concerned in the manufacture of domestic cottons of the coarser qualities.

Question. Is the present duty on those articles sufficient to enable you to prosper in your present manufacture of cottons?

Answer. Yes; I think it is.

Question. What is it that enables you to afford the coarse cottons so much lower now than they were afforded at a few years ago? Is it owing, in any considerable degree, to the increase of capital, of skill, the perfection of machinery, and to the diminished price of cotton?

Answer. It is owing to the improvement in machinery, the reduced price of raw cotton, and to the increased skill in the manufacture.

Question. Is not the continuation of the minimum duty on coarse cotton goods the only security on which the manufacturers rely for continuing their operations?

Answer. I cannot say that it is. I think the manufacture of coarse cottons in this country is now so well established that we could make them if the present minimum was reduced. I think, if the present minimum was repealed, that the foreign cottons of this description would, for a time, come in, and would greatly injure for awhile all our manufacturers; but this, I think, would be done at a loss to the foreign manufacturer. Some of our manufacturers would be able, eventually, to sustain themselves, because, I think they can afford the article now about as cheap as it can be afforded from England. This reduction would, however, create a contest between the American capital invested in these manufactures and the foreign, which would, in my opinion, ruin some of our establishments, and compel them all, for a time, to sustain themselves at a loss. For these reasons I do not think the present minimum ought to be repealed.

Question. Would a minimum duty on fine cottons probably produce the same results on those goods as have been produced by the minimum on coarse cottons?

Answer. That is my decided opinion.

Question. What are the names of the cotton factories in which you are concerned?

Answer. I am concerned in the "Oneida Manufacturing Society" and in the "Utica Cotton Manufacturing Company." They are both incorporated companies. I hold also an interest in the "Whitestown Cotton and Woolen Manufacturing Company," but I have contracted to sell the whole of this interest, and have conveyed and received payment for part of it, and am under an obligation to convey the residue. This establishment makes fine cotton cloths, No. 32. The general manufactures of the two other establishments are Nos. 14 and 15. The last named company makes no woolens. I am still a trustee of the latter company, but do not consider myself interested in it.

Question. Can you state what per cent. these factories have made for the last three years on their capital employed, or on the market price of their stock?

Answer. I cannot. All these establishments originally cost more, in my opinion, than they ought to have cost. They have since been bought in by other persons at a reduced price. The Oneida Manufacturing Society commenced operations, I think, in 1809, at which time they paid in $44,000. The company continued business, increasing their machinery and extending their business from the profits of the establishment, until about 1813 or 1814, when they took an inventory of their original investments and the additions made, and the whole was valued at $88,000. During this period, I think, some dividends had been made, but when or to what amount I cannot say. Subsequently further dividends were made, but to what amount I cannot say. The capital paid a very good interest until about 1815. For about two or three years after that time, I think, they made no dividends. During this period the stock of the company fell from $50, for which shares had been sold, to $15, which is the present price of a share, upon which there had been actually paid $22. For the last two or three years the society have made semi-annual dividends of 75 cents upon each share, and for the last half year there was a dividend of $1 on each share. The above detailed facts will show that, for the last three years, with the exception of the half year ending the 1st of July last, the dividends have been at the rate of 10 per cent. per annum, and for the half year last mentioned at about 13 per cent. per annum upon the market value of the stock.

Question. What kind of cotton wool do you manufacture?

Answer. Principally best Georgia Uplands in the factory last spoken of.

Question. Do you know of any factory, or how many, that manufacture the Sea Islands, and to what extent?

Answer. I believe that the Sea Island cottons are manufactured at the mills of the Messrs. Marshalls and Wolcott, called the York Mills, at Whitestown, in Oneida county, State of New York, for warp. I am satisfied that there is no other factory in that district of country which works this cotton, nor am I certain that this does.

Question. Do you know of any other machinery capable of working the Sea Island cotton with any hope of profit to the manufacturer?

Answer. I know of none except the machinery in the factory last mentioned.

Benjamin Bakewell further examined:

Question. Have you any woolen or cotton manufactories in your city?

Answer. We have one very extensive cotton manufactory in the city and two more in contemplation. The one now in operation is confined to the manufacture of the coarser cottons, such as twist, shirtings, sheetings, &c. I had a conversation with the proprietor of this factory after I received the subpœna of

the committee, and asked him the description of goods made at his factory; to which he replied, that they were necessarily confined to the coarser goods, because the fine were not protected; that although they had made sales at a fair price of all they had hitherto manufactured, yet, when the projected establishments went into operation, if they were still confined to the manufacturing of coarse goods, the domestic competition would be so great as to reduce their profits to little or nothing. On the coarse goods he did not think further protection required, but expressed a desire that proper protection might be extended to fine cotton goods.

SATURDAY, *January* 19, 1828.

Hon. Aaron Tufts further examined:

Question. Are the manufacturers of cotton doing a good business at this time in New England?

Answer. I think that the manufacturers of coarse cottons, which is the description of cottons generally made, are doing a good business.

Question. Would a minimum duty on fine cottons, proportioned to the present duty on coarse cottons, probably produce the same results upon the fine fabrics which have followed the minimum duty on coarse cotton goods?

Answer. I should think it would.

Question. Do you know of any machinery so improved, and to what extent, as to possess the facilities of working to any advantage the fine Sea Island cottons of the south, from which the fine cotton goods are manufactured?

Answer. There is machinery now in operation in Massachusetts which I think can work the finer cottons. They have spun as high as No. 70, and, I am told, can spin finer. There is now a small establishment in my neighborhood which uses Sea Island cotton only, and makes thread entirely. A very large thread factory, I have also understood, is now erecting in the same neighborhood.

Question. Have they done a profitable or unprofitable business; and can you say what the raw material costs?

Answer. I understood from the same owner that they have done a fair business. I do not know the cost to them of their cottons, as I am not a cotton manufacturer.

Question. Have you known any fine cotton cloths wove from this fine thread?

Answer. I have not.

Question. Have not all or most of the manufacturers of cotton goods done a good business; and have not some of them made large fortunes?

Answer. The manufacturers of cotton goods, since the tariff of 1824, have been considered as doing a very good business; but before that time they were much depressed.

Question. Are they not constantly increasing their capital, machinery, buildings, &c.?

Answer. They are to a considerable extent.

TUESDAY, *January* 22, 1828.

William Phillips further examined:

Question. Are the manufacturers of cotton doing a good business at this time in New York?

Answer. I have conversed with some of them, who have generally represented that their business was good.

WEDNESDAY, *January* 23, 1828.

Abraham Marland further examined:

Question. Are the manufacturers of cotton doing a good business at this time in Massachusetts?

Answer. The general impression is that they are doing a good business.

THURSDAY, *January* 24, 1828.

Joseph Marshall, of Hudson, New York, admitted and sworn:

Question. Are you now and have you been engaged in the manufacture of fine and printed cotton cloths? If yea, how long, and at what places?

Answer. I have been engaged for about thirty years, previous to August last, in the manufacture of cotton cloths, at Manchester, in England.

Question. In what manufactories of cotton are you now interested, and which of them are under your immediate superintendence?

Answer. I am interested in four different establishments, one of which is at Troy, in the State of New York, where we make calicoes for shirting and for printing in equal proportions. Another is in the neighborhood of Whitestown, in the same State, where we make nothing but shirtings. A third is what we call the "New York Mills," and is in the immediate neighborhood of the last. At those mills we make shirtings and cambric muslins. The fourth is in the neighborhood of Hudson, New York, where we do nothing but bleach and print cloths made at our and other factories.

Question. What descriptions of cotton do you use; where is it usually purchased; and what does it cost you at your factories?

Answer. We use chiefly Alabamas and New Orleans, generally purchased by an agent in New Orleans and Mobile. We consume about 1,000 bales per year, which usually cost us at the factory from 11 to 14 cents per pound, in which is included one cent per pound for freight and other charges from those places to our factories.

Question. What numbers of the cotton yarn do you spin, and what are the finest numbers or qualities you weave into cloth?

Answer. We spin from No. 32 to No. 50 at the New York Mills, but at Whitestown most commonly No. 22. At the Troy mill we spin No. 35. The No. 50 is the finest we weave, and that is made into cambric muslin.

Question. What qualities of the cloths do you make, and what proportion of the whole cloths made at your factory is printed?

Answer. That of our weaving, which is printed, is called the 1,200 reed, and is made of No. 35 exclusively. We print no other number of our own, but purchase and print considerably from No. 12 to No. 40, but none higher. The proportion we print compared with what we make is inconsiderable. At Whitestown we make about 2,000 yards per week; at the New York Mills about 7,000 yards per week; and at Troy about 3,000 yards; from all which we print only about 1,400 yards a week.

Question. What are the values of the different qualities of cloths made at your factories before and what after they are printed, in the markets?

Answer. What we make at Whitestown commands 12½ cents in the gray or unbleached state. At the New York Mill all is bleached before sale, and they bring 22 cents. The cambric muslins have not been brought into the market. The cotton shirtings made at Troy are bleached, and sold at 19 cents; these are made of No. 35. That which is intended for printing is worth, before it is bleached, 12½ cents; this is also No. 35. We purchase about 16,000 yards unbleached weekly, for bleaching and printing, of the numbers mentioned in the answer to the fifth interrogatory. The prices vary from 6¼ to 14 cents the yard. After they are bleached and printed they sell from 11 to 30 cents the yard.

Question. What is the difference of expense to the proprietor of a factory between manufacturing the same qualities of cotton in England and in the United States?

Answer. The buildings can be put up for about the same in Hudson as in England, and for ten per cent. less in Whitestown. The machinery, taken all together, will cost nearly double in this country what it will in England, independently of the propelling power. There they work by steam, and in this country we work by water, the first cost of which, with water privilege, &c., about the same.

Question. What is the difference of expense of printing the same patterns and qualities of cloths in the two countries?

Answer. The expense of printing is one-third higher here than in England. This arises from the difference of expense in fuel, drugs, and wages. The fuel which costs $27 in Manchester, will, in Hudson, cost $120 to do the same business. The 112 pounds of coal in Manchester cost ten cents; oak wood in Hudson is $4 a cord.

Question. What is the capacity of the manufactories in the United States, so far as your knowledge extends, to supply the markets of this country with fine cotton cloths, printed and not printed?

Answer. I am not sufficiently acquainted with the factories of this country to answer that question.

Question. What is the difference in price at which the English manufacturer can afford his fine and printed cottons in the English and in the American markets?

Answer. The English manufacturer can afford fine printed or other cottons for the American market for one-third less than the American manufacturer. It costs the English manufacturers fifty per cent. on the price in the English market to get printed cottons into the American market. On cotton of one yard wide, made of No. 35 yarn, and in the 1,200 reed, the operative duty is, at this time, just seventy per cent. on the cost in England; the other charges, viz., insurance, boxing, freight, exchange, commissions, &c., is twenty-five per cent. I speak now of the cloth that would cost in England about 9½ cents per yard. I am enabled to state this with accuracy, having been a large exporter from Manchester.

Question. Is there any other printing establishment besides yours in the United States; and if any, to what extent?

Answer. I know of six, each of which prints more than we do at this time, and there are many smaller ones.

Question. What are the finest cottons which you weave? Is there any factory in the United States that weaves finer or so fine as you do?

Answer. I know of no factory that spins or weaves so fine as we do?

Question. Do you know of any factory in the United States which operates with the Sea Island cotton?

Answer. I do not know that there are any such. We used the Santees, sometimes called Sea Island, for a short time, for warp, but found that the Orleans answered quite as well, and it is much cheaper?

Question. Does not the manufacturer of cottons in the United States, considering the means of payment by the consumer, enable him to use more than he could do if he depended on a foreign supply?

Answer. I am decidedly of that opinion.

Question. Is the protection now afforded to coarse cottons such as to enable you to sustain a competition with English goods of the same quality?

Answer. It is quite sufficient on coarse cottons not printed. I speak of that made of No. 25, or anything under it.

Question. Taking the price at which you can produce coarse cottons or calicoes at your factory, at Hudson, can you print and sell them at such prices as to sustain a competition with English printed calicoes of the same qualities?

Answer. We do not produce as much coarse cottons as we print; but taking that which we buy as the standard, we cannot compete with the English manufacturer.

Question. To enable the American manufacturer to compete with the foreigner in printed cottons are additional protecting duties necessary? If so, what addition to the present duty is required?

Answer. They are; and my opinion is that two cents on the running yard of all printed cottons, in addition to the present rates of duty, would furnish a perfectly sufficient protection.

Question. What per cent. on the cost of the fabric would be produced by an additional duty of two cents on the yard?

Answer. It would be equal to an ad valorem duty of 10 per cent. as an average.

Question. Does your acquaintance with the importation and manufacture of cotton in Great Britain enable you to form an opinion whether cotton can be packed in bagging made of cotton and transported to that country in good order?

Answer. I have been extensively engaged in the purchase of cotton and in its manufacture, and am well satisfied that cotton packed in bags made of cotton can be transported to England in as good order as that put up in hemp or flax bagging, and when well put up it will command more in the market, particularly if in square bales. One reason for the difference in the price is, that the bag can be applied to a valuable purpose; another reason is, four pounds are allowed in the hundred weight for tare; and, as cotton weighs less than hemp, the purchaser will give the preference to that packed in cotton.

Question. Do manufacturers or purchasers of cotton in England find the bag made of cotton of more value, after the cotton is used, than that made of hemp or flax; and if so, to what purpose is it applied?

Answer. They do find the cotton bag of more value, because it is again worked up into coarse cotton and sold for half price; it is considered too valuable to work into paper, to which latter purpose the hemp bag is usually applied.

Question. Is it likely that large quantities of bagging would be manufactured from cotton in England and imported, if it was admitted into this country free of or at a small duty; and would this increase, to a great extent, the consumption of the raw material?

Answer. It would not be likely to increase the consumption in England, because the profit would not

be likely to pay for the labor bestowed on it. I am of opinion, however, that it might be manufactured in the United States to great advantage; and if this be done to any great extent it would necessarily lead to a great consumption. I have heretofore contemplated, and have not yet abandoned, establishing a factory for that purpose. I have thought we could make it as good as could be wished, forty-two inches wide, and sell it at fourteen cents.

Question. So far as your acquaintance extends, what is the difference in price of manufacturing labor generally in England and in the United States?

Answer. The prices of the various descriptions of labor required in manufactures are so different, and the prices, both in England and in the United States, in different places and different factories, vary so widely, that it would be very difficult, if not impossible, to arrive at an exact relative scale of the different descriptions of labor in the two countries, and of the relative prices of each kind; but labor, generally, in the manufactories in England is lower than it is in the United States.

SATURDAY, *January*, 26, 1828.

Jonas B. Brown further examined:

Question. Are the manufacturers of cotton doing a good business at this time in your neighborhood?

Answer. I am not acquainted with the business, but am told they are.

John Siddal, of Wilmington, Delaware, admitted and sworn:

Question. Are you now and have you been engaged in the manufacture of fine and printed cotton cloths? If yea, how long, and at what places?

Answer. I have been intimately acquainted with spinning and weaving cotton for nearly forty years. I began in 1814, with partners, near Wilmington, in Delaware, and continued it until 1823, when I had to abandon the business. We spun from No. 24 to 30 until 1823, and wove fine numbers for printing. Since that time we spin from No. 5 to 10. We do not weave any, but sell the yarn.

Question. In what manufactories are you now interested; and which of them are under your immediate superintendence?

Answer. Since 1823 I have been the agent and superintendent of the factory alluded to in my last answer, with the exception of one year, when I superintended one at Patapsco, in Maryland.

Question. What description of cotton do you use; where is it usually purchased; and what does it cost you at your factories?

Answer. We use what is called "Georgia Uplands," purchased in Philadelphia. The price has varied; of late its price has generally been from ten and a half to eleven and a half cents, in which we pay also for bagging and rope. The freight from thence to Wilmington it is difficult to estimate, as we either draw it in our own wagon or receive it by water.

Question. What number of cotton yarns do you spin?

Answer. We spin nothing higher than No. 10 at this time.

Question. What are the values of the different numbers?

Answer. The prices from No. 5 to No. 9 are about the same, and are generally from 22 to 23 cents per pound; No. 10 will bring a half or a cent more. But from these prices are to be deducted six and a half per cent. for commissions and warrantry, and for other incidental charges.

Question. What amount of capital is employed in the factory to which you refer?

Answer. It is from four to five thousand dollars, all of which is invested in machinery.

Question. What is the annual quantity of yarn produced by your factory?

Answer. About 80,000 pounds.

Question. What is the average cost of the yarn you make per pound?

Answer. We calculate that the price of the raw material, the expense of spinning, waste, &c., makes it cost us from 19 to 20 cents per pound.

Question. What number of hands do you employ?

Answer. We employ generally about forty, of various ages and sexes.

Question. Is there sufficient protection by duties afforded to coarse cotton goods?

Answer. I think the duty on coarse cotton goods quite sufficient to enable the manufacturer to do a fair business.

Question. Is further protection required on fine cotton fabrics?

Answer. I do not consider the finer kinds of cotton cloths sufficiently protected; but if additional protection is granted, it is requisite that it should extend to the gray or brown as well as to the printed or colored cotton cloths of every description, or otherwise the finer kinds of cotton cloths will be imported (in the brown or white state) and printed or dyed in this country.

Question. Is it within your knowledge that cotton and woolen weavers from Europe are emigrating to the United States?

Answer. Many do come to this country, principally from Great Britain. Some of them, who are the best and most ingenious workmen, return, because they do not find employment suited to their capacity.

Testimony in relation to paper.

THURSDAY, *January* 17, 1828.

Benjamin Bakewell:

Question. Have you a manufactory of paper in your city; and do you know whether a further protecting duty is required to sustain it?

Answer. We have one very extensive manufactory of paper in the city, and another in the vicinity. From a conversation held with the proprietor of the one in the city, after I received the subpœna of the committee, he declared no further duty on paper is necessary.

SATURDAY, *January* 17, 1828.

Andrew Way:

Question. Are you engaged in the manufacture of paper; if so, where is your manufactory established?

Answer. I am engaged in the manufacture of paper in the vicinity of this city, on Rock creek.

Question. Do you manufacture paper extensively and of various kinds?

Answer. I make about 2,000 reams of different qualities per annum.

Question. Are the prices of paper lower now than formerly; and if so, is this owing to importations, or to domestic competition?

Answer. The prices of some kinds of paper are lower than formerly, other kinds bear about the same prices, or, perhaps, those of the best quality are a shade higher than they were eighteen months ago. I conceive the prices are regulated now wholly by domestic competition.

Question. Are you able to supply all the demand made on you for paper?

Answer. I find a ready sale for all I make; but this may be owing to my advantageous location. I could sell more than I am now able to make.

Question. Does the manufacture of paper require further protecting duties, or are the prices regulated by domestic competition?

Answer. I think it does not require any further protection by way of duties on the foreign manufacture. On the contrary, I am of opinion that it is better protected than perhaps any other article of domestic manufacture.

20TH CONGRESS.] No. 844. [1ST SESSION.

EXPENDITURES OF THE PUBLIC DEPARTMENTS OF THE GOVERNMENT.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 31, 1828.

Mr. JOHNSON, from the Committee on Public Expenditures, to whom was referred the resolution of the House of Representatives instructing them to report whether it is compatible with their other duties to enter upon that sort of rigid examination necessary by comparing, with the several laws making appropriations, the disbursements under them, and the vouchers in support of them, according to the spirit of the sixty-fifth rule of the House, and the objects in said resolutions specified; and also to report, if necessary, what further provisions and arrangements are wanted to add to the economy of the Departments and the accountability of their officers, reported:

That, on examining with care and attention the rules of this House for the purpose of ascertaining distinctly the duties required of them, they find the same, or nearly the same, duties assigned to so many different committees that they have been compelled to give a liberal construction to the various rules relating to public expenditures, rather than be guided by the letter of the rules themselves, in order to give a just operation to all the rules taken together, and full employment to the several committees appointed under those rules.

By the fifty-seventh rule of this House the Committee of Ways and Means are required to take into consideration all such reports of the Treasury Department, and all such propositions relative to the revenue, as may be referred to them by the House; to inquire into the state of the public debt, or the revenue, and of the expenditures, and to report from time to time their opinion thereon; to examine into the state of the several public Departments, and particularly into the laws making appropriations of moneys, and to report whether the moneys have been disbursed comformably with such laws; and also to report from time to time such provisions and arrangements as may be necessary to add to the economy of the Departments and the accountability of their officers. The committee was first appointed as a standing committee of the House of Representatives, on the 9th of December, 1799; and, from that time until the 24th of February, 1814, all the duties now assigned to them, to the Committee on Public Expenditures, and to the six standing committees appointed under the seventy-fourth rule of this House, were delegated to them. On the 24th February, 1814, the Committee on Public Expenditures was first appointed as a standing committee of the House.

It is considered that the creation of the Committee on the Public Expenditures, with the adoption of the sixty-fifth rule of the House, which charges this committee with those duties that had been previously allotted to the Committee of Ways und Means under the fifty-seventh rule, as rendering it unnecessary for both committees to discharge, in terms, the same office; and, being thus clothed with equal powers and concurring duties in relation to the same objects, it is believed that the performance of the class of duties which touch the accountability of the public officers, and the fidelity and economy of the disbursements, as more fitly belonging to this committee than to that of Ways and Means.

On the 30th of March, 1816, the House of Representatives passed a resolution appointing the six additional standing committees before referred to, prescribing to them the same duties now designated in the seventy-fifth rule of this House. Until the appointment of these six additional standing committees, the duties imposed on the Committee on Public Expenditures must have been too arduous and multifarious ever to have been performed with effect; but, under the construction which your committee now give to the various rules on this subject, and the classification of the several duties to be performed by the before mentioned several committees, it is hoped and believed such an examination may be made into the expenditures of the public moneys of the nation as will insure a just economy in the several Departments and a proper accountability of the officers of Government.

Taking these views of the subject, your committee have considered it to be their proper duty to examine into the laws making appropriations of money, and to ascertain—1st. Whether the money thus appropriated has been drawn for the specific object designated in the law making the appropriation. 2d. Whether any more has been drawn than may have been authorized by the law. 3d. Whether the money has been drawn from the Treasury on the requisition of proper officers of the Departments for whose use the appropriation may have been made: leaving it to the committee on the particular Department to examine whether that Department has properly applied the money thus placed at its disposal; whether the vouchers for its disbursements are regular; and whether the expenditure has been made with due regard to economy and in good faith for the public service.

Should the House agree with the Committee on Public Expenditures in the view they have thus taken of the relative duties of the respective committees before mentioned, this committee believe they will be able to discharge the duties imposed on them in a reasonable time. It should, however, be recollected that such a work as they have to perform requires time, patience, and perseverance; for, by acting hastily, they may either overlook the public interest or improperly implicate the officers whose official conduct they are required to examine and scrutinize.

20TH CONGRESS.] No. 845. [1ST SESSION.

AGAINST INCREASE OF DUTIES ON IMPORTS.

COMMUNICATED TO THE SENATE FEBRUARY 1, 1828.

To the honorable Senate and House of Representatives of the United States in Congress assembled:

The undersigned, inhabitants of Thomaston and vicinity, have regarded with much regret the exertions which have been made, and are now making, under the specious pretence of protection to domestic manufactures and encouragement to domestic industry, to obtain the imposition of higher duties on imported manufactures, and especially upon the article of imported woolen cloths.

Living in a maritime country, and deriving their subsistence almost entirely from the unfailing sources which commerce opens to the enterprising, your memorialists ask leave respectfully to express their firm conviction of the impolicy of such a measure. Not unfriendly to the manufacturing interests of the country, but regarding with equal pride and satisfaction the success which has rewarded the industry and ingenuity of their brethren, they yet beg leave to say there are other interests equally important and equally deserving the encouragement and protection of a liberal Government. The hardy seaman, whose gallantry has encircled the stars upon our banner with a halo of unfading glory, and the active merchant, whose enterprise has whitened every sea with our canvas, conveying to every region the products of American soil and American industry, are certainly worthy of some regard in the formation of our "American system."

We cannot assent to the justice or the policy of any system of exclusive encouragement of any one branch of trade to the manifest and material injury of others, nor can we acknowledge the conclusiveness of the argument so earnestly urged upon us, that it is necessary to impose higher duties, amounting, in fact, to a prohibition of the articles, upon imported manufactures, to prevent our own from being undersold in our own market. All trade depends upon an exchange with others of mutual benefits, and our commerce owes its existence chiefly to the exportation of commodities which our soil, our climate, and our habits of living, enable us to sell at a lower rate than they can elsewhere be obtained; and if, in exchange for such commodities exported in our own ships, we can purchase articles of foreign manufactures at a lower rate than we can furnish them ourselves, why prohibit this trade? Independent of the very considerable portion of our revenue which will be lost by such a prohibition, must it not prove injurious, nay, ruinous, to the commercial interests of the country? In the strong language which has been used upon a similar occasion, "if we will not buy foreign commodities, we cannot sell our own; if we will not import, we cannot export."

But an increase of duties upon imported manufactures is contended for as an act of justice which may be demanded of the Government, because individuals have been induced by the liberal encouragement given them to invest their fortunes in manufactures. Your memorialists respectfully beg leave to question the soundness of the principle upon which the claim is founded. The same course of reasoning might be infinitely pursued, and every new act of encouragement would thus become only a pledge for still more. We believe that sound policy will always be opposed to the forcing of any trade. Our citizens *will* regard their own interest, and that interest will, of itself, induce them to afford a proper encouragement to all branches advantageous to the country, without the intervention of legislative aid.

The moral effect of a system of high duties upon articles of common use, and the strong temptation it holds out to the violation of the laws, is certainly deserving of consideration in a country governed as ours is, by the force of public opinion, and whose laws owe their strength to the sanctity which their own justice and impartiality have given them in the eyes of the people.

Your memorialists beg leave here utterly to disclaim anything like party feelings in the foregoing expression of their views. They have endeavored to consider the subject fairly and impartially, and they cannot refrain from renewedly expressing their thorough conviction that an increase of duties upon imported manufactures, while it might swell the capitals, already enormous, of a few moneyed men, must prove injurious to the best interests of the country.

There is another subject peculiarly interesting to your memorialists, which they beg leave respectfully to submit to your consideration. By the existing law, registered vessels, upon entering coastwise with cargoes from any port beyond an adjoining State, are required to pay the same tonnage duty as if direct from a foreign port. The exacting this duty is a subject of frequent complaint among ship-masters and ship-owners in this section of the country. From a moment's consideration of the subject it will be seen that the complaint is not made without reason. To show the operation of the law at a glance, we will suppose one of our vessels engaged in freighting to and from the different ports on our seaboard between Boston and New Orleans, and from either of those ports to foreign countries. She sails from this district under an enrolment and license, and while coasting under the same is required to pay but a yearly tonnage duty. Upon taking a cargo for a foreign port she must necessarily obtain a register. On her return from such a voyage, unless she enters the district where she belongs, she must retain her register, and perform all voyages as a registered vessel, until she returns to her own district. Perhaps it may not be convenient for her to return to her own port for months, or for years, and in the meantime is employed freighting from port to port within the United States as under her enrolment and license. Now, we ask, why should this vessel be required to pay more tonnage duty than she did when in the same employment previous to the change of papers? She had performed her voyage to a foreign port, and, perhaps, contributed largely to the revenue by the duty on her imported cargo; why should her compliance with what was prerequisite to her making such a voyage, viz., the exchanging her enrolment and license for a register, make her liable to any more or higher duties while pursuing the same under her original papers? It cannot be the interest of the law to burden and thereby discourage vessels that may occasionally make foreign voyages from engaging in the coasting business; yet such is the effect of the duty now exacted. But it becomes, not unfrequently, an inconvenience to masters and owners of vessels, when nothing is contributed to the revenue. For instance, one of our vessels is homeward-bound from New York: she might take a quantity which would save the trouble of procuring ballast; perhaps the owner or the master may wish to put a few stores on board for their families; they are liable to pay tonnage duty upon entering if any freight is taken on board, and the result is, that they send home their goods in another vessel in order to be freed from this exaction. With these remarks, we respectfully submit it to the consideration of Congress whether the existing law ought not to be so amended as to allow registered vessels to enter coastwise without the payment of the duties now required.

20TH CONGRESS.] No. 846. [1ST SESSION.

IN FAVOR OF INCREASE OF DUTIES ON IMPORTS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 4, 1828.

At a numerous and respectable meeting, composed of manufacturers, agriculturists, wool-growers, and others friendly to the promotion of American industry, held, pursuant to public notice, at the house of P. Munger, in Morrisville, in the county of Madison and State of New York, on the 21st December, 1827, General Erastus Cleaveland was called to the chair, and Amos Crocker chosen secretary.

Resolved, That a committee be appointed to draught and present for consideration resolutions and a memorial expressing the sense of the meeting on the subject for which it was called.

Resolved, That the said committee consist of Curtis Hoppin, Willard Welton, William Berry, and Bennet Bicknell.

Whereupon the committee, after a recess, reported the following resolutions and memorial; which were unanimously adopted, to wit:

Resolved, That we approve of the proceedings of the Harrisburg convention, held on the 31st day of July last, in recommending and urging upon Congress to extend an adequate protection and encouragement to the growing of wool, hemp, flax, and the manufacture of woolens, iron, steel, and other articles of domestic productions.

Resolved, That we fully approve of the proceedings of the meeting of agriculturists, manufacturers, and others friendly to the encouragement of American industry, held at the Capitol, in the city of Albany, on the 26th day of November last, and of the resolutions passed at said meeting.

Resolved, as the sense of this meeting, That the agricultural interest of this county would be greatly promoted by an increased duty on imported liquors.

The memorial of the wool-growers and manufacturers of wool, in the county of Madison, State of New York, convened, pursuant to public notice, at Morrisville, December 21, 1827, respectfully represents: That they inhabit a section of country nearly equidistant from the extremes of the said State, which, for growing of wool, is equal, in salubrity of climate and fertility of soil, to any other in the same latitude of our hemisphere.

Our yeomanry, aware of the advantage coincident with the principles of domestic political economy, have availed themselves of the opportunities collateral to their situation.

Stimulated by the revising the tariff of 1824, a large proportion of our citizens have entered extensively and at great expense into the growing of wool, inasmuch that the wool has become an important staple of the country. Our manufacturers, possessing the advantages of hydraulic and scientific power, animated by the same principles, encouraged by the same law, unwearied in their industry, and liberal in their enterprises, have invested a great amount of capital; have created a business where little before existed; affording the means of subsistence and consumption for a numerous population. Such briefly is the location, and such the condition of your memorialists.

We assume as a fact, that Congress designed by the tariff of 1824 to afford to the great agricultural and manufacturing interests of the United States an adequate protection; under the faith of the guarantee implied by that law your memorialists have invested their capital. We have gone industriously to work to build up an interest which Congress and national economy assured us and the world they would protect—but our business languishes.

Not a woolen factory within the circle of our acquaintance, however industrious and prudent in its management, but assures us of a losing business; our flocks of sheep are reduced to less than half their former value; and lands, though not so much affected, are essentially reduced in price. In searching for causes, the effects of which are so alarming, we are led to discover some defect in the tariff system of 1824, which the ingenuity of foreign manufacturers and growers of wool have turned much to their advantage. That law imposes an ad valorem duty; allows the foreigner to set a value to his own invoices; while the state of trade and manufactures in England and other European countries permits this value to be placed so low that the American manufacturers and wool-growers are overborne by undervalued cloths and wool; and the revenue, too, is defrauded by that which ruins the citizens. Large quantities of broad flannels and pelts have been introduced to evade the duty and embarrass our citizens. Every expedient which the ingenuity of foreign manufacturers and merchants could devise have been resorted to to prostrate the American system; and, we may add, they have been eminently successful. But far more than this, the statesmen of Great Britain, with an eye ever watchful of her agricultural and manufacturing interest and scientific power, the secret of her wealth, have interposed their guardian care, and, by a reduction of her duties from six pence to a halfpenny per pound on imported wool, have virtually countervailed the effect of the American system. By that reduction the English manufacturer has received an advantage of 44 per cent. on wool valued at 20 cents per pound. In England the wool is estimated at about one-third the value of the cloth, consequently the manufacturer has gained 14¾ per cent. on the fabrics of this article by this reduction of the duty on wool. As the English manufacturer is the competitor against whom the law of 1824 was intended to protect the American manufacturer, this 14¾ per cent. must be deducted from the 33⅓ laid by the American law on the foreign fabric; and, in effect, the duty for the encouragement of our looms is thus brought down to 18⅝ per cent. In order, then, to counteract this British legislation, and give the protection intended by the American law, it is incumbent on Congress to increase the duty to 48 per cent. Should this be done, the foreign article will not be enhanced to the American consumer beyond its old prices, because what is added to the duty will be taken from the cost. Will you allow the British Parliament thus virtually to repeal the law passed for the protection of American manufacturers and wool-growers? We think the genius, the interest, and independence of Americans forbid the idea. We derive the confidence of this from various considerations. As manufacturers, we desire that the materials of our fabrics should be grown in our country, relieving us from a dependence upon precarious, uncertain, and foreign supply; while, as wool-growers, demonstration is clear, that, with the fall of American manufactures, our enterprises as wool-growers must be abandoned. We also derive a confidence from considerations of public policy and the force of public opinion. The capital now invested in sheep and manufactures in the United States embraces an immense amount; the home market, created by the employment of this capital, is, probably, equal to the agricultural exports of the nation, with the exception of cotton. The population thus fed, clothed, and educated; the increased value of lands; the amount added to the commerce of the country; the actual increase of the revenue, by

increasing the consumption and the ability to purchase; besides the independence of all foreign nations, are circumstances which must operate conclusively in favor of sustaining, by an adequate protection, these great essential branches of the national industry. Nor will the example and industry of Britain be overlooked. When did she abandon to skill and enterprise an employment in the least connected with the nation's prosperity? With her guardian care and her perseverance she has conquered all difficulties and overcome all obstacles. A reference to the records of European policy for ages past assures us that, in proportion as Governments have protected the agricultural and manufacturing interest, in such proportion have they advanced in prosperity and power; while a neglect of those primary interests has produced opposite and beggarly results.

We also derive great assurances from the test of experiments in our country. The duty on sugars has raised the sugar plantations of Louisiana, and made that business, in point of profit, of the first importance, and added great wealth to the United States. The duty on cotton has built up the factories of the northern and western States, and these consume about one-third of the cotton crop of the United States. Should this be thrown into the European market with the other two-thirds, what would become of the article but for the protection afforded to its fabric by our Government? This protection has insured the price and improved the fabric, and induced a competition which has served to regulate both the quantity and prices. Your memorialists might extend their observations much further; but our main reliance is on the application of the wisdom and intelligence of your honorable body. Satisfied, as your memorialists are, that alterations have become indispensably necessary to our well-being, we humbly pray that the ad valorem duty be changed to a square yard duty, with such regulations as shall insure the collection; and that the duty on wool be so far raised as to counteract the effect of this British legislation, and, in a fair competition, to place us on an equality with the other great agricultural and manufacturing interests of the United States; that the duty on wool be increased, and be annually progressive in improvement. And, as in duty bound, your memorialists will ever pray.

Resolved, That the proceedings of this meeting be signed by the chairman and secretary, and published in several papers in this county, and a copy thereof forwarded to the Representative in Congress from this district.

Resolved, That a corresponding committee, consisting of seven persons, be appointed, whose duty it shall be to call meetings when they think proper.

Resolved, That Erastus Cleaveland, Bennet Bicknell, P. G. Childes, Curtis Hoppin, Willard Welton, Amos Crocker, and Thomas Beckwell, Esquires, be that committee.

ERASTUS CLEAVELAND, *Chairman.*

Amos Crocker, *Secretary.*

20th Congress.] **No. 847.** [1st Session.

AGAINST INCREASE OF DUTIES ON IMPORTS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 4, 1828.

A JOINT REMONSTRANCE to the Congress of the United States against the power assumed to protect certain branches of domestic industry at the expense of others, and the policy of the measure.

To the honorable the Senate and House of Representatives of the United States of America in Congress assembled:

The General Assembly of Alabama, alive to the rights of the people they serve and the interest of the country in which they live, (however painful the duty,) feel themselves called on by the crisis to protest most solemnly against the principle asserted by the General Government to control the labor of the nation by protecting certain branches of domestic industry at the expense of others. We do not complain of the power to raise revenue or regulate commerce. These powers are expressly granted to preserve the existence and promote the harmony and prosperity of the Government. Nor do we complain of the incidental protection that may result from a well adjusted "tariff" imposed on the importation of foreign goods with a view to revenue alone, nor yet of the occasional inequalities that must attend the operation of any general system. The power to raise revenue is essential to the existence of Government, and is expressly and distinctly granted in the Constitution. It is a power entirely safe, and every way compatible with limited and free government, because it has a boundary so well defined by the wants of the Government as rarely to be transcended. The power to regulate commerce was obviously given to avoid the conflicting systems that would necessarily arise in the different States if each had retained a separate control of the subject. That power is connected with the other, and was given to equalize the duties in the different States. It is not of these powers that we complain, but it is the assertion of another and a very different one. It is the assertion of the power to impose a duty on any article of foreign commerce, not because we want revenue, or the regulations of commerce as such require improvement, but because we want to exclude the foreign in favor of the domestic fabric. This power is not granted in the Constitution, and must be sustained, if at all, by the pliable doctrine of implication; and as it is not necessary to the power to raise revenue or regulate commerce, it cannot be sustained as an incidental or implied power; on the contrary, it is a substantial, distinct power, resting on assumption, and fraught with frightful danger. It has no limit but the caprice of those who assert its existence, and is necessarily subject to all the varying views of supposed convenience and the fugitive conceits of expediency. The unlimited nature of this power, and the dangerous purposes to which it may be applied, renders it odious and unfit to mingle in human affairs. Its natural offspring is monopoly, and its natural tendency is to divide the community into nabobs and paupers, to accumulate overgrown wealth in the hands of the few, and to extend the poverty, the vices, and the miseries of the many. This alarming principle leads to the union of the worst of human passions. Cupidity and ambition, under its deleterious influence, minister to each other at the expense of the community. Cupidity will barter worlds for money, and unchastened ambition will filch from the poor man's toil a portion of its just reward to appease the cupidity of the cold calculating monopolist. In this sordid and selfish exchange of equivalents, each accords to the other what is most highly prized without feeling the loss. As the ambitious man cares not for money, nor the monopolist for rank and power, will not the seductive influence of these passions

destroy the equipoise of the General Government, and throw its destructive weight upon any portion of the Union that may be necessary to promote their views? Is fate more certain or destiny more inevitable? Can a power leading, in the dawn of its existence, to a combination so incompatible with freedom exist in a free Government? Shall it be assumed or raised by implication for purposes so oppressive? Shall its oppressive character be obscured by the magic of a name? Can the cabalistic appellation of "American system" change the essential character of the principle? These are portentous questions to all concerned, and the crisis calls for the greatest exertions of the friends of limited Government. Already has the manufacturing interests assumed an organized form, and exhibited a concert and systematic combination against all the other great interests of the nation. Union of councils and immense wealth enable the manufacturing corps to sustain a set of agents to attend the sessions of Congress to importune and press their claims upon the attention of the National Legislature. Not content with the importunity of individual agents, a solemn convention has been convoked at Harrisburg, consisting of delegates from various States, to execute a writ of inquiry, as it would seem, upon the agricultural and other interests of the country, and indicate to Congress, in a more commanding form, how much further the scheme of oppression can be prudently pressed. The right to assemble and petition Congress for the redress of grievances can give no sanction to such a convention. The other languishing interests of the country might well raise a voice of supplication; but for the most pampered and, beyond question, the most flourishing interest in the country to affect a distress that does not exist, and urge Congress for a license to extort from the poor man's toil a still greater portion of its just reward, is a plain insult to the understanding as well as an overt act of tyranny and oppression. In the conflicts of party strife the timid and the silent are apt to be shoved aside to make room for the bold and aspiring; when further exaction is thus urged, to be silent would be criminal. If our rights must be usurped, and our wealth drained to pamper monopolists, we will yield them only when the last inch of ground has been defended with the spirit of freemen. Is it desirable here to imitate the policy of England, and pursue a system that takes from the laborer more and more the proceeds of his toil, until pauperism pervades the land? The policy that takes from one class of laborers the proceeds of their toil to fill the pockets of another must be intrinsically unjust and inimical to freedom. The inevitable tendency of such a system is to accumulate the wealth of the country into a few hands. The rich become more and more rich, without becoming more virtuous or happy; and the poor are pressed down from one point of depression to another, until the extreme of pauperism and consequent misery, vice, and degradation is attained. This picture is not drawn from fancy, but from the solemn admonitions of history. England has pursued the infatuated system of monopoly and protection, of balances and counterbalances, until the middle class of society, once the pride and strength of the nation, is nearly extinguished and merged in the other two, and the nation is divided into a small number ruinously rich, and the millions of paupers who infest the poor-house and cook-shops of the nation. The sponge of monopoly has absorbed nearly the whole wealth of the nation, and drawn it into a few hands, gradually diminishing in number. The nation, it is true, presents a splendid and magnificent exterior, dazzling and captivating the distant spectator, but an interior of extended wretchedness, vice, and misery. Of 21,000,000 of people, less than 300,000 are said to own the whole of the immense public debt, and nearly the whole of the landed property of the nation.

The balance of the nation are in a state of pauperism varying only in degree, taxed to the bone, and doomed to ceaseless toil for a scanty and wretched subsistence. This appalling mass of wretchedness, vice, and poverty, is the practical result of the "*British system*" of monopoly and protection, of balances and counterbalances, in the scheme of restriction, and regulating labor for a series of years, pursued by the magnificent and splendid Government of a wretched and impoverished people.

Let it not be said that the "American system" of monopoly and protection will have different tendencies or lead to different results; the artifice is two shallow to deceive. We cannot disguise the fact that we are struggling with fearful odds, and contending with an organized body of monopolists, who act in concert, and, like the tiger that has tasted blood, prowls for more with increased voracity. Already pampered into fearful importance by partial legislation, they goad and importune Congress for further exactions from the planting interest.

The *allied powers* of avarice, monopoly, and ambition, through the Harrisburg convention, and every subordinate channel of importunity at their command, call for a further subsidy on the labor of the south and southwest, in the shape of a woolens bill, to pamper the gentlemen wool-growers and wool-carders of the northeast; and this, too, at a time when agriculture is languishing and prostrate, yielding a bare support to those who pursue it, and the mercantile and shipping interests partaking of the languor, and manufacturers alone in a flourishing and prosperous condition. The interest least in need thus urging, by aid of such powerful political machinery, a further tribute from the interest least able to bear it, is surely sufficient to prove to Congress how vain and fruitless is the attempt to satisfy the inordinate cravings of the monopolists. One exaction leads to another, and every concession generates a new and more exorbitant demand.

When combinations thus formidable endeavor to throw the overgrown weight of the General Government upon the southern and southwestern States, dry up their commerce by sapping its foundation, degrade them from the proved equality of the compact into the humiliating condition of dependent tributaries to the greedy monopolists of the north and east, the victims would deserve the oppression were they not promptly to interpose the most determined and unyielding resistance.

Let it not be again said that because the southwest and south send no agents to beset the members of Congress, and have foreborne to petition or remonstrate in every village, or to call a counter-convention, that they are so recreant to duty as to acquiesce in the proposed oppression. On the contrary, let it be distinctly understood that Alabama, in common with the southern and southwestern States, regards the power assumed by the General Government to control her internal concerns by protecting duties beyond the fair demands of the revenue as a palpable usurpation of a power not given by the Constitution, and the proposed woolens bill as a species of oppression little less than legalized pillage on the property of her citizens, to which she can never submit until the constitutional means of resistance shall be exhausted.

SAMUEL W. OLIVER, *Speaker of the House of Representatives.*
NICHOLAS DAVIS, *President of the Senate.*

Approved January 15, 1828. JOHN MURPHY.

SECRETARY OF STATE'S OFFICE, *Tuscaloosa, January* 16, 1828.

It is hereby certified that the foregoing is a true copy of the original roll on file in this office.

JAMES J. THORNTON, *Secretary of State.*

20TH CONGRESS.] No. 848. [1ST SESSION.

DRAWBACK OF DUTIES AT KEY WEST.

COMMUNICATED TO THE SENATE FEBRUARY 5, 1828.

IN SENATE OF THE UNITED STATES, *February* 5, 1828.

Mr. SMITH, of Maryland, from the Committee on Finance, to whom was referred the petition of sundry inhabitants of Key West praying that the right of drawback on the exportation of foreign merchandise imported into that port from any of the ports of the United States may be extended to Key West, reported that the prayer of the petitioners is at this time inexpedient, and ought not to be granted.

To the honorable the Senate and House of Representatives of the United States of America in Congress assembled:

The memorial of sundry inhabitants of Key West most respectfully represents: That by a provision of the 10th section of "An act to provide for the collection of duties on imports and tonnage in Florida, and for other purposes," approved the 7th May, 1822, you will perceive that foreign goods, wares, and merchandise cannot be imported from any port in Florida for the benefit of drawback "unless the same shall have been imported directly into the said port from a foreign port or place."

We cannot see any just reason for placing the ports in Florida under those peculiar restrictions from which ports of the United States are exempted. These restrictions operate with extreme severity against the ports of Pensacola and Key West, which, from their local positions, are better adapted for an advantageous trade with the island of Cuba and the ports of Mexico than any other ports within the sovereignty of the United States; and they would, in our opinion, enjoy a large portion of the trade of those countries provided these restrictions were removed. As the law now stands, goods imported into Key West direct from a foreign country can be shipped with debenture; but if transhipped coastwise from New York to Key West this privilege is denied. It cannot surely be considered advisable, in wise legislation, to retain a statute which merely gives trouble to the merchant, but which can be so easily evaded; for example, goods are shipped from New York for Bermuda, the drawback forthwith attaches, and the debenture becomes effectual. These goods, then, can again be reshipped, and arriving, would, as coming direct from a foreign country, be entitled to debenture when re-exported from Key West, and the merchants in their trade to the islands and to the main would attain all the benefits they desire. Thus, you see, the law can be most easily evaded with this only inconvenience, that a shipment *via* Bermuda would impose some additional trouble and expense beyond what would be incurred if drawbacks were admitted on shipments made coastwise from ports or places in the United States. Any increased expense that can be avoided should be, because every increase of it will have a tendency to place us on terms of less fair competition with the merchants residing at New Providence. The advantages to be derived from this trade is of more importance than one who has not reflected upon the subject might at first conceive. The contiguity of Key West to Cuba and the ports of Mexico gives it, in point of situation, a decided superiority over other ports of the United States for a trade with those countries.

The Spanish vessels are in the habit of bringing specie, cochineal, hides, sugar, coffee, &c., and, in exchange, require large and various supplies of articles which they have been in the habit of procuring heretofore at New Providence and at Jamaica.

So important have the British Government considered this commerce, that for the last twenty years free port licenses have been extended to the Spanish traders, by which they are exempt from all and every sort of port charges. But the proximity of Key West, which is only about eighty miles from Cuba, a distance that can always be run in a night, induces those traders to prefer a commerce with it. The passage is so short and so safe, and withal, everything of risk from privateers and pirates being saved, they will always prefer it while they can be supplied with articles suited to their purposes. This, though, cannot be the case, unless the privilege of drawback is allowed; for, at present, owing to the limited state of capital and the facilities afforded at our home markets, importations direct from Europe do not take place; the consequence is, that unless Congress grant the relief sought for, a great portion of the Spanish trade, now so valuable to the commerce and navigation of the United States, must continue to go to the ports of Jamaica and New Providence.

It has been urged that the arrangement sought to be obtained would increase the chances to fraud on the revenue, and that an illicit trade from Key West to the United States might be the consequence. This certainly is a far-fetched suggestion, and applies, in point of probability, no more to that than any other port or place in the country. The same thing might be imputed to shipments for drawback from New York, Boston, Philadelphia, or Baltimore, and with much greater seeming plausibility, because Key West, being contiguous to the main land in Florida where the population is few and scattering, precludes every inducement or attempt at fraud—persons being never disposed to place property where there are none to consume and purchase it. But, besides this, an ample and sufficient answer to this objection is, that the supposition of frauds of this character goes to break down the whole doctrine and system of debenture, inasmuch as its feasibility from any other port is just as great as it could be from Key West.

We offer this hasty sketch of our views upon this subject, not deeming it necessary to go minutely into detail to those so familiar with the commerce and navigation of the country as you are. It is submitted, not doubting that when you shall have turned your attention to the subject you will readily perceive other and various considerations why the proposition to repeal the 10th section of the act of 1822 should be adopted by Congress.

Report of the Secretary of the Treasury, showing the amount of revenue from imposts and tonnage in Florida since its cession to the United States.

TREASURY DEPARTMENT, *December* 19, 1827.

SIR: In obedience to a resolution of the Senate of the 14th instant, directing the Secretary of the Treasury "to report to the Senate what amount of revenue from impost and tonnage has been collected

within the Territory of Florida since its cession, designating the amount collected at each particular port," I have the honor to submit a statement prepared by the Register of the Treasury, which contains the information requested.

I have the honor to remain, with the highest respect, your most obedient servant,

RICHARD RUSH.

Hon. the PRESIDENT *of the Senate.*

JOSEPH NOURSE, *Register.*

TREASURY DEPARTMENT, *January* 22, 1828.

SIR: I had the honor to receive your letter of the 10th instant, enclosing a statement of sundry inhabitants of Key West, praying that goods entitled to debenture arriving there from other ports of the United States may be entitled to a drawback of the duties in like manner as if they had* been shipped direct from such ports to a foreign country; and requesting of me, on behalf of the Committee on Finance, such information as I may possess relative to the safety of the revenue in case the prayer should be granted, the number of inhabitants at Key West, and such other information on the subject as might enable the committee to act advisedly in relation to it.

A letter which has been addressed to me by the Comptroller, dated the 17th instant, presents the views taken at that office of the subject-matter of the memorial, and I beg leave to enclose it herewith. There is, otherwise, no information in this Department which bears upon it, and, above all, none at present that would seem to warrant the belief that the revenue would be endangered should the prayer be granted.

The answer to your letter has been kept back for a few days, under an expectation, which was indulged, of being able to procure more precise information touching the number of inhabitants at Key West than is stated in the Comptroller's letter. But that expectation has been disappointed. I have written a letter on the subject to the Collector at that place, and should his answer arrive in time, or whenever it may arrive, it will be immediately transmitted to you for the information of the committee.

I return the enclosures that came with your letter, and have the honor to remain your most obedient servant,

RICHARD RUSH.

Hon. S. SMITH, *Chairman of the Committee on Finance.*

TREASURY DEPARTMENT, *Comptroller's Office, January* 17, 1828.

SIR: In referring to me the enclosed communication of the Hon. Samuel Smith, chairman of the Committee on Finance in the Senate, with the documents which accompanied it, on the subject of a petition from sundry inhabitants of Key West, East Florida, praying that goods transported coastwise from other ports of the United States to that port might have the privilege of being exported therefrom with benefit of drawback, you request me to reply to such parts of it as I might be enabled to do from the files of this office or otherwise.

Upon referring to an act passed the 7th of May, 1822, entitled "An act to provide for the collection of duties on imports and tonnage in Florida, and for other purposes," it will be perceived that, according to the proviso in the 10th section thereof, there was to be no allowance of drawback on exportation of any goods, wares, or merchandise from any port or place of said Territory other than on those which shall have been imported *directly* into the same from a *foreign* port or place.

The object of the petitioners alluded to is to have that restriction repealed.

A restriction similar to this will be found in the proviso in the 6th section of the act passed the 24th February, 1804, entitled "An act for laying and collecting duties on imports and tonnage within the territory ceded to the United States by the treaty of the 30th April, 1803, between the United States and the French Republic, and for other purposes;" which restriction, however, was repealed by an act passed the 5th January, 1805, entitled "An act concerning drawbacks on goods, wares, and merchandise."

It is also to be observed that the 77th section of the collection law of 2d March, 1799, restricts the exportations for benefit of drawback to the districts of original importation, and to those ports at which vessels from the Cape of Good Hope, or from any place beyond the same, are permitted to make entry. The 18th section of that act designates the ports at which vessels thus arriving may be permitted to be entered. But by subsequent acts a number of other ports have been added to the list, namely, Nantucket, Plymouth, New Bedford, Biddeford, and Pepperelboro', (now Saco,) Bristol, New Orleans, Bath, and Castine.

As the duties on goods imported into other districts of the United States, and transported coastwise to the district of Key West, to be hence exported for benefit of drawback, must have been previously paid or secured to have been paid; as the goods must be accompanied by certificates as to their regular importation, (and in the case of ad valorem, goods must be inspected in the same manner as at the time of their importation,) I do not apprehend that, if the privilege applied for by the citizens of Key West were granted, the security of the revenue would be endangered; and under such impressions it is presumed the restrictions in the act of February, 1804, as to the port of New Orleans, were repealed by the act of 5th January, 1805, before referred to.

From information received from a highly respectable source, the population of Key West is estimated at from three to four and five hundred, and is sometimes greater.

With great respect, I have the honor to be your obedient servant,

JOS. ANDERSON, *Comptroller.*

Hon. RICHARD RUSH, *Secretary of the Treasury.*

20TH CONGRESS.] **No. 849.** [1ST SESSION.

AGAINST AN INCREASE OF THE DUTIES ON IMPORTS AND A SYSTEM OF INTERNAL IMPROVEMENTS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 6, 1828.

EXECUTIVE DEPARTMENT, GEORGIA, *Milledgeville, January* 28, 1828.

SIR: By the request of the General Assembly of the State of Georgia, I transmit to you a copy of a report made by one of their committees on the subject "of the powers of the General Government, claimed and exercised for the purposes of encouraging domestic manufactures and effecting a system of internal improvement," to be laid before that branch of the Congress of the United States in which you preside.

I have the honor to be, with great respect, your obedient servant,

JOHN FORSYTH.

Hon. A. STEVENSON,
Speaker of the House of Representatives of the Congress of the United States.

Report adopted by the Legislature of Georgia on the Tariff and Internal Improvement.

IN SENATE, *December* 5, 1827.

SIR: The Committee on the State of the Republic, to whom was referred so much of the Governor's communication as relates to the powers of the General Government, claimed and exercised for the purposes of encouraging domestic manufactures and effecting a system of internal improvement, beg leave to make the following report:

The committee are aware that it is assumed by the General Government, as expressed in the decisions of the Federal Court, that State Legislatures have no right to complain of its usurpations, however formidable or fatal. That the General Government is said to be "truly and emphatically a Government of the people," and, therefore, entirely out of the reach of representative bodies, whose sole duty it is to keep within the sphere of their own delegated trust. It would seem that, if even such a pretension were admissible, it should be considered no great breach of decorum for a sovereign State, through its highest known authority, to approach a Government it had contributed to establish with a subject of complaint, especially when it is perceived that much inferior bodies are patiently listened to, and listened to with effect. While manufacturing companies and self-created delegates, pretending to represent whole States, assemble for the purpose of directing the Congress what measures they must adopt, surely the Legislature of a State, without much violence to any known rule of modesty, may respectfully offer a counter-remonstrance to such a growing temper of dictation. But it is not in this humble manner that your committee would recommend the Legislature to prefer their just complaints to the General Government. They claim it as a right to remonstaate with that Government on all measures which they may conceive violative of the fundamental principles of its institution. They affirm that those who create a delegated Government have lawfully the power to restrain it within its proper bounds, and maintain the doctrine asserted by

Luther Martin in his address to the Legislature of Maryland, at the time of the adoption of the Federal Constitution, that "the proper constituents of the General Government are the States, and the States are to that Government what the people are to the States; that this is entirely within the spirit and intention of the Federal Union."

In support of this, as well as other principles which will hereafter be presented in this report, the committee will frankly own they can offer nothing new to the Legislature, for it is a subject that has been so much discussed all must be familiar with its details; nevertheless, with the above acknowledgment, to embody some of the leading objections to the course pursued against the rights of the States will not, it is hoped, be considered improper. The people cannot be too well enlightened on this subject.

First, then, the committee contend that the States, through their Legislatures, have a right to complain of, and redress if they can, all usurpations of the General Government. They maintain "that the terms of the grant in the Federal Constitution did not convey sovereign power generally, but sovereign power limited to particular cases, and with *restrictive means* for executing such powers;" and further, that the powers "were delegated, not by the people of the United States at *large*, but by the people of the *respective States;* and that, therefore, it was a compact between the different *States.*" Composed as the States were at the close of the Revolution, being independent of each other as they were previous to that event, and in the exclusive possession of self-government, it will be readily admitted there could be but two ways to form the General Government, either by "compounding the American people into one common mass," giving up their State Governments, and suffering the majority to govern, or by continuing their State Governments, and delegating a part of their power to the General Government for the protection of the whole. Under one or the other of these methods has the General Government come into existence. Now, no one will pretend to say that it was under the first named method; the power was not delegated by the people composing one great *consolidated community*, but by the people of *each State*, unconnected with, and independent of, the people of the *other States* in their *corporate capacity.*

If the history of this transaction is attended to, every one must be convinced that, from first to last, it was a procedure of the *States*, and not of the people composing *one great* political society. They were separate and distinct before the Revolution; they *confederated* as States for the purpose of more effectually conducting them through that struggle; they remained independent, and were so acknowledged, with all their rights, territorial and municipal, at the close of it. By *States* the proposition was made to enlarge the powers of the Confederation. The States appoint delegates for that purpose; they assemble, make, and submit to the *States* a Constitution, expressly declaring that when the same is ratified by nine out of the thirteen States, the same shall be binding, and the States are still found exercising independent and sovereign control over their ungranted powers. Now, if the assent of a *majority* of *all the people* of the United States was necessary to ratify this instrument, was it not as easy to have so declared as to say that nine out of thirteen States should effect that object? Would it not have been more intelligible, and have better answered the purpose, if such was intended, than the mode adopted? But that this was not intended was obvious from the fact that, according to the plan pointed for the ratification of the Constitution, more than two-thirds of the States might have received the instrument, and yet a majority of the whole people would have rejected it. For instance, at the first census in 1790, Massachusetts, New York, Pennsylvania, and Virginia, had 56 members out of 105 in Congress; at the second census in 1800, they had 74 out of 141; and in 1810 they had exactly one-half of twenty-three States. Now, every one must perceive, if these four States had alone voted against the Constitution in opposition to all the rest, the instrument would, nevertheless, have been adopted, and clearly adopted against a *majority* of the *whole people* of the United States.

The absurdity of this result, to wit, to have a Government founded upon the *will* of a *minority*, is so extravagant as to refute altogether the idea that the Federal Government is "truly and emphatically a Government of the people." But it is contended that the Constitution was ratified by the States assembled in convention, and that therefore the people of each State adopted it. This is granted; and in what other way could it have been ratified? This is the only way that the *sovereignty* of the State could act. It was the sovereign consent of the State that was asked; this could not have been expressed by any one branch of the Government of the State, for the sovereignty does not lie in any one branch alone. But, after the people of each State had, in their sovereign capacity, delegated a portion of their sovereign power to the General Government, and that Government received it as a TRUST, every one must perceive that, as the people of each State cannot always remain in Convention for the purpose of taking care of their reserved, and guarding the exercise of granted powers, and as they have, in their State Constitution, granted the residue of the power not previously conferred upon the General Government to their own Legislature, except such as are *specially* given to the Executive and judicial branches of the Government, in no manner partaking of a *representative* nature, it follows that the care of this TRUST, as well as every other interest of the people of each State not granted to the co-ordinate branches of the State Government, belongs to their Legislature. To make this idea clearly understood: All power is in the people; they are obliged to exercise it by representatives; they grant a portion of it to the General Government; the residue is distributed among their own legislative, executive, and judicial branches of Government. The watching and superintending of the power granted to the General Government, so as to keep it within its proper limits, must remain somewhere. The people act alone by their State authorities; this right is not with the executive or judicial authorities of the State; the conclusion is irresistible, that their representatives in General Assembly met have the right to protect the States from the usurpations of the General Government, and to remonstrate against any act that shall *encroach* upon the *powers* reserved by the people and *granted* to their *own Government.* Under this firm conviction, the committee claim for the Legislature the right to protest, and earnestly remonstrate against the exercise, on the part of the General Government, of any undue powers, and especially power assumed by them to encourage domestic manufactures and to effect a system of internal improvement within the States. We know that all complaints are listened to with jealousy, and sometimes with contempt; and, unfortunately, this State has had stronger evidence of this than the general truth of the remark. But we likewise know, and, if it were necessary, we could produce more instances of the fact than is furnished by the American Revolution, that a long course of abuse, encroachment, and oppression, followed up after repeated warnings and respectful expostulations, have terminated in a convulsion fatal to the affections which generally bind together either men or nations. We do most solemnly deprecate such an issue of the attachment which we bear to the General Government; and, if that Government entertains a faithful recollection of all history on this subject, and is not borne away by the pride of superior power and strength, which usually closes the ear to just remonstrance, there is yet no danger of

such a result. But if reckless of the fact that the only true cement of the Union is a generous and high-minded affection of its members for each other, and that no sordid motives of speculation or selfish desire to prosper upon each other's injuries or misfortunes has brought them together, it must be obvious to every understanding that an uncompromising course of self-willed legislation, upon subjects so long and so often objected to, must inevitably end in the worst of consequences.

If the subjects of domestic manufactures and internal improvement depended upon the question of expediency, we should have nothing to say; for that is a matter purely within the power of Congress; and, although we should greatly deplore the adoption and continued prosecution of a policy obviously grinding down the resources of one class of the States, to build up and advance the prosperity of another of the same Confederacy, yet it would be ours to submit under the terms of our compact. All argument is vain against interest supported by power. But we do most solemnly believe that such policy is contrary to the letter and spirit of the Federal Constitution.

All must agree that the best method of ascertaining the intention of the framers of the Constitution, wherever the power is doubtful, is first to go to the *letter* of the power, and then to the history of its origin, as contained in the journal of the convention. This is the method we propose to pursue in relation to the two subjects just above expressed.

When we ask for the *letter* of the above powers in the Constitution, there is a diversity of opinion on the subject, and we are pointed to various passages in that instrument, by various advocates of the General Government's right, not uniformly agreeing among themselves on the different clauses conferring this right. Now, this uncertainty of itself ought to create great doubt, and, in all free Government, doubt and forbearance, in relation to the exercise of power, ought to be synonymous. But most persons refer to that particular clause of the Constitution which gives to Congress the power to regulate commerce with foreign nations and among the States.

Before we examine this point with reference to its particular import, it will be proper to lay down some general principles which made the *establishment* of the Federal Government at all necessary. If the intelligence and moral character of the States were altogether sufficient for their own internal police, (and that it has been stands fortified by the most ample experience,) wherefore the necessity of a General Government? Every body perceives that the laws which would do for the municipal regulation and internal affairs of Massachusetts would not do for Georgia; and therefore a Government to legislate for both, in those particulars, would be absurd and ridiculous. What, then, was it that made these two States *unite* in what is called a *General* Government? Does any one believe it was that *both States* should legislate for the particular interest of one, and against the particular interest of the other? Or, to come more to the point, that *both* should legislate for the promotion of the *manufactures* of the one, and directly against the *agriculture* of the other? No one can believe this, unless he is prepared to say that the weaker State was utterly destitute of all sense of self-preservation. The exclusive inducement and sole motive, then, to the UNION was, first, "COMMERCE, and secondly, the COMMON DEFENCE." Every one must at once perceive, who has any knowledge of the history of the times, that at the close of the Revolution the States were left in the most ruinous condition as to their public *debt* and *credit;* that to COMMERCE every State looked as the only efficient source to relieve them from their burdens; and as each State had exclusively the right to regulate its own trade, the utmost perplexity and confusion must have resulted from the great diversity of interest which existed among them. *Commerce*, too, is the fruitful source of *war*. To regulate, then, a matter so essential to the welfare and peace of the States, considered as neighbors, who had just come out from a most disastrous conflict, the common dangers and sufferings of which had greatly endeared them to each other, and to DEFEND this interest from internal and external aggression, was the true and only ground of the Confederation; or, in the language of an able writer, all that was desired "WAS A FEDERAL HEAD to regulate commerce, and a *federal arm* to protect us." To secure these objects, all the powers granted in the Constitution are entirely referable. It is a General Government, and therefore the powers are *general*. The States never intended to give up one particle of power that related to their *internal police;* all the powers of the General Government are *national;* that is to say, they are suited to the *whole Confederation* as one nation; they are not to operate partially, so as to affect one State and not another. All the powers granted to the General Government, with the exception of taxation, the States cannot legislate upon, so that, when it is necessary to ascertain the powers which belong to each, it is alone tested by this principle; if the General Government can legislate upon it, *the States cannot:* and *vice versa*. The two Governments do not possess *concurrent* power of legislation on the same subjects. The Federal Court has declared that "it is the genius and character of the whole Government, that its action is to be applied to all the *external and internal concerns which affect the States generally and equally; but not to those which are completely within a particular State, which do not affect other States, and with which it is not necessary to interfere for the purpose of executing some of the general powers of the Government.*"

With these general reflections, let us proceed to consider the right of the General Government to encourage domestic manufactures, under the right to regulate commerce. It is readily conceded that any law regulating commerce for its sole *advantage*, or for the purpose of *revenue*, which shall incidentally promote the interest of manufactures, will be perfectly reconcilable with the power to regulate commerce; but the moment it loses sight of either of those objects, then it is a departure from the spirit and true intent of the Constitution; and a breach, in that regard, according to all interpretation of law, is not less illegal than a violation of the most express provision in the instrument. If COMMERCE was one of the prime causes of the UNION; if it was the source to which *each* State looked for its prosperity; it surely was the *intent* and *interest* of the whole to have it so regulated by the General Government as to be productive of the greatest possible advantage to the Confederation. In giving up their great source of wealth to the Union, no one can believe it was for any other object than to be encouraged, fostered, and promoted by all the means which the united energies of all the States could exert. In the power to regulate commerce no one could possibly conceive there was contained a lurking principle to destroy it; yet every one must admit that the direct tendency of encouraging manufactures is to produce that effect. And, in proof of this assertion, commercial men, commercial cities, from one end of the Union to the other, raise their hands and voices in the most earnest opposition to this singular method of regulating commerce by promoting manufactures.

But there is another view of this question which is worthy of peculiar notice. It is a principle which no one will deny, that which is *directly* forbidden cannot be *indirectly* effected. Now, the Federal Constitution, in granting the power to regulate commerce, was so fearful that the regulation might be made to operate partially upon the States, to the benefit of some and injury of others, that it declared "no tax or duty should be laid on articles exported from any State. No *preference* shall be given by any regulation

of *commerce* or REVENUE to the ports of one State over those of another." If, then, no regulation of commerce or REVENUE could directly be made to act unequally upon the States, how happens it that a regulation concerning manufactures, bottomed upon the power to regulate commerce, can lawfully have that effect? In other words, if a law compelling Georgia to pay duties to Massachusetts for the protection of her commerce would be unconstitutional, how does it happen that a precisely similar law to protect manufactures, derived from the right to regulate commerce, is not equally so?

In carefully consulting the journal of the convention, nothing appears on the subject of manufactures until the 18th of August. On that day this power was proposed to be given, to wit: "to establish public institutions, rewards, and immunities, for the promotion of agriculture, commerce, and manufactures." On the 20th of the same month another proposition "to assist the President in conducting the public affairs, there shall be a Council of State of the following officers: among others, the Secretary of Domestic Affairs, who shall be appointed by the President, and hold his office during pleasure. It shall be his duty to attend to matters of general police, the state of agriculture and manufactures, *the opening of roads and navigation, and the facilitating communications through the United States.* And he shall from time to time *recommend such measures and establishments as may tend to promote those objects.*" These propositions were referred to what was called the committee of detail; and afterwards, on the 31st of August, was referred, together with some other reports which this same committee had partially made, to a grand committee composed of one member from each State. On the 5th of September this committee reported, among other things, the following proposition, which is now found standing in the Constitution, to wit: "To promote the progress of SCIENCE and the USEFUL ARTS, by securing, for limited times, to authors and inventors the exclusive right to their respective writings and discoveries." This clause, then, is all that could be produced from the unequivocal propositions to grant the power to the General Government of encouraging manufactures. And what is it? The right to promote science and the *useful arts.* Under the first, no one will contend that the power to protect manufactures will result. It must be then under the last. And there is no doubt, under the expression of *useful arts,* as distinguished from the term *fine arts,* both *agriculture and manufactures* would properly fall.

All persons will agree that no *arts* can be more *useful* than agriculture and manufactures. Every one must at the first glance perceive that if the clause had stopped at the words "*useful arts,*" the power to promote *manufactures* would have been full and complete beyond all cavil. But does it stop here? Is it a general or limited power? And if a limited power, how is it limited? Let common candor answer the question, not by protecting duties, not by imposts on foreign exports, not by premiums and bounties, but "by securing, for limited times, to authors and inventors, the exclusive right to their respective writings (in SCIENCE) and discoveries," (in the USEFUL ARTS.) Now, says an able advocate of State rights, "if a power to promote a specific object by a prescribed mode does not exclude the power to promote it by a different or other mode, then there is no truth in a universal maxim (in law and logic) that 'the expression of *one thing* is the exclusion of *another.*'" The restrictive words upon the power to promote the useful arts must have meant something; and is any one so uncandid as not to own that it was merely to "*secure to ingenious men patents for their inventions?*" *Writings* and *inventions* would alike benefit all the States; being *general,* they would have an equal and impartial operation over the *whole Union.* Not so by encouraging the *fabrics* that resulted from these inventions; for some States might possess greater means, both moral and physical, to produce them. The *inventor* of the plough might be rewarded, but no one will contend that it should entitle the *ploughman* to an exclusive privilege over the *weaver;* nor would a *patent* for the *steam loom* authorize a peculiar indulgence to its *cloth* over the hard-earned *bread* of the planter. These being all local and partial operations, would subject the States, if submitted to the legislation of the General Government, to the most unequal effects, and wholly subversive of that principle which we have already mentioned, that the "action of the General Government is to be applied to all the external and internal concerns which affect the States generally and equally, but not to those which are completely within a particular State." Manufactures had been proposed in the convention, and so had the sciences, and all that could be possibly obtained for them was the provision we have just explained. Every one must believe if more had been intended, more could have been given; for never was a subject so entirely before a deliberative body than was that of manufactures before the Federal Convention.

But there is another section of the Constitution, which, when taken in connexion with the history of its adoption, places this question beyond all doubt, and for the exposition of which the committee are indebted to an able southern writer on the subject of federal powers. It is the following: "No State shall, without the consent of Congress, lay any imposts or duties on imports or exports, except what may be absolutely necessary for executing its inspection laws; and the net produce of all duties and imposts laid by any State on imports or exports shall be for the use of the Treasury of the United States; and all such laws shall be subject to the revision and control of the Congress." Those who will consult the structure of this clause, in the journals of the convention, will find that perhaps none other was more disputed, and that a very different object was intended from that of levying a trifling duty to execute inspection laws. What was that object? It cannot be discovered from the clause itself; and perhaps none in the Constitution has been so often read without a knowledge of its true intent and meaning. To grant the State the privilege of imposing duties beyond what is necessary for inspection laws, merely to go into the National Treasury, seems to be perfectly idle. What benefit is it to be to the States? Some was certainly intended; and fortunately there is at hand a key to this mystery. It was to enable the States, within themselves, if they desired it, to protect their own manufactures by the imposition of export duties on the raw materials, or imposts upon foreign fabrics. Without this construction everybody must at once perceive that the clause is useless and ridiculous, and is the only feature of the Constitution without meaning or motive. But, happily for the interest of the agricultural States, we have a cotemporaneous and complete explanation of the object and intention of this clause.

Mr. Luther Martin, a delegate of the convention from the State of Maryland, in giving to his State an exposition of the Constitution on this particular clause, indignantly remarks: "Every State is also prohibited from laying any imposts or duties on imports and exports without the permission of the General Government. It was urged by us that there *might be* cases in which it would be proper, for the *purpose of encouraging manufactures,* to lay duties to prohibit the exportation of raw materials; and, even in addition to the duties laid by Congress on imports for the sake of revenue, to lay a duty to discourage the importation of particular articles into a State, or to enable the *manufacturer here* to supply us on as *good terms* as they could be obtained from a *foreign market.* But the most that could be obtained was, that this power *might be exercised* by the *States* with, and *only* with, the consent of Congress, and subject to its

control; and so anxious were they to seize on every shilling of our money for the General Government that they insisted even the little revenue that might thus arise should not be appropriated to the use of the respective States where it was collected, but should be paid into the Treasury of the United States, and accordingly it was so determined." Besides fully accounting for the clause in question, what are the rational inferences from the foregoing quotation? In the first place, we see that the power of Congress itself to lay duties on imports was for "the sake of *revenue*" alone. In the next place, aside from the fact that the subject of manufactures had been before the convention and settled to be promoted only by *patent*, if there had been any power reserved to the General Government to encourage that object Mr. Martin would not have asked for that right to the States, seeing that the only manner in which it could be done was forestalled by the Constitution, in conferring upon Congress the exclusive right to impose duties on imports. The States being engaged in different pursuits, all subject to clashing interests, a *general* power could not be given to the Federal Government to regulate such a local concern. Accordingly it was placed, as it should be, at the discretion of each State, who might protect its own manufactures, if it should choose to do so, without calling upon its sister States to bear the burden. Adopting the ideas of a profound writer on this subject, surely a State does not wish greater advantages by the Union than would be enjoyed by her confederates. Surely she does not desire more, at the expense of her sister States, than she would possess if she remained free and independent; surely, if sovereign and independent of the whole world, she would not lay duties to encourage her own domestic manufactures, because it would oppress her commerce and agriculture; she will not wish their prosperity at the sacrifice of the very same interests of her neighbors. If there is any State that desires her manufactures to be promoted, why does she not avail herself of the express provision intended for that purpose? Is it because it will injure her other great concerns? And have other States no interests to affect? If a State has the power by the Constitution to do exactly what she might do if alone, and it is her interest to do so, why does she not proceed to encourage her manufactures by the appointed means? No; the fact is, such a State wants the profit without the burden of such a measure; and as long as she can tax her associates to answer her purpose, her own community will never be made to bear any of the sufferings of such an unequal system. If other States are obliged to pay the cost, or even divide it with the State seeking to establish her manufacturing institutions; if their exports and imports are to contribute to the welfare of northern money-making projects and to advance the schemes of private capitalists, depend upon it the only method that will be pursued is the one found in the increasing exactions of the tariff laws of 1816, '20, and '24.

With regard to the question of internal improvement, independent of the fact that there is not a solitary expression to be found in the Constitution in the remotest degree connected with that subject, we have already shown that on the 18th and 20th of August a distinct and full proposition to grant that power was rejected by the convention; and the committee would here observe that many of the remarks which they may have made on the subject of manufactures will be strictly applicable to this branch of the subject. But, in addition to what has been submitted, we have to state that the following facts are to be found on the journal of the convention, to wit: On the 18th of August it was specially proposed to vest in Congress the power "*to grant charters of incorporation* in cases where the public good may require them, and the authority of a single State may be incompetent."

To *establish a university.*

To encourage by proper premiums and provisions the advancement of useful knowledge and discoveries.

To establish seminaries for the promotion of literature and the arts and sciences.

To grant charters of incorporation.

To establish public institutions, rewards, and immunities, for the promotion of agriculture, commerce, trades, and *manufactures*, and to regulate stages on the post roads.

Now, where are any of these powers to be found in the Federal Constitution; and what course of reasoning can entitle them to a place in an instrument purporting to contain nothing but expressly defined powers? But this is not all; on the 14th of September, only three days before the final passage of the Constitution, some, still anxious to enlarge the powers of the General Government after the instrument was presented for the adoption of the convention, proposed "*to grant letters of incorporation for canals*," &c., which was rejected.

The committee are aware that the subject is far from being exhausted, but time would fail them to present all the objections which could be justly preferred against the course of the General Government. Less could not be said; for the subject is of such growing magnitude, and is producing sensations of such just inquietude among the people of the south, that they ought to be made thoroughly acquainted with all its bearings, and certainly can never be too often admonished to be prepared for the worst events. The committee are fully sensible that every degree of moderation is due to the question upon which they have founded the present serious complaint; but they owe it to truth and sincerity to say that it is their decided opinion an increase of tariff duties will and ought to be RESISTED by all legal and constitutional means, so as to avert the crying injustice of such an unconstitutional measure.

They are constrained, too, to say that this State ought to *oppose*, in every possible shape, the exercise of the power on the part of the General Government to encourage domestic manufactures or to promote internal improvement. They will not pretend, at present, to recommend the mode of OPPOSITION; but they will recommend the peaceable course of remonstrating with Congress on the subject, and of asking of that body to pause before it proceeds any further in measures that must inevitably destroy the affection of some of the States for the General Government. It will detract nothing from the firmness or wisdom of the Congress to listen to the voice of State Legislatures while it is considering the memorials of *manufacturing companies.*

If to the contempt of *right* there should be added the jealousy of *partiality*, it must be obvious to all that there will be an increased account of unmerited aggravation. How long a people shall be permitted to complain, or how much they can be made to suffer, has always been matter of dangerous experiment or doubtful calculation; and knowledge, acquired under either issue, has never been without its certain and severe regrets. In conclusion, your committee recommend the following resolution:

Resolved, That his excellency the Governor be, and he is hereby, requested to cause the foregoing report to be laid before Congress at its next session, and that he forward a copy of the same to each of the other States, to be laid before their respective Legislatures, for the concurrence of such as may approve of the principles therein avowed; and, as due notice to those who may dissent from the same, that Georgia, as one of the contracting parties to the Federal Constitution, and possessing equal rights

with the other contracting party, will insist upon the construction of that instrument contained in said REPORT, and will SUBMIT to no other.

Read and agreed to.

THOMAS STOCKS, *President.*

Attest: WM. Y. HANSELL, *Secretary.*

IN THE HOUSE OF REPRESENTATIVES, *December* 24, 1827.

Read and concurred in.

IRBY HUDSON, *Speaker.*

20TH CONGRESS.] No. 850. [1ST SESSION.

OPERATIONS OF THE SINKING FUND.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 6, 1828.

REPORT.

The Commissioners of the Sinking Fund respectfully report to Congress:

That the measures which have been authorized by the board subsequent to the last report, of the 6th February, 1827, as far as the same have been completed, are fully detailed in the report of the Secretary of the Treasury to this board, dated the second day of the present month, and in the statements therein referred to, which are herewith transmitted, and prayed to be received as part of this report.

JOHN C. CALHOUN, *Vice President.*
J. MARSHALL, *Chief Justice of the United States.*
H. CLAY, *Secretary of State.*
RICHARD RUSH, *Secretary of the Treasury.*
WM. WIRT, *Attorney General of the United States.*

WASHINGTON, *February* 4, 1828.

TREASURY DEPARTMENT, *February* 2, 1828.

The Secretary of the Treasury respectfully reports to the Commissioners of the Sinking Fund:

That the sums disbursed from the Treasury during the year 1826, on account of the principal and interest of the public debt, amounted, as far as per last annual report, to $11,045,466 30; and have been accounted for in the following manner, viz:

There was applied for the payment of a sum short provided on account of the public debt prior to the 1st of January, 1826, as per statement B, annexed to the last report....		$110,616 97
There was repaid into the Treasury on account of moneys advanced for the payment of the 6 per cent. stock of 1813, (loan of 7½ millions,) as per statement D, annexed to the said report.....		6,021 70
And there was applied during the year 1826, towards the payment of the principal and interest of the public debt, as ascertained by accounts rendered to this Department, as per the annexed statement A, the sum of $11,010,972 75, viz:		
In the redemption of the 6 per cent. stock of 1813, (residue of the loan of 7½ millions).....	$5,062,402 50	
In the redemption of the 6 per cent. stock of 1813, (part of the loan of 16 millions).....	2,002,306 71	
In the redemption of the residue of the 7 per cent. stock of 1815.....	25 00	
In the reimbursement of Treasury notes	2,389 58	
In the reimbursement of Mississippi stock	450 00	
In the payment of certain parts of the domestic debt, (certificates of the old registered debt).....	27 86	
	7,067,601 65	
The interest which accrued for the year 1826 amounted to.....	3,943,371 10	
	11,010,972 75	
Deduct short provided, per statement B.....	82,145 12	
		10,928,827 63
		11,045,466 30

That, during the year 1827, the following disbursements were made by the Treasury on account of the principal and interest of the public debt, viz:

On account of the interest of the debt	$3,482,509 21
For interest on Louisiana stock, being a balance due the late agents in London	3,562 30
On account of the redemption of the 6 per cent. stock of 1813, (2d and 3d payments of the loan of 16 millions)	6,507,466 85
In the reimbursement of Mississippi stock	1,642 48
In the reimbursement of Treasury notes	6,384 03
In payment of certificates of the (old) registered debt	21 12
Making, together, as per statement C	10,001,585 99

Which disbursements were made from the appropriation of ten millions of dollars for the year 1827, and from the unexpended balance of the appropriations at the commencement of that year, and will be accounted for in the next annual report, in conformity to the accounts which will then have been rendered to this Department.

In the meantime, the manner in which the said sum has been applied is estimated as follows:

There is estimated to have been applied to the deficiency at the end of the year 1826, as per statement B		$82,145 12
In the redemption of the principal of the public debt, as per estimate E		6,515,514 48
And on account of the interest of the debt, viz:		
There was paid to the late agents in London, for paying interest on Louisiana stock, a balance due them, of		3,562 30
The interest on the public debt for the year 1827 is estimated at	$3,518,313 37	
Of this sum there was short provided, per estimate F	117,949 28	
		3,400,364 09
		10,001,585 99

A statement (G) is annexed which exhibits the state of the annual appropriations on account of the debt on the 1st January, 1828, and a statement, marked H, of the funded debt of the United States on the same day.

All which is respectfully submitted.

RICHARD RUSH, *Secretary of the Treasury.*

A.

Statement of the application during the year 1826 *of the funds provided for the payment of the principal and interest of the public debt.*

1. PAYMENTS ON ACCOUNT OF THE PRINCIPAL OF THE DEBT.

1. In the redemption of the 6 per cent. stock of 1813, (residue of the loan of 7½ millions)	$5,062,402 50
In the redemption of the 6 per cent. stock of 1813, (part of the 16 millions loan)	2,002,306 71
In the redemption of Treasury notes	2,389 58
In the redemption of the 7 per cent. stock of 1815	25 00
In payment of certificates of Mississippi stock	450 00
In payment of certain parts of the domestic debt, (certificates of old registered debt)	27 86
	7,067,601 65

2. PAYMENTS ON ACCOUNT OF THE INTEREST.

The interest for the year 1826, as per account settled at the Treasury	3,943,371 10
	11,010,972 75

JOSEPH NOURSE, *Register.*

TREASURY DEPARTMENT, *Register's Office, February* 1, 1828.

B.

Statement of the provision made before the 1*st of January*, 1827, *for the payment of the principal and interest of the public debt.*

The demands to be satisfied on the 1st January, 1827, were as follows, viz:

1. Dividends payable by Commissioners of Loans, including dividends due on that day, and exclusive of dividends no longer demandable at their offices	$994,902 28
2. Unclaimed dividends from the Loan Offices, payable at the Treasury, beyond the amount advanced for their payment	191,420 62
3. Balances due to the agents in London, per Treasury settlement No. 43824	1,474 44
	$1,187,797 34

Brought forward		$1,187,797 34
The funds provided to satisfy these demands were as follows, viz:		
1. Cash in hands of the Commissioners of Loans applicable to dividends.	$998,998 13	
2. Cash advanced for Treasury dividends over the amount payable	2,716 35	
3. Cash paid for bills of exchange on account of the debt prior to January 1, 1817, subsequently protested for non-payment, and not yet repaid, as per note A to statement B, which accompanied the report of the Commissioners of the Sinking Fund of the 7th February, 1822	103,652 22	
		1,105,652 22
		82,145 12

20TH CONGRESS.] **No. 851.** [1ST SESSION.

IN FAVOR OF INCREASE OF DUTIES ON IMPORTS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 7, 1828.

ALBANY, *February* 2, 1828.

SIR: In compliance with the request of the Legislature I send the enclosed resolutions to you; and am, with great respect, your most obedient servant,

DEWITT CLINTON.

Hon. J. G. STOWER.

STATE OF NEW YORK.

IN ASSEMBLY, *January* 30, 1828.

Resolved, (if the Senate concur herein,) That the Senators of this State in the Congress of the United States be, and they are hereby, instructed, and the Representatives of this State are requested, to make every proper exertion to effect such a revision of the tariff as will afford a sufficient protection to the growers of wool, hemp, and flax, and the manufacturers of iron, woolens, and every other article, so far as the same may be connected with the interests of manufactures, agriculture, and commerce.

Resolved, (as the sense of this Legislature,) That the provisions of the woolens bill, which passed the House of Representatives at the last session of Congress, whatever advantages they may have promised to the manufacturers of woolen goods, did not afford adequate encouragement to the agriculturist and the growers of wool.

Resolved, That the Governor be, and he is hereby, requested to transmit a copy of the above resolutions to each of the Senators and Representatives in Congress from this State.

By order:

FR. SEGER, *Clerk.*

IN SENATE, *January* 31, 1828.

Resolved, That the Senate do concur with the Assembly in their said resolutions.

By order:

JOHN F. BACON, *Clerk of the Senate.*

20TH CONGRESS.] **No. 852.** [1ST SESSION.

DRAWBACK ALLOWED WHERE REGULATIONS ARE NOT COMPLIED WITH.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 8, 1828.

Mr. MCDUFFIE, from the Committee of Ways and Means, to whom was referred the petition of Seth Knowles, made the following report:

It appears that the petitioner exported one hundred hogsheads of New England rum in July, 1819, and was prevented by sickness from executing his debenture bond and swearing to the entry in the time prescribed by law. As it is in evidence that after his recovery he went to the custom-house and offered to comply with the requirements of the law, and as there seems to have been an absence of all design to defraud the revenue, the committee have reported a bill granting relief to the petitioner.

20TH CONGRESS.] No. 853. [1ST SESSION.

IN FAVOR OF INCREASE OF DUTIES ON IMPORTS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 11, 1828.

To the honorable the Senate and House of Representatives of the United States in Congress assembled:

The undersigned, a committee in behalf of the manufacturers of cotton in Rhode Island, assembled in Providence on the 11th day of January instant, respectfully represent: That, encouraged by their success in manufacturing coarse cotton goods, in the benefits of which they believe the whole country has fully participated with them, many of your memorialists have, for some time past, turned their attention to the manufacture of goods of a fine description, principally for the purpose of printing, to supply the printing works in the vicinity, which have been commenced to a considerable extent; and your memorialists have, accordingly, entered into contracts with the proprietors of these works to furnish them with gray cloth for printing of different descriptions, but mostly of the finer kinds. But they regret, very recently, to find that these persons cannot successfully compete with imported fine prints at the present rate of duties, and, accordingly, are closing their contracts for cloth of this description either by discontinuing them altogether, or exchanging the fine for a coarse article. There are several difficulties which those engaged in printing have to contend with in this competition, all of which combined, it seems, prove insurmountable. That arising from the want of skill and experience in the business, incident to every new branch of industry in a nation, though it has been very seriously felt, and still exists to a considerable degree, will, in a few years, vanish before the ingenuity, the energy, and the perseverance, aided by the capital, of those engaged in it, provided a similar encouragement is afforded by Government, in this branch of the cotton manufacture, which has been given to others; but, without some addition to the present protection, these endeavors must fail, or be confined wholly to goods of the coarsest and most common description, and leave the extensive field of the finer fabric to be occupied by the foreign manufacturer without a competitor. One important advantage which the foreign manufacturer of fine cottons, whether printed or not, has over our citizens engaged in the same business, and which was probably not adverted to by Congress when the present tariff was established, arises from the well known fact that, as such cloths are always *bleached* before they are finished, this process causes them to shrink in width about three inches in yard-wide cloth, and consequently the duty is diminished in proportion, namely, six and a quarter mills per square yard: the duty of twenty-five per cent. on the valuation of thirty cents per square yard being thus one-twelfth less on a finished than on an unfinished article. In the case of prints this inequality is increased to the extent of the cost of printing, which is a large proportion of the value of the article when finished, varying according to the style of finish; so that, by the present tariff, printed cottons, though they cost in the place of manufacture much more than those not printed, and *all* bleached cottons, (which are mostly fine,) notwithstanding the cost of bleaching has been added, pay one-twelfth less duty than those unbleached or unprinted, which, it is believed, it was not the intention of Government should be the case. The advantage which the foreign manufacturer has in these respects is increased by the materials for bleaching and printing costing him less than they do our own citizens, who have to import the most of them, and this turns the foreigner's labor, thus bestowed, to a still further amount. But, as far as the navigation and revenue of the country may be affected by the protection now solicited, these will in a great degree be compensated by a very great increase in the importation of bleaching and coloring materials, paying a high duty, which would follow the extension of the printing business in this country. Believing it to be the true policy of the Government to afford sufficient aid to the manufacture of all cotton goods which are usually made on power looms, to insure the establishment of them adequate to supply the wants of the country, leaving the finer articles to be supplied by importation from countries where labor is cheaper than, happily, it is with us, they beg leave to call your attention also to unprinted fine goods.

The present tariff is believed to have been established principally in reference to coarse goods, and was not adapted to the protection of prints and finer fabrics, which were not an article of domestic manufacture when the law was passed, at least to much extent.

Your memorialists now ask for such a protection only, for the articles before mentioned, as would enable both the manufacturers of fine goods, for printing and other purposes, as well as those engaged in printing, to go on with their business as heretofore contemplated, and to derive from it a *reasonable profit;* and, in a short time, they doubt not, the same result would follow which has happened in the case of coarse cotton goods, as well as many other articles, the domestic manufacture of which is protected by Government, and the country be supplied with cheaper and better fabrics than those now imported. But, unless some aid is afforded by Government to the branches in question, they will be obliged to confine their attention to coarse articles altogether, and such has been the increase of mills, principally for the purpose of manufacturing fine goods, it is greatly to be feared, if these are now turned to making the coarse articles heretofore made, in addition to those already employed in it, the market will soon be overstocked, and the whole cotton manufacturing business become greatly embarrassed, the demand for export being too uncertain and precarious to form any dependence upon.

Your memorialists would, therefore, respectfully recommend that an addition of not less than eight and one-third per cent. be made to the present duty upon the square yard, valued at thirty cents upon all colored and printed cotton goods, and upon all fine cotton goods.

PHILIP ALLEN.
JOHN WHIPPLE.
J. P. FRANKLIN.
WILLIAM SPRAGUE.
BENJAMIN COZZENS.

20TH CONGRESS.] No. 854. [1ST SESSION.

IN FAVOR OF INCREASE OF DUTIES ON IMPORTS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 13, 1828.

At a meeting, pursuant to public notice, of a large number of respectable and extensive wool-growers and farmers, at the house of John Adams, in the town of Ghent, in the county of Columbia, John C. Hogeboom, Esq., was called to the chair, and T. P. Beekman appointed secretary.

It was, on motion,

Resolved, That Jacob Rutsen Van Rensselaer, James Vanderpool, Edward Puggsley, David W. Patterson, and Abraham P. Holdridge, Esqs., be a committee to draught and report resolutions and a memorial, to be forwarded to their Representative, to be by him presented to Congress. Whereupon the committee retired, and, by their chairman, reported the following resolutions and memorial:

Resolved, That it is the right of the American citizen respectfully to present to the consideration of those elected to enact laws the grievance under which they labor, and the duty of their Representatives to relieve them.

Resolved, as the sense of this meeting, That the prospects of the wool-growers and farmers have become alarming, and that the state and condition of agriculture requires the protecting and fostering care of Government.

Resolved, That, in our opinion, during the great fluctuations which exist in the market for woolen goods, arising from the pernicious and fraudulent sale of foreign goods at auction, and the practices of the British manufacturers in invoicing their goods at low prices and short measure, it is impossible for the manufacturers to pay to the wool-grower a fair remunerating price for the raw material.

Resolved, That the depression of the price of woolen goods must more seriously affect t he agricultural than the manufacturing interests, because the latter will not purchase except at a price which will afford him at least the prospect of a profit.

Resolved, That, in the opinion of this meeting, high protecting duties on any article of abundant foreign production, and which we are also capable of producing abundantly, will speedily, if not directly, tend, by domestic competition, to reduce it to the lowest price at which it can be made.

Resolved, That we rejoice in the increased and increasing prosperity of the shipping and the planting interests, and of all those manufacturers and artisans who, under the protection of a wise and liberal policy, engross the home market.

Resolved, That we as sincerely regret that the shipping interests of our fellow-citizens of the south are hostile to the protection of the manufacturers of wool, hemp, flax, and iron; upon which not only the welfare, but almost the existence, of many sections of our country depend, and which we firmly believe would also increase their prosperity.

Resolved, That, thoroughly convinced of the wisdom, policy, and even necessity, of this protection, we will steadily and zealously pursue every honorable means calculated to afford relief.

Resolved, That it be recommended to our fellow-citizens in the several Congressional districts in this State and in our neighboring States to meet, and respectfully, but firmly, represent to the several members of Congress from each of those districts the just expectations of the people that they will not adjourn the present session of Congress until they have done all in their power to procure the passage of a law affording ample and perfect protection to the interests of the wool-grower and manufacturer, and the growers of flax and hemp, and the manufacturers of iron.

Resolved, That the Legislature of this State be requested to pass a resolution requiring the Senators and requesting their Representatives from this State in the Congress of the United States to aid in procuring the passage of a law for the effectual protection of domestic industry.

Resolved, That the committee appointed to prepare and report resolutions and a memorial be requested to sign the same in behalf of this meeting.

T. P. BEEKMAN.

The memorial of the wool-growers and farmers of the county of Columbia, in the State of New York, respectfully showeth: That they have not heretofore presented their claims to the protection of their Government, willing to believe that the progress of truth, the reflections which they fondly hoped would be produced by the agitation of the proposition for the protection of domestic industry, and a mutual desire on the part of the enlightened citizens of our common country to extend the protection of Government to every important interest and section of it, would have produced that state of things for which they ardently hoped. Farmers, from the nature of their pursuits, and the necessity of almost constant toil and labor, are little inclined, and less able, to devote any considerable portion of their time to an interchange of opinions on their important interests. Hence they are less liable to be operated upon in their feelings, and more apt to submit even to severe pressure under any measures of their Government, than those clases which are in the habit of constant and repeated intercourse with each other.

They have witnessed with satisfaction the efforts made in different sections of the Union by the woolen manufacturers in the hope that their reasonable requests would be gratified; inasmuch as they felt a conviction that the gratification of their wishes would have secured to the agricultural interests great and lasting benefits in the production of a home market for the surplus products of their farms, and as they believed the best interests of their common country were identified with their success.

Disappointed in those expectations, and feeling severely the pressure arising from the want of a market for the surplus products of their farms, they present their case to the constituted authorities of their country, and claim, as a matter of right, that encouragement and protection in their pursuits (not against any portion of their fellow-citizens, but the subjects of a foreign Government) which shall place them on a footing of equality with the other great interests of the Union.

They regret that those who have heretofore experienced and still enjoy the protection of the Government under which they have prospered and grown great and rich should have united their power and their strength, their zeal and their passions, in opposition to that portion of the community who have, since regular Governments were formed, proved the prop and stay of every free people. They ask that their case may be fairly, and coolly, and deliberately examined and judged in candor, and with a due regard to the interests of the whole.

Your memorialists have observed that those interests have, with too much success, impressed on the public mind the opinion that high protecting duties in favor of the manufacturers of wool, iron, hemp, and flax were to operate to the benefit of the few to the injury of the many. This opinion they conceive entirely erroneous, and the cause of much violent opposition to their application for protection and relief. Were it proposed to grant to these manufacturers exclusive privileges to establish a monopoly and to prevent domestic competition, there would be force in the objection; but when the fact is notorious to all that success in any branch of business insures competition; when there is an abundance of unoccupied water-power, an immense capital seeking profitable employment, it cannot be presumed that they will long be permitted to enjoy the profits of their business alone; others will enter, and a fair competition will reduce their profits to the level of ordinary pursuits. If the price of the manufactured articles continues low, the manufacturers will cease their operations altogether, or they will pay such prices for the raw material and labor as to insure, if possible, some profit; and hence this lowness of price will operate most severely on the producer of the raw materials and the laborer.

The opinion is entertained by many manufacturers that were the duties on wool and woolen goods entirely repealed their situation would be improved. Such a state of things would, however, be the means of destroying a very great portion of all the best sheep in the country; as the price of wool would afford no compensation for the expense of growing it. The fact is well ascertained that wool is superabundant in Europe, and it can be grown there at half the price it costs in this country, as the flocks there are fed in winter almost exclusively on succulent vegetables, requiring comparatively very little labor in their production and preservation; an acre of turnips frequently yielding twenty-five and even thirty tons; whereas, in this country, they must, for at least ninety days in each year, be fed on dry food at great expense.

The price of breadstuffs is now so depressed that farmers cannot afford to hire laborers to grow and carry them to market; hence they are compelled to confine their exertions to their individual labor, and the improvement on their farms is stationary, and in some instances retrograding. Ordinary laborers are consequently reduced to the necessity of working for incompetent prices, or of being altogether idle. When produce bears a fair remunerating price farmers hire freely, and comfort and happiness is diffused among the poorer classes of the community; the mechanic and the laborer find constant employ at high wages; these positions are so clear and self-evident, so completely verified by past experience, that it is not possible to find arguments to elucidate them. Create a demand for agricultural products, and you produce this employment; draw into existence many manufacturing establishments and increase the number of the non-producing population, and you create and sustain this demand. The cause and the protection of the manufacturer, therefore, is the cause, the life, the comfort, and the support of the many, with the additional and fortunate circumstance that it does not produce injury to any.

Your memorialists will not detain you by a repetition of arguments frequently and strongly urged upon you of the necessity of creating a home market for the surplus productions of their labor. On this subject volumes have been written, and facts enough adduced, they would hope, to satisfy the most doubting mind. They will merely state that, at the time the commercial and the planting interests of their country received the fostering aid and protecting care of the Government, and for a long time afterwards, owing to the belligerent state of Europe, the price of agricultural products generally bore an extravagant price, and the best investment of capital consisted in the humble but honorable pursuits of the husbandman.

This scene is now changed, and was it not for the protection granted to the manufacture of cotton and other branches of domestic industry most deplorable indeed would be our condition. That encouragement has given a large increase of consuming population to the eastern section of the Union, and thus insured a domestic demand for part of our surplus productions in grain and salted provisions. We will not urge, but merely mention, that the nation, some of whose statesmen have professed themselves favorable to what they termed the enlightened and liberal system of free and unrestrained commercial intercourse between nations, has prohibited and excluded from her ports every article the product of our country to which the labor of her own subjects cannot add ten, fifty, and an hundred fold value. The cotton manufactured in Great Britain adds annually, by its conversion into various fabrics, upwards of one hundred millions of dollars to her wealth; and could she destroy our cotton manufactures the amount would be increased many millions more. She is also the greatest commercial nation on earth; and the value of her exported manufactured articles nearly or quite equals that of all the civilized world besides. Annihilate her manufactures, and her commerce would be destroyed, and her agriculturists impoverished through want of means on the part of the other classes of the community to purchase and pay for the products of their labor. France is rapidly extending her manufactures, and her commerce in consequence is reviving, and her agriculture flourishing; while Spain and Portugal are without manufactures, almost entirely without commerce, and their agriculture in a wretched and unproductive condition, and their Governments without revenue or resources. And your memorialists think they can with safety challenge their opponents to cite the instance of any nation who, in times of profound peace, long enjoyed a prosperous commerce and productive agriculture without well established and well supported manufactures.

Your memorialists regret to perceive the hostility of the protected interests to a participation, on their parts, in the wise policy which produced that protection.

The shipping and planting interests have received all the aid and protection they have applied for to the complete exclusion of foreign competition; and they now urge that a grant of the protection to the other interests would interfere with and injure them. The one says commerce will suffer by the diminution in the imports of a few millions of dollars of woolen goods from Europe annually, all of which can be brought in either of the Liverpool line of packets to New York in the year. The southern planters

urge that they will have to pay a cent or two per yard more for their negro cloths. Permit your memorialists to say this is the amount of their arguments; about as sound, and entitled to about as much respect, as their predictions heretofore proclaimed aloud in opposition to every measure for the protection of any and every article of domestic manufacture have been verified by experience.

Your memorialists beg leave to call the attention of your honorable bodies to these predictions and terrible forebodings of ill, and to contrast them with the result. In 1816, and again in 1824, it was strenuously urged that the encouragement of the domestic manufacture of cotton and wool, and other articles, would have a tendency to diminish the revenue, inasmuch as it would reduce the amount of importation. Yet it appears that the revenue derived from imports has almost regularly increased since both periods. Our shipping has constantly received augmentations; freights are cheaper than while foreign competition existed; and notwithstanding the manufacture of cotton has so extended itself as to furnish not only the whole supply for domestic consumption, and, of course, annihilated importations of the article, but produced a surplus for exportation, and the employment of our shipping to an extent nearly equal to the amount employed in the importation of woolen goods from Europe into the United States; and on which, besides, has been based the importation of other dutiable commodities to an equal or greater amount, and increased, by this means, the revenue. Then it was also strenuously urged that the consequence of protection would be an augmentation of price to the consumer, equal, at least, to the amount of the duty, and that, by this means, the many would be injured for the benefit of the few; and yet our southern brethren have clad their slaves at a less price than ever before, and in an article, one-fourth of the value of which is now, in most instances, composed of the great staple of the south; procured, too, by them in exchange for that very staple, and thus producing an increased consumption of an article almost redundant, and the residue composed of the coarse wools of South America, purchased in exchange for manufactured cotton goods—thus giving double freights to our ships. Permit us to call your attention to a few articles liberally protected by the Government in refutation of this last prediction; and to ask for a single solitary good reason why the same result will be less extensively experienced in other protected articles. Our coarse cottons command the domestic market exclusively, and yet they are purchased for less than half their former price, and superior in quality. Foreign brown sugars have a duty of three cents a pound on their importation; this protection has furnished employment to a large amount of capital and very many laborers in the south, giving great additional value to its slave population. Hats have been so protected as to destroy foreign competition. Paper is, almost exclusively, of domestic manufacture. Boots, shoes, leather, nails, glass, and many other articles, have been so effectually protected as to exclude, almost totally, all foreign competition; and yet each of these articles, at least equal in quality with those formerly imported, are now from fifteen to fifty per cent. cheaper than were the imported articles. Your memorialists are, therefore, at a loss to assign any reason why similar results should not be produced in the articles of wool, woolen goods, iron, flax, and hemp.

Your memorialists believe they are correct in stating, as a universal truth, that high protecting duties on any article abundantly produced abroad, and for the abundant production of which their country has also the capacity, must, and will, from the nature of our institutions, the character of our people, and the advantages of our climate, our soil, and our exhaustless water-power, have a tendency to produce a speedy reduction of the price to the consumer here; and we hazard nothing in assuming the broad position that a profitable and extensive commerce cannot long exist which is not based upon and supported by a prosperous state of the manufacturing interest.

Your memorialists consider themselves not merely as citizens of the county of Columbia, or even of the State of New York; they claim the noble, the exalted character of citizens of the United States, gratified by every system of measures and policy calculated to promote the general welfare and cement the bonds of their Union. If they could believe, nay, if it were possible to be true, that the grant of their prayer, however calculated to secure to them important benefits, would or could injure the general prosperity, they would refrain from addressing you, and cheerfully submit to any privation to secure this general benefit. They believe that the strength of a Government consists not so much in a full and overflowing Treasury as in the general comfort, the happiness, the attachment of its citizens to its Constitution, its laws, and its institutions, and the possession of the means to contribute to the exigencies of the Government whenever required. Cases have not unfrequently occurred in which a people limited to the mere necessaries of life have yet been the subjects of a Government possessed of almost exhaustless resources and a full Treasury.

Your memorialists cannot believe that it is the wish or design of any section of the country or portion of the people to annihilate the interests sought to be protected; the mere suggestion of the idea would produce an expression of universal reprobation against the author, and yet, if experience is worth any thing, if history speaks the language of truth, if similar causes will produce similar effects, then must this speedily be the case, unless your protecting arm is extended to them, unless you fold to your bosom the languishing infants, and protect and nourish them until they attain the age and strength of manhood, when, if necessary, they will, in turn, take you on their shoulders and carry you triumphantly through any difficulties or dangers which you may be called upon to encounter.

If success is evidence of forecast, of prudence, and of wisdom, then may we draw many valuable lessons from the history of Great Britain. Her policy has uniformly been to give protection to the domestic industry of her subjects; to act on the principle that the constant and steady employment of all her population is the safest and most certain road to national wealth and individual happiness. She never suffers those of other Governments to compete with her own, on equal terms, on her own soil, until her artisans have carried their commodities to market of a better quality and at lower prices than others can do, and then, to be sure, she professes herself wonderfully delighted with and attached to the liberal policy, but with the hope and effect of inducing others to adopt her precepts, whilst she refuses to practice them herself, and thus securing to herself the markets of her neighbors. Why does she now retain a rate of excluding duties on almost every article the product of human labor and skill? Why does she exclude our grain, our beef and pork, and our salted fish, except on the principle that she knows we would, in those articles, undersell her, and materially injure her agricultural and shipping interests? Why are the ports of her West India colonies closed against the produce of our country in our ships, except on the principle that she is determined, at all hazards, and at all events, to protect her commercial interests, and on the conviction that, if the trade were free and open, we would engross it? Her writers and speech-makers, her legislators and her statesmen, may write and talk of the liberal policy as much as they please, she will not, she cannot, she dare not, without risking, without losing, very many of her most firmly-

rooted sources of private wealth and public revenue, materially relax her present system of protection and exclusion.

Your manufacturers of wool, of flax, and of hemp are struggling hard for an existence; the protection intended to be afforded to the first by Congress has proved altogether fallacious and deceptive by the measures of the British Government, the practices of her manufacturers, and the system of sales, at public auction, in this country; and, unless they are protected, and effectually protected, against the effect of these measures and practices, they must inevitably abandon their pursuits. Among these practices, it is believed, is one altogether fraudulent of the revenue of the United States. Your memorialists have been informed, on respectable authority, that very many of the manufacturers of Great Britain, who send their goods to this country to be sold at auction, invoice them at very short measure, on which the duties are levied and collected, and, when sold, they are measured, and they receive payment for the whole quantity.

The public debt of the United States will, according to past experience and present anticipations, speedily be entirely paid off, or so reduced as not to require much revenue or the continuance of the existing rate of duties; and whenever either of these events happen, if the interests of the manufacturers are not protected, if they are not enabled to extend themselves, to secure more capital, and, by giving permanent employment to their workmen, induce the emigration of first-rate workmen and artisans, but are permitted to continue in their depressed condition, they must inevitably sink into ruin, and carry in their train many, very many, of our best citizens, and produce universal distress, at least in this section of the country. The only question then will be, shall the immense amount of capital vested in land, in sheep, in buildings, and in machinery, be totally sacrificed, or shall all foreign competition be destroyed? and then, if destroyed, the country may, and probably will, for some time, incur the inconvenience arising from want of foreign competition; but give them now full protection, so that they continue to progress in extent of establishment, accumulation of capital, and perfection of workmanship, with an abundant supply of the raw material, and they will be able to grapple with and maintain a successful contest with the antagonist. Your coarse cotton manufacturers can now safely defy foreign competition.

While your memorialists rejoice at the wealth and the enjoyments of their fellow-citizens engaged in the commercial and planting pursuits, they must be permitted to ask for some share of the same privileges which have produced that wealth and those enjoyments. When they behold the proud ships of the former ornamented beyond all example, the stately edifices and the splendid equipages of their commercial fellow-citizens, they are bound to believe their prosperity unparalleled; and when they view the long retinue of servants, the splendid and sumptuous tables, and taste the delicious wines of the southern planter, and contrast them with their own humble dwellings, and their own frugal fare, the products of their individual labor and industry, they cannot but believe that something besides incessant toil and labor, to which they are subject, and the practice of the most rigid economy, have produced this difference of situation. In examining for the cause they think they trace it to the fostering care and protection of their common Government, and they ask of it no more than it has granted to them, the right of using, in their common country, the products suited to their climate, their soil, and their industry, protected against a ruinous competition with a powerful, a sagacious, and, in many instances, an unprincipled adversary.

20TH CONGRESS.] No. 855. [1ST SESSION.

TARIFF OF DUTIES ON WOOLEN GOODS AS PROPOSED BY MR. MALLARY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 18, 1828.

A statement of the duties, ad valorem, which would be charged on woolens of various descriptions under the amendment proposed to be made by Mr. Mallary to the bill No. 132, according to the 2d, 3d, and 4th provisions of that amendment:

The amendment proposes an ad valorem duty of .40 per cent. after June 30, 1828; 45 per cent. after June 30, 1829; and of 50 per cent. after June 30, 1830. Under the 2d provision all manufactures of wool, or of which wool shall be a component part, the *actual value* of which at the place *whence imported* shall not exceed fifty cents the square yard, shall be deemed to have cost fifty cents the square yard, and the ad valorem duty charged thereon.

The following calculations are made from the only datum that can be obtained, viz: the *actual cost* at the *place where purchased*. The rates of the duties, ad valorem, thus ascertained are less than they would be to make the calculations on the actual value at the place whence imported according to the provision in the amendment. The calculations are made at 50 per cent. ad valorem by the following rule:

A running yard of cassimere, 27 inches wide, at 2*s.* 3*d.* sterling, with an addition of one-third to make the value of the square yard, would be 66⅔ cents, which it is proposed to estimate at	250 cents.
Add, for charges at the port of shipment, 2 per cent	5
	255
Add 10 per cent	25.5
At 50 per cent. ad valorem is	280.5

140¼ cents on a square yard of cassimere of the value of only 66⅔ cents being actually equal to a duty of a fraction less than 214 per cent. ad valorem.

The second provision would embrace the following description of woolens:

Plains, width 27 inches, cost 10*d.* to 1*s.* 6*d.* sterling. An article of great consumption by sailors, boatmen, fishermen, and laborers. Proposed duty: on the finest, 63 per cent.; on the coarsest, 114 per cent. ad valorem. The quality principally consumed costs 1*s.*, and would pay a duty of 95 per cent.

Paddings, 27 inches wide, cost 5*d.* to 1*s.* A stiff coarse cloth for collars, sometimes worn by laborers. Proposed duty: on the finest, 95 per cent.; on the coarsest, 227 per cent. The quality principally consumed costs 8*d.*, and would pay a duty of 143 per cent.

Flannels, 27 inches wide, cost 6*d.* to 2*s.* An article of universal consumption. The finer qualities would come under the next provision. Under this, the proposed duty would be: on the finest, 56 per cent.; on the coarsest, 168 per cent. The principal consumption is among the laboring class, at 1*s.*, which would pay 95 per cent.

Bockings and baizes, 42 inches wide, cost 6*d.* to 1*s.* 3*d.* For lining the pea-jackets of sailors and boatmen, and the great-coats and round-jackets of farmers, mechanics, and laborers, and for table and floor-cloths, &c. Proposed duty: on the finest, 118 per cent.; on the coarsest, 295 per cent. The principal consumption is for lining of jackets and great-coats, at 9*d.*, which would pay a duty of 196 per cent.

Baizes, 18 inches wide, cost 1*s.* to 2*s.* For floor-cloths. Proposed duty: on the finest, 74 per cent.; on the coarsest, 168 per cent. The quality principally consumed costs about 1*s.* 6*d.*, and would pay a duty of 112½ per cent.

Serges, 27 inches wide, cost 7*d.* to 11*d.* For the finest, 103 per cent.; for the coarsest, 162 per cent. These are used as baizes for lining jackets, great-coats, &c., and for the same purposes that coarse flannels are used. The principal consumption of this article would be at 9*d.* sterling; duty, 126 per cent.

Caroline plaids, 27 inches wide, cost 6*d.* to 9*d.* Proposed duty: for the finest, 126 per cent.; for the coarsest, 168 per cent. This is an article composed of cotton and worsted, and would pay the higher or woolen duty. The consumption is very great among the farming, mechanic, and laboring interests; and it is not at present manufactured in any part of the United States. The quality principally consumed costs 7*d.* sterling, and the proposed duty on it would be 162 per cent.

Drab kerseys, 27 inches wide, cost 1*s.* to 5*s.* The qualities coming under this provision would pay. on the finest, 56 per cent.; on the coarsest, 95 per cent. It is used for great-coats, jackets, and trowsers, by farmers, mechanics, sailors, boatmen, and laborers.

Swansdown, 27 inches wide, cost 8*s.* to 3*s.* Proposed duty under this provision: on the finest, 56 per cent.; on the coarsest, 142 per cent. It is not manufactured in the United States. Used by the farming, mechanic, and laboring interests. The quality principally consumed costs about 1*s.* 2*d.* sterling, on which the proposed duty would be 78 per cent.

Toilinettes, 27 inches wide, cost 8*d.* to 5*s.* The quality principally consumed would come under the next provision. Under this the proposed duty would be: on the finest, 56 per cent.; on the coarsest, 142 per cent. This article is consumed by all classes.

Kerseynettes, 27 inches wide, cost 8*d.* to 1*s.* 3*d.* It is composed of cotton and wool, but would pay the woolen duty. The proposed duty would be: on the finest, 76 per cent.; on the coarsest, 142 per cent. This article is used by all classes for summer dresses, and the quality principally consumed costs about 1*s.*, and would pay a duty of 95 per cent.

Coatings, 50 inches wide, cost 1*s.* 8*d.* to 5*s.* These would come under this and the next provision. Proposed duty under this: on the finest, 56 per cent.; on the coarsest, 105 per cent. Consumed by the farming, mechanic, and laboring interests, and for women's cloaks and coats. The principal consumption is by the farmers, mechanics, and laborers, of a quality which costs about 2*s.* 6*d.*, on which the proposed duty would be 70 per cent.

Flushings and lionskins, 48 inches wide, cost 1*s.* 5*d.* to 3*s.* Proposed duty: on the finest, 56 per cent.; on the coarsest, 101 per cent. ad valorem. These articles are used for great-coats, jackets, &c., and are worn by farmers, mechanics, laborers, sailors, fishermen, and boatmen.

Pelisse cloths, 54 inches wide, cost 2*s.* 6*d.* to 3*s.* 4½*d.* Worn by all classes. Under this provision the finest quality would pay 56 per cent.; the coarsest, 76 per cent.

Broadcloths, 45 inches wide, cost 1*s.* 10*d.* to 2*s.* 5*d.* The most inferior would come under this provision, but the mass of broadcloths would come under the next proposed duty under this, on the finest, 65 per cent.; on the coarsest, 86 per cent. This quality is used by mechanics, sailors, fishermen, boatmen, and laborers.

The third provision of the amendment provides that all woolens over 50 cents and under $2 50 the square yard shall be valued at the latter rate. This provision would embrace most of the woolens now imported, viz:

Flannels, from 1*s.* 3½*d.* to 2*s.* sterling, under this provision would pay 237 per cent. on the finest; 280 per cent. on the coarsest.

Drab kerseys, 1*s.* 8½*d.* to 5*s.* On the finest, 95 per cent.; on the coarsest, 280 per cent.

Swansdown, 1*s.* 8½*d.* to 3*s.* Finest, 158 per cent.; coarsest, 280 per cent.

Toilinettes, 1*s.* 8½*d.* to 5*s.* Finest, 95 per cent.; coarsest, 280 per cent. Principal consumption at 3*s.* 6*d.*; duty, 135 per cent.

Coatings, 3*s.* 1⅝*d.* to 5*s.* Finest, 176 per cent.; coarsest, 280 per cent.

Ladies' cloths, width 58 inches, cost 5*s.* to 13*s.* Finest, 79 per cent.; coarsest, 204 per cent. Principally consumed at 9*s.*; duty, 113 per cent.

Pelisse cloths, 3*s.* 4¾*d.* to 4*s.* 6*d.* Finest, 210 per cent.; coarsest, 279 per cent.

Cassimeres, 27 inches wide, cost 1*s.* 9*d.* to 5*s.* These prices include almost all imported. The quantity above 5*s.* is very limited and is annually decreasing. This is an article of general consumption, and would pay, on the finest, 95 per cent.; coarsest, 271 per cent.

Broadcloths, of common quality, 50 to 54 inches wide, 3*s.* 3½*d.* to 6*s.* Worn very generally by farmers, mechanics, sailors, boatmen, fishermen, and laborers. The finest, 153 per cent.; coarsest, 280 per cent.

Broadcloths, 54 inches wide, 6*s.* to 9*s.* Consumed by the same classes throughout the country. Finest, 105 per cent.; coarsest, 158 per cent.

Broadcloths, 54 inches, 9*s.* to 12*s.* Consumed by all classes throughout the United States. Finest, 70 per cent.; coarsest, 105 per cent.

Broadcloths, 60 inches wide, cost 12*s.* to 16*s.* Consumed by wealthier people, and by those who live in cities. Finest, 66 per cent.; coarsest, 88 per cent. ad valorem.

The fourth provision, embracing broadcloths of the value of $2 50 to $4 per square yard, would reach those descriptions only which are consumed by the wealthy and fashionable classes. These cloths are 63 inches wide, and cost 19*s.* 9*d.* to 25*s.* sterling per running yard. The proposed duty would be, on the finest, 71 per cent.; on the coarsest, 90 per cent. ad valorem.

The fifth provision, embracing broadcloths of $4 to $6 per square yard, would be almost inoperative.

The following is a summary of the duties proposed under the second and third provisions of the amendment:

	Finest.	Coarsest.
UNDER THE SECOND PROVISION.	*Per cent.*	*Per cent.*
Plains	63	114
Paddings	95	227
Flannels	56	168
Bockings and baizes	118	295
Baizes for floor-cloths	74	168
Serges	103	162
Caroline plaids	126	168
Drab kerseys	56	95
Swansdown	56	142
Toilinettes	56	142
Kerseynettes	76	142
Carpeting, ingrained	56	280
Brussels	85	94
UNDER THE THIRD PROVISION.		
Coatings	56	105

The duties now existing vary from 25 to 33⅓ per cent. There is a minimum of 33⅓ cents per square yard on some woolens, but it applies to a very small proportion of them.

20TH CONGRESS.] No. 856. [1ST SESSION.

DUTIES ON TEAS IMPORTED FROM CHINA.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 18, 1828.

Mr. McDUFFIE, from the Committee of Ways and Means, submitted the following report upon so much of the annual report of the Secretary of the Treasury as relates to the reduction of the duties on teas:

The various descriptions of teas, classified in reference to the existing rates of duty, cost in China the following sums, and are now subject by the laws of the United States to the following specific duties, respectively:

Imperial, Gunpowder, and Gomee teas cost 58 cents per pound, and pay a duty of 50 cents per pound.

Hyson and Young Hyson teas cost from 36 to 40 cents per pound, and pay a duty of 40 cents per pound.

Hyson Skin and other green teas cost 20 cents per pound, and pay a duty of 28 cents per pound.

Souchong and other black teas (excepting Bohea) cost from 20 to 28 cents per pound, making an average of 24 cents per pound, and pay a duty of 25 cents per pound.

Bohea tea costs 10 cents per pound, and pays a duty of 12 cents per pound.

From the foregoing statement it appears that Imperial, Gunpowder, and Gomee teas pay an *ad valorem* duty of about 86 per cent.; that Hyson and Young Hyson pay an *ad valorem* duty of from 100 to 111 per cent.; that Hyson Skin and other green teas pay an *ad valorem* duty of —— per cent.; that Souchong and other black teas (with the exception of Bohea) pay an *ad valorem* duty of from 89 to 125 per cent., making an average of 107 per cent.; and that Bohea tea pays an *ad valorem* duty of 120 per cent. It is obvious that in the existing rates of duty there is an inequality which ought to be removed. Teas which cost the highest prices, and are consumed by the more wealthy classes of the community, are now chargeable with the lowest rate of duty; and teas which cost the lowest prices, and are consumed by the poorer classes of the community, are chargeable with the highest rate of duty. In fixing a scale of specific duties applicable to the different qualities and descriptions of teas, the committee have made it a primary object to abolish the existing inequality. They have also made such a reduction of the rates of duty as will, in their opinion, enable the people to obtain a wholesome beverage at prices considerably reduced, without any material diminution of the revenue. The remark is a very obvious one, that neither very high nor very low duties are most productive of revenue. It is impossible to ascertain, with any tolerable precision, the point at which the duty on this particular article would be most productive. The committee cannot doubt, however, that the proposed reduction of the duty will very considerably increase its consumption; and, when the facility of smuggling it through the Canadas is taken into the estimate, it can hardly be doubted that the duties proposed by the committee, averaging, as they do, about seventy-five per cent. on the value, are sufficiently high for the purposes of revenue.

It is true that the committee have had no evidence that teas have been hitherto smuggled into the United States through the Canadas; but as the East India Company, under recent regulations, now import their teas directly into those provinces almost free of duty, and as they have now in their stores there an accumulated surplus considerably beyond the demand for the consumption of the provinces, the committee are of opinion that the probability of smuggling in that quarter ought not to be entirely disregarded in fixing the rates of duty on teas imported into the United States. This consideration acquires additional weight from the fact that the East India Company have fixed a minimum price, below which their agents in Canada are not now permitted to sell their teas. While this fixed price remains unaltered, there is no adequate inducement to smuggle teas into the United States from Canada. But the East India Company have the power of removing the existing restriction at any moment; and, to obtain a vent for the large and accumulating surplus of their teas, the inducement for removing it is so great as to render that event probable. Should it take place, there can be little doubt that our northern frontier would be the scene of extensive smuggling, if the present high rates of duty on teas imported into the United States be not reduced. Such are the views which have induced the committee to report the accompanying bill.

20TH CONGRESS.] **No 857.** [1ST SESSION.

IN FAVOR OF INCREASE OF DUTIES ON IMPORTS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 20, 1828.

To the Senate and House of Representatives of the United States in Congress assembled:

The petition and memorial of the subscriber, a citizen of these United States, respectfully represents:

That I, your petitioner and memorialist, was born and raised in Chester, now Delaware county, Pennsylvania, where I reside, and am now, February 14, 1828, fifty-nine years of age; was bred to the profession of a farmer; have steadily pursued that business up to the present time, and have been practically and personally engaged in all the various branches of agriculture common in Pennsylvania, but latterly most extensively engaged in the management and cultivation of merino sheep. And having read with surprise the report of the Committee on Manufactures as it regards wool and woolens, I have thought it right and expedient, to do justice to myself and brother farmers, as well as to the manufacturers and my fellow-citizens generally, to lay before your honorable bodies a statement containing a sketch of my experience, and conclusions drawn from facts, together with the consequences which, in my view, must necessarily result from your decisions on those measures, so long and so earnestly called for, for the protection and encouragement of the American farmer, manufacturer, and the enterprise and industry of the country, especially as it regards wool and woolens. With a view that I may be fairly understood, and that the information may be of value as data for your deliberations, I propounded to myself a series of questions, which seemed to embrace the whole matter, which I have endeavored to answer as clearly and fully as I am capable, and which I have answered almost altogether from *my own experience* and immediate observation. In any calculations made I have taken great care to keep within bounds; facts are given as they are.

1st. What is your profession?
2d. How long have you been engaged in raising sheep?
3d. What number of sheep do you keep, and what kind are they?
4th. What quantity of clean wool is the average produce of a sheep?
5th. What is their annual increase?
6th. What is the cost of keeping a sheep?
7th. What is the present price of wool?
8th. What quantity of land will maintain a sheep?
9th. Are there any manufactories in your neighborhood?
10th. Is there any demand for wool at present?
11th. Have you sold your wool regularly every year?
12th. What price have you obtained for wool at different periods, and what is the price now?
13th. What additional duty on wool, do you think, will protect the American wool-gower?
14th. Are you in favor of an additional duty on woolen goods, and to what amount?
15th. What will be the effect on wool-growers, in your opinion, if no additional duties are laid on imported cloths?
16th. Do the farmers of your neighborhood think a general improvement in the market for their products will be the result of additional duties on wool and woolens?

In the year 1813 I was led to turn my attention to the cultivation of merino sheep, and extend my agricultural operations. At that time it was honorable and patriotic, and highly recommended by our wisest statesmen, the acts of Congress, and the almost unanimous sentiment of practical men, not only of our own country, but of Europe, and I bought one hundred and three full blood merinos, which cost me, on an average, over one hundred dollars apiece. The prospect was then flattering, because it promised a handsome profit on the capital and labor, and would make a pleasant and honorable business withal; and it would have been almost treason to doubt of its permanency, because the *Government would never withdraw its protection.* In this, however, I was disappointed; for shortly after the war the *Government did withdraw its protection,* and our manufacturers were driven from *our own markets,* and for several years I could not sell a pound of wool unless I would sell it to go to England, which I might have done immediately after the war, and was offered for it fifty cents a pound, in the dirt, for that purpose; but I would not, as I expected our own manufactories would revive. At length a partial resuscitation took

place, and in 1818 I sold to Fisher & George, near Germantown, at fifty cents per pound for full blood, and forty cents for some mixed blood I then had. Since then, up to 1822, the prices have fluctuated, and I sold it from fifty to thirty-seven and a half cents in the dirt, equal to one dollar and to seventy-five cents clean. Since 1825 I have not been able to sell for a price that would enable me to live, twenty-five cents being the most I have been lately offered, and that only for a small quantity. I have now about 3,000 Spanish and Saxony merinos, besides some small flocks out on shares, which yield, on an average, four and a half pounds of unwashed or two and a quarter pounds clean wool. The cost of keeping per head here, that is, in Delaware and Chester counties, is about one dollar and fifty cents per annum. In Belmont and Harrison counties, Ohio, where the heaviest part of the flock is, under the charge of my sons, who understand the business well, and are devoted to it, the annual cost of keeping is one dollar per head; and notwithstanding the low price of land and produce, with all the skill and economy we have been able to exercise, we cannot do it for less. Merino ewes are not put to breed until in their second or third year, and they seldom produce more than one lamb at a birth; though if high kept, they may be induced to breed twice a year; but this is not esteemed a judicious practice where a motive obtains for improving the flock; and eighty per cent. from the ewes put to breed may be considered a safe calculation, and a flock of merinos will more than double in five years. The Irish, English, and most of the various breeds of our country, breed the first year, and many have twins; so that three years would be allowing ample time for doubling a flock of these. They will average about the same quantity, or, perhaps, a little more, of clean wool than the merinos, and will consume about one-third more; but as almost every farmer can keep a small flock of these without their interrupting much his other agricultural operations, the increase, too, being more rapid and sooner at maturity for fatting, it is probable their wool, though strong and of general use, will continue to be sold at a less price than the merino. As to the quantity of land requisite for the support of a given number of sheep, it would depend so much on the quality of soil that I think a comparison with other stock, which every farmer, wherever situated, must be familiar with, will lead to satisfactory views on this subject. It has been estimated, and I think with tolerable accuracy, that six full-grown sheep, of the common kind, will consume as much herbage as a cow or steer of 500 pounds weight; hence, a calculation may be made for any given number of sheep on any variety of soil. The soil and climate of a great part of this country are so congenial for sheep and wool that we might in a very short time raise wool of any quantity and quality desired for home consumption, and for export, if we had a market for it.

There are several woolen factories in this neighborhood, but they decline buying wool at present, unless in very small quantities and greatly depressed prices.

I am not acquainted with the process of manufacturing wool, and cannot speak positive as to the profits, if there are any; but I have had the best reasons imaginable, short of positive evidence, for believing that latterly it has been a losing concern to the manufacturer; and at one establishment near me, that was believed to be well managed, where I had frequently sold my wool, I have equally strong reasons for believing that in 1825–'26 they lost to the amount of their whole stock of wool for that year; and any one who had known them in prosperous times would have his feelings wounded to see them now. When they were selling their cloths for good prices I could get a good price for my wool, and *vice versa;* and I am fully sensible that no additional duty on raw wool, without securing to the manufacturer a greater share of our home market, will benefit the farmer or wool-grower. It is to the manufacturer we look for a market, and it is while he is on our own soil that we are suffered to approach him with the produce of our flocks and our farms; for, while in England, we must furnish him with *English wool* and feed him on *English bread and English beef, all the produce of English farmers;* but bring the manufacturer on to our own soil, and lay an efficient specific duty on the foreign manufactured articles, and upon raw wool a duty of twenty cents per pound, increasing it annually five cents until it shall reach fifty cents per pound, and I believe all will be benefitted; for it may be reasonably estimated that we do not import more than one-fifth of all the wool and woolens we consume; and we can more than double our annual stock of wool of all kinds in from three to five years with great ease. I am therefore of opinion that, to give the farmer a secure and permanent market for his wool and surplus produce generally, manufactories should be got up and sustained by efficient duties, and by guarding against and preventing any advantages being taken or practiced on us by foreign legislation or foreign fraud. Of this I express not only my own sentiments, but the avowed sentiments of all the respectable farmers of my acquaintance either in this State or Ohio. And this flock, which has been got up to what it now is, more with an eye to future prospects than anything that has been realized from it, with many others, will not long survive a repeated disappointment of the reasonable expectations the proprietor *conceives he has*, that Congress will, at the present session, provide efficient protection to wool and woolens, without which, I am of opinion, many very valuable flocks will be lost to the nation, and we shall be forever discouraged from making any attempts to introduce and cultivate fine wooled sheep in our country again, and must be depending on another country for our clothing, or be *determined* to be independent of all foreign nations, whether in *peace* or *war*, and go naked, while in the midst of greater natural advantages than any other people on this earth can boast, and which a grateful and wise community will not neglect to cultivate.

If I could live by dint of honest and honorable industry, it would be all I ask; and surely there can be none more so than cultivating the means God has given us to feed and clothe ourselves. There is certainly nothing extravagant or unreasonable in this, and this, I humbly think, (with all due deference and respect for those worthy fellow-citizens to whom we have preferred the management of our national barque,) every American citizen has a right to expect. Every rational man who raises a family he regards (and this, I blush not to say it, is emphatically my situation) must necessarily look forward with some degree of anxiety and desire for their future prosperity, and be shocked with any apprehension that his or their laudable exertions shall be lost. Manufacturers have a tendency to create a greater variety of employments, and, of course, increase the facilities for individual comfort and national prosperity. We have climate, soil, forests, minerals, water-power, native genius, and all the essential requisites for prosecuting them to any extent desired; then let us, while foreign nations receive from us only very partially the great staple articles of our country, foster the arts and manufactures, and secure to ourselves all the advantages we can have from our own markets. This would invite to emulation and perfection, and produce a greater extension and variety of commodities for internal and external commerce, and diffuse its invigorating influence throughout the whole system. They also open to the farmer a market for many heavy and perishable articles, and enlarge the sphere of his agricultural operations by adding many new ones for its culture. (Successful manufactures will be always understood when referring to their advantages.)

I have said it might be reasonably estimated that we do not import more than one-fifth of all the woolens we consume. The data I assume is this: that taking five dollars as the average annual amount of manufactured woolens consumed by each individual in the United States would be putting it low; but few put it below ten, which is probably nearer the point; but we will say five to be within bounds; the precise amount will not affect the principle; then the whole population, say 12,000,000, five dollars for each person is sixty millions, and our importation of woolens is about 12,000,000 when manufactured; one-fifth of the whole quantity being consumed. If it should be objected that "if we manufacture so large a portion of the whole, why do we complain? we might be satisfied to let foreign nations have one-fifth," my answer is this: wool is an article indispensable, which we can raise and manufacture in our own country, and a business in which so large a portion of the citizens can take a part. We can supply ourselves, and more than do it, to any amount desired, and it is wise in any nation to provide, if possible, a market or vent for its surplus, because it will preserve regular prices, and a steady and profitable condition of business and circumstances; for if the surplus, however small, is thrown back on to our own market, it invariably and inevitably reduces the prices, not only on that surplus, but on the whole quantity produced. And here the great mischief is done, by foreign nations throwing in upon us their surplus articles of the kind we are raising and making here, rendering business fickle, and sinking the prices below a reasonable profit on the labor and capital employed; paralyzing industry and research; and producing ruin, degradation, and distress; while, on the other hand, we stimulate and invigorate our competitors by freeing them of redundancy. This is self-evident, and accords with experience everywhere. I have experienced it several times since the last war, and experience it now, to my deep regret, and am afraid, unless your honorable bodies interpose efficient and effectual relief, it will be fatal, not only to me, but thousands of others under like circumstances; so that it is quite immaterial, as it respects the principle, whether we import one-fifth or one-tenth; the effect is proportionably the same, unless we have a market or vent abroad for our surplus, which, as I before observed, every wise nation will endeavor to foster. What other could have raised England to that exalted degree of wealth and power she now holds if she had not cultivated her energies, and stimulated and brought into action all the inventive and physical powers of her people, by securing to them all the advantages they could have in their own markets, and creating others abroad for their surplus, which they seem determined, by every contrivance and means in their power, to maintain? No matter what the sacrifice, they must clear off the surplus. If it is even all sunk, which sometimes may be the case, and nothing is returned to cover the cost of producing it, the nation is the gainer by sending it away. This accounts at once for the extraordinary efforts to thrust her manufactures into every part of the world, and keep other nations down, who, as the United States, she fears will be converted from a long and rich customer into an extensive and powerful rival. If it *be* true that the average annual amount of woolens imported from Great Britain is equal to ten millions, and money is worth five per cent. per annum, then it is evident, on the principles already explained, we furnish her with a capital equal to two hundred millions of dollars to keep down the growth and manufacture of wool, and damp the spirit of enterprise and improvement in our own country, which she dreads, as becoming a growing rival in her markets abroad, as she well knows our facilities exceed hers, and Yankee prowess is not to be trifled with. How, then, is it to be expected that, without the efficient aid of our Government, we shall be able to withstand such a powerful opponent, whose wise statesmen are always on the alert, and whose penetrating eye seems even to pierce into the very secret movements of every nation on earth, and ready, with an act of Parliament, order in Council, and millions of secret service money at their command, if necessary, to check and chastise any refractory customers who shall think of acting for themselves? The thing is utterly impossible. With me it would be just as rational to lay hold of the pillars of the Capitol that surrounds you, run off with it with all its contents, and heave it into the ocean, as to attempt, by individual exertion, unaided by the laws of my country, and standing, too, on such very unequal grounds in point of experience, and combatted by such powerful antagonists, to raise this nation to greatness and to glory.

If I have been correct in my observation, and it is wise in a nation to cultivate her own resources, then it will be said we are acting directly the reverse of all that is rational by putting a rod in the hands of so powerful a competitor to scourge and chastise ourselves. Great Britain, according to her own statistics, wields a power in her productive operations, produced principally by the application of steam and water power on her improved machinery, equal to that of two hundred millions of able-bodied men. I should think it quite sufficient for *us*, a young and inexperienced nation, to meet her on terms of the strictest reciprocity. She receives from other nations only what suits her convenience; we should do the same, and in less than five years we might have an amount of woolens to export greater than we now import. Then there need be no fears for the revenue, for here would be aliment for foreign commerce which would be prosecuted in proportion to the wants of the people and their ability to purchase.

I will not enter into political squabbles, nor descend to local partialities, which I consider as instruments in the hands of the enemy, whose principle it is to divide and conquer. But whatever is done, in God's name let it be done for the benefit of the whole, as one family. We shall then be disposed to act, and will act in concert, on any great national question, such as is calculated to give a stimulus and security to laudable industry and enterprise, and to cultivate those great advantages a beneficent Providence has granted us. Let it not be said that we are prodigal, and treat with contempt those proffered blessings as beneath our attention and not worth improving. (I am no scholar, and have no set manner of writing, and I trust I shall be excused for expressing my sentiments in the only manner I am capable.) God forbid that I should think that any of my brethren of this Union would, knowingly and designedly, be guilty of such gross absurdity and wickedness. I am sure it will not be thought by your honorable body that I intend to convey such an idea. I merely wish to draw your attention to this great and overwhelming fact, that the prosperity and salvation of this nation requires that we should have a market or vent somewhere for our surplus, and without which it is folly to attempt to make any improvements or advances in the arts, for the more we do the worse we are off, unless we have no dealings, no commerce, internal or external; for, without an adequate market, the more the stock of surplus labor increases the greater is the difficulty of disposing of only a little. I speak from facts—from experience. I have no theory. It has been so with me at several different periods since the late war, and is so at this moment, and I have to regret its effects deeply and extensively. Nor is the loss of money merely that which we should regret so much. Society is deeply and injuriously affected by it; and unless something is speedily done to revive and animate the industrious classes—something that shall hold out to them more encouraging and animating prospects—*who shall presume* to make calculations on the future greatness and prosperity of this nation? I say none. None so stupidly blind as not to know that we must have

a market for our surplus, either at home or abroad. A great portion of the stock of surplus agricultural products of all the Middle and Western States for these three years past has been either accumulating or wasting. There cannot be a doubt but there is a heavy stock of cloths and wool on hand, and if there was a total prohibition of wool and woolens of every description in three months from this time it could not produce any great shock; for if there should even not be quite enough to supply the demand, (and like causes produce like effects,) there would be an overwhelming quantity imported and thrown in before the act would take effect, and our own establishments would immediately be put into full operation, and many new ones soon got under way. I know of several very fine establishments for woolens that are either all but silenced or waiting to know the determination of Congress on these measures. In the small county of twelve miles square, where I reside, according to a statistical report made by a committee appointed for the purpose, there are two hundred good mill seats, about forty of which are on the principal streams unimproved, and several woolen manufactories would be got up this year if any efficient bill should pass. And I think I have shown that we can double our annual stock of wool of all kinds in from three to five years. I have had some small flocks of merinos to more than double in three years; so that the deficiency could be supplied in one year from our own farms. Why we should be so extremely diffident about making the best use of our own markets, as the bill reported in relation to woolens indicates, I am yet utterly at a loss to conjecture. Foreign nations *grant us* nothing further than *suits their convenience*, and surely they will not complain if we *mete out to them in the same measure they mete to us.*

I therefore most earnestly implore your honorable bodies, the Congress of the United States, to give us that market you have in your power to give, and which no foreign Power on this earth has a right to control, nor, without your permission, can control, which will be a full and complete protection of our own markets for wool and woolens. A crisis has arrived in which we cannot, as a social people, exist much longer without them. Agriculture, manufactures, the arts and sciences, and commerce, are all members of the same family, and should harmonize and move together with as much cordiality (if I may be indulged in the figure) as the most intelligent married couple, who are not pledged by bargain merely, but by a union of all the finer feelings of the heart. They would then be prosperous, and we might, with some degree of confidence, look forward to future greatness.

I have examined and maturely considered the bill reported by the Committee on Manufactures, as it respects wool and woolens, and am decidedly of opinion that the adoption of that bill will leave the farmer, wool-grower, and manufacturer in a worse situation than if no attempt had been made to legislate upon it; for, while foreign nations are permitted to throw in their surplus on our already glutted market, with orders to sell at auction for cash for what they will bring, it is in vain that our manufacturers attempt to sell; for if they offer at a price ever so low, the foreign article is thrust in below them, until the price is so reduced that the American manufacturer, on whom alone we look for a market for our wool, is not enabled to purchase at any price whatever.

I therefore pray that, if your honorable bodies shall not see fit to give us our own market entire for those branches, you will adopt the Harrisburg plan, as relates to wool and woolens, as a substitute for those provisions of the bill now before the House, as being better calculated to produce the end desired.

I now feel that I have done my duty, and I most devoutly pray to God that he may lead and direct you in all your deliberations and efforts to do yours.

In great regard, I have the pleasure to subscribe, your friend and fellow-citizen,

JAMES M'ILVAIN.

20TH CONGRESS.] No. 858. [1ST SESSION.

IN FAVOR OF INCREASE OF DUTIES ON IMPORTS.

COMMUNICATED TO THE SENATE FEBRUARY 20, 1828.

Whereas, in the opinion of the General Assembly of the State of Indiana, it is the true policy and the imperative duty of the General Government to foster and encourage every branch of national industry which in every degree has a tendency to render us independent of foreign capital or skill, or to increase the wealth and resources of the nation, and more particularly to protect those manufactures which are necessary to our comfort and convenience, for which the raw materials are or may be abundantly produced in our country, and, by a proper regulation of the tariff, to place the American manufacturer beyond the reach of foreign combinations which may be formed to paralyze his energies and efforts, and to enable him successfully to compete in the American market with the European capitalist; and whereas our experience of the advantages resulting from the limited protection afforded to the manufactures of cotton has not only tested the soundness of the principles and correctness of the policy upon which the measure was predicated, but affords unequivocal evidence of the expediency and necessity of such a further revision of the tariff as will insure adequate protection to the culture of hemp, the growth of wool, and the manufacture of woolens; and whereas we believe the future interests and prosperity of the western country are particularly involved in the success of a measure which is dictated by policy and duty, has been tested by experience, and is demanded by our situation and necessities: Therefore—

Resolved, That our Senators in Congress be instructed, and our Representatives specially requested, to use every reasonable effort to restrain the importation of hemp, raw wool, and woolens, and to afford full and ample protection and encouragement to all articles of American growth and manufacture, and to give their united aid and co-operation to those of our sister States who encourage a national system of domestic manufactures and internal improvements.

H. H. MOORE, *Speaker of the House of Representatives.*
JOHN H. THOMPSON, *President of the Senate.*

JANUARY 24, A. D. 1828.

Approved.

J. BROWN RAY.

20TH CONGRESS.] No. 859. [1ST SESSION.

AGAINST INCREASE OF DUTIES ON IMPORTS.

COMMUNICATED TO THE SENATE FEBRUARY 20, 1828.

YORK COURT-HOUSE, *South Carolina, October* 25, 1827.

The following report of the committee appointed by the citizens of York district, in the State of South Carolina, "for the purpose of taking into consideration the *tariff policy* heretofore pursued by Congress, and also the subject of the proposed woolens bill," was this day submitted to an adjourned meeting of the citizens of said district, and, after full consideration, was *unanimously* adopted, viz:

1. *Resolved*, as the sense of the citizens of this district, That equality of rights, equality of laws, equality of burdens, and equality of benefits, are the fundamental principles of all Republican Governments, and were intended by the framers of our *Constitution* as the inviolable basis of our federative system.

2. *Resolved*, That this is a Government of *compromise*, the powers of which are defined in the Constitution, and that it is dangerous to transcend, by a process of strained and doubtful *construction*, its *express limits*, regardless of the mode prescribed for "alteration and amendment."

3. *Resolved*, That in order to preserve *harmony* between the General and State Governments, agents appointed for specific objects can never safely and rightfully assume the exercise of powers not *expressly delegated*.

4. *Resolved*, That the broad considerations of the "common defence and general welfare" were the appropriate objects of the *convention* only who framed the Constitution of the United States; and that Congress can consider them in no other way than in accordance with the *express powers* granted by that instrument.

5. *Resolved*, That to foster one branch of industry at the expense of another, and one class of men at the expense of the rest, without an *express grant of power* for that purpose, is in violation of that equality which we regard as the basis of our Constitution.

6. *Resolved*, That no power to encourage domestic manufactures as a sole and exclusive object is apparent to us in the Constitution; and, therefore, every tariff which looks to that object *alone* is unconstitutional.

7. *Resolved*, That the tariff duties which are proposed on *woolen manufactures*, and every other which goes beyond the purposes of revenue for constitutional objects, is *inexpedient* as well as *unconstitutional:*

Because it will diminish the *revenue* of the United States, and so far disable the General Government to fulfil the purposes of its adoption, and especially to pay the *public debt* already in existence, by diminishing foreign importations, and thus cutting off the most fruitful source of national funds:

Because it will be injudicious for Government to sustain, at the expense of a respectable portion of the Confederacy, an investment of capital which the circumstances of society or the improvidence of capitalists renders unprofitable, and that it will be unjust and unnecessary to do so if such investments already yield a reasonable profit:

Because the consumers of manufactures are the great body of the nation, and ought not to be taxed for the benefit of the few, particularly when such tax goes not into the coffers of the National Treasury:

Because the encouragement of manufactures by law beyond the demands of commerce only changes the *direction* of capital, which is alone the wealth of a nation as it is of individuals, and transfers its employments from departments of industry which yield reasonable profit, to one which, it is urged, does not; and therefore its destination is clearly for the worse:

Because there is not yet an overstock of capital and labor in agriculture and commerce; and when there is, it may be invested in manufactures with propriety, and without the aid of taxation upon the community:

And because, until then, it is premature to force manufacturing employments into preference.

8. *Resolved*, That copies of the foregoing resolutions be laid before Congress, through the medium of our delegation from this State.

THOMAS WILLIAMS, JR.,
WILLIAM McGILL,
SAMUEL RAINEY,
RANDOLPH HILL,
T. J. WETHERS,
JOHN THOMPSON,
J. R. DARNELL, *Committee.*

ROBERT CLENDENIN, *Chairman of the Meeting.*

JAMES ROGERS, *Secretary.*

20TH CONGRESS.] No. 860. [1ST SESSION.

DRAWBACK IN CASE OF INFORMALITY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 22, 1828.

Mr. ALEXANDER SMYTH, from the Committee of Ways and Means, to whom was referred the petition of Augustus Aspinwall, made the following report:

That it appears that the petitioner entered at the custom-house in Boston 91 boxes of brown and 41 boxes of white sugar, brought coastwise from New York, and produced a certificate from the Collector of that port that the coastwise certificate was not issued at the time of the sailing of the vessel; that on the 27th of April following, the coastwise certificate not having been received, the petitioner was permitted by the Collector at Boston, "conditionally," to lade the 41 boxes of white sugar on board of a vessel bound to Gibraltar, which was done, and all the necessary forms were complied with.

By the 31st section of the act of 1st March, 1823, concerning the collection of duties, it is provided that the coastwise certificate shall be delivered to the Collector within two months from the date of the entry, and *before the goods shall be entered for exportation*. In this case the coastwise certificate was delivered within the two months, but not before the goods were entered for exportation.

It thus appears that the permission given by the Collector at Boston was against the letter of the law, and it is not stated on what "condition" the permission was given; but the committee are of opinion that, when the exportation was made, both the petitioner and the Collector considered that the intent of the law would be substantially complied with if the coastwise certificate was delivered within two months from the date of the entry of the goods at Boston; the only difference between the certificate actually received and the regular coastwise certificate being the insertion of the weight in the former.

Your committee being of opinion that the petitioner intended such a compliance with the law as would entitle him to debenture on the said 41 boxes of white sugar, and that it was in consequence of the permission granted by the Collector that the prescribed course was deviated from, report a bill for his relief.

20TH CONGRESS.] No. 861. [1ST SESSION.

DUTIES CHARGED ON APPRAISED VALUE OF GOODS IN ABSENCE OF INVOICE.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 23, 1828.

Mr. VERPLANCK, from the Committee of Ways and Means, to whom was referred the petition of A. & Z. Cavelier, made the following report:

That the facts of this case, as stated by the Collector at New Orleans and the Comptroller of the Treasury, are the following:

In October, 1827, the petitioners received from Marseilles, at New Orleans, 100 bales of blankets, which, being unaccompanied by any invoice, were entered on appraisement, conformably to the collection law of March 1, 1823, some weeks after the invoice was received, produced at the custom-house, and the bond given for its production accordingly cancelled. But it appearing from a comparison of the invoice with the appraisement that the invoice was less by 3,338 francs than the appraised value, the importers applied to the Collector, and afterwards to the Treasury Department, for a ratable reduction of the duties.

These applications were refused, on the ground that, by the existing laws, no discretionary power to that effect was allowed to any officer of Government. The duties having been made on the appraised value, the importers now petition that the amount of duties on this excess of 3,338 francs be reimbursed to them, as having been unjustly paid.

By the collection act of 1st March, 1823, it is provided that, in case of goods being received without any accompanying invoice, if it is not judged expedient to leave them in the public stores until an invoice can be procured, they may be admitted to entry on an appraisement; upon which appraised value the duties shall be estimated, the owner at the same time giving bond to produce the actual invoice within a specified time, and to pay any excess of duty which it may appear the goods would be liable to by the invoice over those estimated on the appraised value. The law is not only silent as to providing for reimbursement in case of the appraisement exceeding the invoice price, but seems to have intentionally excluded any allowance for such a contingency. The policy of the law is to present the strongest inducement for the presentation of the real invoice, and to guard the Treasury from loss, in consequence of its suppression, whether through negligence or design. Had the general law extended to an allowance for excess of appraised duties in cases like the present, a constant opportunity for fraud would be afforded, by enabling the fraudulent first to try the chance of a low appraisement, to be acquiesced in and conformed to, if satisfactory, or else to be set aside, and a reimbursement of the difference demanded.

The present law seems to have been prepared with great caution and exactness, for the purpose of preventing frauds on the revenue, and the committee see no reason for innovating on its general provisions.

In this particular case there is no imputation or suspicion of fraud; but as it clearly falls within the

policy of the collection law, the committee regard it as inexpedient and of bad precedent to grant any special relief.

They therefore submit the following resolution:

Resolved, That it is inexpedient to grant the prayer of the petitioners.

20TH CONGRESS.] No. 862. [1ST SESSION.

AGAINST INCREASE OF DUTIES ON IMPORTS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 25, 1828.

PROCEEDINGS OF CITIZENS OF NEWBERRY DISTRICT.

At a meeting of a portion of the citizens of Newberry district, South Carolina, on the 5th of August, 1827, John B. O'Neall in the chair, and James J. Caldwell secretary, it was

Resolved, That the citizens of the district at large should be invited to meet at Newberry Court-House on the third Monday of September following, to take into consideration the "woolens bill," and the duties heretofore laid by Congress for the protection of domestic manufactures; and that Job Johnston, James J. Caldwell, George W. Glenn, Meredith W. Moon, and Benjamin Maybin, be a committee to report resolutions for the consideration of that adjourned meeting.

ADJOURNED MEETING.

On the 3d of September, 1827, a numerous concourse of citizens took place; John B. O'Neall was called to the chair, and James J. Caldwell appointed secretary. Job Johnston, the chairman of the committee appointed at the previous meeting, reported the following resolutions; which were severally considered and agreed to, *nem. con.*

Resolved, That the imposts heretofore laid by Congress for the purpose of protecting domestic manufactures are partial, unjust, unconstitutional, and oppressive, and ought at once to be repealed.

Resolved, That Congress possesses no power but such as is expressly delegated, and such as is necessary to carry the delegated powers into operation.

Resolved, That the power to lay imposts and duties for purposes other than raising revenue is nowhere to be found in the Constitution; and to pervert the power to raise revenue for other purposes is a usurpation of power, and a fraud on that instrument.

Resolved, That to protect domestic manufactures under the power to "regulate commerce" is substantially converting the right "to regulate" into a right to destroy.

Resolved, That the system of protecting duties is not an "American system." The leading aim of our Government is to give all men equal rights, and leave each individual to his own exertions.

On the contrary, the protecting system, at its very outset, robs one class of the community to enrich the other.

It detracts from the fair profits of agriculture and commerce, and thus tends to destroy industry and enterprise in those most necessary vocations.

It adds profit to manufacturing investments already profitable, (which is needless and unjust,) or it aids unprofitable investments, (which is impolitic.)

It destroys the markets for our staple commodities; for nothing can be plainer than that if other nations are prohibited from selling to us they cannot afford to buy from us. It impoverishes the consumers, (who are the great body of the people,) by compelling them to buy dear and sell cheap, when they have an opportunity (else there is no need of such laws) to buy cheap and sell dear.

In destroying foreign trade it destroys our shipping interest, and with it our nursery of seamen and our Navy.

In prohibiting foreign goods it deprives the Government of the duties, and will render a resort to direct taxation and excise inevitable. By rendering a system of smuggling almost necessary, it tends to demoralize the people, an evil destructive of the Government itself under which we live, which is emphatically a Government of the people, and depends for its support solely on their virtue.

Resolved, That the woolens bill is liable to all the foregoing objections to a greater extent.

Resolved, That our attachment to the union of these States is inferior to none, and that, as a means of perpetuating and insuring the safety of the same, we will adopt all peaceable and constitutional methods to procure the repeal of the protecting duties already laid, and to prevent the passage of the woolens bill, or other measures of a similar character, or to procure their repeal should they pass.

Resolved, That we will, when they shall deem proper, cordially unite with our fellow-citizens of this State in associations for the non-consumption (with such limitations as prudence may dictate) of the staple commodities or manufactures of such sections of the United States as have, by their Representatives, supported or shall support the system of which we complain; and we hereby recommend such associations, or we will unite in any other measure, not hostile to the Government, calculated to prevent the passage of such measures, or to procure their repeal.

Resolved, That a committee be appointed to express by memorial to Congress and to the State Legislature the sense of this meeting.

Resolved, That a committee be appointed to devise peaceable and constitutional measures to defeat the woolens bill, and to prevent the oppressive operation of that measure, (should it pass,) as well as of the existing protecting duties.

Resolved, That it is our wish that our Representatives in both branches of the State Legislature, as well as in Congress, should, on fit occasions, act in accordance with the sentiments expressed by this meeting.

Resolved, That copies of the foregoing resolutions be furnished to our Representatives in both branches of the State Legislature and in Congress; and that they be also published in the Telescope.

By order of the meeting:

JOHN B. O'NEALL, *Chairman.*

JAMES J. CALDWELL, *Secretary.*

To the Senate and House of Representatives of the United States:

The memorial of the citizens of Newberry district, South Carolina, showeth: That your memorialists have ever been, and now are, as much attached to the union of the States and the Constitution of the United States as any other portion of the people; and have ever manifested, and are yet prepared to manifest, as strong a disposition to support the Government of their country, with all their means, in the full exercise of all constitutional powers, and in the pursuit of a just and equal policy, as any section of this Republic. That, from a spirit of forbearance, and trusting to the generosity, good sense, and patriotism of their brethren of other sections, they have hitherto abstained from open complaints against the right assumed by Congress to lay duties, not for revenue, nor for the regulation of commerce, but for the protection of domestic manufactures. It is a power nowhere to be found in the Constitution; it is neither included in those expressly delegated, nor is it incident to, nor obviously necessary to carry the delegated powers into execution. The exercise of it is a usurpation, and, if tamely submitted to, would sanction the exercise of other powers not delegated, not proceeding from the people, and subversive of their right of self-government. Ours is a Government of the people. It ought not only to be administered for them, but by them. The powers granted by them to their public servants are enumerated with jealous circumspection in the Constitution as guides to their agents. Beyond this, the constitutional authorities must not pass. When they arrive at these limits they must pause, and ask the people of the States for an enlargement of their constitutional powers. If the requests be reasonable, the people are interested to grant it; and if they refuse, the wisdom of the people has spoken in the refusal, and the power of the people will assert their right to be obeyed.

The species of legislation of which we complain is an infringement of the federal pact. It is a faithless departure from a pledge to legislate, not for a section, but for the Confederation; not for a few, but for "the general welfare." It creates discord, instead of insuring "a more perfect union." It violates the eternal principles of justice by robbing one to enrich another. It arrays the interest of the oppressed against his public duties, and tends to disturb "domestic tranquillity." It detracts from the revenue, from the strength of the Navy, and other means of the "common defence," and (what is clearly against the whole scheme of our Government) it needlessly interferes with the liberty of the citizen to pursue his private avocations according to the dictates of his own judgment.

We observe with pain that the demands of the manufacturers are never ending. The support of paupers increases pauperism. Encourage manufactures—others engage in that pursuit, and you find the line of beggars for protection in your lobby doubled. It appears that things have arrived to that pass that a corps of agents, duly organized and drilled according to a system of mercenary tactics, are, year after year, armed with statements and pretences manufactured for the purpose, and sent to the seat of Government to conquer the Legislature by skilful manœuvres. Even when discomfited, as in the last campaign, they are not conquered. A hollow peace is patched up, and you behold them industriously "in time of peace preparing for war." It is in vain to pretend that the force lately organized at Harrisburg is a "peace establishment." It will disclose its true character in an unblushing and determined attempt to plunder all other classes for the aggrandizement of the manufacturer.

We speak from the heart. Our burdens are more than we can bear. Universal distress pervades the south. If the apprehended distress of the manufacturers at the end of the last war entitled them to relief, surely our present poverty and approaching ruin should produce compassion if we could submit to ask it. But we ask not compassion; we demand nothing but simple justice.

We are treated as colonies. Our honest earnings are taken from us and given to others. What is taken from us never returns to us. We have never received, and never expect to receive, any benefit from such legislation. The "bloated promises" of our oppressors we believe ever will be, as they ever have been, followed by "lank performances." We place no confidence in them. We have no faith in that wisdom which has set out to render us independent by reducing us to beggary. We protest against the power of the General Government to protect domestic manufactures; and we request that all laws heretofore passed for that purpose be repealed, and that the principles be forever abandoned. If necessary, we are willing to contribute "millions for revenue—not a cent for protecting duties."

We submit our grievances with a hope they will not be disregarded.

By order of the meeting.

JOHN B. O'NEALL, *Chairman.*

JAMES J. CALDWELL, *Secretary.*

20TH CONGRESS.] No. 863. [1ST SESSION.

AGAINST INCREASE OF DUTIES ON IMPORTED MOLASSES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 25, 1828.

To the honorable the Senate and House of Representatives of the United States of America in Congress assembled:

The subscribers, citizens of the town of Warren, in the State of Rhode Island, &c., would respectfully represent: That the principal business of this town, and, in fact, of the district in which it is located, is

the West India trade and distillation of molasses; that they follow this business from necessity, having no water privileges or other facilities for manufacturing, which their neighbors possess in a greater or less degree; that they suffered the loss of all their business and a great part of their property during the long embargo, non-intercourse, and the war which followed, by the effects of which their population was very much diminished; that they have, since the peace, by their industry, frugality, and assiduous attention to their business, in some measure retrieved their losses and repaired the dilapidations of the town, caused by the measures aforesaid. Their population has also increased, and they had begun already to anticipate the time as not far distant when their real estate would bring in market something near the price for which it sold in the days of their former prosperity. But the report of your Committee on Manufactures, recommending an increase of the present *heavy duty* on molasses and the abolishment of the drawback allowed on the exportation of spirits distilled from that material, has come upon them like a powerful electrical shock, which has dissipated all their pleasing dreams of future prosperity, and paralyzed all their efforts. They anticipate from that recommendation, if carried into effect, nothing short of a total destruction of all the distilling establishments in New England, and, consequently, an end of the principal part of their business. And although they acknowledge themselves in favor of a reasonable protection of the manufacturing interests in this country, still, as self-preservation is the first law of nature, they cannot silently submit to be sacrificed whenever the manufacturers shall think it expedient to place them upon the altar. They consider that they are entitled to the protection of the Government, in common with other citizens, whatever may be their pursuits. They therefore beg leave to remonstrate against the passage of the bill recommended by the Committee on Manufactures entitled "A bill in alteration of the several acts imposing duties on imports," especially so far as the same relates to an increase of the present duty on molasses and the abolishment of the drawback on the exportation of spirits distilled from that material. They consider the present *duty* as *enormous*, compared with the cost of the article in the West Indies, especially in the island of Cuba, where the average price for the last five years, in the seaports, has been less than nine cents per gallon, and on the plantations not over six and one-quarter cents. Your remonstrants do not think it possible to obtain a supply of molasses adequate to the present consumption from any part of the territory of the United States; and if it were, no further protection is necessary to its culture; for, if the West India planter can live by the business at the prices above named, the American planter certainly can, who has been obtaining, during the same time, eighteen to twenty-two cents per gallon on his plantation for this article. They, therefore, consider it unnecessary that their business should be destroyed to protect the interests of the American planter. And shall their business be annihilated to enrich the distillers of gin and whiskey? The distillers of molasses can now scarcely live by their business, in competition with the distillers of grain, as the eastern States are yearly flooded with whiskey from the grain-growing States. It has been said by a gentleman from Kentucky that it was his intention, in recommending the measure, to abolish the use of the "poisonous taffia" manufactured in New England, and to substitute "wholesome grain liquors." Your remonstrants beg leave to differ with the gentleman in opinion in relation to the qualities of the liquors in question, as whiskey and gin are generally considered by the best judges here much more pernicious than liquors distilled from molasses. That argument, then, in favor of the proposed measure is, at least, of doubtful force. But be that as it may, is not the distilling of molasses one of the great manufacturing interests of the country? And are not all those interests equally entitled to the protection of the Government? And with respect to the importers of molasses, are not their interests closely connected with the great agricultural and maritime interests of the country? Does not their business find markets for a very considerable portion of its agricultural and manufacturing productions? And does it not create employment for numerous mechanics and laborers? And is not the West India trade a great nursery of able seamen, whose services may be of immense consequence in the event of a *war* with any great naval Power? Your remonstrants consider that it would be an unjust, illiberal, and impolitic measure to destroy a business productive of so many benefits to the country. They do not think that the manufacturing business requires so great a sacrifice for its protection. They believe the manufacturing business generally to be much more profitable than any trade which they are or have been engaged in for many years, and that if any business needed protection, to the exclusion of others, it would be that of the importers and distillers of molasses.

Wherefore, inasmuch as your remonstrants are fully convinced that the aforesaid bill, if the same should pass in the form in which it was recommended, would entirely destroy their said business; that it would deprive a numerous class of mechanics and laborers of their employment, and would take from them the means of earning a subsistence for themselves and families, for the purpose of pampering and aggrandizing another class of citizens; that it would close the West India markets against a very considerable portion of the agricultural and manufacturing productions of the country; and that it would drive from their employment a numerous, hardy, and enterprising portion of our seamen, and thereby paralyze the arm of national defence; they would, therefore, again respectfully, but most sincerely and earnestly, entreat your honors, by your regard for the prosperity of our common country, by your respect for its Constitution, and, above all, by your sacred obligation to extend equal protection to every branch of industry and to every class of citizens, whatever may be their pursuits, that you would reject the aforesaid bill, or especially such provisions of the same as relate to an increase of the present duty on molasses and the abolishment of the drawback allowed on the exportation of spirits distilled from that material.

20TH CONGRESS.] No. 864. [1ST SESSION.

POWERS OF THE GENERAL GOVERNMENT UNDER THE CONSTITUTION IN CERTAIN CASES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 25, 1828.

EXECUTIVE OFFICE, *Columbus, Ohio, February* 12, 1828.

SIR: I herewith transmit a copy of the preamble and resolutions of the General Assembly of Ohio, in reply to the resolutions from the Legislature of South Carolina respecting the constitutional powers of the General Government.

I have the honor to be, with great respect, your most obedient,

ALLEN TRIMBLE,
By SAMUEL C. ANDREWS, *Private Secretary.*

Report of the select committee on the resolutions from the Legislature of the State of South Carolina.

The select committee, to whom were referred the resolutions of the Legislature of the State of South Carolina respecting the constitutional powers of the General Government of the United States, have had the same under consideration, and recommend the adoption of the following preamble and resolutions:

Whereas there have been communicated by the Governor copies of certain resolutions of the Legislature of the State of South Carolina, transmitted by the Executive of that State to be laid before the General Assembly of this State for their consideration; and it being proper that this General Assembly should respectfully express their opinion upon the matters therein contained: Therefore—

Resolved by the General Assembly of the State of Ohio, That to the general propositions contained in the first resolution, abstracted from definite questions of constitutional right or power, this General Assembly perceive no grounds of exception.

Resolved, That this General Assembly do not concur in the opinion of the Legislature of South Carolina, as expressed in the second, third, and fourth resolutions; and to the doctrines therein contained this General Assembly express their most solemn dissent.

Resolved, That the Governor of this State be requested to transmit copies of the foregoing preamble and resolutions to the Governor of South Carolina, and to the Governors of the several States, with a request that the same be laid before the Legislatures of their respective States; and also to our Senators and Representatives in Congress, to be by them laid before Congress for their consideration.

EDWARD KING, *Speaker of the House of Representatives.*
SAMUEL WHEELER, *Speaker of the Senate.*

FEBRUARY 12, 1828.

OFFICE OF THE SECRETARY OF STATE, *Columbus, Ohio, February* 12, 1828.

I certify the foregoing to be a correct copy of the original roll remaining on file in this office.

JEREMIAH M'LENE, *Secretary of State.*

20TH CONGRESS.] No. 865. [1ST SESSION.

DRAWBACK OF DUTIES WHERE GOODS WERE NOT EXPORTED FROM A LEGAL PORT.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 25, 1828.

Mr. SPRAGUE, from the Committee of Ways and Means, who were instructed, by resolution, to inquire into the expediency of allowing to William J. Quincy and Charles E. Quincy the amount of a certain debenture certificate, have had that subject under consideration, and report:

That said William J. Quincy and Charles E. Quincy represent that, being the owners of twelve pipes of brandy imported into the port of Boston, entitled to debenture, they transported the same coastwise from Boston to Portland, and thence to Ocracoke, in North Carolina, whence they were shipped in a vessel bound for the Canary Islands, and a regular certificate of such shipment obtained from the Collector at Ocracoke. On presenting the same to the Collector at Boston, he declined granting the debentures, on the ground that Ocracoke was not a port from which goods imported into districts could be exported with the right to debenture. The 77th section of the collection law of March 2, 1799, provides "that the districts from which goods, wares, or merchandise may be exported, subject to drawback, be only the districts of original importation and those ports at which vessels from the Cape of Good Hope, or from any place beyond the same, are permitted to make entry." Ocracoke was not the port of original importation, nor a port at which vessels from the Cape of Good Hope, or from any place beyond the same, were permitted to be entered; and the brandies in question could not, therefore, be exported from that district subject to

drawback. But as it seems that the Collector at Ocracoke, as well as the owners of said brandies, acted under the belief that the right to drawback would accrue from the exportation from that district, and that said William J. Quincy and Charles E. Quincy are not in fault, the committee are of opinion that they are entitled to relief, upon furnishing evidence that the duties accruing upon the original importation of said brandies have been paid, and that the same brandies have been exported from the United States and actually landed in a foreign port; and for that purpose they report a bill.

20TH CONGRESS.] **No. 866.** [1ST SESSION.

IMPORTS OF WINES AND DUTIES THEREON FROM 1801 TO 1826.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 26, 1828.

20TH CONGRESS.] **No. 867.** [1ST SESSION.

IN FAVOR OF INCREASE OF DUTIES ON IMPORTS.

COMMUNICATED TO THE SENATE FEBRUARY 26, 1828.

EXECUTIVE OFFICE, *Columbus, Ohio, February* 12, 1828.

SIR: I herewith transmit the report of a committee, and several resolutions adopted by the General Assembly of Ohio, relative to the agricultural and manufacturing interests of the country.

I have the honor to be, with great respect, your most obedient,

ALLEN TRIMBLE,
Per S. C. ANDREWS, *Private Secretary.*

The committee appointed to inquire into the agricultural and manufacturing interests of the country, and the means which, in their opinion, will be best calculated to promote and protect domestic industry, respectfully submit the following report:

The wealth and prosperity of individuals and nations depend principally upon an equal encouragement given to the three great branches of industry—agriculture, commerce, and manufactures. Whatever tends to encourage the classes of laborers in them, tends also to improve the productive powers of industry, to furnish a more ample field for talents and enterprise, to create a more uniform demand for surplus production, and give a position more independent of foreign policy.

The United States, from the nature of their soil, climate, and productions, are admirably calculated to establish and encourage these grand divisions, in such a manner as to derive the utmost benefit from the industry and enterprise of their citizens, and place individual and national wealth and prosperity beyond the injustice or caprice of foreign legislation.

The profits of agricultural labor have been greatly diminished since the general peace of Europe, owing, it is believed, in a great measure, to the unfriendly as well as arbitrary policy which excludes many of our productions from her markets, or renders them so fluctuating and uncertain as to paralyze commercial enterprise, and indirectly affect the industry of the numerous agricultural and manufacturing classes of our fellow-citizens.

For several years during the late wars in Europe our agriculturists extended their enterprise so as to have a great analogy to commercial speculation. They were induced to do so from the temporary removal of commercial restrictions, and the high price of flour and other provisions in foreign markets. The close of the war closed also the markets against us, and thus produced at once that destructive depreciation of land and its products which brought so much distress and misery upon this numerous class of our citizens. The illiberal maxim adopted by one of those great nations is to "sell everything and buy nothing;" nor will she deviate from it until her starved population threatens the country with plunder and devastation. Our great agricultural interest has not yet recovered from this sudden and ruinous check to its industry and enterprise by the peculiar domestic policy of foreign nations, nor can it hope to recover until the wisdom of Congress shall devise a plan which shall furnish a home market for our surplus productions.

The late war with Great Britain—as foreign wars always must so long as we depend for supplies upon other nations—compelled us to look to our own resources for those commodities to which we had been accustomed in times of peace, and which were indispensably necessary for our comfort and happiness, as well as the success of our arms. Necessity, therefore, produced at once a great variety of manufacturing establishments. They were, at the close of the war, put down by the competition of an experienced rival,

who had perfected that branch of industry, aided by premiums and bounties, and the result was bankruptcy and ruin to these honest and useful adventurers in a new enterprise. This branch of industry is slowly advancing from its depression, under the fostering care of the General Government, and the happy effects of its encouragement are felt throughout a wide extent of our country. It is, however, believed that it requires further aid to meet, within a reasonable time, foreign competition, and diffuse its best effects throughout every part of the country.

The peculiar situation of Ohio, the nature of her products and pursuits, have made her citizens look with intense interest upon the recent controversy touching the constitutional powers of the National Legislature, and the policy of encouraging home industry by protecting or prohibitory duties. Nor does this interest arise wholly from local considerations. Ohio believes the wealth and prosperity of the nation depend much upon the encouragement afforded by the Government to domestic enterprise and industry, as equally applied to the grand divisions of labor.

We hold, and ever have held, that local views and considerations should yield to the common interest of the nation.

From the interior situation of this State, her citizens have had little or no direct interest in foreign commerce; and yet, with a liberality of sentiment characteristic of her population, her Representatives have uniformly supported appropriations for the augmentation of the Navy, and the protection of the seaboard of her more prosperous and commercial sisters. When a war became necessary for the protection of commerce, our citizens generously submitted to the hardships and privations incident to a military life, and parted with their blood and treasure for the common honor and interest of the country. No complaints were heard amongst us that the agricultural was taxed to support the commercial interest of the nation, or that the expense bore unequally upon the different classes of society.

The objections to import duties for the protection of domestic industry are both to the constitutional right and the expediency of the measure. Some able politicians of the southern portions of our Union deny positively the right of the General Government to levy taxes upon imports for any other purposes than revenue, and that when the object of the duty is protection or prohibition the law itself is unconstitutional. The power of the Government to protect, by law, the industry of its own citizens, whether in the form of import duties, or of positive prohibitions, is as incontestable as the right of defence against the aggressions of foreign arms; it is a power claimed as an incident of sovereignty by every other independent nation, and by our National Government, on the ground of constitutional investiture.

Some worthy men and respectable public bodieshave given an interpretation to the Constitution which would forbid the interference of the General Government in any kind of encouragement and protection; but history and facts, as well as the phraseology used, will show there are no good reasons for such limited construction. By the Confederation, Congress had unlimited powers to ascertain the sums of money to be raised, and to appropriate it; and it was said, long before the formation of the present Constitution, that "without this provision the articles of confederation would be an empty form." The objections of one State (Rhode Island) to a tax on imports were answered by a committee of Congress, that "the Government ought to have the means necessary to answer the ends of its Constitution. By weakening its hands too much it may be rendered incapable of providing for the interior harmony or exterior defence of the State."

The articles of confederation were found, in practice, to be defective in many particulars, but in none were they more manifestly so than in the provisions for the regulation of commerce and for the raising of revenue. Among the other propositions made to remedy these defects it was proposed by a committee that the sole and exclusive power should be given by the States to Congress "of regulating the trade of the States as well with foreign nations as with each other; and of laying such imposts and duties upon imports and exports as may be necessary for the purpose." It is unquestionable that the opinion then entertained was that impost duties were to be employed as a proper means for the regulation of commerce with foreign nations.

The State of Georgia, in 1786, passed an act, in pursuance of the recommendations of Congress, "vesting the United States with power to prohibit the subjects of foreign States, unless authorized by treaty, from importing goods, wares, and merchandise, which shall not be the produce or manufacture of the dominion of the Sovereign whose subjects they are." Acts similar in substance, vesting Congress with unlimited powers for the regulation of trade, were passed by several other States of the Confederacy; but a difficulty arising with respect to the details led to the convention which formed the Constitution of the United States. With this important and interesting subject fresh before them, the first power delegated to Congress was "to levy and collect taxes, duties, imposts, and excises; to pay the debts, and provide for the common defence and general welfare of the United States," &c. The legislative department of the Government gave a construction to the power thus delegated by the preamble to "An act for levying a duty on goods, wares, and merchandise imported into the United States." This act was passed July 20, 1789. The preamble is in these words: "Whereas it is necessary for the support of Government, for the discharge of the debts of the United States, *and the encouragement and protection of manufactures*, that duties be laid on goods, wares, and merchandise imported." The duties imposed upon some of the articles enumerated in this act amounted to nearly a prohibition, and the discrimination clearly shows the object to be something besides mere revenue.

Alexander Hamilton, in his celebrated report, adverting to the question of constitutional right to encourage manufactures by bounties and premiums, protecting or prohibitory duties on imports, says: "There is no good foundation for such a question. The National Legislature has express authority *to levy and collect taxes, duties, imposts, and excises;* to pay the debts and provide for the common defence *and general welfare*, with *no other qualification* than that all duties, imposts, and excises shall be *uniform* through the United States; *that no capitation or other direct tax shall be laid*, unless in proportion to numbers, ascertained by census or enumeration taken on the principles prescribed in the Constitution; and that no tax or duty shall be laid on articles exported from any State. Those three qualifications excepted, the power to raise money is *plenary and indefinite*, and the objects to which it may be appropriated are no less comprehensive than the payment of the public debt and the providing for the common defence and general welfare. The terms *general welfare* were doubtless intended to signify more than was expressed or imparted in those which preceded, otherwise numerous exigencies incident to the affairs of a nation would have been left without a provision. The phrase is as comprehensive as any that could have been used, because it was not fit that the constitutional authority of the Union to appropriate its revenues should have been restricted within narrower limits than the *general welfare*, and because this necessarily embraces a vast variety of particulars which are susceptible neither of specification nor

definition." The Executive Departments of the Government have uniformly given the same construction to the constitutional right of Congress to give encouragement and protection to manufactures. President Washington, in his message of 1796, says: "Congress have repeatedly, and not without success, directed their attention to the encouragement of manufactures. The object is of too much importance not to insure a continuance of their efforts in any way that shall appear eligible." Mr. Jefferson, in his message of 1802, makes similar observations. The same doctrine was held by Mr. Madison, and the tariff of duties of 1824 received the direct approval of the venerable Monroe. If the opinion that Congress has the power to protect domestic industry by taxes or imposts beyond objects of mere revenue requires additional confirmation, that confirmation is furnished by judicial authority. In the recent case of Brown against the State of Maryland, Mr. Chief Justice Marshall says, "it is obvious that the same powers which impose a light duty can impose a very heavy one, one which amounts to a prohibition. Questions of power do not depend upon the degree to which it may be exercised."

These illustrious patriots were familiar with the discussions which produced the charter of their liberties and ours, and were not likely to err in giving that instrument its proper construction. A more limited construction would, in effect, take away all right in the General Government to encourage agriculture and commerce, as well as manufactures, and would make all those laws, laying duties on cotton, sugar, and manufactured tobacco, which have amounted to nearly a prohibition, and which have contributed immensely to southern wealth, unconstitutional and void.

From this limited view of the question, the conclusion is irresistibly forced upon us that the National Legislature has all the constitutional powers necessary to encourage and protect domestic labor, whether employed in agriculture, commerce, or manufactures; and that a different construction is incompatible with the liberal terms of the Constitution, contrary to the uniform practice of every department of the Government, and would place the great interests of this nation at the mercy of foreign policy and legislation.

It appears fairlywithin the scope of the inquiry intrusted to the committee to examine the expediency of protecting domestic industry.

We have heretofore remarked that agriculture, commerce, and manufactures are the great sources of wealth and prosperity. The laborers in these three great branches of industry will never long remain in the attitude of angry rivals, unless forced into such position by the operation of a system of unequal protection and encouragement. Their natural tendency, like the most interesting of domestic relations, is to harmony and reciprocal support. The depression of one interest will, either directly or indirectly, affect the prosperity of the others. Hence that system of legislation calculated to afford equal protection to each is best adapted to promote the *general welfare* of the nation. The United States possess the elements and the power to bring all of them to the highest perfection. Our first statesmen have been advocates of a system for the encouragement of home industry; but an unfortunate combination of circumstances has hitherto either prevented or in a great degree defeated the measures of the General Government devised for the purpose. The philosophers and politicians of Great Britain, distinguished before any in Europe for their sagacity in discovering, and their ingenuity in providing against distant dangers to the interest of their country, have long viewed the United States as their most dangerous rival, and have directed the utmost efforts of their talents to preserve their own ascendency and depress our commerce and manufactures. The preservation of the balance of power in Europe has not entered deeper into her policy than the prevention of our successful competition in those great branches of industry to which alone she owes her maritime power, her wealth, and glory. Considerations like these have originated her system of discriminations and restrictions, prohibitions and bounties, which has so frequently defeated the beneficial effects of our legislation, and has brought ruin and distress upon vast numbers of our citizens.

If the policy of nations would permit industry to be left to seek the natural channels, there would be little or no necessity for our Government to resort to legislation upon the subject. The superior intelligence and enterprise of our citizens, under the direction of private interest, would guide labor to its most productive employment; but experience has taught us not to hope for any long continuance of this natural state of things. The whole course of foreign policy is artificial and fluctuating, and the result has been, and *must be*, sudden springs, succeeded by sudden depressions, in every department of our home industry.

The laws of Congress adopted for the protection of domestic industry have either been quite inadequate or counteracted by those Governments whose policy it is to monopolize trade and its elements. As an illustration of this truth, the tariff of 1824 had not much sooner taken effect than Great Britain repealed nearly all the duties upon foreign wool, for the purpose of enabling her manufacturers to enter into successful competition with ours in our own market. As a part of the same settled system of monopoly, as well as with a view of protecting her agricultural interest, she has closed her markets, except under circumstances not likely often to occur, against our provisions and breadstuffs. Hunger must press hard upon her population before her rigorous laws will admit the importation of flour or provisions. These impediments to the progress of natural industry must be obvious to all, for they affect all. This state of things, while it has a most injurious effect upon the nation at large, operates with peculiar hardship upon the citizens of Ohio.

Our situation precludes us from entering into foreign commerce, nor have we any particular interest in this lucrative branch of industry further than it comes in aid of agriculture and manufactures. It has been estimated that ninety per cent. of our population is engaged in agriculture. This added to the exceeding fertility of our soil, and the mildness and general salubrity of the climate, leaves a prodigious excess of agricultural products beyond consumption. This immense surplus cannot be exchanged at home for manufactured fabrics that we need; for a most obvious reason, that nearly all have the same surplus and require the same exchanges. As applied to this State, there is no proportion between agricultural and manufacturing products and consumption. In the first there is an incalculable surplus; in the last an impoverishing deficiency. These facts are equally applicable to all the Middle and Western States. We therefore find the richest gifts of nature wasting upon the hands of the agriculturist, or squandered with lavish profusion, because a useless encumbrance to the plantation, while, at the same time, the owner and his family are suffering from a deficiency of comfortable clothing and convenient household utensils. This profusion of one product of labor and deficiency of another has a demoralizing influence upon our population, and naturally tends to check the progress of civilization and refinement.

Our surplus consists mostly in bulky articles—tobacco, hemp, flour, and provisions—which subject us to great waste of time and heavy expense in the transportation to Atlantic markets. These domestic markets, subject to the fluctuation of others still more distant, are too unsteady to admit of any safe

calculation by our commercial adventurers. Those who have ventured far in this dangerous field of enterprise have met with disaster and ruin.

Nor have the few who have vested their capital in manufacturing establishments met with a better fate. They struggled for a little time against the inundation of foreign goods that rose above the mountains and flowed in upon us, until their means and credit were both exhausted, and then sunk under the unequal competition. And yet it cannot be denied that this State possesses, in vast abundance, the elements of both these great sources of wealth. Her rich soil and mild climate produce almost spontaneous harvests; her native pastures feed innumerable herds; her earth is filled with minerals; her population have all the activity and vigor of youth. And yet, with all these superior natural advantages, her progress in useful arts and wealth is slow, her resources limited, and she is compelled to rely upon public credit for the accomplishment of the mighty work she has undertaken. If her prosperity was alone affected by foreign laws or the inadequacy of our own protecting system; or if the interest of any of our sister States were to be sacrificed by what WE believe to be the true national policy, it would be the duty of Ohio to suffer in silence until time produced a change of legislation, or worked a revolution in the objects of industry. But she feels that the United States have a common interest at stake, and that, although a temporary embarrassment may result from a great change in the national policy, the permanent effects will be a more active domestic commerce that will wear down sectional asperities; a more steady home market, a more abundant and cheaper supply of wants, and a great accession of national wealth and power. From these beneficial results no part of the Union will be excluded.

It would be well for our southern brethren, who with so much zeal oppose every project for the protection of national industry, to reflect that the time MAY come when their cotton and rice—those great staples from which, within a few years, so immense a profit has arisen—may, like our breadstuffs and provisions, be reached by the prohibitory measures of Great Britain, and then, in the absence of manufactories, they will be involved in calamities infinitely worse than those now endured by the Western and Middle States.

From every view of this most interesting subject, it appears most unfit that this vast country, full of youthful vigor and freedom, and abounding in all the variety of materials for the supply of her own wants by her own labor, should longer remain dependent upon foreign laws and industry for the simple necessaries and conveniences of life. The evils are general, and require a corresponding remedy. The States have parted with the right to levy import duties, and this, the simple and most obvious, if not the only means, of guarding against the effects of foreign competition, is vested in the General Government. Your committee, therefore, after full consideration, are of opinion that the General Government has the power, and that it would promote the best interests of the nation, to encourage, by direct legislation, domestic industry. They therefore recommend the adoption of the following resolutions:

Resolved by the General Assembly of the State of Ohio, That the rights originally possessed by the individual States of protecting their domestic industry, by levying tonnage and impost duties, were, by the grant of powers contained in the Constitution, surrendered to the General Government.

Resolved, That, by the Constitution of the United States, Congress is vested with full power to foster and protect domestic industry throughout the nation, whether employed in agriculture, commerce, or manufactures.

Resolved, That, in the opinion of this General Assembly, the present condition of the agricultural and manufacturing interests of the country, depressed by foreign restrictions and competition, require aid and encouragement from the General Government; and that they rely on the wisdom of Congress to devise and adopt such measures as may be effectual to protect and advance the manufacture and production of woolen goods, wool, iron, hemp, and spirits distilled from domestic materials; and, in their opinion, the provisions proper for this purpose will receive the unequivocal approbation of the people of this State.

Resolved, That the Governor be requested to transmit copies of the foregoing resolutions to the Senators and Representatives in Congress from this State; and that they be requested to use their exertions and influence to have the objects of them carried into effect.

EDWARD KING,
Speaker of the House of Representatives.
SAMUEL WHEELER,
Speaker of the Senate.

AMOUNT OF DUTIES ON TEAS IN 1823 TO 1827.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 28, 1828.

TREASURY DEPARTMENT, *February* 26, 1828.

SIR: In obedience to a resolution of the House of Representatives of the 23d instant, "directing the Secretary of the Treasury to furnish to the House a statement showing the amount of duties which accrued in the years 1824, 1825, 1826, and 1827, on the several descriptions of imported teas, classified in reference to the duties imposed by the existing laws," I have the honor to transmit herewith the statement required.

I have the honor to be, very respectfully, your obedient servant,

RICHARD RUSH.

Hon. the SPEAKER *of the House of Representatives of the United States.*

Statement exhibiting the amount of duties actually received on teas during the years 1823, 1824, 1825, 1826, *and* 1827.

Teas.	1823.	1824.	1825.	1826.	1827.
Bohea	$70,303 68	$5,053 68	$11,010 60	$13,367 76	$6,815 43
Souchong	398,191 46	477,031 00	258,129 00	387,504 00	237,113 50
Hyson Skin	551,092 48	497,379 68	615,171 48	617,040 48	218,465 24

Imperial	132,762 50	178,686 50	98,584 50	232,578 50	69,865 00
Extra duty on teas from other places than China	39 71	671 29	232 68	3,037 32	.....
Total	2,105,956 63	2,368,306 15	2,198,787 46	3,016,385 66	1,462,691 97

The year 1827 is estimated, the accounts of the Collectors of the Customs being now under adjustment. The documents from which this estimate is formed are such that the variation from the actual amount cannot be very great.

TREASURY DEPARTMENT, *Register's Office, February* 26, 1828.

JOSEPH NOURSE, *Register.*

20TH CONGRESS.] No. 870. [1ST SESSION.

REMISSION OF DUTIES ON GOODS DESTROYED BY FIRE.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 29, 1828.

Mr. DWIGHT, from the Committee of Ways and Means, to whom was referred the petition of John F. Ohl, made the following report:

That the petitioner imported, on the 8th November, 1826, into the port of Philadelphia, in the brig Antelope, from Havana, seventy-five boxes white and seventy-five boxes brown sugars. The duties were secured upon the same by bond, with sureties, which bond is still unpaid. On the morning of the 5th February, 1827, one hundred and forty-nine boxes of the sugars above mentioned were consumed by fire in the original boxes in which they had been imported; no other alteration having been made in the said boxes than that the hide straps were taken off and their place supplied by wooden hoops. The object of that change was to prevent subjecting the vessel, in which he intended to re-export said sugars, to quarantine in the port of Genoa.

By the testimony of Mr. M'Ever and Mr. Russell, the petitioner shows not only his design, but his contract to re-export said sugars; and that said contract was prevented from being fulfilled only by the misfortune of the petitioner in having them consumed by fire.

The petitioner asks the remission of the duties upon the sugars thus consumed by fire, which, in the shape of debenture, the committee have no doubt he would have been entitled to had not the accident occurred.

The sugars having been destroyed in the original boxes in which they were imported, and therefore easily identified, less danger to the revenue results from the remission of duties in such cases than in many others where the proprietor shall have changed the forms or packages of his goods before their destruction.

The committee consider the precedents in which relief has been given to be confined to cases where the goods have been burnt or destroyed in the form in which they were originally imported; and believing, as they do, that the spirit of the revenue laws requires the collection of duties only upon those goods which are consumed in the country, and that every loss of this kind must necessarily call for an additional and equivalent importation upon which duties will be paid, have reported a bill for the relief of the petitioner, confined, however, to the goods above mentioned, and excluding any remission of duties upon a variety of other bonded goods consumed at the same time, but in regard to which the evidence of identity was much less satisfactory.

20TH CONGRESS.] No. 871. [1ST SESSION.

NET REVENUE ANNUALLY, FROM 1791 TO 1826, ON CERTAIN ARTICLES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 1, 1828.

TREASURY DEPARTMENT, *February* 29, 1828.

SIR: In obedience to a resolution of the House of Representatives of the 8th instant, "directing the Secretary of the Treasury to furnish the House with a statement of the net revenue collected annually, from the year 1790 to 1826, inclusive, on each of the following articles, viz: hammered and rolled bar iron, wool, hemp, flax, sail-cloth, molasses, foreign distilled spirits, cotton manufactures, and woolen manufactures, and of the revenue which accrued on each of the said articles during the year 1827, together with the quantity and value of the respective articles imported in each year, and the rates of duty thereon," I have the honor transmit herewith the statement required, with a letter from the Register of the Treasury explanatory of the same.

I have the honor to remain, very respectfully, your most obedient servant,

RICHARD RUSH.

Hon. the SPEAKER *of the House of Representatives.*

TREASURY DEPARTMENT, *Register's Office, February* 28, 1828.

SIR: I have the honor to transmit herewith statements prepared in obedience to a resolution of the House of Representatives of the 8th instant.

This resolution calls for the net revenue on hammered and rolled bar iron, wool, hemp, flax, sail-cloth, molasses, foreign distilled spirits, cotton and woolen manufactures, from the year 1790 to 1827, inclusive, together with the quantities and values of the respective articles imported, and the duties thereon.

The statements numbered 1, 2, and 3, exhibit the net revenue which accrued on spirits, molasses, and hemp, for the calendar years from 1790 to 1826, inclusive.

Bar iron and sail duck, being subject to an ad valorem duty until the 30th June, 1816, there is no means in the Treasury of ascertaining the quantity or the amount of duty which accrued on the importation of either, or of distinguishing the value and duty from other articles paying a similar rate of duty.

Statement No. 4 exhibits the quantities of bar iron actually paying duty from the 1st of July, 1816, annually, for the years ending on the 31st of December, 1826.

Statement No. 5 exhibits a similar view of sail duck from the 1st of July, 1816, to the 30th of June, 1824; after which date this article again became subject to an ad valorem duty of 15 per cent.

Flax has ever been subject to an ad valorem duty; no means exist of ascertaining either the quantity imported, the value, or the duties accruing.

Wool: This article was not specially enumerated until the year 1822.

The dutiable value and duties are exhibited in table No. 14.

Manufacturers of wool and cotton, under the act of 4th of July, 1789, and the several acts subsequent thereto, have been subject to duties ad valorem; what the amount, in value, of duties which accrued annually on the importation of either has been, up to the year 1821, no means exist in the Treasury of ascertaining.

To meet the resolution as fully as practicable, tables, numbered from 6 to 14, have been formed for the fiscal years ending on the 30th of September, 1821 to 1827, inclusive, exhibiting the quantity, value, and duties which accrued (after deducting the drawback) on the several articles specified in the resolution, except woolen and cotton goods, and unmanufactured wool, the *quantities* of which cannot be ascertained.

Table No. 15 exhibits a condensed view of the duties which accrued on the several articles specified.

As a doubt existed whether the *foreign cost* or *dutiable value* was intended by the last clause of the resolution the latter has been adopted.

I have the honor to be, sir, your obedient servant, JOSEPH NOURSE, *Register.*

Hon. RICHARD RUSH, *Secretary of the Treasury.*

JOSEPH NOURSE, *Register.*

TREASURY DEPARTMENT, *Register's Office, February* 28, 1828.

20TH CONGRESS.] **No. 872.** [1ST SESSION.

AGAINST INCREASE OF DUTIES ON IMPORTS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 3, 1828.

PROVIDENCE, *February* 25, 1828.

GENTLEMEN: The bill reported to the House of Representatives by the Committee on Manufactures containing features entirely repugnant to our views of the true policy of the United States, we take the liberty of stating to you our earnest desire that the bill, in its present shape, may not become a law.

We are by no means adverse to the manufacturing interest; on the contrary, we are decidedly favorable to this branch of national industry, and are perfectly willing that every important article manufactured in the country, not already sufficiently protected, should receive further aid from Government. It must, however, be recollected that we have other great concerns, and that the patronage of Government is not to be confined to a few objects, however important. The bill reported is very objectionable, and, as it regards wool and woolen cloths, seems not to be approved either by the wool-grower or the wool manufacturer; while all persons interested in navigation and foreign commerce discover manifest signs of deep hostility to these great sources of national wealth in the proposed increase of duty on the articles of hemp, sail-cloth, iron, and molasses.

It is well known that the shipping interest is severely depressed, and that foreign trade is laboring under many disadvantages; is it, therefore, wise to burden these branches with heavier duties?

Hemp, duck, and iron constitute a large part of the value of every vessel. We find by an examination of the public records that there is already a considerable diminution of the registered tonnage of this district. In the year 1821 it was 15,490 tons; 1824, 16,522 tons; 1828, 13,126 tons; while the coasting trade has been nearly stationary for the last seven years, varying but little from 5,000 tons. The article of bar iron, besides being employed in ship-building, is used in large quantities by our manufacturers of nails, hoops, ploughshares, &c. This State supplies several establishments, probably to the extent of three or four thousand tons annually. The expenses attending the importation of a ton of iron from Sweden and Russia, including the duty of eighteen dollars, is full thirty dollars, or fifty per cent. on the cost at the shipping ports in those countries, and operates as a bounty to this extent to the manufacturer of bar iron in this country. The British Government, aware of the importance of this material to England, has recently reduced the duty on foreign iron from £6 10*s.* sterling per ton to £1 10*s.*; and it is well known that an immense quantity is manufactured in Great Britain from native

ore. On hemp the English duty is only £4 13*s.* 4*d.* sterling per ton; whereas the duty here on its importation is $35. It is true that hemp is not cultivated in England, and the moderate duty there is, doubtless, to encourage navigation. In this country it is certainly desirable to increase the quantity raised as well as to improve the quality; but not by so heavy a tax on foreign hemp as will tend to the entire prostration of the ship-owner. The expenses attached to every ton of hemp imported into the United States from the place of shipment in Russia, including the present duty, cannot be less than sixty-five dollars, which should be considered an ample bounty. The duty on sail-cloth is now sufficiently high to protect the manufacturer.

The molasses trade we consider extremely valuable to the country. There was imported into this town in 1827, 856,512 gallons, chiefly from Cuba, and as much, or rather more, in 1826, and all paid for in the domestic productions of the United States, viz: beef, pork, lard, cheese, butter, vegetables, boards, staves, hoops, &c. The amount of exports in these articles to the West Indies is annually increasing, as may be seen by referring to the annexed table. If the duty on molasses be doubled, as proposed by the committee, it will lessen the trade with Cuba, and may tend to further impositions there on the products of the United States when imported into Cuba. It should be mentioned that, besides the molasses imported into this town, there is probably five to six hundred thousand gallons brought to Newport, Bristol, Warren, &c., making nearly one million and a half gallons annually imported into Rhode Island. If this plan of increasing the duties, *not for revenue* but to protect manufacturers, is intended, finally, to prohibit importations, what is to become of that portion of our southern products that cannot be consumed in this country? Can foreign nations receive them if we take nothing in return? How is our Government, in such a state of things, to be supported? By an excise on manufacturing industry, or by a direct tax on the landed property of the country? It may be useful to look forward.

We repeat, that the permanent prosperity of the manufacturing classes is very interesting to this State, as well as to the country at large; several of us have capital embarked in manufactures, and, of course, are anxious for their success, but not to the ruin or essential injury of other interests. We believe if a more rigid economy, accompanied by the usual attention to improvement, was more generally adopted, there would be less occasion to apply to Congress at every session for increased protection.

We shall not seek to enforce, by the addition of names, the suggestions now made for your consideration, knowing that you are sufficiently acquainted with the feelings and pursuits of the inhabitants of this State to be convinced that the sentiments we have expressed must command the assent of most Rhode Islanders.

We have the honor to be, very respectfully, gentlemen, your obedient servants,

NICHOLAS BROWN.
THOMAS P. IVES.
CYRUS BUTLER.

AGAINST INCREASE OF DUTIES ON IMPORTS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 3, 1828.

At a very numerous and respectable meeting of the inhabitants of the county of Dutchess, in the State of New York, opposed to the prohibitory system, composed of all classes of citizens and without reference to their political opinions, convened pursuant to a call from the inhabitants of the town of Poughkeepsie, and held at the house of William Germond, in Pleasant Valley, on Monday the 18th February, 1828, William Bard, Esq., of Hyde Park, was called to the chair, and Josiah Williams, Esq., of Poughkeepsie, and Joseph C. Hoffman, of Freedom, were appointed secretaries. The following resolution and memorial were adopted by the meeting, and the undersigned appointed a committee to forward the same to Congress, in the name and behalf of the meeting:

Resolved, That this meeting, alarmed by the active and unwearied exertions of the advocates of the high tariff or prohibitory system, and by the measures they have proposed and are now urging Congress to force upon the country, beg leave, respectfully, to lay before that honorable body the following memorial, expressive of their views and feelings on that important subject, and to earnestly recommend it to their consideration.

To the Congress of the United States:

The memorial of the undersigned, inhabitants of the county of Dutchess and State of New York, respectfully presents: That your memorialists would feel themselves unwarranted in presenting themselves to the notice of your honorable body, were they not justified in the measure by the example of a

portion of their fellow-citizens who entertain different opinions, and did we not believe it to be our duty to correct, so far as we can, what we are constrained to think are erroneous representations of the condition and sentiments of the inhabitants of Dutchess county.

We have lately seen in circulation amongst us a memorial to your honorable body soliciting additional protection for wool-growers and manufacturers, praying for the imposition of prohibitory duties upon foreign importations, and representing the agricultural, mechanic, manufacturing, and laboring population of this county as in a state of extreme depression, from which no relief can be hoped or expected unless through the interposition of Congress, by the adoption of the prohibitory or, as it is sometimes termed, "the American system;" and that those classes of our citizens were generally importunate and eager that such an interference by Congress should be immediately attempted in their behalf.

To the advocates of that memorial the undersigned very freely concede their claims to considerable numbers, great respectability, intelligence, and wealth, and undenied sincerity in their opinions; but, with the same freedom we must beg leave, respectfully, to dissent from their representations and to differ from their opinions. We have no wish to intimate or prescribe a policy for the adoption of Congress; we rather confide in their wisdom to discover and establish those just and equal measures of national legislation which will operate for the public benefit, and do not presume that our sentiments or suggestions will enlighten their deliberations or affect their decisions; we therefore shall not in this memorial, except in a very limited degree, enter into a discussion to show the foundation of our belief, nor to point out the mistakes as to facts, nor the fallacies as to reasoning in which our opponents have indulged with a latitude so unbounded, and with absurdities so glaring as to produce great surprise on the part of this community, and almost an entire immolation of their own theories. We have an humbler object; we only claim that our condition, our opinions, and our wishes may be neither misrepresented nor misunderstood; and we therefore most respectfully represent to Congress that, in our judgment, the agricultural, manufacturing, and laboring population of Dutchess county is not in a depressed condition; we believe that our agriculturists are substantially prosperous and flourishing, and we think we hazard little in asserting that they were never more so. The time has been when their incomes were numerically greater, but the present prices which their produce commands afford them the means of purchasing land and all the necessaries of life, at their present value, in much greater abundance than was ever known before. It is with them as with every other class—one dollar is now worth what two were in former times; and if constant progressive improvement in cultivation, in buildings and enclosures, in stock and in implements; if freedom from embarrassment and debt; if the enjoyment of great abundance of the necessaries, comforts, and even luxuries of life; if the regular and steady accumulation of capital and wealth be any evidences (as we think they are) of the prosperity of those who possess and enjoy them, then do we confidently assert that our agricultural citizens are a prosperous and happy people.

It is generally admitted that the wages of labor never before have been so high in proportion to the expenses of subsistence; and the scarcity of labor, with the attending difficulty of procuring it, for all the common and domestic occupations of society, are subjects of universal complaint in this section of the country. So far from there being an excess of labor, there is a deficiency; and the industry of the people, instead of languishing and declining, is now actually impelled to unusual exertions by the almost unexampled productiveness of its efforts in every manual employment.

We know of no distress among that meritorious class of our citizens who are engaged in mechanic occupations; their general comfort, independence, and success, are plainly evident to all who are familiar with their condition; and their welfare and prosperity, being common to their fellow-citizens of the laboring and agricultural classes, become and present a just occasion of public congratulation to all, and of sincere and unaffected gratitude to Heaven.

Of the wool-growing and wool manufacturing interests in this county, had we relied on the common indications of prosperous circumstances, we should have believed that they also were participators in the general weal, and now entertain a different opinion only from a reliance on and respect for their uniform and reiterated declarations of their great disadvantages, and the imminent distress overshadowing their prospects. We respectfully present to Congress that we know of no class of our citizens, with the exceptions aforesaid, (if, indeed, these are exceptions,) who do not now receive a reasonable and competent recompense for their capital, skill, labor, and industry, employed in the various and diversified business of the county; that we know of no other interests which require additional encouragement or legislative protection.

The transition of the civilized world from war to peace has terminated the career of hazardous speculation, uncertain pursuits, great vicissitudes, and individual extravagance, incident to the one, and restored that serene condition of moderate emolument, regular employment, permanent uniformity, and practical economy, which the benignity of Heaven has rendered inseparable from the other. Having accomplished this change, we believe that our country is now moving onward to the destiny which awaits her, with sufficient rapidity for the development and establishment of her resources, her industry, and her wealth; that the natural increase and condensation of her population will, of itself, spontaneously supply the manufactures, and the undirected ingenuity of her citizens discover the proper time for the necessary and advantageous employment of her industry and capital; and that such an improvement is preferable to an artificial and premature cultivation of the pursuits and employments peculiar and appropriate to a more advanced period of our national existence. We, therefore, deprecate the introduction of any system which may change the present happy aspect of our affairs, and, by attempting to prove what is now reasonably good, lead to evils and injuries beyond the power of correction, and leave us worse instead of better.

Against the prohibitory system, and against the bill now before the House of Representatives as a part of that system, and in our judgment amounting, if passed in the present form, to an interdict upon foreign importations, we beg leave, most respectfully and seriously, to remonstrate.

We have long enjoyed, and as long flourished in the enjoyment of a system of moderate imports, unrestricted industry, and universal intercourse and interchange of our commodities with the other nations of the earth. Their restrictions and prohibitions have injured us less than themselves; what we have had to sell they have bought, and our purchases have been made with surplus productions, for which no adequate demand could be furnished in the establishment of home manufacturing. When we cease to buy we must also cease to sell; and the redundancy of our southern agricultural productions, consequent upon the loss of our foreign markets, must produce a ruinous reaction and destruction of the great and invaluable internal trade between the south and the north. The diminution of our national revenue, and the

establishment of direct taxation, with the corrupting increase of smuggling, are evils which, in the minds of your memorialists, seem inseparable from the introduction of the prohibitory system.

The destruction of much of our foreign commerce, and the ruin of a portion of our commercial and shipping interests, seem to us plainly incident to the same policy; and we cannot but advert to the encouragement which the wisdom of our country has hitherto bestowed upon them as an argument most irresistibly enforced by all our past and present prosperity for still fostering and protecting them. Nor can your memorialists believe that a further increase of the tariff is necessary for our national independence and honor. Our present advances furnish the elements of any requisite extension of manufacturing, and warrant the belief that any exigency of war or non-intercourse, however unexpected, would be soon met by the enterprise and habitual energy of our people.

Unable to comprehend how the necessity of higher prices for woolen manufactures, so loudly asserted by the high tariff advocates, can possibly be reconciled with that reduction which these same men promise from domestic competition, we are constrained to aver our belief that the embarrassments and distress of which they now complain are to be imputed to their own injudicious investments and improvident management, rather than to any inadequacy of recompence for skill, industry, and capital, when properly and economically employed in manufacturing. Still less can we comprehend the necessity of that exorbitant encouragement which they demand; and we trust that the wisdom and firmness of Congress will long hesitate before anything is conceded, and then yielded only on conviction, in moderate measures, and in gradual and almost imperceptible impositions. Especially do we hope this, when we reflect that an increase of price in woolens (which, disguise it as they may, is the certain object and consequence of an increased tariff,) will fall with peculiar severity upon the laboring and poorer classes of our community, and be, in effect, helping those who least of all need assistance, by still more impoverishing those who most of all should be protected.

We disclaim any hostility to domestic manufactures; we wish them success and improvement, and we believe them in the path of prosperity and permanence; but we should regret to behold their advancement accelerated by any infringement upon other interests, or purchased at the expense and sacrifice of those branches of national industry which we have been taught to regard as equally, and, perhaps, more important and indispensable.

In proclaiming these sentiments, your memorialists are aware that they incur the heavy censures of their opponents, who do not hesitate to impute our conduct to infatuated ignorance, or to motives of a more censurable character and still darker complexion. We have no wish to recriminate; and without professing more than common zeal and devotion for the public welfare, and claiming no more patriotism than we trust belongs to the great body of our citizens, we only ask that consideration for our opinions which they may rightfully expect from having received the sanction of our revolutionary sages, and the approbation of no small portion of the wisdom, and talents, and virtue of the preceding and present generations.

In conclusion, your memorialists would respectfully repeat that the county of Dutchess is now substantially prosperous and flourishing; that the agricultural, laboring, and mechanic population are gradually and permanently increasing in independence, comfort, and wealth; that if (as we should doubt) her wool-growers and wool manufacturers do require additional encouragement, a very moderate augmentation of that which they now enjoy would be amply sufficient; and that the proposed increase of the tariff is, in our judgment, beyond the bounds of moderation and wisdom, and would inflict upon the great body of our citizens an injury infinitely greater than could be recompensed by any possible benefits to those who are its only advocates. And, further, we do confidently represent to your honorable body that the views and opinions expressed in this memorial, in relation to the prohibitory system and the proposed tariff bill, are the common views and opinions of a large majority (if not of four-fifths) of the inhabitants of Dutchess county, and who, with us, humbly trust to the independence and wisdom of Congress to protect us from the adoption of a system of no general utility, but pregnant with consequences of universal and indiscriminate public injury.

All of which is most respectfully submitted.

RICHARD D. DAVIS,
HENRY A. LIVINGSTON,
LEONARD MAISON,
FREDERICK BARNARD,
ABRAHAM G. STORM,
JOHN V. B. VARICK,
ISAAC H. VERVALIN,

Corresponding Committee, in the name and behalf of the said meeting.

20TH CONGRESS.] No. 874. [1ST SESSION.

FOR SPECIFIC DUTY ON IMPORTED UMBRELLAS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 3, 1828.

To the Senate and House of Representatives of the United States in Congress assembled:

This memorial of the proprietors of the Hingham Umbrella Manufactory humbly showeth: That the duty of 7½ cents per square yard on imported cotton cloths of inferior qualities induces the manufacture of almost every description of low price cotton goods excepting umbrella ginghams. This article, although legally subject to the square yard duty when imported in the piece, is nevertheless admitted to entry as a component part of umbrellas, at an ad valorem duty of 30 per centum. The protecting duty

of 7½ cents the square yard being thus virtually evaded, as respects umbrella ginghams, there exists no inducement to manufacture them in this country, and, therefore, the American umbrella makers are dependent on England for their supply of this article, on which they are compelled to pay a square yard duty amounting to about 60 per centum.

Owing to the unequal operation of the tariff in this particular, it is impossible for the American manufacturers of umbrellas to hold a competition with those of England; and, consequently, the profit on the labor of making umbrellas, *even for the consumption of the United States*, is thrown into the hands of foreigners. The *square yard* duty on a sufficient quantity of gingham to cover an umbrella amounts to more than the *ad valorem duty* on an *entire umbrella* when imported in a manufactured state. This your memorialists conceive to be neither equitable nor politic; and they believe it was never the intention of Congress that the law should operate in this way, to the prejudice of American industry. Therefore, your memorialists humbly pray that the evil of which they complain may be remedied by laying a *specific duty* on imported cotton umbrellas of such an amount as will place the American umbrella manufacturer on an *equal* footing (at least) with the English; and, at the same time, prevent those impositions on the revenue which your memorialists believe have been too frequently practiced by invoicing umbrellas below their actual cost. Your memorialists further pray that silk umbrellas, made in the United States, may be entitled to a drawback, when exported, equal to the amount of duty which may have been paid on the silk cloth, which would enable this country to supply the West India and South American markets with umbrellas. By granting these petitions your memorialists believe that the important fisheries to the Brazil Banks (whence the whalebone is derived) would be fostered and extended. And your memorialists will ever pray.

The proprietors of the Hingham Umbrella Manufactory, by their agent,

LEWIS GROSVENOR.

HINGHAM, *February* 21, 1828.

20TH CONGRESS.] **No. 875.** [1ST SESSION.

AGAINST INCREASE OF DUTIES ON IMPORTS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 3, 1828.

To the honorable the Senate and House of Representatives of the United States of America in Congress assembled:

The undersigned, citizens of Bristol, in the State of Rhode Island, respectfully represent: That they have seen, with concern, that a bill is reported to your body providing a great increase of duties on imported molasses, hemp, iron, and duck, and a repeal of the law allowing a drawback of duties on the exportation of rum distilled from imported molasses; and, although it may seem arrogant in us to attempt to enlighten your honors on the policy of the bill, yet we trust that the consideration that it would affect most ruinously the commercial and manufacturing interests of this district will be an apology for the interposition of our views and wishes.

The committee which reported the bill have, doubtless, correctly ascertained the amount of molasses imported into the eastern States, but have, probably, underrated the quantity consumed in them before distillation. It is in such general use here, in its original state, as justly to be considered a necessary of life, and makes a part of the daily beverage of almost every family. We add, that it is a cheap and wholesome one, for which grain cannot be wrought into a substitute. A large portion is, indeed, distilled, and a portion of this again exported for sale, thus answering the valuable purpose of a material for the employment of commercial and manufacturing enterprise, industry, and capital. And for what is this article to be excluded? (for its exclusion would be the necessary effect, and, indeed, must be the design of the bill, to give any hope of attaining its avowed object,) not to favor a section of the country in which it is made, and which would supply its place in *kind*, and whose interests languish for want of protection—no; that small section is now amply protected, and its interests highly prosperous—but to improve the market and enhance the price of grain in other sections. Foregoing the discussion of the policy of augmenting, if practicable, the price of breadstuffs in a country seeking to encourage and establish, on a permanent basis, domestic manufactures, and finding the greatest obstacle to their success in the high price of labor and subsistence, we would ask, first, whether the agricultural interest at large would be benefitted by the proposed measure? and if so, then, whether the benefit to that interest would compensate for the injury to be inflicted on a commerce, now languishing, for the destruction of a considerable branch of manufactures, with loss of the capital invested in buildings and utensils, and for the evil of an undue taxation of a necessary of life? In solving the first question, let it be considered that a large quantity of agricultural products of almost every kind, suitable for exportation, is now bartered in the purchase of molasses in the ports of Cuba, which, without the benefit of this exchange, would remain on hand, depressing the price to the grower, or perishing in his possession. No profit is generally made in this trade on the outward cargo, which is now carried out only to create a fund for investment in a return cargo. Let it also be considered that the commerce employed in importing, and the manufacturing industry exercised in converting this article, require for their support a considerable supply of the productions of the soil. Let these facts be well considered, and the tendency of the bill to the relief of the agricultural interest may well be doubted. But suppose a small increase in the price of breadstuffs in our own market to result, at first, from the passage of the bill, would not the check thereby given to the exportation of these soon obviate this effect, and, at the same time, jeopard the few remaining foreign markets to which they are now admitted?

In every point of view we are constrained to consider the imposition of any additional duty on molasses as highly impolitic, and that the true principles of a judicious tariff require additional facilities for the exportation of the rum into which a portion of it is distilled.

Of the remaining articles mentioned in this memorial, as proposed to be subjected to higher duties,

we have only to remind you that their admission into the country barely enables the shipping interest to sustain a competition with that of the European nations in the carrying of colonial produce from the West Indies to the north of Europe, and that they are all essential to the interests of navigation; that the first two, hemp and iron, may be regarded in the light of raw materials, on which the manufacturing industry of the country is extensively exercised; that the duty upon them is now high, and that, from the remoteness of the countries from which they are imported, the freight of them is necessarily high, and even the export charges up the Baltic are quite considerable; all which operates as a bounty and protection on the domestic production of the corresponding article, fully adequate to its production to the requisite extent, unless some impediment exists requiring for its removal a sacrifice to the interests of commerce, which, at the present time, it is unable to sustain.

Wherefore your memorialists humbly pray that no increase of duties on the articles before mentioned may, at this time, be made, and that the drawback of duty on the exportation of rum may still be allowed.

BRISTOL, RHODE ISLAND, *February* 19, 1828.

20TH CONGRESS.] No. 876. [1ST SESSION.

IN FAVOR OF INCREASE OF DUTIES ON IMPORTS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 3, 1828.

To the Senate and House of Representatives of the United States in Congress assembled:

The petition and representation of the subscribers, citizens of the county of Otsego, in the State of New York, respectfully show: That your petitioners constitute a portion of the people of that large district of our country composed of the grain-growing, wool-growing, and manufacturing States, whose industry and prudence, perseverance and economy, are rendered unavailing by the influence of what has been *miscalled* the "*free trade system*" of England; that system which, while it deluges our country with the manufactures of England, refuses to take scarcely anything of the productions of our soil in return. This will appear by the fact that, during the year ending the 30th of September, 1826, there were exported from this country only 36 barrels of beef and 26 barrels of pork to the Kingdom of Great Britain and Ireland; during which time the same district of country imported $17,000,000 worth of British goods. They have refused to take our breadstuffs, except under such restrictions and regulations as amount to a prohibition of this principal staple of our country. In the year ending September 30, 1826, the whole amount of the products of the farmers in beef, pork, flour, corn, &c., &c., exported as above, was in the pitiful sum of $313,079. In the same year the whole amount of all the articles of every description received into the United Kingdom, from a population consuming seventeen millions of dollars' worth of British goods, was only about $1,500,000. We would ask, why does not the British Government, as an evidence of its sincerity in its boasted "*free trade system*," receive our breadstuffs and meats? It is evident that we could sustain their people in breadstuffs and meats at *one-half* the price it now costs them, provided their Government would allow a trade in these articles. In respect to free trade and *reciprocity*, the island of *Cuba* is of more importance to us than the whole of Europe! These *facts* are an unfortunate commentary on the boasted "*free trade and reciprocity system*" of England.

If the British Government is compelled by a lordly and overgrown aristocracy to submit to these regulations, in order to keep up the value of land and rentals, we pray your honorable bodies not to allow them any longer to assess upon the free people of this country the costs of keeping up their expensive and splendid establishments.

If the cold-hearted aristocracy of England shall keep *their* people in slavery, to add decorations to their gorgeous trappings and titled splendors, we beseech your honorable bodies no longer to allow the voice of American suffering to mingle with the cries of distress that follow the car of England's King.

To "buy cheap and sell dear" is a favorite saying with certain economists. But how buy at all, unless we can sell? Why buy when we can make as cheaply for ourselves? Proper protection to the great business of fabricating woolen cloths is of incalculable importance to the manufacturers not only, but to the whole body of farmers and mechanics throughout this immense district of our country, as the prosperity or decline of this essential interest has a corresponding effect on the agriculture and mechanic arts thoughout every branch of these great departments of industry.

It has been said that it will not do to resort to restrictions; that we do not grow wool enough for home consumption. By strict examination of the consumption in fifty families in Washington county, Pennsylvania, who use no foreign woolens or other cloths than what they make out of their own wool, it appears that five pounds are required for each person annually. Taking this as a basis, and our present population at twelve millions, 60,000,000 pounds are required. The present number of sheep in the United States cannot be less than 20,000,000, and a steady market for wool would insure their being double in number in three years. There is at this moment on hand, awaiting a favorable market, at least 20,000,000 pounds, which being added to the products of 20,000,000 sheep, we shall have on the first of June next 70,000,000 pounds, which will be more than a supply of the raw material. It has been estimated that in 1826 our own machinery worked more than thirty millions of pounds, and this, too, while very many of the establishments were not operated at all, and very few of those that were worked were pushed to more than half of their ability, on account of the fraudulent introduction of British goods. We offer the following calculations which go to exhibit only *some* of the features which give to this interest unquestionable claims of being considered of permanent importance: 60,000,000 pounds of wool at the low price of 33⅓ cents is $20,000,000. It is estimated that each pound will make one square yard of fulled cloth, and that the labor and cost of fabricating each yard will constitute two-thirds of its accepted value; and we have added to

the value of the raw material $40,000,000. Thus we have $60,000,000 as the annual aggregate value of this branch of industry to the farmers and manufacturers of our country, and this, too, without taking into consideration the *immense* market to be created for the products of the farmers for the supply of all concerned. In the language of President Cooper, "*How do the boasted panegyrics on foreign trade dwindle into insignificance when set in competition with this!*"

According to existing laws it is in the power of foreign capitalists, by means of their agents in this country, almost at any moment entirely to derange this important interest. It is supposed, that of the $7,000,000 worth of British woolens consumed in the year ending 30th September, 1826, at least $5,000,000 were imported on foreign account; that the frauds committed on the revenue through the medium of unprincipled agents, false invoices, and false consignments, enabled those goods to be sold at auction at about 25 per cent. below their cost to the regular American importer; and thus these foreign capitalists, intent on the destruction of our "*infant establishments*," manage materially to affect, if not entirely to distract and derange, one of the principal elements of the comfort, prosperity, and happiness of eight millions of people.

If there should be done for this great interest what has been done for cotton, we can see no good reason why it should not speedily attain the same elevation and prosperity. In the year 1808 there were in the whole country only about 3,000 spindles, consuming only about 300,000 pounds. In the last year it is estimated that the manufacture of this invaluable article will be extended to more than *seventy millions of pounds*, having supplied the home demand for all the coarser fabrics, and furnished more than a million of dollars worth for exportation. We would respectfully suggest that something be done further to encourage the manufacture of *fine* printed and colored cotton goods, which, calculating on our own supply, would extend the consumption of the raw material by our own machinery many millions of pounds, and save to the country about six millions of dollars annually. With proper protection it will not be presuming too much to say that in a few years all those articles may go into the foreign commerce of the country, and, under the auspices of our own patriotic and enterprising merchants, in ships navigated by our own brave and hardy seamen, protected by the "constellated flag," will find their way into all countries from the "burning line to the icy barriers of the north and south," and, partaking of those beneficial exchanges suggested by the liberal and philanthropic spirit of honorable commerce, carry the knowledge of our power and the freedom of our country for the benefit, refinement, and happiness of man.

We therefore pray your honorable bodies to grant such protection to the several manufactures as is enumerated and suggested in a petition from a convention of delegates assembled at Harrisburg, in the State of Pennsylvania, on the 3d of August, 1827, that your petitioners, being protected in their lawful pursuits, may have new cause to cling to the institutions of their country, and that, by the exercise of industry and perseverance, of prudence and economy, they may cherish the well-founded hope of once more seeing the time when they may rejoice in the glory of their country, and in the happiness of their fellow-citizens.

20TH CONGRESS.] **No. 877.** [1ST SESSION.

IN FAVOR OF INCREASE OF DUTIES ON IMPORTS.

COMMUNICATED TO THE SENATE MARCH 3, 1828.

At a numerous and highly respectable meeting of the manufacturers of the city of Philadelphia and its vicinity, and the friends to the increased protection of manufactures, held, pursuant to public notice, on Monday, the 25th of February, at the Musical Fund Hall, the following resolutions were unanimously adopted:

1. *Resolved*, That, in supporting manufactures, we disown party attachments, and will uphold the industry of our country, as its first interest, superior to all others.

2. *Resolved*, That we disclaim all measures having for their object the exclusive benefit of any particular class of our citizens; that we desire the protection of manufactures for the good of the country at large, of its agriculture, commerce, and general prosperity.

3. *Resolved*, That the supporters of manufactures are true friends of commerce, and that those are greatly mistaken who oppose the protection of manufactures as detrimental to our trade.

4. *Resolved*, That the transportation of the raw materials for our manufactures, and the exportation of the manufactured articles, form a considerable share of the foreign commerce of the United States, and constitute the principal part of our coasting trade, which has been estimated to amount to between two and three hundred millions of dollars per annum.

5. *Resolved*, That our navigation, and all the most flourishing trades and mechanic arts of our country, owe their success to protecting duties, particularly ship-building, coach-making, cabinet work, the manufacture of hats, nails, glass, shoes and boots, paints, chemicals, paper, books, all the manufactures of leather, tobacco, coarse cotton goods, and the coarser articles of ironmongery; all which are now furnished better in quality and lower in price in consequence of the support thus given to their manufacture.

6. *Resolved*, That our country possesses the capacity of raising wool to an immense extent, and of manufacturing every kind of woolen cloth; and that nothing but sufficient governmental protection is wanting to insure a steady and profitable market for the wool, and the general productions of the farmer, and the cloths of the manufacturer.

7. *Resolved*, That the advantages of internal improvements, by turnpikes, canals, and railroads, are greatly enhanced by manufactures, which promote exchanges, quicken circulation, and spread prosperity throughout the interior of the country.

8. *Resolved*, As the opinion of this meeting, that a further increase of the square yard duty on cotton goods to a minimum of forty cents would insure the same beneficial results in the finer uncolored, and in the dyed, stained, and printed cottons, as have already been attained in the coarser fabrics, and would much increase the domestic market for the great staple of the southern States.

9. *Resolved*, That the recommendations of the Harrisburg convention were adopted by that body

after a thorough investigation of the interests of all parties concerned; and, as the best judgment of an assembly, two-thirds of which were farmers and wool-growers, from thirteen States of the Union, we hope they will meet the most serious attention of the Congress of the United States.

10. *Resolved*, That the tariff bill reported by the Committee on Manufactures would, if enacted into a law, deeply injure the interests of our farmers and manufacturers of wool and flax. The duty on the low priced wool, costing under eight cents per pound, would prevent the manufacture of woolens of the description now made therefrom; while the exclusion of that kind of wool would in nowise benefit the wool-growers of the United States, as no such wool is now produced in this country, nor could it be with any advantage to the sheep owner; and the duty on flax would materially injure, if not destroy, its manufacture.

11. *Resolved*, That the minimum duty on imported woolens of one dollar per square yard in the present tariff bill would produce the most serious injury to the farmers and wool-growers, and to the manufacturers of the kind of cloths which would otherwise be made in great quantities from wool grown in the United States, but which, under that provision, would be imported from England.

12. *Resolved*, That a committee be now appointed to respectfully transmit to our members of Congress a copy of these resolutions, and to urge upon them the necessity of procuring, at this session, the passage of a tariff bill, founded upon the recommendations of the Harrisburg convention.

It was also unanimously

Resolved, That China ware (or porcelain) be added to the list of the articles recommended for protection in the above resolutions.

And it was

Resolved, That Colonel Peter A. Browne, Mathew Carey, William Young, J. J. Borie, and Benjamin Chew, jr., Esquires, be appointed on the committee created by the 12th resolution adopted by this meeting.

MATHEW CAREY,
Chairman of the meeting.

Attest:
WM. YOUNG, } *Secretaries.*
B. CHEW, Jr., }

PHILADELPHIA, *February* 26, 1828.

20TH CONGRESS.] No. 878. [1ST SESSION.

IN FAVOR OF INCREASE OF DUTIES ON IMPORTS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 5, 1828.

At a meeting of a number of the wool-growers of the county of Washington, Pennsylvania, convened at the court-house, in the borough of Washington, on Saturday, the 1st day of March, A. D. 1828, in pursuance of a public notice for that purpose, Joseph Ritner, Esq., was called to the chair, and Samuel Hazlett and John S. Brady appointed secretaries.

The memorial prepared by the committee appointed at a former meeting to Congress, on the subject of the revision of the bill reported by the Committee on Manufactures, was read and adopted, and signed by all the wool-growers present.

The following resolutions were offered, and unanimously adopted:

Resolved, That the project of the bill of the Harrisburg convention, so far as regards wool and woolens, meets with the decided and cordial approbation of this meeting, and that it ought to be sanctioned by the constituted authorities.

Resolved, Independently of the intrinsic merits of the bill proposed by that convention, which will bear the strictest scrutiny and examination, that there is strong ground for our *faith* and confidence, arising out of the "material" of which it was composed, embracing some of the most *enlightened*, *persevering*, and *disinterested patriarchs* of the American system. It consisted principally of *actual* and practical wool-growers and manufacturers, who, in a spirit of mutual confidence, liberality, and concession, fixed the rate of protection for each branch.

Resolved, We are constrained, after the most anxious and deliberate examination we are capable of giving the subject, to express our decided conviction that the provisions of the bill now pending before Congress, so far as regards coarse wool and woolens, will, in its practical operation, prove not merely illusory, but destructive to both branches.

Resolved, That a committee be appointed to forward the memorial to Congress, and procure signatures to similar memorials to be forwarded in like manner, and that the chairman appoint said committee. Messrs. Alexander Reed, Thomas McGiffin, Doctor John Wishart, Samuel Hazlett, and Samuel Cunningham, were nominated by the chair as said committee, and the nomination approved by the meeting.

Resolved, That the foregoing proceedings be published in the newspapers of Washington, and that a copy of the same be forwarded to the honorable Speaker of the House of Representatives of the United States.

JOSEPH RITNER, *Chairman.*

JOHN S. BRADY, } *Secretaries.*
SAM'L HAZLETT, }

To the honorable the Speaker of the House of Representatives of the United States:

SIR: In the exercise of a privilege secured equally to all the citizens of this free and happy Republic, we present ourselves to the honorable body over which you preside in the character of petitioners. The bill now pending before Congress, purporting to give further protection, encouragement, and security to American industry, will have a direct and important bearing on our individual interests and pursuits. We are wool-growers, and, in common with a large proportion of our fellow-citizens of this county engaged in the same business, have a direct interest in that branch of the bill relating to unmanufactured wool. But it did not, nor could it, escape our attention and certain conviction that the *value and effect*

of any increased duty on foreign wool, as a protection to us against foreign competition, must necessarily and essentially depend upon the *extent* and *adequacy* of that which is given to the manufacturer of woolens. The *price* of our wool must depend on the *demand;* the *consumption* must be insured; the inducement and ability to purchase by our own *manufacturers* must be at least cotemporaneously secured; otherwise vain, delusive, and deceptive will be any rate of protection to us, however nominally high and extravagant. Our interests and those of the manufacturers are inseparable—are "one and indivisible." They are mutually dependent on each other; and we are constrained to view with distrust any statements of *facts* or *opinions* tending, let the intent be what it may, to excite jealousy and suspicion in our minds against the manufacturers. Conscious ourselves of our own *fairness* and integrity of purpose in asking adequate, and *merely* adequate, protection to our interests, we disclaim all suspicion as to the equal fairness of the manufacturers as a class.

The security of both interests depends, not upon the mere *fact* of the passage of a bill for our protection, but upon the practical operation of that measure. If, after the same exclusive possession of the *home* market as has already been given to other objects, we do not produce similar advantages to the country, to the *consumer*, giving a better *fabric* at a less price, we are entirely aware that a *reaction* is inevitable, and that any advantage which might be obtained by a momentary delusion or deception must be as transient as the means of attaining it would be disreputable. The *tie*, then, which ought and must limit the intelligent manufacturer to the claim of *merely* adequate protection is as strong as that of self-preservation. We are sensible of the intrinsic difficulty which exists in fixing any precise rate of protection which will prove, by experience, alike beneficial to the *producer* and the *consumer*. Depending upon so many facts and circumstances, both *domestic* and *foreign*, precise accuracy or mathematical certainty is unattainable. The present bill, as we understand it, and can make any calculation as to its practical operation, will exclude all foreign *coarse* wool, not only the Smyrna and South American, but that which would come in competition with our common native wool, and probably under half blood merino. We doubt the policy of excluding the Smyrna wool and that of a similar description, inasmuch as we understand it to be used (and capable of *little*, if of any other use) in the coarser kinds of negro clothing and *headings* for fine cloths. The price at which the native or common wool *can* be afforded by the grower will preclude the manufacturer from purchasing it as a substitute, and, in that event, that branch of domestic *manufacture* and *supply* must cease. We would therefore suggest the propriety of admitting all *clean* wool costing under eight cents free of duty, or with barely a duty of 10, 15, or 20 per cent. ad valorem.

We cordially approve of that feature of the bill which secures the home market to our own coarser kinds of wool, under the belief of its being an established fact that the *domestic supply* of this description of wool is equal to the demand which is necessary to supply our *own market* with that kind of cloths which are manufactured of such wool. We cannot discover, however, that the manufacture of this description of cloth is, as we think it ought to be, put upon an equality of protection with the wool out of which it is made. Herein lies the great error, as we do consider that the *capacity* of our manufacturers to supply the *home market* with this description of cloths is as certain as that *we* can supply. The committee affirm it as an established fact that the British manufacturer *now* obtains the raw material at fifty per cent. less cost than the American manufacturer can, and that the raw material is one-half the cost of the manufactured article. Now, taking these positions to be true, and we believe them to be substantially so, what will be the situation of the manufacturer of such cloths under the operation of the proposed tariff on wool and that on the manufacture of the same relative description? This kind of wool will have a protection, amounting to prohibition, exceeding one hundred and twenty per cent.; whereas the cloths manufactured from that wool only receive about fifty per cent. Unless, then, we be grossly in error as to this matter, the result must be certain ruin of this branch of domestic manufacture, and, although consequential, yet as certain ruin to the grower of this description of wool, notwithstanding the high rate of duty, plausible and seductive as it may be.

We would, therefore, with all proper diffidence in ourselves, and with all due respect for the "constituted authorities," suggest the addition of the project of the Harrisburg convention, at least so far as regards this branch, viz: the manufacture of cloths costing under two dollars and fifty cents. Indeed, the whole of that project (as regards wool and woolens) meets with our decided and cordial approbation, and has, heretofore, had that of all parties here, and we should be much better satisfied with its adoption, in extenso, than that of any other we have seen. If deemed inadmissible by those who shall decide, we would recommend the following substitute for all cloths costing less than four dollars the square yard, viz: all cloths under fifty cents the square yard shall pay a duty of twenty cents the square yard. From fifty cents to two dollars shall be deemed to have cost two dollars, and pay a duty of forty per cent. From two dollars to four dollars shall be deemed to have cost four dollars the square yard, and shall pay forty per cent. on the square yard.

And also that the duty on wool should be seven cents per pound on all wool costing above eight cents per pound, with thirty per cent. ad valorem, increasing at the rate of five per cent. annually until it arrives at fifty per cent.

MARCH 1, 1828.

20TH CONGRESS.] **No. 879.** [1ST SESSION.

MONTHLY STATEMENTS OF BANK OF THE UNITED STATES FOR 1827.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 6, 1828.

TREASURY DEPARTMENT, *March* 4, 1828.

SIR: In compliance with a resolution of the House of Representatives of the 3d instant, I have the honor to transmit the monthly statements of the affairs of the Bank of the United States for the year 1827, as rendered to this Department.

I have the honor to remain, with great respect, your obedient servant,

RICHARD RUSH.

Hon. the SPEAKER *of the House of Representatives.*

20TH CONGRESS.] No. 880. [1ST SESSION.

IN FAVOR OF DUTIES ON SALT.

COMMUNICATED TO THE SENATE MARCH 6, 1828.

To the honorable the Senate of the United States in Congress assembled:

At a meeting of the manufacturers of salt, in the town of Barnstable, State of Massachusetts, on the 25th day of February, A. D. 1828, to take into consideration the subject of the repeal of the import duty on salt—

Resolved, That the following memorial be presented to Congress, praying for a continuance of the present duty on imported salt, and that the same be signed by the chairman and secretary of this meeting:

Your memorialists, manufacturers of salt in the town of Barnstable, beg leave to represent: That they have learned with surprise and deep concern that the subject of the repeal of the duty on imported salt is before your honorable House; that having confidence in the permanency of that policy which first dictated the measure, and in the laws of their country, they have, at great expense, erected buildings for the manufacture of salt; that these buildings would be of trifling value should the duty be repealed; that there is at this time one million and three hundred thousand superficial feet of works wholly employed in this manufacture; that no part of these salt works would have been erected had they doubted the permanency of the duty; that it would have been extremely difficult in the late war, while your memorialists were surrounded by the enemy's ships, to have obtained this article had it not been for these manufactories, and many other sections of the country derived their chief supply of salt from this county during that period; that whilst almost every branch of domestic manufacturers have been busy in soliciting the fostering aid of Government, your memorialists, being among the oldest manufacturers, have been content with that which first prompted them to engage in these manufactories, although their profits have been moderate; that from a competition among manufacturers, and between manufacturers and importers, the price of salt has been much reduced, and that its present value is only about forty-three cents per bushel; that your memorialists are not engaged in the manufacture of any other articles of their own consumption to any extent, and that they already pay more than their full proportion of tax on all others subject to foreign duties.

From such circumstances, we venture to hope that Congress, in its wisdom, will not suffer the law imposing a duty on imported salt to be repealed.

DAVID COOCHEE, *Chairman.*

Z. D. BASSETT, *Secretary.*

20TH CONGRESS.] No. 881. [1ST SESSION.

VALUE AND AMOUNT OF COTTON GOODS IMPORTED FROM 1817 TO 1827.

COMMUNICATED TO THE SENATE MARCH 10, 1828.

TREASURY DEPARTMENT, *March* 7, 1828.

SIR: In obedience to a resolution of the Senate of the 5th instant, directing the Secretary of the Treasury to lay before the Senate "statements showing the value and amount of duties on cotton fabrics, under a cost of twenty-five cents the square yard, imported into the United States for the years 1817, 1818, 1819, 1820, 1821, 1822, 1823, and half of 1824, and the same on similar goods, at a cost under thirty cents the square yard, for half of the year 1824, and years 1825, 1826, and 1827, and also the value of cotton fabrics manufactured in the United States exported to foreign countries during those years," I have the honor to transmit a letter from the Register of the Treasury, accompanied by two statements, which contain the information required by the resolution, so far as the same is afforded by the returns made to the Treasury.

I have the honor to remain, very respectfully, sir, your obedient servant,

RICHARD RUSH.

Hon. the PRESIDENT *of the Senate.*

TREASURY DEPARTMENT, *Register's Office, March* 7, 1828.

SIR: I have the honor to transmit herewith statements numbered 1 and 2, prepared in obedience to a resolution of the Senate of the United States of the 5th instant.

The resolution calls for the value and duties on cotton fabrics under a cost of 25 cents the square yard, imported from 1817 to 1824, and, at a cost under 30 cents, from 1824 to 1827. The Treasury is not in possession of the information called for, and can only comply with the resolution in the manner exhibited in the statements alluded to.

Domestic cottons cannot be distinguished from other manufactured articles exported previous to the year 1826.

I have the honor to be, with great respect, sir, your obedient servant,

JOSEPH NOURSE, *Register.*

Hon. RICHARD RUSH, *Secretary of the Treasury.*

No. 1.

A statement exhibiting the value and amount of duties which accrued on cotton fabrics during the years ending on the 30th September, 1821 to 1827, inclusive.

COTTON FABRICS.

Year.	Dutiable value.	Duties.
1821	$7,541,830	$1,885,458
1822	10,703,721	2,675,930
1823	7,789,928	1,947,482
1824	8,263,115	2,065,779
1825	12,663,819	3,165,955
1826	7,916,799	1,979,200
1827	9,405,077	3,251,269

No. 2.

A statement exhibiting the value of cotton fabrics of domestic manufacture exported during the years ending on the 30th of September, 1826 and 1827.

DOMESTIC COTTONS.

Year.	PIECE GOODS.		Nankeens.	Twist, yarn, and thread.	All other.	Total.
	Printed or colored.	White.				
1826	$68,884	$821,629	$8,903	$11,135	$227,574	$1,138,125
1827	45,124	951,001	14,750	11,175	137,368	1,159,418

20TH CONGRESS.] No 882. [1ST SESSION.

AGAINST INCREASE OF DUTIES ON IMPORTS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 10, 1828.

ELLICOTT'S MILLS, *Anne Arundel County, February,* 1828.

At a large and respectable meeting of the agriculturists, mechanics, and those friendly to their interests, held pursuant to public notice, Allen Thomas was appointed chairman, and George Cooke and Bancroft Winchester appointed secretaries. The object of the meeting being explained by the chairman and other gentlemen present, it was

Resolved, That George Cooke, James Rawlings, B. Winchester, Charles S. Mathews, and Wesley Linthicum be a committee to draw up resolutions expressing the views of this meeting, and also a memorial to Congress to the same effect.

The committee reported the following resolutions, which were unanimously adopted:

Resolved, That the interests of agriculture are pre-eminently entitled to the fostering care of Government; that those who by their labors feed and enrich the nation, and in times of war are the strongest bulwark of our defence, should be protected and encouraged in those labors by our national guardians.

Resolved, That, as the proposed increase upon our imports must necessarily injure our commerce with foreign nations, and thereby tend to accumulate the present embarrassments of the farmer, we view the proposed increase of our tariff as one of the greatest misfortunes that can befal us.

Resolved, That the prosperity and increase of the manufacturing establishments are the best evidences of their being already sufficiently protected.

Resolved, That we disapprove of the late meeting held at Ellicott's Mills, by a number of manufacturers and those friendly to their views, in recommending to Congress further increase on cotton and woolen goods, iron, &c., and on imports generally.

The committee then reported a memorial to Congress on the subject of an increase of our tariff, when it was

Resolved, That this meeting unanimously approve of the memorial to Congress expressing our views on the subject of an increase of our tariff, and that it be signed by those present.

Resolved, That a copy of these resolutions be signed by the chairman and secretaries, and, together with the memorial, be forwarded to our Representatives in Congress to be presented to that honorable body.

ALLEN THOMAS, *Chairman.*

GEORGE COOKE,
BANCROFT WINCHESTER, } *Secretaries.*

To the honorable the Congress of the United States of America:

Your memorialists, farmers, mechanics, and those friendly to their interests, residents of Anne Arundel and Baltimore counties, in the State of Maryland, aware of the exertions that are making by the manufacturers and their friends to represent to your honorable body that it will be to the advantage of this country to have an increase of our present tariff, consider it their right and duty to protest against such doctrines and the assumption of exclusive legislative protection claimed by the manufacturers. Believing, as we do, that commerce and agriculture are equally dependent on each other, and if the present rates of our tariff should be increased our commerce with foreign nations must be materially injured, if not destroyed, an event so much to be apprehended must tend to increase the burdens and embarrassments of the farmer.

Your memorialists, therefore, hope your honorable body will refuse further protection to manufacturers of cotton and woolen goods, iron, and our imports generally. We would also pray your honorable body to examine the statements of the manufacturers before you grant the protection which they claim as their right. The manufacturers say that they cannot go on with the present duties. They have told us so for years, yet they still exist, and seem to find it a profitable business. They even increase; and we do not hear of one cent of capital being withdrawn from business for the last year. On the contrary, they go on increasing their factories, and even boast of the profits they are making.

Your memorialists would beg leave to state that they are mostly residents in the neighborhood of large factories, and are witnesses of their increasing prosperity under the existing tariff. Why, then, grant them further protection when every increase of duty on our imports is, in fact, so much levied upon the agriculturists, mechanics, and laboring class of our fellow-citizens, who are principally the consumers of that species of cotton and woolen goods upon which the manufacturers wish an increase of duty? The prospect held out by the friends of the high tariff system that we shall find a home market for our wool and surplus produce is, in our opinion, delusive; for, by their own statements, there are already 18,000,000 of sheep in the United States, which in two or three years would so increase that if we were not to import one yard of woolen goods would be more than sufficient to supply the whole demand of the United States. What, then, is to become of our surplus? What foreign nations will receive it when we exclude their products? We can hardly suppose the manufacturers will assert they will consume the surplus of our breadstuffs. What is to become of our tobacco, one of the great exports of our State, should the countries that now receive it lay such a duty on it as will be equivalent to the one that it is proposed to lay on the coarse fabrics of Germany, from whence we derive so many articles in exchange for our tobacco?

In the event of the high tariff system being adopted, we believe a great falling off in the national revenue must be the result, and which will compel the Government to resort to a direct tax, or some equally oppressive measure, upon the agricultural interests of our country. We therefore pray that your honorable body will not pass the law proposing to increase the rates of duties on cotton and woolen goods, iron, &c., which, by so doing, would tend to increase the difficulties of the agriculturists and laboring class of citizens, who are the principal consumers of the coarse fabrics upon which it is proposed to lay such duties as will tend to a prohibition.

ELLICOTT'S MILLS, *Anne Arundel County, Maryland, February*, 1828.

20TH CONGRESS.] No. 883. [1ST SESSION.

EFFECTS OF THE PROPOSED BILL ON WOOL AND WOOLENS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 10, 1828.

WASHINGTON, *March* 7, 1828.

SIR: In reply to your inquiry as to the effects of the bill reported to the House of Representatives by the Committee on Manufactures, in reference to wool and woolens, we hand you herewith a statement showing its operations as contrasted with the provisions of existing laws.

We think it proper to remark that we have calculated the duties on woolen fabrics only at the minimum points of the proposed bill, deeming the assumption that goods would be imported varying from these points so as to subject them to double duties to be founded in error; because all milled cloths suited to the actual wants and necessities of the people might as well be imported by paying the lowest rate of duty.

It is also proper to remark that the minimum of fifty cents affords ample protection to the manufacturers of flannels.

Respectfully yours,

ABR. SCHENCK, *of Matteawan, New York.*
JONAS B. BROWN, *Massachusetts.*
WILLIAM R. DICKINSON, *Ohio.*

Hon. JOHN C. WRIGHT.

FIRST MINIMUM OF FIFTY CENTS PER SQUARE YARD.

Cloth.

Present duty on a square yard by existing law	$0 18⅓
Proposed duty by the reported bill	16
Loss to manufacturer on a square yard	2⅓

Wool.

It will require two pounds Smyrna wool in the dirt, worth ten cents per pound, for a square yard of cloth, viz:

Proposed bill.—Two pounds wool, at 10 cents		$0 20	
Specific duty		14	
Ad valorem 50 per cent.		10	
		44	
Present law.—Two pounds wool, at 10 cents	$0 20		
Duty, 15 per cent	3		
Cost of wool by the present law	23	=	23
Loss to the manufacturer on the wool			21
Loss by the proposed bill to the manufacturer on a square yard of cloth			23⅓

(Equal to 46 per cent.)

SECOND MINIMUM OF ONE DOLLAR PER SQUARE YARD.

Cloth.

Present duty on a square yard by existing law	$0 36⅔
Proposed duty by the reported bill	40
Gain to manufacturer on the square yard of cloth	3⅓

Wool.

It will require one and a half pound of wool, washed on the sheep's back, worth 30 cents per pound, for a square yard of cloth, viz:

Proposed bill.—One and a half pound wool, at 50 cents		$0 45	
Specific duty		10½	
Fifty per cent. ad valorem duty		24	
Cost of wool by the proposed bill		79½	
Present law.—One and a half pound wool, at 30 cents	$0 45		
Thirty per cent. duty	14		
Cost of wool by the present law	59	=	59
Loss to the manufacturer on the wool			20½
Loss by the proposed bill to the manufacturer on a square yard of cloth			17

(Equal to 17 per cent.)

THIRD MINIMUM OF TWO DOLLARS AND FIFTY CENTS PER SQUARE YARD.

Cloth.

Present duty on a square yard by existing law	$0 91⅔
Proposed duty by the reported bill	1 00
Gain to manufacturer on a square yard of cloth	8⅓

Wool.

It will require one and a half pound of wool, washed on the sheep's back, worth 60 cents per pound, for a square yard of cloth, viz:

Proposed bill.—One and a half pound wool, at 60 cents		$0 90	
Specific duty		10½	
Fifty per cent. ad valorem duty		49½	
Cost of wool by the proposed bill		1 50	
Present law.—One and a half pound wool, at 60 cents	$0 90		
Thirty per cent. duty	33		
Cost of wool by the present law	1 23	=	1 23
Loss to manufacturer on the wool			27
Loss by the proposed bill to the manufacturer on a square yard			18⅔

(Equal to 7¾ per cent.)

FOURTH MINIMUM OF FOUR DOLLARS PER SQUARE YARD.

Cloth.

Present duty on a square yard by existing law			$1 46⅔
Proposed duty by reported bill			1 76
Gain to manufacturer on a square yard			29⅓

Wool.

It will require one and a half pound wool, washed on the sheep's back, worth one dollar per pound, for a square yard of cloth, viz:			
Proposed bill.—One and a half pound of wool, at 100 cents		$1 50	
Specific duty		10½	
Fifty per cent. ad valorem duty		82	
Cost of the wool by the proposed bill		2 42½	
Present law.—One and a half pound wool, at 100 cents	$1 50		
Thirty per cent. duty	49		
Cost of wool by the present law	1 99	= 1 99	
Loss to the manufacturer on the wool			43½
Loss by the proposed bill to the manufacturer on a square yard			14

(Equal to 3½ per cent.)

20TH CONGRESS.] No. 884. [1ST SESSION.

IN FAVOR OF INCREASE OF DUTIES ON IMPORTS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 10, 1828.

The memorial of a number of the citizens of Adams county, in the State of Pennsylvania, respectfully represents: That your memorialists, in common with their fellow-citizens of the grain-growing States, have labored for several years past under great depression from the reduced price of every article which we can produce, and a consequent depreciation of every kind of real property, ruinous to many individuals, and injurious to all classes of the community: which state of things we believe must exist as long as our workshops are in Europe. This distressing state of affairs we attribute solely to the want of that protection from Government which we think we are entitled to. Much has been said about monopoly by our own citizens taking advantage of high duties should the tariff be raised; but we have no fears of that kind, as our own experience has fully demonstrated the reverse. Witness our cotton goods, for which, were it not for the protection afforded the cotton manufacturers, we would yet be paying 25 cents per yard, as we formerly did, for cotton cloth inferior to what we can now get for 12½ cents.

The policy of manufacturing for ourselves is so plain and so well established by experience that the most sceptical can scarcely disbelieve it; but, lest any should yet uphold the old doctrine that it is more to our advantage to raise grain and sell it abroad, and import our clothing and other necessaries, than to manufacture those articles at home, we will state a case in point, and that upon the supposition that the British would take our produce in payment for their goods, (which, it is well known, they have not done for several years past, and probably never will, unless starvation compels them to it:) Suppose a farmer at Pittsburg (or any other place as far from a seaport) sends wool 300 miles by land to Philadelphia, and 3,000 miles by water to England, to be made into cloth for himself and family; and sends flour, beef, pork, &c., the same distance by land and sea to feed the manufacturer and pay him for his labor; and then transports the manufactured article the same distances back by land and sea, subject to all risks, insurance, and foreign duties—would we suppose it a profitable trade? Would it not reduce the price of the exported article 200, 300, or 400 per cent., or enhance the price of the imported article to a great degree, or both? Place the manufacturer by the side of the agriculturist, and you insure the farmer a steady market and a fair price for his produce.

The policy of protecting domestic manufactures by high duties is, in our opinion, so self-evident that we confidently believe had Congress, in 1890, or as soon as the Constitution gave it the power, laid on reasonable progressive duties, which would have secured to the manufacturer ample protection as soon as he was able to supply the wants of the country, we should, long ere this, not only have manufactured sufficient for ourselves of almost every article which we need, but now manufacture many articles upon such terms as to compete with the British in any market; of the truth of which our cotton fabrics afford abundant proof.

Your memorialists, therefore, pray the National Legislature to lay such additional duties on woolen goods, wool, iron, hemp, foreign spirits, printed cottons, goods made of flax or hemp, and any other articles which we can produce, as will effectually protect our agriculturists and manufacturers against foreign competition and stratagem of every kind.

20TH CONGRESS.] No. 885 [1ST SESSION.

ON THE STATE OF THE FINANCES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 12, 1828.

Mr. McDUFFIE, from the Committee of Ways and Means, submitted the following report on the state of the public finances:

REVENUE AND EXPENDITURES OF 1827.

The actual receipts into the Treasury during the year 1827, as ascertained more precisely from the returns in the Treasury Department since the date of the annual report of the Secretary, amounted to $21,686,742 39. This sum was derived from the sources and in the proportions following: From the customs, $19,659,615 53; from the public lands, $1,437,549 92; from the stock owned by the Government in the Bank of the United States, $420,000; from arrears of internal duties and direct taxes, $79,721 62; from repayments of advances made in the War Department prior to the 1st July, 1815, $32,344 98; and from other miscellaneous sources, $57,510 34. The balance in the Treasury on the 31st December, 1826, excluding the sum of $1,000,000 which consists of debts due to the Government by insolvent banks, and cannot therefore, with any propriety, be denominated money in the Treasury, was $5,358,686 18. This sum added to the receipts of 1827 will exhibit an aggregate revenue of $27,045,428 57, applicable to the service of that year.

The actual expenditures of the year 1827, as exhibited in a detailed statement from the Register of the Treasury, containing a comparative view of the expenditures of that and several preceding years, and herewith submitted, amounted to $22,331,218 53. It is here proper to remark, by way of explanation, that the committee have excluded from their statement of the revenue applicable to the service of the year 1827 the sum of $1,204,960, paid by the British Government to indemnify the claimants under the first article of the treaty of Ghent. This sum constitutes no part of the national revenue. Upon the same principle the committee have excluded from their statement of the national expenditures the sum of $402,951 73, paid out of that fund to the claimants under the award of the Commissioners appointed by this Government.

By deducting, then, the sum of $22,331,218 53, the amount of the actual expenditures, from the sum of $27,045,428 57, the amount of the available revenue of the year 1827, it will be seen that there was a balance in the Treasury on the 1st of January, 1828, of $4,714,210 04. This balance, however, is subject to a charge of $3,980,000, being the amount of the unexpended balances of appropriations made previous to the 1st of January, 1828, which will yet be required to accomplish the objects for which the appropriations were originally made. But it is due to a just exposition of the financial resources of the Government, as applicable to objects for which new appropriations may be made, that the committee should state that our uniform experience warrants the anticipation that there will be at the close of the present year as large, or very nearly as large, a balance of unexpended appropriations as there was at its commencement.

PUBLIC DEBT.

The funded debt of the United States amounted on the 31st of December, 1827, to $67,435,489 54. This sum includes the seven millions of five per cent. stock subscribed by the Government to the Bank of the United States, and for which the Government holds a full equivalent in stock of that bank. Throwing these seven millions out of the estimate, there remained on the 31st of December last, to be extinguished by appropriations of the public revenue, the sum of $60,435,489 54 of the public debt, consisting of the following descriptions and in the following proportions, viz: three per cent. stock, being the remainder of the debt of the Revolution, and redeemable at the pleasure of the Government, $13,296,247 70; six per stock, redeemable at various periods prior to the 1st of January, 1828, and of course now redeemable at the pleasure of the Government, $25,353,177 53; five per cent. stock, redeemable in the years 1831, '32, and '35, principally in the latter year, $5,792,000 20; and four and a half per cent. stock, redeemable in the years 1829, '30, '32, '33, and '34, principally in the year 1832, $15,994,064 11. To exhibit another view of the public debt, it may be useful to state that, exclusive of the stock subscribed to the Bank of the United States and the three per cent. stock, there is now redeemable all the six per cent. stock, amounting to $25,353,177 53; that there will be redeemable in 1829, including the foregoing, stock to the amount of $26,122,845 61; that there will be redeemable in 1830, including the foregoing, stock to the amount of $26,892,513 69; that there will be redeemable in 1831, including the foregoing, stock to the amount of $26,911,415 28; that there will be redeemable in 1832, including the foregoing, stock to the amount of $37,930,316; that there will be redeemable in 1833, including the foregoing, stock to the amount of $40,176,581 56; that there will be redeemable in 1834, including the foregoing, stock to the amount of $42,403,945 53; and that in 1835 there will be redeemable, including the foregoing, stock to the amount of $47,139,241 84.

It is apparent, from the analysis last presented, that the public debt is in a condition to put the whole amount of the Sinking Fund in constant and active requisition, without applying any portion of it to the extinguishment either of the three per cent. stock or of the stock held by the Bank of the United States. Of the sum of ten millions annually applicable by a permanent law to the payment of the national debt, it required the last year something more than $3,500,000 to pay the current interest. In the process, however, of extinguishing the debt, there will be an annual and progressive diminution of the proportion of that fund applicable to the payment of interest, and a corresponding increase of the proportion applicable to the extinguishment of the debt. Taking the average of the next five years, it may be assumed that $7,250,000 of the Sinking Fund will be annually applicable to the payment of the principal. It follows that at the close of the year 1832, a year in which a large amount of the debt becomes redeemable, there will remain to be extinguished of the debt then redeemable at the pleasure of the Government, if the Sinking Fund be faithfully applied, less than two millions of dollars, exclusive of the three per cent. stock and the stock held by the Bank of the United States.

It also follows that, in the year 1835, when the whole debt becomes redeemable, the Sinking Fund

will be adequate to its entire extinguishment if the stock held by the Bank of the United States, and which cannot be justly considered a part of the national debt, be excluded from the estimate. This anticipation, however, is founded upon the supposition that the revenue will not be diminished. Whilst the committee look forward with much gratification to the period when the whole national debt shall be extinguished as to an era of which history furnishes scarcely an example, the reflection is forcibly suggested, that the revenue by which this extraordinary result will have been produced is almost entirely the contribution of our foreign commerce—a commerce which, though exposed to great vicissitudes and rendered by our own legislation tributary to other branches of industry, has, notwithstanding, carried forward the nation in a career of prosperity, since the late war, for which no parallel is to be found except in our own previous history, at a period when the wars of Europe threw into our hands the carrying trade of almost the whole commercial world, and gave us a market of unprecedented extent for the productions of our soil.

ESTIMATE OF THE REVENUE AND EXPENDITURE FOR THE YEAR 1828 AND FOR FUTURE YEARS.

In forming an estimate of the probable amount of the revenue for future years, the portion of that revenue which will be derived from sources other than foreign commerce is, comparatively, so inconsiderable and so little liable to fluctuation that the committee propose to confine their inquiries exclusively to the probable income from the customs, and to the effect produced, and likely to be produced, by the existing and contemplated regulations of the duties on imported merchandise. And, in the first place, the committee cannot concur with the Secretary of the Treasury in the opinion expressed in his annual report, that "to suppose the tariff of 1824 is at such a pitch as to affect injuriously the interests of foreign commerce would be contrary to analogies afforded by the history of other commercial nations, and, thus far, to the experience of our own." On the contrary, the committee see nothing in those analogies, or in that experience, to render it at all doubtful that foreign commerce is injuriously affected by every imposition upon it, even for the purposes of revenue merely; and that prohibitory duties, in the very nature of things, must diminish foreign commerce to a greater extent than they build up and sustain the substituted productions of domestic industry.

The statistical combinations and comparisons from which the Secretary deduces the inference that the interests of foreign commerce have not been injuriously affected by the tariff of 1824 are not less liable to objection than his general reasoning on the subject. To state that the aggregate imports of the three years succeeding that tariff exceeded the aggregate imports of the three years preceding it, without stating also the notorious and extraordinary cause of that excess, is, in the opinion of the committee, a mode of laying premises by no means propitious to a legitimate conclusion. The unexampled speculations in cotton, the great staple of our exports, and the extraordinary rise in its price, resulting from those speculations, caused the imports of foreign merchandise in 1825 to exceed by nearly sixteen millions of dollars their amount in 1824, and by nearly nineteen millions their amount in 1823. To assume that this sudden and extraordinary increase of the quantity of foreign merchandise imported in 1825 resulted from the increased duties laid upon that merchandise by the act of the preceding year, would be nothing more than a fair illustration of the Secretary's mode of reasoning.

The committee might appeal, with much better reason, to the fact that the imports of the year 1827 are fifteen millions of dollars less than they were in 1825, as an exemplification of the effect of the tariff of 1824. The just view of this subject, however, seems to be, that we have not yet reached a point from which the effect of that measure upon foreign commerce can be distinctly seen. In the few years immediately succeeding an increased tariff of duties, it is to be calculated that the prohibitory effect of the increase will not be very considerable, unless the duties are very high, as in the case of the tariff now proposed. The breaking up of established commerce and driving it from its accustomed channels is not the work of a moment. The foreign manufacturer cannot suddenly accommodate himself to the emergency in which he is placed. He must have a vent for his manufactures; and until he can either find a new market, or withdraw a portion of his capital from the business of manufactures, he finds it to be his interest to have a very bad market rather than none. Hence it is that the British manufacturer continues to export his fabrics in quantities gradually decreasing, and we shall continue to consume them, at enhanced prices, until the domestic manufacturer obtains possession of the home market.

Another reason for rejecting the comparative view exhibited by the Secretary of the Treasury will be found in the progressive nature of unshackled commerce, particularly in a country growing rapidly in population and still more rapidly in wealth. A commerce which, in 1822, the first year in the series selected by the Secretary, amounted to eighty-three millions of dollars, ought, in the natural progress of population and wealth, to amount in 1827, the last year of that series, to the still larger sum of at least ninety-five millions of dollars. And it is this larger sum with which the actual importations of 1827, amounting only to eighty-one millions of dollars, should be compared, in order to ascertain something like the effect of the existing tariff upon the foreign commerce of the country.

It is also worthy of remark that the importations of every year since 1825 have been considerably increased by the anticipation of an increased tariff of duties on foreign manufactures of wool. There can be no doubt that such an anticipation, strengthened into confidence by the convention at Harrisburg, has very considerably increased the importations of the last year.

Differing, as the committee do, with the Secretary of the Treasury as to the effect of the tariff of 1824 on the commerce of the country, they are constrained to differ with him still more decidedly as to the effect of a further increase of the duties on foreign merchandise. And here it may be proper to remark, that the only authority under which the Secretary of the Treasury acts, in presenting his annual report on the state of the finances to Congress, is a law which expressly enjoins it as his duty to prepare a report "containing estimates of the public revenue and public expenditure, and plans for *improving* and *increasing* the revenues, from time to time." Whether the recommendation of high and prohibitory duties, professedly and exclusively designed to encourage domestic manufactures, by excluding those that are foreign, and inevitably tending to impair and diminish, instead of increasing and improving, the revenue, be a substantial observance or a direct violation of the authority under which the Secretary acts; and whether it is not calculated to impair the constitutional responsibility of the Executive for the President to devolve upon his subordinate officers the high duty of "recommending to the consideration of Congress such measures as he shall judge necessary and expedient," it is the province rather of the House than of the committee to determine. The committee, without stopping to question the authority of the Secretary, felt it to be proper that they should ascertain the precise rates of duty which he deemed it expedient to

impose on "woolen goods and foreign wool, on fine cotton goods, on bar iron, and on hemp," and, with this view, directed their chairman to address him a letter of inquiry. The chairman complied with this direction, and received from the Secretary the following project for a tariff of duties to be laid on the articles in question:

"All foreign manufactures of wool, or of which wool is a component part, (except blankets and worsted stuff goods,) the cost of which abroad does not exceed fifty cents the square yard, to be deemed to have cost fifty cents, and pay a duty of forty per cent. ad valorem until the 30th September, 1829; forty-five per cent. until the 30th September, 1830; and fifty per cent. after the latter date. All manufactures of the same kind that cost more than fifty cents the square yard, but not more than two dollars and fifty cents, to be deemed to have cost the latter sum, and pay an ad valorem duty as above. All that cost more than two dollars and fifty cents, but not more than four dollars, to be deemed to have cost four dollars, and pay duty as above. All that cost more than four dollars, but not more than six, to be deemed to have cost six, and pay duty as above; and all that cost more than six dollars to pay ad valorem duty at the same rate. The duty on foreign wool, costing more than eight cents a pound in a foreign country, to be twenty cents per pound, and be increased two and a half cents annually until it amounts to fifty cents.

"2. Fine cotton goods. I would propose, as expedient, under this head, that an additional duty of five cents the square yard be imposed on all *printed or colored* cotton goods.

"3. Bar iron. The duty on hammered bar iron to be increased to one dollar and twelve cents the hundred weight.

"4. Hemp. The duty on hemp to be increased at the rate of five per cent. per annum until it amounts to forty-eight dollars a ton, instead of thirty-five dollars, the present rate of duty."

To remove the disguise which the artificial and arbitrary scheme of valuation recommended has thrown over the proposed tariff of duties on woolen manufactures, the committee beg leave to present a practical analysis, the result of careful calculation and inquiry, exhibiting the rate of duty *ad valorem* proposed to be laid on the various descriptions of imported woolen goods, having reference both to their actual cost at the place of exportation and to the classes of our citizens by whom they are consumed.

Under the first minimum, of fifty cents, will be embraced the following articles, principally used by farmers, mechanics, and laborers of every description, and chargeable with the following duties, viz:

Plains, costing from 24 to 44 cents the square yard, will pay from 63 to 116 per cent. ad valorem; making an average of 89½ per cent.

The quality principally consumed costs 29 cents, and will pay 95 per cent.

Paddings, costing from 12 to 29 cents, will pay from 95 to 233 per cent.; making an average of 164 per cent.

The quality principally consumed costs 18 cents, and will pay 152 per cent.

Flannels. The lower qualities, costing from 14 to 44 cents, will pay from 63 to 198 per cent.; making an average of 131 per cent.

The quality principally consumed costs 22 cents, and will pay 126 per cent.

Bocking and baizes, costing from 9½ to 23 cents, will pay from 120 to 294 per cent.; making an average of 207 per cent.

The quality principally used costs 14 cents, and will pay 198 per cent.

Baizes, costing from 16 to 33 cents, will pay from 83 to 174 per cent.; making an average of 123½ per cent.

The quality principally consumed costs 24 cents, and will pay 116 per cent.

Serges, costing from 17 to 27 cents, will pay from 102 to 163 per cent.; making an average of 132½ per cent.

The quality principally consumed costs 22 cents, and will pay 129 per cent.

Caroline plaids, costing from 14 to 22 cents, will pay from 126 to 198 per cent.; making an average of 162½ per cent.

The quality principally consumed costs 17 cents, and will pay 164 per cent.

Drab kerseys, costing from 29 to 50 cents, will pay from 56 to 95 per cent.; making an average of 75½ per cent.

Swansdown, costing from 18 to 50 cents, will pay from 56 to 154 per cent.; making an average of 105 per cent.

The quality principally consumed costs 32 cents, and will pay 87 per cent.

Kerseynettes, costing from 18 to 36 cents, will pay from 76 to 154 per cent.; making an average of 115 per cent.

The quality principally consumed costs 29 cents, and will pay 95 per cent..

Coatings, costing from 16 to 50 cents, will pay from 56 to 172 per cent.; making an average of 109 per cent.

Flushings and lionskins, costing from 29 to 50 cents, will pay from 56 to 95 per cent.; making an average of 75½ per cent.

Pelisse cloths, costing from 37 to 50 cents, will pay from 56 to 74 per cent.; making an average of 70 per cent.

Broadcloths, costing from 32 to 50 cents, will pay from 56 to 86 per cent.; making an average of 71 per cent.

Under the second minimum will be embraced, in the opinion of experienced importing merchants, woolen goods to the amount of four and a half millions of dollars, of qualities consumed by all classes of the community, known by the denominations and chargeable with the duties following, viz:

Coatings, costing from 50 to 79 cents the square yard, will pay from 177 to 281 per cent.; making an average of 229 per cent.

Drab kerseys, costing from 50 to 156 cents, will pay from 89 to 281 per cent.; making an average of 185 per cent.

Flannels, costing from 50 to 58 cents, will pay from 240 to 281 per cent.; making an average of 260½ per cent.

Toilinettes, costing from 50 to 146 cents, will pay from 94 to 281 per cent.; making an average of 187½ per cent.

Swansdown, costing from 50 to 88 cents, will pay from 159 to 281 per cent.; making an average of 220 per cent.

Ladies' cloths, costing from 68 to 177 cents, will pay from 78 to 194 per cent.; making an average of 136 per cent.

The quality principally consumed costs 124 cents, and will pay 182 per cent.

Pelisse cloths, costing from 50 to 67 cents, will pay from 197 to 281 per cent.; making an average of 239 per cent.

Carpeting, costing from 50 to 66 cents, will pay from 210 to 281 per cent.; making an average for almost all the carpeting imported of 245½ per cent.

Cassimeres, costing from 52 to 146 cents, will pay from 95 to 268 per cent.; making an average for nearly all the cassimeres imported of 131½ per cent.

Broadcloths, costing from 88 to 132 cents, will pay from 104 to 159 per cent.; making an average of 118 per cent,

Broadcloths, costing from 132 to 176 cents, will pay from 79 to 104 per cent.; making an average of 91½ per cent.

Broadcloths, costing from 159 to 212 cents, will pay from 68 to 87 per cent.; making an average of 77½ per cent.

Under the third minimum, of four dollars, will be embraced none but fine broadcloths consumed by the wealthy, costing from 250 to 317 cents. These will pay from 71 to 90 per cent.; making an average of 80½ per cent.

The fourth minimum, of six dollars, will have very little operation, because scarcely any of the imported cloths cost more than four dollars the square yard.

It will be seen that, in the foregoing analysis, the committee have translated British into American denominations of currency, and running yards into square yards. It will be also perceived that, under each minimum, goods of the lowest prices are chargeable with the highest rates of duty. Another remark may not be improper by way of explanation. The committee have added two per cent. for shipping charges to the minimum valuation, and ten per cent. on the value thus produced, in conformity with what they understand to be the custom-house construction of analogous provisions in the act of 1816. If, however, the general provisions of that act relative to the valuation of goods paying ad valorem duties should not be construed to apply to the *artificial* valuation fixed by the plan of the Secretary of the Treasury, a reduction will have to be made from the rates of duty set down by the committee of a little more than one-tenth part of those rates respectively. This, however, would render it necessary to add the two and the ten per cent. above mentioned to the *actual* cost or value of goods in the foreign country, which would increase the duties on goods costing prices a little below the several minimums to points beyond the rates set down by the committee. For example: goods costing 46 cents would be raised from the first to the second minimum, and, instead of paying 60 per cent., would pay 271 per cent. The result would be a great increase of the duties on goods near and below the minimums, where the duties are lowest, and a diminution of them very inconsiderably in other parts of the scale where they are so much above the point of prohibition that the diminution would have no practical effect.

Having thus presented an exposition of the duties on woolen goods proposed by the Secretary, the committee think proper, as equally connected with the probable legislation of Congress, in a manner affecting the revenue, to exhibit a similar exposition of the scale of duties proposed by the Committee on Manufactures.

Under the first minimum relative to woolen goods, those which cost 50 cents and under that sum per square yard will be subject to a duty of 16 cents per square yard. It results that—

Plains, costing from 24 to 44 cents, will pay from 34 to 67 per cent.; average, 50½ per cent.

Paddings, costing from 12 to 29 cents, will pay from 55 to 133 per cent.; average, 94 per cent.

Flannels, costing from 14 to 44 cents, will pay from 34 to 114 per cent.; average, 74 per cent.

Bockings and baizes, costing from 9½ to 23 cents, will pay from 69 to 168 per cent.; average, 118½ per cent.

Baizes, costing from 16 to 33 cents, will pay from 48 to 100 per cent.; average, 74 per cent.

Serges, costing from 17 to 27 cents, will pay from 67 to 94 per cent.; average, 80½ per cent.

Caroline plaids, costing from 14 to 22 cents, will pay from 73 to 114 per cent.; average, 93½ per cent.

Drab kerseys, costing from 29 to 50 cents, will pay from 32 to 55 per cent.; average, 43½ per cent.

Swansdown, costing from 18 to 50 cents, will pay from 32 to 89 per cent.; average, 60½ per cent.

Kerseynettes, costing from 18 to 36 cents, will pay from 44 to 89 per cent.; average, 66½ per cent.

Coatings, costing from 16 to 50 cents, will pay from 32 to 100 per cent.; average, 66 per cent.

Flushings and lionskins, costing from 29 to 40 cents, will pay from 40 to 55 per cent.; average, 47½ per cent.

Pelisse cloths, costing from 37 to 50 cents, will pay from 32 to 43 per cent.; average, 37½ per cent.

Broadcloths, costing from 32 to 50 cents, will pay from 32 to 50 per cent.; average, 41 per cent.

Under the second minimum, goods costing more than 50 cents and not more than 100 cents will be subject to a duty of 40 cents the square yard. It follows that—

Coatings, costing from 51 to 79 cents, will pay from 51 to 80 per cent.; average, 65½ per cent.

Flannels, costing from 51 to 58 cents, will pay from 69 to 80 per cent.; average, 74½ per cent.

Swansdown, costing from 51 to 88 cents, will pay from 45 to 80 per cent.; average, 62½ per cent.

Carpeting, costing from 41 to 66 cents, will pay from 60 to 80 per cent.; average, 70 per cent.

Pelisse cloths, costing from 51 to 67 cents, will pay from 59 to 80 per cent.; average, 69½ per cent.

There will be a small quantity of drab kerseys, toilinettes, ladies' cloths, and cassimeres included under this minimum which will pay from 45 to 80 per cent., making an average of 67½ per cent. Under the third minimum, goods costing more than 100 cents and not more than 250 cents will be subject to a duty of 100 cents the square yard. It follows that—

Drab kerseys, costing from 101 to 156 cents, will pay from 64 to 99 per cent.; average, 81½ per cent.

Toilinettes, costing from 101 to 146 cents, will pay from 68 to 99 per cent.; average, 83½ per cent.

Ladies' cloths, costing from 101 to 177 cents, will pay from 57 to 99 per cent.; average, 78 per cent.

Cassimeres, costing from 101 to 146 cents, will pay from 68 to 99 per cent.; average, 83½ per cent.

Broadcloths, costing from 101 to 132 cents, will pay from 75 to 99 per cent.; average, 87 per cent.

Broadcloths, costing from 132 to 176 cents, will pay from 57 to 75 per cent.; average, 66 per cent.

Broadcloths, costing from 159 to 212 cents, will pay from 47 to 63 per cent.; average, 55 per cent.

Under the fourth minimum, goods costing more than 250 cents and not more than $4 the square yard shall be deemed to have cost $4, and be subject to a duty of 40 per cent. on that valuation.

This provision will embrace all the fine broadcloths, costing from 250 to 317 cents, and will impose duties of from 56½ to 71 per cent.; making an average of 63¾ per cent. on the actual cost.

The committee will now present a statement, on the authority of the most intelligent and respectable importing merchants in the United States, of the rates of duty now payable on cotton manufactures, and a comparative statement of the duties which those manufactures will pay under the recommendations of the Secretary of the Treasury and of the Committee on Manufactures, respectively. The proposed increase of five cents per square yard, recommended by the Secretary of the Treasury, is applicable only to printed and colored fabrics; but it is to be remarked that these constitute more than three-fourths of our present importations, as will be seen by reference to the Treasury statements. The increase proposed by the Committee on Manufactures, of 1¼ cent the square yard, applies to all kinds of cotton manufactures. The following are the existing and proposed rates of duty.

	Present duty.	Duty proposed by the Secretary.	Duty proposed by the Committee on
	Per cent.	*Per cent.*	*Per cent.*
Prints or calicoes	45	75	52½
Cotton cassimeres	53	87	62
Ginghams	45	75	52½
Plate calicoes	80	133	93
Cotton handkerchiefs	52½	87½	61
Cambric muslins	50	50	58
Cambrics, 6-4 wide	66⅔	66⅔	78
Sarcenet cambrics	70	70	81

It is here proper to remark that all the above descriptions of goods are now actually imported and pay at the custom-house the rates of duty above stated under the head of "present duty." Of course, under the existing tariff, the consumers of cotton goods now actually pay, for the protection of the domestic manufacturer, high rates of duty on the foreign articles imported, and still higher rates upon the coarser fabrics supplied by our own manufacturers, in consequence of the exclusion of their foreign rivals.

The committee will here make a single remark on the comparative effects upon the revenue of the schemes presented by the Secretary of the Treasury and the Committee on Manufactures relative to woolens. Though the duties proposed in the latter scheme are more equally laid upon the different qualities of goods and are less in amount, this committee regard the difference as being merely a nominal one; the duties in both cases rising, with very unimportant exceptions, to the point of ultimate, not distant, and, in most instances, immediate prohibition. Duties which amount to 56 per cent. will result in prohibition, and those which amount to 281 per cent. can do no more. It is obvious, therefore, that the duties proposed by the Committee on Manufactures, ranging principally from 60 to 80 per cent., are as effectually prohibitory as the more unmeasured impositions proposed by the Secretary of the Treasury. If, indeed, a doubt could be entertained as to the prohibitory character of the lowest average of the duties proposed, that doubt would constitute a conclusive objection to their imposition. For, if the foreign manufacture can be imported and sold, for any considerable length of time, as cheap as the domestic manufacture, after paying 20 per cent. for the charges and profits incident to its importation and 56 per cent. duty, making an aggregate of 76 per cent., it would seem to the committee that no principle of sound policy, under any of the conflicting theories of political economy, would give countenance to a measure involving a permanent imposition so excessive upon the consumers of woolen goods for the benefit of the manufacturers.

It may be asserted, indeed, without any qualification, that duties upon foreign merchandise can afford protection to the rival productions of domestic industry only by prohibition. A home market cannot be provided for the domestic but by the exclusion of the foreign production. The direct and necessary effect, therefore, of protecting duties, if they really accomplish their professed object, is the exclusion of foreign merchandise—at least to the extent that a home market is provided for the substituted articles of domestic industry. But this is not all. In all cases where high duties are necessary to afford adequate protection, foreign commerce must, in the nature of things, be diminished to a greater extent than domestic industry is encouraged. For, in the cases supposed, the encouragement is given to the protected articles by raising their price at least 56 per cent. above that at which similar articles could be imported. A considerable increase of the price of any given article must, upon obvious principles, diminish its consumption. If, therefore, the effect of a protecting duty be to diminish the aggregate quantity of the protected article consumed by the community, it results, as an unavoidable consequence, that, for a given quantity of the domestic production substituted, there must be a still greater quantity of the rival foreign production excluded. In treating as prohibitory the proposed duties on the great mass of the woolen and cotton manufactures now imported from abroad, the committee, therefore, desire to be considered as using terms with due consideration, and in their strict and proper acceptation.

They now propose to inquire into the extent of this prohibition, and to trace its operation upon the foreign commerce and upon the revenue of the country. The whole amount of the importations of woolen manufactures in the year 1826 was $8,431,974; the whole amount of their importations in 1827 was $8,661,740. This statement exhibits an increase of the importations in 1827 beyond what they were in 1826 of $229,766. In the tariff of 1824 certain descriptions of woolens were exempted from the general provision of the law imposing a duty of 33⅓ per cent. on woolen manufactures, and subjected to a duty of 25 per cent. only. The importations of woolen manufactures, subject to the higher rate of *ad valorem* duty, and of carpeting, subject to a still higher specific duty, amounted in 1826 to $6,571,031, and in 1827 only to $6,293,160—exhibiting a decrease in the importations of woolens subject to the higher duties of $277,871.

The importations of woolens subject to the lower rate of duty amounted in 1826 to $1,860,943, and in 1827 to $2,368,580—exhibiting an increase of the importations of this description of woolens amounting to $508,637. When it is recollected that the importations of 1826 were made at the very crisis of the

reaction produced by the extraordinary speculations and excessive importations of 1825, a just inference may be drawn from the comparative statement above presented as to the effect of the tariff of 1824. It will be seen that the importation in 1827 of woolen goods subject to the higher rate of duty was less than in the year preceding; whereas, from the natural increase and recovering state of our commerce, as well as from a reference to the importations of woolens paying only 25 per cent. duty, a considerable increase ought to have been exhibited. The committee will here remark, in further illustration of the effect of the tariff of 1824, that the average importations of woolens for the three years preceding it amounted to $8,981,936, being an excess of $320,196 beyond the importations of 1827.

The importations of the descriptions of woolen manufactures which fall under the operation of the high duties recommended by the Secretary of the Treasury amounted in 1827 to upwards of six millions of dollars. A recurrence to the analysis presented by the committee will show that the great mass of woolens embraced in the scheme of duties proposed by the Secretary will be chargeable with more than 100 per cent., a considerable proportion with more than 200 per cent., and but a small quantity with less than 70 per cent. The committee, therefore, think they are quite within bounds when they assume five millions as the amount of woolen manufactures that will be excluded, and speedily excluded, if the duties recommended shall be imposed upon the foreign manufacture. They believe it may be assumed, with equal confidence, that a duty of five cents the square yard, in addition to the existing duty on cotton manufactures, will exclude the foreign manufactures to the amount of $3,500,000

When to these prohibitions those of raw wool, bar iron, and hemp are added, it will not be extravagant to estimate the curtailment of foreign commerce by the proposed duties at ten millions of dollars within a few years after their imposition. Making every allowance for the increased rate of duties that will be collected on the remaining importations of the articles under consideration, the committee cannot estimate the annual loss of revenue resulting from the duties proposed by the Secretary of the Treasury at less than $4,000,000. And here the committee cannot but pause for a moment to contemplate the singular and extraordinary spectacle of an officer who presides over the finances of a nation recommending a scheme of revenue which, at the same time that it will diminish the national income $4,000,000 per annum, will increase the burdens of the community beyond all example in time of peace, and fully equal to any in time of war! It is due, however, as well to the station of the officer in question as to the magnitude of the national interest involved, that the grounds upon which he places his recommendation should be fairly stated and dispassionately examined. And the committee cannot but express their regret that the views of the Secretary have not been presented in propositions more distinct, and in language less ambiguous. That they may not, however, do injustice to his opinion as to the effect of the proposed measure upon foreign commerce, they will state it in his own words: "The opening of new objects of labor, (says the Secretary,) by multiplying the occupations of men, has also increased the public prosperity. This has produced an increased ability to buy all articles of consumption whensoever obtained. Hence foreign trade has not declined, of which we have the incontestable evidence just stated, whilst new domestic resources in manufacturing labor have been unfolding themselves. As the latter are more amply brought out it is confidently anticipated that the former will become wider and more enriching in its range." As far as the committee are able to comprehend the specific bearing of the words and sentences just quoted, they interpret them to mean that the loss which foreign commerce will sustain by excluding the foreign articles in question will be amply compensated by the increased importation of other foreign merchandise which the augmented wealth of the people will enable them to purchase and consume.

Believing that this opinion as to the effect of the proposed tariff on foreign commerce is utterly destitue of any just foundation, and that it can only find cover under the vagueness and generality of the terms in which it is expressed, the committee will now attempt to remove the veil from it by exhibiting a practical view of the effect of the proposed increase of duties on the wealth of the nation. Assuming that it will exclude foreign manufactures, or, which is the same thing, give effective protection to domestic manufactures, to the extent of $10,000,000, it remains to be ascertained how and to what extent the various interests of the country will be affected by the change. In the first place, then, it is conceded that the price of the manufactured articles in question will be enhanced, and the only doubt is as to the extent and duration of the enhancement. The present duty upon woolens is 37½ per cent., and the testimony of the persons engaged in the manufacture allege that it is grossly inadequate. The very lowest duty in the scheme recommended by the Secretary of the Treasury is 56 per cent., and that is applicable only to a very inconsiderable portion of the woolens imported. Upon the great mass of them it is double that rate. It is presumed, therefore, that the manufacturers, while asking duties of from 56 to 281 per cent., will admit that at least 56 per cent. is necessary to give them protection, or, in other words, to exclude their foreign rivals. If this be granted, it conclusively shows that the price of domestic manufactures, in order to give them adequate protection, must be raised 56 per cent. above what the foreign manufactures would cost in our market if it were not for the duties imposed by the Government. The effect, then, of the proposed duties will be to raise the price of woolen manufactures, as well domestic as foreign, eighteen and a half per cent. at least above their present rates, and 56 per cent. above the price at which the foreign manufacture could be obtained, after paying all the expenses of importation and the profits of the importing merchant, if it were not for the duties. It has been estimated that each individual of the United States, upon a general average, consumes annually woolens of the value of six dollars. The total annual consumption of woolens in the United States amounts, upon this supposition, to $72,000,000. But a considerable proportion of this is household manufacture made and consumed by the same persons, and consequently not affected one way or the other by high duties. If it be assumed that only one-third of the woolens consumed are imported and manufactured *for sale*, it follows that the consumers of that manufacture will pay an annual tax of $13,440,000 upon that single branch of consumption, calculating the duty at 56 per cent. Of the $24,000,000 of woolens purchased and consumed, about three millions, it is estimated, will still continue to be imported under the lowest rates of the existing and proposed duties. It results that the duty of 56 per cent. upon $21,000,000, amounting to $11,760,000, will be *a tax upon the consumers of woolens for the benefit of those who make them;* and that the duty on the three millions of imported woolens will be a tax paid also by the consumers for the support of Government.

Assuming that the consumption of cotton manufactures, which, under the proposed tariff, will be made in the United States for sale, will be equal to that of woolen manufactures, it will follow that, as those manufactures will pay an average of duty nearly equal to 56 per cent., the consumers of cotton manufactures will pay a tax for the benefit of the domestic manufactures nearly equal to that paid by the consumers of woolens. The committee will estimate it, however, at only $10,240,000.

The first step, then, in this process of "inducting" the nation to wealth is to enhance the price of clothing, one of the primary necessaries of life, to a point involving an increase of the annual expenditure of the people for that object of $22,000,000, for the benefit of the manufacturers of woolen and cotton goods, in addition to what they will still pay on imported cotton and woolen goods for the support of Government.

But the effect of domestic manufactures in enhancing the price of the surplus produce of the farmer is strongly relied upon as an equivalent for the increased price of those manufactures. "The effect upon agricultural prices (says the Secretary) produced by the perpetual presence of armies in a country will not too strongly illustrate the extent of the benefit that the manufacturing class renders to the class of farmers." The committee would respectfully add, that the illustration of the Secretary is equally appropriate to show the national expense at which, by the plan proposed, the farmer is insured, if insured at all, a high price for his grain. For it is confidently believed that an army might be maintained at an annual expense much below $22,000,000 of an extent sufficient to consume as much of the productions of the farmer as all the persons who manufacture cotton and woolen goods for sale in the United States.

But conceding to the utmost extent the alleged effect of manufactures in raising the price of grain and wool, it is by no means a clear proposition that this enhancement of price adds anything more to the national wealth than does the enhancement of the price of manufactures. On the contrary, it seems to the committee that the wealth of the nation is diminished precisely in the proportion that the prices of clothing and food are increased by the artificial means of human legislation. If the mass of the community who consume manufactures and do not make them are compelled, by the effect of legislative prohibitions, to pay $22,000,000 more for clothing than if such prohibitions had not taken place; and if the great majority of the community who consume grain and wool and do not make them for sale are compelled, in like manner, to pay an enhanced price for these articles while the price of all other articles remains unaltered, it is extremely obvious that the wealth of the great body of the people is diminished precisely in the degree that the difficulty of obtaining food and clothing is increased by the enhancement of their prices. If the sellers of wool, of grain, and of manufactures, were the only persons in the community, it might be a question between them whether the enhancement of the price of manufactures would not be compensated by a corresponding enhancement of the price of wool and grain. But as these constitute a minority of the people in every State in the Union, and a very small minority in the Union at large, it strikes the committee as an extraordinary mode of consoling the majority for the enhanced price of one of the great necessaries of life, to tell them they will have the privilege of paying an equally enhanced price for another.

It thus appears that the second step of the process by which it is proposed to enrich the nation is to increase the difficulty of obtaining bread, the first necessary of life, and wool, a principal element in the price of woolen cloths, by raising their relative prices.

The committee regard it as a very clear proposition that the wealth of the nation cannot be increased by enhancing the price of any of its productions, except the great staples of exportation. The higher the price we obtain for these from foreign nations, the more, undoubtedly, we add to the national wealth.

But it is obvious that the scheme of the Secretary of the Treasury proposes to enhance the price of manufactures of grain and of raw wool in our own markets only. The attempt, indeed, would be impotent to extend the enhancement by our legislation to foreign markets.

With a view of exposing and illustrating more fully the fallacy of the notion that high prices, however produced and by whomsoever paid, constitute national wealth, the committee will suppose the Government had the power to promulgate and enforce a decree raising the price of grain from one to two dollars a bushel. Though this would be denounced as an arbitrary stretch of power, it would be no more than doing directly what the Secretary proposes to do indirectly. And what would be its effect? While it would neither increase nor diminish the aggregate wealth of the community—and in this it would have a decided advantage over the scheme of the Secretary—it would diminish that of the consumers of grain precisely as much as it would increase that of the sellers.

The delusion which unfortunately prevails on the subject of high prices is to be ascribed to the change which took place in the corn laws of Great Britain in 1819. During the years 1817 and 1818, in the hope of relieving the general distress of the laboring classes, the British Government relaxed the general policy of the corn laws and permitted the free importation of grain. The result was an extension of the market for our grain, and an enhancement of its price almost beyond any former precedent. This was a real increase of the national wealth, because foreigners paid us the enhanced price of our grain. In the grain-growing States the prices of lands rose in proportion to the rise in the prices of their productions, and large investments were made by capitalists. When the British Government resumed their ancient and established policy in relation to corn, and prohibited, in effect, its importation from abroad, great embarrassment unavoidably fell upon the exporters of grain in this country. Real estates sunk from their inflated to a point below their natural value, and grain to a point below its natural price. In this state of things it is not surprising that the grain-selling farmers should have labored under the temporary delusion that high prices constituted the chief good, and low prices the chief evil, without any regard to the question whether those prices were paid by foreigners or by our own citizens. But the wonder seems to be, that after the crisis has passed away which produced this delusion among the farmers it should be gravely taken up and propagated by our statesmen as the basis of a permanent system of legislation. The truth is, that low prices of subsistence and clothing, and high prices of labor and profits of capital, are the real indications of national wealth. The just criterion of the wealth of a nation is the facility with which its citizens can obtain the necessaries and comforts of life; and the committee have yet to learn that an enhancement of the prices of those necessaries and comforts will increase the facility of obtaining them. If this were the case, the British laborer, who pays two dollars a bushel for grain, would be in a more enviable condition than the citizen of Ohio or Kentucky, who pays less than a tenth part of that price. To illustrate this view of the subject a little further, the committee will suppose the Government endowed with the attribute of creative power, and that it should suddenly increase the grain, wool, and manufactured articles in the United States to double the existing quantity. This would undoubtedly be a more godlike and beneficent exercise of power than it would be to double the price without increasing the quantity of the articles in question. It is obvious that it would double the wealth of the nation, so far as it consisted in those articles, and yet it would certainly diminish the price of them in the same proportion.

There is another cause, still more deep and permanent than the one heretofore suggested, for the prevalence of the notion that high prices constitute national wealth; and it is one which is worthy of the

most earnest consideration. History warrants the committee in the assertion that all that branch of legislation which bears directly upon the pecuniary interests of society, and aims to effect the distribution of its wealth, has been exclusively controlled, in all countries, by the various descriptions of capitalists. And it is a fact, as lamentable as it is curious, in relation to our own Government, that while on every other subject the poorer classes of society have a very great influence upon the legislation of Congress—so much so that even their mistaken prejudices are sometimes encouraged by the representative—yet in the branch of legislation which we are considering they have heretofore had no more influence, and their interests have been no more regarded, than if capital and not numbers were the basis of our representation.

If, then, it be true that capital controls this branch of legislation, it will be at once perceived how the notion has obtained currency that high prices constitute national prosperity. It is the undoubted interest of capitalists, in other words, of those who sell, to enhance the prices of their productions; but it is as undoubtedly the interest of the great body of the people, in other words, of those who purchase, that the price of those productions should be diminished. The history of this branch of British legislation is nothing more nor less than a history of the coalitions formed between the different descriptions of capitalists—the landholders on the one hand and the manufacturers on the other—to compel all the other classes of society to pay enhanced prices for their productions. Whether in this instance the fatal career of English legislation will be followed up to its final results in this country will depend, in the opinion of the committee, upon the art of the capitalist in disguising his exactions, and the liability of the consumer to be imposed upon by false pretences.

It will be perceived by the House that the foregoing examination of the effect of the proposed duties on foreign merchandise has been designed to ascertain whether the increased wealth of the community, supposed to result from those duties, will be such as to enable the nation to import other foreign merchandise, beyond its present consumption, equivalent to the manufactures proposed to be excluded. The committee, it will be seen, have entirely failed to discover any such increased resources. On the contrary, it seems clear to the committee that the capacity of the people to purchase other foreign merchandise will be diminished in proportion to the increased price they will have to pay for the kinds of articles which shall be excluded. Indeed, it strikes them as being a paradox, almost too extravagant for grave consideration, to say that we shall increase the capacity of the people to purchase luxuries by compelling them to pay much higher prices for the two cardinal necessaries of life. And yet this paradox is the only foundation upon which the Secretary of the Treasury indulges the anticipation that other branches of foreign commerce will spring up from the ruins of that which he proposes to destroy. While contemplating with a too partial and exclusive solicitude the benefits which may result to the domestic manufacturers from the prohibitory system, he seems to overlook entirely its deleterious and desolating effect upon the wide range of interests inseparably connected with those branches of foreign commerce it proposes to annihilate.

The committee will now proceed to exhibit a brief view of the condition of those interests, and the peril in which they stand, together with estimates of their value. The first great interest that will be injuriously affected will be that of the agricultural staples of cotton, rice, and tobacco. The magnitude, and the national importance of this interest requires that the bearing of the proposed prohibitions upon it should be fully examined. The whole amount of the national exports of domestic productions in 1826 was $53,058,710. The export of cotton, tobacco, and rice, amounted in that year to $32,289,867, and that of cotton alone amounted to $25,025,214. The committee have grounds for believing that of the exports of 1827, that of the staples in question bears a still greater proportion to the whole amount than in the year preceding; and that the export of cotton alone amounts to fully one-half of the whole export of domestic productions. It follows that nearly three-fifths of the foreign merchandise imported for consumption is paid for by the staples under consideration, and nearly one-half by cotton alone. It is equally apparent that these staples contribute to supply at least one-half of the revenue which the Government derives from the imposts—the only source of the national income which involves taxation. A proper understanding of the operation of our system of revenue, as far as regards its relative bearing upon the great interests of agriculture, commerce, and manufactures, will be promoted by a summary view of our imports. The whole value of foreign merchandise imported and consumed in the United States in 1826 was $60,434,865; of this sum $7,432,661 was of merchandise imported free of duty; a considerable proportion of which was for the use of the manufacturers, and almost all of which was imported into the manufacturing States in exchange for their productions, and consumed in those States. It results from this statement that the foreign merchandise imported in 1826, and which paid duties, amounted only to $53,002,204. In the same year the merchandise imported from Great Britain amounted to $26,131,869, consisting almost entirely of manufactures of cotton, wool, iron, flax, and hemp, paying the highest duties under the tariff of 1824; and the three first subjected to prohibitory duties by the scheme recommended by the Secretary of the Treasury. Of the $26,131,869 imported from Great Britain in 1826, the committee estimate the amount re-exported, with benefit of drawback, at $2,131,869; leaving $24,000,000 as the amount consumed in the United States, at least four-fifths of which was paid for by the agricultural staples of cotton, tobacco, and rice, and two-thirds of it by cotton alone. The importations from France in 1826 amounted to $8,329,691; of this the amount re-exported, with the benefit of drawback, may be estimated at $1,829,691; leaving $6,500,000 as the amount consumed in the United States, and almost the whole of which was paid for by cotton. The net revenue which accrued in 1826 from the imported merchandise which actually paid duties (amounting, as before stated, to $53,002,204) was a little upwards of $20,000,000.

The foregoing statement is designed for the two-fold purpose of showing the dependence of the national revenue upon those branches of our foreign commerce which are sustained, almost entirely, by the exports of cotton, tobacco, and rice, and the inseparable connexion and mutual dependence which subsists between the export trade in those staples, and the continued importation of those articles of foreign merchandise which it is the design, and will be the effect, of the proposed tariff to exclude. It may be safely assumed that upwards of $10,000,000 of the revenue which accrued from imposts in 1826 was derived from merchandise obtained in exchange for the staples in question, and that upwards of five millions was derived from the descriptions of merchandise involved in the scope of the proposed prohibitions. It is against the great staples, then, which supply more than one-half of the ordinary revenue of the Government, and in a particular manner against cotton, which supplies more than one-third of that revenue, that the Secretary of the Treasury directs the ban of a prohibitory policy, that will as infallibly destroy the foreign market for those staples as it will exclude the merchandise with which foreign countries now pay for them.

Before the committee proceed to expose the inevitably destructive effect of the proposed tariff upon the export trade in cotton, tobacco, and rice, they will submit a few remarks in confirmation of the idea

already suggested, that the principal burden of taxation, even under a mere revenue system of imposts, falls upon those staples, and on the shipping interest and commerce dependent upon them. It has been already shown that the manufacturing States import upwards of seven millions of merchandise free of duty. This exemption operates as a bounty in favor of manufactures, not only at the expense of the revenue, but also at the expense of agriculture and commerce, which must be subjected to heavier charges, to supply the deficiency resulting to the revenue from that exemption. But the committee feel authorized to go still further, and to assert that the whole of the revenue derived from imported articles, of which similar and rival articles are manufactured in this country, even under the most moderate system of impost duties, is a tax upon agriculture and commerce; and that manufactures, so far from participating in the burden, are benefitted by its imposition. Conclusive practical proof of this will be found in the fact that the manufacturers would unquestionably oppose a proposition to repeal the whole of the impost duties, even if the public lands were adequate to supply the Government with all the revenue required for the public service. It is only necessary, indeed, to suggest the idea of a repeal of the impost duties and an imposition of internal taxes, equally bearing upon all the interests of the country, to render strikingly evident the proposition stated by the committee.

It cannot, indeed, be doubted that a system of revenue which imposes no internal taxes, but is exclusively confined to impost duties, is a tax upon agriculture and commerce, and a bounty in favor of manufactures. And it is while this system of revenue is in operation that the manufacturers, not satisfied with the bounties it provides for them, but making every concession the basis of more exorbitant demands, call upon Congress to add millions to the annual burdens of agriculture and commerce, in addition to former prohibitions, and to sacrifice, at the same time, four millions of the public revenue for their exclusive benefit!

The committee will now attempt to exhibit the injurious tendency of the proposed tariff in its bearing upon the commerce and shipping sustained by our southern staples, as well as upon the agricultural labor and capital engaged in their production. And, in the first place, they are of the opinion that the prohibition of British manufactures will inevitably cut off very nearly to the extent of that prohibition the foreign demand for our cotton. There is no law of trade more deeply fixed, in the very nature of commercial exchanges, than that a nation cannot purchase foreign productions but by giving its own productions or its own labor, directly or indirectly, in exchange for them. This is peculiarly the case with those manufacturing nations in which every branch of industry is overstocked with productions seeking a market. Such is precisely the present condition of Great Britain. Her very existence is involved in the prosperity of her manufactures, and the prosperity of these is entirely dependent on a foreign demand for the surplus produced beyond her own consumption. It is the cardinal principle of her commercial policy, growing out of the inexorable necessities of her condition, to extend that demand. In this state of things, when she has forced her manufactures through every channel into all quarters of the world accessible to her enterprise, and furnishing any suitable commodity to give in exchange, what will be the effect of excluding from our markets nearly ten millions of her manufactures?

It will undoubtedly throw upon her hands that amount of manufactures heretofore given principally in exchange for our cotton, and which will be of no value to her if she cannot obtain a new market for them. Any market, therefore, will be better than none; and it will be her decided interest to give a high price for raw cotton to countries that will take in exchange for it the manufactures prohibited by our policy, rather than to give even a much lower price for our cotton, when we refuse to take the only production she has to give in exchange for it. When, therefore, we exclude British manufactures by prohibitory duties, no retaliatory acts of British legislation will be necessary to deprive us of the British demand for our cotton to an equal extent. It will result from those immutabe and self-sustaining laws of commerce which stand ready to vindicate the freedom of trade and avenge its violation. The committee are aware of the prevalence of the opinion that Great Britain must purchase our raw cotton whether we take her manufactures or not. In confirmation of this opinion, it is said that Great Britain, even now, purchases that staple from us only because it is her interest to do so, and because we sell it cheaper than other nations. This is, undoubtedly, true. But it is equally true that the reason why it is her interest to purchase from us, and why she takes from us double the quantity she takes from the whole world besides, is because we have hitherto been her best customers. As long as we continue to take her manufactures, it will be her interest to take raw cotton from us, but no longer. The cotton of any country that will take her manufactures will be cheaper to her than ours if we will not take them.

This obvious principle of trade, connected with the actual state and capacities of the other cotton-growing regions of the world, will abundantly evince the imminent jeopardy to which the interest of the cotton-growers in the United States will be exposed by the proposed prohibition of foreign manufactures. The principal countries adapted to the production of cotton, besides the United States, are Brazil, Egypt, Greece, and the East and West Indies. Most of these have latent capacities, of indefinite extent, for the production of cotton—capacities which only require the stimulus of foreign demand, foreign capital, and foreign enterprise, to draw them into productive action. It is equally important to remark that they are all countries not likely to embark in the business of manufacture, and in which it will be no difficult matter for Great Britain to diffuse a taste for her manufactures. They are precisely, then, in the condition to render the proposed tariff most perilous to the American cotton-grower. It requires nothing but the motive of interest to induce Great Britain to apply all her political influence, her manufacturing capital, and her commercial enterprise, to stimulate the productive powers of Egypt, Greece, Brazil, and the East Indies, to the full extent of her demand for cotton. If we prohibit her manufactures we shall furnish her with that motive. She will establish a trade of profitable exchanges with those countries, and, being driven by our own infatuated policy to obtain raw cotton from them, she will cease to purchase ours to the same extent.

Under the peculiar circumstances just stated, it is not presenting the case too strongly to say that duties upon the exportation of cotton, equivalent to those which it is proposed to lay upon the manufactures taken in exchange for it, would not more certainly, or to a greater extent, curtail the exportation.

The committee will now exhibit an estimate of the loss which will be sustained by the growers of cotton in this country. It will be quite within limits to assume that, of the ten millions of manufactures that will be excluded by the proposed prohibitory duties, six millions are now exchanged for our cotton, and can be exchanged for nothing else. Estimating cotton at ten cents a pound, six millions of dollars will purchase sixty millions of pounds, which is equal to 200,000 bales, averaging three hundred pounds. It thus appears that the American cotton-grower will be deprived, by the proposed prohibitions, of a foreign market for nearly one-fourth of the entire production of that staple in the United States, amounting in

value to six millions of dollars. But even this view does not give anything like an adequate conception of the loss that will be sustained in the annual income of the nation by depriving the cotton-growers of their accustomed market. The whole of the shipping and commercial capital employed in transporting this cotton to Europe, and the merchandise received in exchange for it to the United States, will be thrown out of employment. The annual loss that will be sustained by the shipping interest alone may be estimated at $1,500,000, consisting of the freight and other charges of the cotton and merchandise mutually excluded. The annual loss that will result to the commercial capital now engaged in effecting the exchange of our cotton for the prohibited manufactures may be estimated at $1,000,000, consisting of the profits of the exporting and importing merchants. These sums united will exhibit a loss of $2,500,000, in addition to that sustained by the cotton-growers, and falling almost entirely on the ship-owners and merchants in the middle and northern States.

It thus appears that the growers of cotton, and the ship-owners and merchants engaged in its transportation, will sustain an annual aggregate loss of $8,500,000, at a very moderate estimate, by the direct amputation resulting from the proposed prohibitory duties, in addition to the increased burden they will have to sustain, in common with the rest of the community, from the enhanced prices of manufactured and other articles.

But the loss sustained by the country, in consequence of that inflicted on the cotton-growers, does not stop here. "If (to use the language of the Secretary of the Treasury) there can be no dissent from the maxim, as between different parts of the same nation, that the prosperity of one promotes that of another," "it cannot be doubted," in the opinion of the committee, "that the ruin of one, by the errors of human legislation, necessarily involves the injury of another." Both branches of this proposition, introduced by the Secretary with a very different bearing, are strikingly illustrated by the large participation of other parts of the Union in the prosperity of the cotton-growing States, and in the injury they are destined to suffer, if the proposed tariff shall be adopted.

The result of inquiries directed to practical men, and of estimates founded upon their statements, warrant the committee in expressing the opinion that the cotton-growing States import from the manufacturing States a great variety of articles exclusive of the manufactures of cotton, wool, and iron, and consisting principally of the productions of the soil, amounting annually to two millions of dollars, at a very moderate estimate. These are, all of them, such articles as the cotton-growing States have every facility for producing themselves, and which they can afford to import from other States only in a prosperous condition of their principal agricultural pursuit. Even in the present condition of their trade in cotton, just views of economy would seem to dictate the expediency of limiting the too abundant production of that staple by diverting from it so much capital and labor as would be sufficient to produce all the articles now imported from other States of the description just mentioned.

It is certain that the proposed prohibitions will, if adopted, render it not only expedient, but necessary, for the cotton States to produce the articles in question, instead of importing them. Another branch of domestic trade, larger in amount and more extensive in the diffusion of its benefits than the one just stated, will inevitably fall a sacrifice to the proposed system of exclusion. The committee have reference to the trade in live stock between the western and the cotton-growing States, which they estimate, after the most careful examination, to amount to at least the annual sum of $3,000,000. This trade is exceedingly important to the western States, because they receive in exchange for their live stock almost nothing but money. Is it not too much to say that in this single branch of internal trade the cotton-growing States afford to the western farmers a more extensive and profitable market for their agricultural productions than the manufacturers of cotton and wool would furnish in the course of half a century, even if the foreign importation of those manufactures were entirely prohibited? But the benefits of this trade are not confined to the western States. The money received from the cotton States is principally expended in the middle and eastern States, in payment for manufactures. There is no branch, therefore, of our commercial intercourse so diffusive and profitable in proportion to its nominal amount, and the committee speak advisedly in saying there is none that would be so certainly destroyed, utterly and irrevocably destroyed, if the proposed tariff should receive the sanction of Congress. The capacity of the cotton-growing States to produce the live stock they now import from the west is even greater than that for producing the agricultural articles they import from the north; and the same views of economy which suggest the expediency of producing the latter, instead of importing them, still more forcibly suggest the same policy in relation to the former. In a few years from the passage of the proposed tariff the trade in question will have ceased almost entirely.

In closing this brief and imperfect view of the destroying operation of the proposed prohibitory policy, denominated, with singular unappropriateness of language, a *protecting* policy, the committee cannot but pause to make a remark, obviously suggested by the occasion, that it is much easier to destroy than to create wealth by legislation. To effect the former, even folly and ignorance are more than competent; but, to accomplish the latter, human wisdom, in its profoundest exercise, will be found inadequate. And when financiers, and statesmen at the head of affairs, are found gathering up and appropriating the exploded errors of less enlightened ages, and recommending, as a means of increasing the national wealth and revenue, a policy that will inevitably destroy the annual income, directly and indirectly derived from a single staple, to the extent of more than thirteen millions of dollars, it is difficult to avoid exclaiming, in the language of a wise man of another country, "with how little wisdom the world is governed!"

Having thus presented an estimate of the loss that will be sustained in a single agricultural staple by the proposed exclusion of the foreign manufactures now taken in exchange for it, the committee propose to inquire how far this loss will be indemnified by the demand which the establishment of domestic manufactures will create for the staple in question. That this domestic demand will be anything like an equivalent to the foreign demand that will be destroyed by the prohibitory policy is one of those extraordinary and delusive anticipations which belong, in a peculiar manner, to the artificial scheme of enriching the nation by substituting for the bounties of nature and the providence of God the miserable and impotent contrivances of man.

In estimating the comparative extent, present and prospective, of the existing foreign and the proposed domestic market for raw cotton, it must occur to the most careless and incompetent examiner that Great Britain and the manufacturing nations of the continent manufacture cotton to supply the multiplying uses and increasing consumption of cotton manufactures by the whole civilized world; whereas our domestic manufactories can only supply the consumption of the United States. It is estimated by intelligent merchants in Liverpool and Havre that the present consumption of raw cotton in Europe amounts to 1,200,000 bales, which is equal to 360,000,000 pounds. It is a notorious fact that the consumption

of cotton manufactures, from their extraordinary cheapness when compared with those made of any other fibre, is rapidly extending on the continent of Europe, not only from the increase of population, but also from the new uses to which cotton fabrics are applied.

This consumption is susceptible of an indefinite extension. *It has no practical limit but that which is imposed by the refusal of the cotton-growing countries to receive manufactures in exchange for the raw material.* The United States now supply three-fourths of the European demand for that material. On the other hand, the domestic manufactories, even after we shall have excluded five millions more of foreign cotton manufactures, will not require more than two hundred thousand bales of cotton, at the utmost extent, to supply the domestic demand of the United States for those manufactures. It thus appears that the cotton-growers are to be consoled and indemnified for the loss of markets which now furnish a demand for 900,000 bales of their cotton—a demand which a system of free trade on our part would indefinitely extend—by the miserable substitute of a domestic demand for 200,000 bales; a demand created by legislative restrictions, and, consequently, incapable of being extended in a degree corresponding with the natural and progressive increase of the foreign demand.

This comparative view will be illustrated by a more specific reference to the effect which will be actually produced by the contemplated exclusion of foreign manufactures upon the foreign and upon the domestic demand for raw cotton.

It has been shown that the proposed prohibition of foreign merchandise, estimated at $10,000,000, will have the effect of depriving the cotton-growers in the United States of a foreign market to the extent of 200,000 bales of cotton. It is apparent that the substitution of five millions of domestic manufactures of wool for the same amount of the foreign fabric will add nothing at all to the domestic demand for raw cotton. It is equally apparent that the substitution of $3,500,000 of domestic for the same amount of foreign manufactures of cotton can have the effect of adding so much only to the domestic demand for cotton as will supply the raw material for making domestic manufactures of the value of $3,500,000. It it estimated by Mr. Huskisson that the raw material constitutes only one-fifth of the value of cotton manufactures, taking the average of the various qualities. As those which now remain to be excluded by the proposed tariff are of the finer descriptions, it may be safely assumed that raw cotton of the value of $700,000 will be sufficient for the making of manufactures of the value of $3,500,000. Now, estimating cotton at ten cents per pound, and each bale to contain 300 pounds, it follows that the entire addition which will be made to the domestic demand for cotton, by the complete accomplishment of the objects of the proposed tariff, will be 23,333 bales. In this calculation no deduction is made for the effect of the enhanced price of the manufacture in diminishing its consumption, and the still more striking effect of that enhancement in diminishing the *quantity* of the raw material necessary to make a given *value* of the manufacture of it. Thus it is that the splendid illusion of increasing the demand for cotton, by adding the domestic to the foreign market, vanishes into the wretched reality of substituting a domestic demand for 23,333 bales, at most, in place of a foreign demand for 200,000, involving a curtailment of the aggregate demand for cotton to the extent of 176,667 bales.

It remains for the committee to inquire how far the benefits resulting to the manufacturers of woolen and cotton goods, and to the farmers who will supply them with raw wool and grain, will indemnify the country for the losses sustained by its other interests. And here it may be proper to remark, that the committee intentionally abstain from any reflections upon the injustice of building up one interest on the ruins of another—reflections which, however just in themselves, have no necessary connexion with the purpose of this report, which is to ascertain the effect of the proposed tariff upon the aggregate wealth and the aggregate foreign commerce of the country, and, by necessary consequence, upon its revenue derived from impost duties.

What, then, will be the addition made to the wealth of the country by the diversion of capital and labor to the manufacture of woolen and cotton goods? It is quite obvious that no part of the capital under consideration will be *created* by the proposed policy. All that can possibly result from that policy will be an increase of the profits of the capital already invested in the manufactures in question, and a transfer of existing capital to those manufactures from other employments. That the increased profits of the capital already invested will make a corresponding increase in the wealth of the manufacturers is not to be questioned. And if their manufactures were made for exportation, and *foreigners* could be compelled, by our policy, to pay the enhanced price, the wealth of the country would be undoubtedly increased in this branch of industry. But, as the profits of the manufacturers will be enhanced only by increasing the price paid by *our own citizens* for the manufactures of woolen and cotton goods, it is a self-evident proposition that the wealth of the nation will be diminished, in this particular, precisely as much on the one hand as it will be increased on the other. The only effect of the prohibitory policy, in this part of its operation, will be to transfer a given sum annually from the planters, farmers, merchants, mechanics, and laborers of the country to the manufacturers of woolen and cotton goods. As to that portion of the capital of the country which the prohibitory system may transfer from other employments to manufactures, the increase of its profits will be doubtful in point of fact, and still less conducive to the national wealth than the increased profits of the capital already invested in manufactures; for it can hardly be doubted that capital now invested in the shipping business, and in the business of foreign commerce, will be thrown out of employment, to an extent very nearly equal to the amount of the new investments that will be made in the business of manufacture, in consequence of the proposed prohibitions. Any increase, therefore, which may be made in the profits of the capital thus transferred to manufactures is not only liable to the objection that it is produced by an increase in the price of manufactured articles, and consequently paid by our own citizens, but to the additional objection that the new employment of capital is produced by the destruction of its natural employment. The community, then, are subjected to the charge of paying the increased price of cotton and woolen manufactures, without anything like a corresponding increase of the profits of this portion of the capital invested in the business of making them.

The committee now propose to inquire what will be the extent of the incidental benefit resulting to the growers of wool and grain from the proposed exclusion of foreign manufactures and the substitution of domestic. It is obvious that the substitution of domestic manufactures of cotton for those that are foreign will add nothing to the demand for raw wool. The substitution of domestic for foreign manufactures of wool, however, will certainly increase the demand for raw wool in this country. Assuming that the raw wool constitutes two-fifths of the cost of the manufactured article, it follows that the substitution of domestic for foreign manufactures of wool to the amount of $5,000,000 will create a domestic market for raw wool to the amount of $2,000,000 if foreign wool be excluded. But at what price will this market be obtained for domestic wool? It has been already assumed, upon the authority of the manufacturers

themselves, that the domestic fabric will cost fifty-six per cent. more than the price at which the foreign manufacture could be obtained, if it were not for the impost duty. This price, it is alleged, is necessary to enable the manufacturer to make the ordinary rates of profit. Fifty-six per cent. duty upon $24,000,000, the estimated amount of woolen goods manufactured and imported for sale, will exhibit $13,440,000 as the sum paid by the consumers of those goods, including the wool-growers, to obtain a market for raw wool to the amount of $2,000,000, upon which the actual profit will not probably amount to $500,000.

In estimating the probable increase of the domestic market for grain, resulting from the exclusion of cotton and woolen manufactures, to the extent contemplated, it will be necessary to consider the number of persons that are now employed in importing those manufactures, in comparison with the number that will be employed in making them.

In the manufacture of cotton and woolen goods, particularly the former, machinery has been so extensively substituted for manual labor that it may be safely assumed that very nearly as many persons are employed, directly and indirectly, in the importation of a given quantity of cotton and woolen manufactures as are employed in their fabrication.

The facts disclosed by the manufacturers in their examination before the Committee on Manufactures warrant the conclusion that each person employed in the manufacture of woolen cloth produces annually, on an average, manufactures of the value of $750. It results that, in the annual manufacture of woolen fabrics of the value of $5,000,000, there will be employed, of all descriptions, 6,666 persons. In the manufacture of cotton goods, it is believed that the more extensive and efficient agency of machinery renders the number of persons employed in producing a given value of the manufacture much smaller than is the case of the woolen manufacture. But as the committee have no authentic statement of facts in this case, they will assume that, in the manufacture of cotton goods of the value of $3,500,000, there will be 3,500 persons employed. The whole number of persons, then, that will be employed in making $8,500,000 of cotton and woolen goods will be 10,166. Estimating the consumption of grain by each individual at twelve bushels per annum, the whole number would consume only 121,992 bushels, equal in value to probably as many dollars. If it be assumed that an equal amount of other agricultural productions will be consumed for food, the extent of the market which the farmers will obtain in consequence of the substitution of $8,500,000 of domestic for the same amount of foreign manufactures will be only $243,984. It is confidently believed that the persons who would be employed in importing the same amount of manufactures, and in exporting the raw cotton and other staples to pay for them, would consume an equal quantity of the productions of agriculture. In any possible view of the subject, the increased demand for grain, and other articles of food supplied by the farmer, would be too inconsiderable to be gravely regarded as a matter of national importance. The benefit would be almost exclusively confined to the farmers in the immediate vicinity of the manufactories, as grain and meat are articles too bulky to bear distant transportation by land. It is not to be doubted, then, that the cotton-growing States now furnish a market for the agricultural productions of the manufacturing States nearly seven times more extensive than will be furnished by the manufacturers in consequence of the proposed prohibitions. And upon the assumption already made, that the annual amount of cotton and woolen goods that will be manufactured for sale in this country will be $42,000,000, it will follow that all the cotton and woolen manufacturing establishments in the United States will employ less than 50,000 persons, and consequently will not furnish a market for the grain-growers half so extensive as that furnished by the city of New York alone—a city which has risen to unrivalled prosperity by the very foreign commerce it is now proposed to destroy.

Having thus taken a general view of the effect which the proposed tariff will produce upon the different interests of the country; having shown that the annual income of the planting, shipping, commercial, and farming interests will be diminished millions where the income of the manufacturing and wool-growing interest will be increased hundreds of thousands; having shown, in a word, that the contemplated prohibitory duties will destroy ten times as much national wealth as they will create, the committee are utterly at a loss to realize the anticipation of the Secretary of the Treasury, that the capacity of the country to purchase foreign merchandise will be increased by this impoverishment. They are equally at a loss to imagine what those new articles of foreign merchandise will be which are to make up the loss that foreign commerce will sustain by the exclusion of cotton and woolen manufactures and other articles of the value of $10,000,000. Nor is it any more easy to conjecture what the domestic productions will be with which we are to purchase those newly-discovered articles of foreign merchandise yet to be disclosed to us in the fulness of future revelation.

With a view of bringing to the test of a practical scrutiny the singular financial paradox, that the revenue derived from imposts will not be diminished by prohibiting the importation of ten millions of foreign merchandise, the committee will examine the operation of the proposed system of prohibitions a little more in its detail.

It is worthy of remark that, while the *argument* of the Secretary of the Treasury is exclusively in favor of the policy of excluding foreign *manufactures*, his *recommendation* extends to the exclusion of the *raw materials* also, which are essential to three important branches of domestic manufactures. While it is earnestly contended that there is too large a proportion of capital and labor devoted to agriculture, producing a surplus which foreign nations will not take, and the consequent necessity of protecting our manufactures is strenuously urged upon Congress, it is, at the same time, gravely recommended that the productions of foreign agriculture, the free importation of which would be the most direct and natural encouragement of domestic manufactures, be also prohibited!

Without stopping to comment upon the incongruity exhibited by the argument and the recommendation of the Secretary, or to expose the inconsistency of complaining that foreign nations will not take our agricultural productions, when those productions—wool and hemp, for example—cannot command even our own market without the aid of prohibitory duties, the committee will proceed to show that the policy indicated by the reasoning and the recommendation of the Secretary involves the ultimate and permanent destruction of at least one-half of the foreign commerce that contributes to the revenues of this Government.

The importations of foreign merchandise in 1826, excluding from the estimate the portion that pays no duty, amounted, in round numbers, to $72,000,000. Of this sum sugar, and the manufactures of cotton, wool, hemp, iron, and steel, and the raw material of the four last, amounted to $30,000,000. All of these are now subjected to heavy protecting duties, and it is proposed to render most of them prohibitory. The manufactures of flax imported in 1826 amounted to $3,000,000; and all the reasoning in favor of encouraging domestic manufactures by prohibitory duties applies with full force to this branch of that

business. We have not only an unlimited capacity for producing the raw material, but the exclusion of foreign manufactures of flax, even if it should not produce the domestic manufacture of that material, would cause cotton shirting and other fabrics to be substituted for those of flax, and thus at the same time increase the consumption of raw cotton, and extend the demand for its manufacture. If to this we add $2,000,000 for the amount of indigo imported in 1826 under a very low duty, (an article which can be produced in the southern States to an unlimited extent if adequately protected,) it will be seen that $35,000,000 of the importations of 1826 fall clearly under the ban of the prohibitory system.

The principal other duty-paying articles imported in 1826 were silks, wine, coffee, and tea, amounting to $17,500,000, and spirits and molasses, amounting to $4,500,000. The two last enumerated articles should, in the opinion of the Committee on Manufactures, be subjected to prohibitory duties, with a view to the encouragement of the grain-growers and manufacturers of whiskey in the United States; and this committee can perceive no grounds for a distinction which would deprive our farmers of protection in this form while it is granted to other interests in other forms. The remaining importations of 1826, amounting to $15,000,000, consisted of manufactures of wood, leather, glass, copper, and of various other materials; hats, bonnets, and caps; lead, paper, and segars; salt, spices, fruits, vinegar, cocoa, and various other articles, too inconsiderable to be enumerated. It will be perceived that of the articles last enumerated a considerable proportion fall within the acknowledged principles, and, indeed, within the provisions of the protecting system.

From the foregoing statement it is apparent that the committee have been quite within limits in assuming that the extension of the prohibitory system to its legitimate results, and to the point which it must soon reach if not now arrested, will cut off one-half of our foreign commerce.

It is time now to inquire what those articles of foreign merchandise will be which are to fill up the chasm in our foreign commerce, produced by the prohibition of $10,000,000 of our present importations? They cannot be manufactures of cotton, wool, iron, hemp, flax, or, indeed, any of the manufactures enumerated in the above analysis of our foreign commerce, (except wines and silks,) for they, all of them, fall within the principles, and most of them within the existing and proposed provisions, of the protecting policy. They cannot be grain, raw wool, hemp, spirits, sugar, or salt, for these are also articles that it is deemed important to protect against foreign competition. Indeed, it is obvious that all the great staples of agriculture and manufacture, everything applicable to the purposes of feeding and clothing mankind, by supplying either the necessaries, the comforts, or the luxuries of life, are excluded by the prohibitory policy, with the exception of tea, coffee, spices, cocoa, and a few small articles of a similar kind, and some small manufactures of inconsiderable importance; and the committee will add silks and wines to the enumeration, though even these might fairly claim a place in the sanctuary of the protecting system.

Unless, therefore, this system shall have the effect of increasing the importation of the very articles it excludes, or of leading to the discovery of others hitherto unknown in the annals of commerce, the committee cannot imagine what other foreign articles could be found to supply, advantageously, the place of those it is proposed to prohibit, even if it were true that the increased wealth of the country would "produce an increased ability to buy all articles of consumption, whencesoever derived." To assert that the *wealth* of the country will be increased by the prohibition of imported articles is at least an intelligible, possibly a plausible proposition; but to allege that *foreign commerce* will not be diminished by prohibiting almost the only descriptions of merchandise, with the exception of coffee and tea, which we now import, or ever can import with advantage, is, to make the most of it, an empty and inflated generality, which instantly vanishes at the touch of a practical analysis.

But the illusion of this anticipated creation of new branches of trade to compensate foreign commerce for the direct curtailment of the proposed prohibitions is not less effectually dispelled by inquiring what are the articles of export of which that trade is to consist? What shall we have to export in greater abundance than we have now? The only answer that can be given is manufactures. And it has been confidently asserted that the exports of domestic manufactures will, at no distant period, be equal to the foreign merchandise we exclude to give them protection. This is another of those propositions that can only be considered with gravity while viewed in the abstract. We cannot command our own market without a legislative protection of fifty-six per cent. in addition to the natural protection of fifteen or twenty per cent. resulting from the expense of importing the foreign manufacture, and yet we are to compete with the most skilful manufacturers in the world, in foreign markets, on terms of perfect equality. But this is not half of the difficulty. To what nations shall we send our manufactures? Shall we find a market for them in Great Britain, France, or any part of Europe? It would be as reasonable to expect Great Britain and France to export raw cotton to South Carolina or Louisiana. In all the nations of Europe we shall have to encounter not only the greater cheapness of their manufactures, but their prohibitory regulations. Shall we export them to the West Indies or any of the colonies of the European Powers? We should there meet the prohibitions of their colonial policy, which excludes all foreign merchandise which the mother country can supply. Where, then, shall we resort? It will be answered, to South America, and an appeal will be made to experience to sustain the allegation. Now it is worthy of remark that we, who have the cheapest, most fertile, and most various soil in the world, with a climate in every respect adapted to the growing of wool, cannot compete, in our own market, without a protecting duty, either with the wool-growers of England, Spain, or Saxony—countries where lands are from ten to twenty times as high as they are in most parts of the United States. And yet it is conceived that we can successfully contend with those nations, in other foreign markets, in the sale of our manufactures. An agricultural nation incapable of maintaining a competition with manufacturing nations in the sale of her natural productions is yet to prove more than a match for them in the sale of manufactures. This would be doing wonders to be sure. But we have yet greater difficulties to encounter. In some of the States of South America we find discriminating duties unfavorable to us and favorable to Great Britain. And when we have surmounted this legal discrimination we find another still more difficult to overcome, growing out of the peculiar character of the productions of South America. The great staple of that region, cotton, is precisely what Great Britain desires most to purchase and this country desires most to sell; and the same remark is applicable to almost all the productions of South America. This circumstance alone would give the British manufacturers an overwhelming advantage in a competition with ours, even if we could rival them in the cheapness of our fabrics.

These views will be clearly illustrated by reference to the nature of the boasted trade now carried on by our manufacturers of cotton goods with South America. We exported, in 1826, domestic cotton manufactures to the amount of $1,138,125, and re-exported British manufactures of the same kind to the

amount of $2,226,090. In 1827 the export of domestic cotton manufactures amounted to $1,177,598; the amount of British manufactures of the same kind for that year has not been ascertained by the committee.

It is apparent, from this statement, that we find it more advantageous to re-export British manufactures, after importing them at an expense of fifteen or twenty per cent., than to export our own, and that the exportation of our domestic manufactures increases very slowly. A conclusive refutation is here found of the inference drawn from this trade by some that we can manufacture our cotton fabrics cheaper than the British. If the fact of our exporting one million of domestic cotton fabrics proves that we can make them cheaper than the British, the fact of our re-exporting two millions of British fabrics proves still more strongly that the British manufacturers can make them cheaper than ours. The truth is that this exportation of domestic and re-exportation of foreign manufactures proves nothing on either hand as to the relative cheapness of the manufactures. We could afford to export domestic cotton manufactures to South America to a limited extent, even if they were much higher, because we take in exchange raw hides and skins that, to this extent, would be of scarcely any value but for our demand for them. This is the true foundation of our export trade in domestic manufactures, and this is its limit. A survey of the productions and commerce of South America will warrant the conclusion that the only articles of value and importance produced in that quarter, either for food or clothing, which it is our interest to import are these raw hides and skins. And thus the vision of indemnifying foreign commerce and the revenue derived from imposts for the loss they will sustain by the exclusion of foreign manufactures is finally consummated in the importation of articles that may be appropriately denominated the offal of trade—articles, too, which pay no duty at all, and come directly in competition with our own agricultural productions, in utter contempt of the principles of the prohibitory system. With this striking exemplification of the commercial and financial bearing of the scheme of the Secretary of the Treasury the committee will conclude their remarks on this branch of the subject.

It will be perceived by the House that the committee have no further entered into the consideration of the proposed duties than was necessary to ascertain their ultimate and permanent effect upon our foreign commerce, and, of consequence, upon the public revenue. They have not permitted themselves to be seduced by the example of the Secretary of the Treasury to depart entirely from the financial view of the subject and to enter at large into the discussion of the policy of protecting domestic manufactures by prohibitory duties, a policy which, whether it be wise or unwise, just or unjust, must inevitably impair the productiveness of our present system of revenue to an extent that will render it difficult to avoid a resort to internal taxes in time of peace. That this will be the probable fruit of the system of prohibition cannot be disguised, however confidently it may be denied. It has been shown that the proposed exclusion of foreign cotton and woolen manufactures, raw wool, hemp, and iron, will diminish the annual income from the customs four millions of dollars. If to these articles be added foreign spirits, molasses, and iron manufactures, in conformity with the views of the Committee on Manufactures, a further reduction of the revenue to the amount of one million and a half may be confidently anticipated. When it is perceived that a revenue of $20,000,000, derived from imposts, is thus subjected to a diminution of $5,500,000 at a single blow of the prohibitory system—a system which our own experience demonstrates to be naturally progressive, making each advance the basis and the instrument of extending still further its desolating encroachments upon our commerce and revenue—it appears to the committee that only a very ordinary share of forecast is required to foresee the ultimate consequences that must result, at no distant period, from the progress of this system. The anticipation indulged by the committee, as heretofore expressed, that the public debt would be extinguished in the year 1835 can only be realized by the faithful application of the Sinking Fund, in conformity with the provisions of the act of 1817, by which the annual sum of $10,000,000 was pledged for the payment of the principal and interest of that debt. The current expenses of the Government for the year 1827, exclusive of the public debt, amounted to $12,000,000; and when it is considered that the expenditures for the military and naval service have been gradually increasing since 1825, it cannot be reasonably expected that the aggregate expenditures will be less than $12,000,000 per annum for the next eight years, exclusive of the national debt. It follows that the current expenditures of the Government will amount annually to the sum of $22,000,000; for, although some branches of these expenditures—the military pensions, for example—will decrease progressively, this will be counterbalanced by an increase in other branches and by appropriations of a contingent nature. Even if the present impost duties remain unaltered, it would be unsafe, in the opinion of the committee, to estimate the annual income from the imposts for the year 1828, and the seven following years, at more than was derived from this source in 1827; for even under the existing laws the progress of our manufactures must still further limit the importation of certain descriptions of foreign merchandise. Estimating, then, the revenue from imposts, in round numbers, at $20,000,000, and that from the public lands, bank stock, and other sources, at $2,000,000, we have an annual income of $22,000,000, and an annual expenditure of the same amount.

If, therefore, the contemplated prohibitions of foreign commerce be adopted, and the revenue derived from the imposts shall sustain a diminution of $5,500,000 per annum after the year 1830, to say nothing of the diminution in the intermediate years, while those prohibitions are reaching their consummation, it is apparent that between the close of the year 1830 and the close of the year 1835 there will be an annual deficit of $5,500,000, which can only be supplied by invading the Sinking Fund and almost entirely arresting the payment of the public debt, or by resorting to internal taxes. And, at the close of the year 1835, instead of finding the public debt extinguished and an annual surplus revenue of $10,000,000, applicable to whatever purposes the public welfare may indicate, we shall find the nation still burdened with a debt which its ordinary revenue will not discharge until ten years more shall have elapsed.

If these views rest upon any just foundation, it is quite evident that the prohibitory system now proposed will postpone the commencement of any such works of internal improvement as Congress may deem expedient until very nearly the middle of the present century. The committee take it for granted that the public mind is definitively made up as to the policy of disburdening the nation of the public debt with all practicable despatch. It is not to be presumed, therefore, that any attempt will be made to arrest the payment of that debt by diverting the Sinking Fund from its plighted purposes to any other purposes, however important, except for the support of the established institutions of the country.

Even, therefore, if no change shall take place in our foreign relations involving an increase of the national expenditure, there will be no surplus revenue to be applied to any objects of internal improvement before the year 1845, if the prohibitory duties now proposed shall be laid on foreign merchandise. The only means compatible with the preservation of the established institutions and policy of the country,

by which any such objects can be effected in the event just supposed, previous to the year 1845, will be internal taxes.

And as the policy recommended by the Secretary of the Treasury will certainly lead, and apparently looks forward, to the substitution of a system of internal revenue in place of the present system of duties upon foreign merchandise, the committee will close this report with a few remarks on the relative advantages and disadvantages of the two systems.

Under our present system of imposts the collection of the revenue costs less than three and a half per cent. on the gross amount; under a system of internal taxes it would cost more than seven per cent. upon the most moderate estimate. The objection to this increased expense of collection would not be diminished by the consideration that it would grow out of the necessity of having a vast number of excise officers and assessors scattered over the country, clothed with inquisitorial powers, and necessarily intruding their inquiries into the private concerns of every citizen. But even this objection sinks into comparative insignificance when viewed in connexion with one which remains to be stated. From the great extent of our territory, the sparseness of our population, and the unavoidably unequal disbursement of the public revenue, in a local point of view, a system of internal taxes will always produce, by disturbing the equilibrium of the circulating medium, the most distressing embarrassments in those parts of the Union in which the smallest proportion of the public disbursement shall be made. If the contributions of the people and the expenditure of the Government could be locally equalized, so that the money contributed by each county, in the shape of taxes, should be returned to it in the form of Government expenditure, there would be scarcely any limit to the financial power of this country. But, as the expenditures of this Government are necessarily extremely unequal and partial, the only remedy or corrective is to be found in a system of revenue which makes the points of contribution, as nearly as possible, coincident with the points of disbursement. This is eminently the case in a system of imposts. Of the annual expenditure of $22,000,000 for the support of the various branches of the public service and for the payment of the public debt, it is believed that more than three-fourths is expended on the maritime frontier, principally in the cities into which foreign merchandise is directly imported. It is obvious, then, that impost duties are the least burdensome impositions that can be devised for such a country and such a Government as ours. It would not be extravagant to say that a net revenue of $15,000,000, raised by internal taxes, would involve, in the expenses of its collection, and in the mode of its operation, a heavier and more vexatious pressure upon the people, than a net revenue of $20,000,000 derived from imposts. The very nature of our country, and the ends for which this Government was obviously created, indicate foreign commerce as the object of our care and source of our revenue. It was principally to protect foreign commerce that this Union was originally formed, and it may well be doubted whether the destruction of the former would not put in jeopardy the very existence of the latter, by greatly impairing both the motive for preserving and the means of sustaining our expensive national institutions. The committee, therefore, believe that the representatives of the people are called upon, not only by considerations connected with the national wealth and revenue, but by every consideration which gives value to the union of the States, to reject the recommendation of the Secretary of the Treasury, and arrest the progress of a system the possible consequence of which no American can contemplate with indifference.

Statement of the appropriations and expenditures of the General Government of the United States for the years 1817, 1822, 1823, 1824, 1825, 1826, *and* 1827, *arranged under sundry general heads or objects.*

TREASURY DEPARTMENT, *Register's Office, February* 11, 1828.

JOSEPH NOURSE, *Register.*

H CONGRESS.] No. 886 [1ST SESSION.

AGAINST INCREASE OF DUTIES ON IMPORTS.

COMMUNICATED TO THE SENATE MARCH 12, 1828.

To the Congress of the United States:

The memorial of sundry citizens of the districts of Chesterfield, Marlborough, and Darlington, assembled at the town of Cheraw on the 25th day of July, 1827, respectfully showeth: That your memorialists belong to those classes of the citizens of the United States who are engaged in commerce and agriculture, and they believe that in attachment to the Union and the principles of the Constitution they are behind no section or class of the citizens of this Republic. Your memorialists are unaccustomed to approach your honorable body, and have heretofore relied, and still do rely, with great confidence, on the justice of Congress; but when a system of partial and sectional legislation is gradually acquiring strength and becoming a part of the settled principles of American policy, they cannot in justice to themselves remain longer silent, and more particularly as their silence has been construed into acquiescence.

Your honorable body will perceive that your memorialists allude to the attempts which have been made, and, they are sorry to say, with some success, by the manufacturers, for their own benefit and emolument, to procure an act of Congress increasing the duty on foreign goods. Your memorialists are not unwilling to bear their just proportion of the public burdens. If the exigencies of the Government require it, we will not murmur at any increase of taxation, direct or indirect, within our ability to pay; but we utterly protest against any law which compels us to share the fruits of our industry with those from whom we derive no reciprocal benefit. We claim no superiority over our manufacturing brethren, nor any exemption from the burdens imposed on them. We ask only to share equally the benefits as well as the inconveniences of the union of these States. Your memorialists are persuaded that the conflicting interests of the several parts of the Union could never have been brought to assent to our excellent Constitution, if the States had supposed they were surrendering to Congress the power of partial and sectional legislation, or of fostering and cherishing the industry of one section of the Union at the expense of another; for if the duty on foreign goods enables the manufacturer of domestic goods to sell twenty-five per cent. higher, does not the consumer pay a bounty to the manufacturer equal to this advance of the price of his commodity? The facility of collection and the aversion of our people to excises have always pointed to imposts on foreign goods as the appropriate source of American revenue; and so far as this has operated to the advancement of American manufactures, so far we have contributed willingly to their success; but we regard a tariff of protection as unjust in its operation, and a palpable violation of the spirit and letter of our Constitution, the fundamental principle of which is equality of rights and equality of burdens.

Your memorialists regard the attempts of their manufacturing brethren to procure an increase of the duties on woolens as unkind and selfish in the extreme, because they are well assured from the best sources of information that no branch of American industry is at this time more flourishing than every species of manufactures. If evidence of this were wanting, it will be found in the uncontroverted fact that the most prudent and calculating men in this nation are daily transferring their capital from commerce and agriculture and investing it in manufactures of both wool and cotton. But even if this were not true, from whence do we arrive at the justice and equity of exempting them from the operation of that rule of equality which says to every man "judge for yourself; if you share the profit with no one, the loss should be exclusively your own?" Your memorialists take no pleasure in exposing their poverty; but they beg leave to call the attention of Congress to the fact that there never was a time when this miscalled "American system" would have operated so oppressively on the cotton-growing country as the present. Our estates are reduced to less than half their former price, our income to one-third of what it amounted to seven years ago, and our citizens are oppressed with debt beyond any former precedent. In fact, such is the present embarrassed condition of the country generally that there are very few, if any, who do not feel the pressure of the present, and look with fearful foreboding to the future. Yet it is not the amount of the increase of our burdens that we complain of. If the object of increasing the tariff were legitimate, if it were equitable, if it were for the good of our common country, we would submit to it without murmuring and with cheerfulness; but when the end is unjust and the means unconstitutional, we will never cease to protest against, and to defeat its operation by every lawful means in our power. Your memorialists have been accustomed to consider as the most glorious fruit of the revolutionary war the establishment of the principle that man is capable of self-government and the best judge of what will best advance his own interest, comfort, and happiness. The necessity of government does not arise from man's inability to regulate his own affairs, but from his propensity to intermeddle with the concerns of others. Hence, all well-regulated Governments have never usurped the power of controlling the efforts of individual industry, except so far as they interfered with the just rights of others. Your memorialists look, therefore, with great confidence, to the justice of Congress, and doubt not the unreasonable demands of the manufacturers to enrich themselves at the expense of others will be denied. As a development of American enterprise and ingenuity, as a branch of national industry, we have ever cherished towards our manufacturing brethren the kindest feelings and the most anxious solicitude for their success. We ask no restriction on their profits, except what is produced by fair and general competition. If, in this way, they become rich, we shall not envy them the enjoyment of the honest fruits of their labor, nor ask your honorable body to tax their industry to redeem us from that poverty which a less favored climate or our own folly may have brought upon us.

Your memorialists, with great diffidence, beg leave to state their belief that the power to pass a law levying a duty on imports, with the sole object of encouraging domestic manufactures, is neither expressly nor by implication granted to Congress by the Constitution. Your memorialists would feel much hesitation in pronouncing as usurpation a system which had been sanctified by time and acted on for ages. Fortunately, in this case, they have no canonized opinions to combat. Our Government has not lived beyond the age which produced it, and this "American system" has no precedent to support it anterior to the year 1816. And your memorialists have great doubt whether the tariff of that year should be regarded as anything more than a necessary increase of the duties on foreign goods in order

to meet the enormous increase of the national debt growing out of the war with Great Britain then recently ended. Your memorialists have looked in vain into the Constitution for authority to sustain the exercise of that enormous power which claims to regulate the whole industry and capital of the nation. If the framers of the Constitution had intended to give this extraordinary power, would it not have been plainly and clearly expressed? Yet in no part of the Constitution do we find the word manufacture used. Did not agriculture and manufactures exist at the adoption of the Constitution, as well as commerce. If so, why was not the power to regulate these given by the Constitution, as well as the power to regulate commerce with foreign nations and among the States? For the very obvious reason that the latter was necessary to the great end for which the Confederation was formed, whilst the former were proper and appropriate subjects of State regulations On this consideration alone your memorialists believe they might rest their case with perfect security, for it never can be disregarded that such is the entire character of the Constitution of the United States, and so perfectly are all its sanctions of a restrictive character, that Congress possesses no power whatever not granted by it.

They feel that this opinion is justified by the absence of every such grant of power as has been assumed, and no less fortified by the provisions which the Constitution does contain, and which, of necessity, excludes the power contended for. Not only is it provided that "the enumeration in the Constitution of certain rights shall not be construed to deny or disparage others retained by the people," but further proceeds, "as if to take a bond of fate," that "the powers not delegated to the United States by the Constitution nor prohibited by it to the States, are reserved to the States respectively, or to the people." Assuredly these provisions ought to protect us against the exercise of all power not granted. We appeal to the 8th section of the 1st article of the Constitution as containing the entire grant, modification, and restriction of all the power which has been delegated to the United States on the subject of manufactures. It is there provided that Congress shall have power "to promote the progress of science and the useful arts." Had there been no qualification or restriction superadded to these words, such a grant of power would have been as plenary as that "to borrow money on the credit of the United States," or "to regulate commerce with foreign nations." In that case there would have been no doubt of the *power* of Congress, whatever there might have been of the expediency of its exercise; but fortunately the framers of the Constitution limited the power, and designated the manner in which it should be exercised. They gave to Congress not all power on the subject, but only the modified and restricted power "to promote the progress of science and the useful arts, by securing, for limited times, to the authors and inventors the exclusive right to their respective writings and discoveries." This restriction and modification is as much a part of the Constitution as the grant of power itself; and being so restricted and limited in its exercise, none other can in good faith be exerted. That the favored objects of the tariff of protection are the "useful arts" of the Constitution, the manufacturers themselves, indeed, the common assent of the civilized world, have established beyond contradiction; for among all those various objects and combinations which constitute American manufactures, scarcely one, however minute and unimportant, can be selected which has not already enjoyed the benefit of this provision of the Constitution, or of similar enactments of foreign Governments. On looking into the Constitution it will be perceived that the important powers granted to Congress are comprehended under one of the following heads: 1. Those necessary to regulate our intercourse with foreign nations; and 2d, such as, in the exercise of the States, would be productive of jealousy and collision among themselves. All other powers necessary to better the condition of our citizens were reserved to the States or the people themselves until it should be found expedient to delegate them to the General Government. The right claimed by the advocates of this "American system" is not comprehended within either of these classes of powers, as your memorialists conceive, either by express grant or necessary implication. It is not pretended that it is one of the primary powers of Congress, but only an incident growing out of other powers, such as the power to regulate commerce and to lay and collect duties on foreign goods. The power to regulate commerce with foreign nations carries along with it the power to do everything necessary to promote and encourage the foreign commerce of the United States; but to claim as incidental to this the power to tax and to prohibit by taxation the importation of foreign goods, for the encouragement of domestic manufactures only, is absurd in the extreme. Your memorialists do not deny to Congress the power to lay and collect duties and imposts on foreign goods, but these duties and imposts must be laid "to pay the debts and provide for the common defence and general welfare of the United States." The object is to pay the debts and provide for the "common defence and general welfare" of the United States; the means are the money arising from duties and imposts.

The advocates of the "American system" say that, under this provision of the Constitution, Congress has power to exclude by prohibitory duties the importation of foreign goods for the encouragement of domestic manufactures, because this is for the general welfare, or, in other words, the means are to be destroyed for the attainment of the end: than which your memorialists humbly conceive nothing can be more inconsistent. Against this species of construction your memorialists most earnestly and solemnly protest, and declare their settled conviction that the power to regulate the whole productive industry of the nation is contrary to the whole spirit of the Constitution, nowhere delegated, nor necessary to carry into effect any of the provisions of that sacred instrument. If an increased duty be necessary to effectuate the legitimate ends of Government, your memorialists would be among the last to complain. And if from this source a benefit resulted to any class of American industry, there is none amongst us who would not rejoice at it. But when, under the disguise of raising a revenue, is concealed, in fact, the design of reducing the revenue and of compelling the consumer to pay an increased price, that thereby the profits of the domestic manufacturer may be increased, your memorialists have become justly alarmed; and in the instance complained of they are without redress, inasmuch as the covert object of the measure is not avowed or expressed in the law itself, so that your memorialists, who are aggrieved by its operation, may submit the question to the decision of the judicial authority of the nation. Your memorialists do not object to any protection which may be afforded to the domestic industry of any State which operates on the citizens of such State exclusively; and they submit, respectfully, that by the concluding paragraph of the tenth section of the first article of the Constitution of the United States it is competent for any State, with the consent of Congress, to pass laws, the effect of which would be, within the limits of such State, entirely to prohibit the importation of foreign goods. If, therefore, it be the policy of Ohio, Rhode Island, or Massachusetts to impose prohibitory duties on foreign manufactures of cotton or wool, as a component part of this Confederation we freely give our consent. Your memorialists most conscientiously believe that this "American system" is a violation of their constitutional rights; that in its operation it will weaken the bonds of Union, produce sectional divisions, and disturb the domestic tranquillity of these

States; that it is unjust, unequal, and oppressive. And they submit to the consideration of Congress that the "general welfare" of the whole American people requires the entire and total abandonment of the system.

20TH CONGRESS.] No. 887. [1ST SESSION.

ANNUAL SUM REQUIRED TO PAY THE NATIONAL DEBT IN 1835.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 13, 1828.

TREASURY DEPARTMENT, *March* 12, 1828.

SIR: In obedience to a resolution of the House of Representatives of the 8th instant, instructing the Secretary of the Treasury to inform the House—

1. What average amount will be annually required to discharge the whole of the national debt in 1835, when the last portion of it becomes redeemable, excepting the three per cents and the subscription to the United States Bank;

2. What amount will be so required to redeem the whole of the debt by that time, the three per cents only excepted;

3d. What will be the surplus of the present appropriation of ten millions remaining annually after discharging the whole of the redeemable debt according to the principle of calculations first above mentioned;

4. What will be the surplus of the present Sinking Fund remaining in 1835, after discharging the whole of the national debt except the three per cents;—

I have the honor to transmit two statements (marked A and B) which contain the information required, accompanied by a letter of the Register of the Treasury explanatory of the same.

I have the honor to be, very respectfully, sir, your most obedient servant,

RICHARD RUSH.

The Hon. the SPEAKER *of the House of Representatives.*

TREASURY DEPARTMENT, *Register's Office, March* 11, 1828.

SIR: I have the honor, in compliance with the reference to this office of the resolution of the House of Representatives of the 8th instant, to transmit two statements (marked A and B) presenting the information required by that resolution.

In relation to the proportion of principal and interest payable in each year, permit me to remark that, after ascertaining the annual average amount that would be required for principal, one moiety of that amount was considered as applicable on the 30th of June, the other on the 31st of December, in each of the eight years; to each moiety was added six months' interest on the several denominations of stock unpaid at the time; the result, however, as respects both the average annual amount, as well as the aggregate sum that may be required to discharge the debt, will be somewhat affected should payments on account of principal be applied oftener than semi-annually, or should a larger proportion be discharged on the 30th of June than on the 31st of December in any one year.

I have the honor to be, sir, with great respect, your obedient servant,

JOSEPH NOURSE, *Register.*

Hon. RICHARD RUSH, *Secretary of the Treasury.*

A.

Statement showing the "average amount that will be annually required to discharge the whole of the national debt in 1835, *when the last portion of it becomes redeemable, excepting the three per cents and the subscription to the United States Bank;" exhibiting also "the surplus of the present appropriation of ten millions which will remain annually after discharging the whole of the redeemable debt according to the principle of calculations" upon which the said average amount is ascertained.*

The sum that will be required to pay off the whole of the principal of the debt, (the three per cents and the United States Bank subscription excepted,) together with the quarterly accruing interest on all the stocks from the 1st of January, 1828, to the 31st of December, 1835, is	$63,342,957 50
The average annual amount, or one-eighth, is	7,917,869 68

The sums which will be annually required, and the surplus of the present appropriation of $10,000,000, are as follows, viz:

	The sums which will be annually required for principal and interest.		Surplus which will remain each year of the present appropriation.
In 1828	$9,079,374 67		$920,625 33
In 1829	8,725,996 27		1,274,003 73
In 1830	8,372,617 87		1,627,382 13
In 1831	8,019,239 47		1,980,760 53
In 1832	7,672,058 96		2,327,941 04
In 1833	7,491,042 25		2,508,957 75
In 1834	7,126,009 50		2,873,990 50
In 1835	6,856,618 51		3,143,381 49
	63,342,957 50	Total surplus	16,657,042 50
		Total payments	63,342,957 50
One-eighth	7,917,869 68		
Annual appropriation of ten millions for eight years			80,000,000 00

JOSEPH NOURSE, *Register.*

TREASURY DEPARTMENT, *Register's Office, March* 11, 1828.

B.

Statement showing the "average amount that will be annually required to discharge the whole of the national debt in 1835, *when the last portion of it becomes redeemable, the three per cents only excepted;" exhibiting also "the surplus of the present appropriation of ten millions which will remain annually after discharging the whole of the redeemable debt according to the principle of calculations" upon which the said average amount is ascertained.*

The sum that will be required to pay off the whole of the principal of the debt, (the three per cents only excepted,) together with the quarterly accruing interest on all stocks from the 1st of January, 1828, to the 31st of December, 1835, is	$68,838,031 59
The average annual amount, or one-eighth, is	8,604,753 94

The sums which will be annually required, and the surplus of the appropriation of $10,000,000, are as follows:

	Amount which will be required annually for payment of principal and interest.		Surplus which will remain each year of the present appropriation of $10,000,000.
In 1828	$9,941,249 39		$58,750 61
In 1829	9,535,379 95		464,620 05
In 1830	9,129,492 51		870,507 49
In 1831	8,723,614 07		1,276,385 93
In 1832	8,351,925 23		1,648,074 77
In 1833	8,024,326 69		1,975,673 31
In 1844	7,719,917 85		2,280,082 15

JOSEPH NOURSE, *Register.*

TREASURY DEPARTMENT, *Register's Office, March* 11, 1828.

20TH CONGRESS.] No. 888. [1ST SESSION.

IN FAVOR OF INCREASE OF DUTIES ON IMPORTS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 15, 1828.

Report of the Committee on the South Carolina and Georgia resolutions.

The Committee to whom were referred the resolutions of the Legislatures of South Carolina and Georgia in relation to the constitutionality and expediency of promoting American manufactures by means of tariff laws, ask leave to report:

That they have had the same under consideration, and perceive no cause to dissent from the construction which Congress have uniformly given to the Constitution of the United States in relation to this subject. Ever since the organization of the Federal Government in its present form, tariff laws have been in force; and at different periods subsequently additional laws have been enacted, having for their object not merely the raising of revenue, but the encouragement and protection of the shipping interest of the country. While this interest was in its infancy, very heavy discriminating duties on imports and tonnage, in favor of American ships, were imposed, which sometimes operated as an entire prohibition of importation in foreign vessels. These duties secured the building of American ships and the employment of American seamen, and rendered permanent and prosperous the commerce of our country. Nor were these discriminating laws repealed or modified until this great interest of the nation had acquired such strength as to render them unnecessary. Besides, large sums of money are annually appropriated to extend ample protection to the property and enterprise of our merchants in every quarter of the world. The constitutionality of these laws has never been questioned. The committee do not perceive that the power of Congress to extend similar protection and encouragement to manufactures is in any degree more limited or more doubtful. In fact, this power has been frequently exercised by Congress. The manufacture of many articles has been encouraged and protected by means of duties which have been imposed upon their importation; and these duties have been imposed avowedly for the purpose of protection to the American manufacturer.

Under these circumstances, your committee are of opinion that a practical construction has been given to the Constitution on this subject, by the successive decisions of the General Government, which cannot now be shaken.

If the result to which the committee have arrived be correct, the only remaining question is the expediency of the further interference of Congress in aid of the agriculture and manufactures of the country.

Experience has shown that the full protection of manufactures from foreign competition creates a competition in the home market, and the community are supplied with these articles so protected without any increase in price. The State of New Jersey has the means of contributing large quantities of the raw materials of iron, wool, and flax, and has already made very great advances in the manufactures of these and other articles. The cultivation and improvement of these resources have become essential to the prosperity of this State.

Believing that these important interests stand in need of further encouragement and protection, and that it is expedient that such protection should be extended to them, the committee ask leave to submit the following resolutions:

Resolved by the Council and General Assembly, That the Senators and Representatives in Congress from the State of New Jersey be, and they are hereby, requested to use their endeavors to procure the adoption of such measures as shall give effectual protection to the great staples of the United States, and to the manufactures of the same, particularly to those of iron, wool, flax, and hemp, and to such others as Congress in their wisdom may deem to require it.

Resolved, That the Governor be requested to cause a copy of the foregoing resolution to be sent to each of the Senators and Representatives in Congress from this State.

COUNCIL CHAMBER, *March* 4, 1828.

This report and resolutions having been three times read in the Council,
Resolved, That the same do pass.
By order of the Council:

ISAAC H. WILLIAMSON, *President.*

HOUSE OF ASSEMBLY, *February* 26, 1828.

This report and resolutions having been read in the House,
Resolved, That the same do pass.
By order of the House:

W. B. EWING, *Speaker.*

SECRETARY'S OFFICE, *March* 12, 1828.

I, Daniel Coleman, Secretary of the State of New Jersey, do certify the foregoing to be a true transcript of a report and resolutions of the Legislature of said State, passed as above dated, taken from the original now on file in my said office.

Given under my hand and seal of office, at the city of Trenton, the day and year last above written.

DAN'L COLEMAN.

20TH CONGRESS.] No. 889. [1ST SESSION.

AGAINST INCREASE OF DUTIES ON IMPORTS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 17, 1828.

To the honorable the Senate and House of Representatives of the United States of America in Congress assembled:

We, your petitioners, hardware manufacturers, smiths, and iron founders, respectfully show: *First.* That the existing tariff of duties on iron is to our different branches of business such an excessive burden that it has actually deprived us of any participation in the manufacturing of heavy articles of hardware; and should the existing high duties remain without modification they will continue to depreciate our business and lessen the consumption of iron in the United States, as will be shown by the following statements:

The duty on hardware is 25 per cent.; on the greatest part of the iron that the same is manufactured out of the present duty is 100 per cent., giving a protection to the foreign manufacturer of 75 per cent. against the domestic manufacturer, by making the raw material that much higher to the latter than it is to the former. The price of common English bar iron is about £7 to £9 per ton in Birmingham, the principal seat of heavy hardware manufactories; taking the medium, which would be £8, or $35 55, or a fraction less than a penny per pound, allowing 12 per cent. wastage, all those articles that cost a half penny per pound to manufacture are now introduced in the United States, at $50 55
Exchange, at 10 per cent..... 5 05
Commission, insurance, export duty, and port charges..... 2 50
Duty, 25 per cent. ad valorem, say..... 14 50
Freight..... 3 50

76 10

Second. The selling price of the same quality of iron is now, in the iron stores, the places from whence we are supplied, $5 50 per cwt., or $110 per ton, making to us the price of the raw material $33 45 per ton higher than this quality of hardware.

Take the above in view with the two following, and it will show that we are completely shut out of our own market by laws we are told were made for our protection. Such articles as cost 1 penny and 1½ penny per pound to manufacture, which include all those articles that could be manufactured here to the best advantage, but are now imported, and can be sold profitably at $107 20 per ton, or $2 80 less than the cost of the same quality of iron in most of our seaports; taking the three descriptions together, the average would be $107 20 per ton, as follows:

One ton of iron in Birmingham..... $35 55
Cost of manufacturing it, at one penny per pound..... 35 55
Duty, 25 per cent. ad valorem, say..... 20 50
Exchange, say ten per cent..... 7 10
Port charges, commission, and insurance..... 5 00
Freight..... 3 50

107 20

As the iron does not cost quite one penny per pound, it would make hardware a trifle lower; but the above is as near the truth as can be, exclusive of fractions. The above is applicable only to common bar-iron above the size of half-inch, round, square, or flat, above the size of hoop.

Third. Rods, round, square, slit, or rolled, from 3-16 to 8-16, cost, made of common English iron, from £9 to £15 per ton; average £12, or..... $53 33
Exchange, at 10 per cent..... 5 35
Commission, port charges, and export duty..... 4 00
Freight..... 3 50
The charges only are nearly 25 per cent., yet these sizes of iron are subject to the enormous duty of three cents per pound..... 68 20

Average cost price per invoice to the importer, per ton..... 134 38

Of which 150 per cent. nearly is duty and charges together, raising the raw material of our business to the present selling price of $9 per 112 pounds, whilst the same article costs the Birmingham manufacturer in his market only $2 66⅔ for the same quantity.

Then in those kinds of ware manufactured out of those materials of which one-half is labor and the other iron, the ware will stand thus:

A ton of iron costs in Birmingham..... $53 33
Cost of labor, &c., to manufacturers..... 53 33

106 66

Exchange, at ten per cent..... 10 66
Export duty, half per cent..... 51
Commission, two and a half per cent.; insurance, say one and a half..... 4 28
Dock and town dues, porterage, and other contingencies, say..... 2 50
Duty, 25 per cent. ad valorem..... 31 03
Freight, say..... 5 00

160 64

Or $19 36 less than the cost of the raw material in this country!!!

Fourth. Sheet iron, the average of which is, for single rolled, £12; double, £14; treble, £16 per ton.

Take the average, say £14, or	$62 22
Exchange, say 10 per cent	6 24
Export duty, commission, insurance, and port charges	5 00
Freight	3 30
Duties, 3 cents per pound	68 20
	144 96

Here, again, is a duty of more than 100 per cent., and, taking the cost for importation into consideration, will make the cost and charges, duties included, $82 74 on $62 22, the first cost, or 133 per cent. duty and charges. Again, one ton of frying pans costs from £20 to £24, say £22 per ton, or...

	$97 77
Exchange, say 10 per cent	9 77
Commission, insurance, port charges, &c.	6 00
Freight	3 50
Duty, 25 per cent. ad valorem	28 34
	145 38

Selling price of sheet iron at our seaports, $9 per cwt., or $180 per ton, or $34 62 more per ton than the manufactured article would cost in our seaports, which is within 93 cents of being as much as the foreign manufacturer gets for manufacturing the raw material into frying-pans; or, in other words, a ton of double sheet iron costs £14 in Birmingham; the manufacturer gets £8 or $35 55 to manufacture it into frying pans, and sells the same for $34 62 less, after paying all charges, than the domestic manufacturer can buy the raw material for.

Now, we simply ask your honorable bodies what would be thought of any foreign Parliament that would lay a duty of upwards of 100 per cent. on our raw cotton, but only 25 per cent. if manufactured into cotton cloth?

Fifth. Hoop iron costs from £9 to £13 per ton, according to the size taken.

The average, say £11, or	$48 88
Exchange, 10 per cent	4 90
Commission, insurance, port charges, &c., say	2 50
Freight	3 50
Duty, 3 cents per pound	68 20
	127 98

Or it costs $79 10 to import $48 88. The same reasons are applicable to hoop iron as a raw material, as to the above quality. The fact is, we are prevented from taking any share in the remanufacturing of hoop or most other iron, the existing tariff being so enormously high on all kinds of iron.

Sixth. Hammered iron, including Russia, Swedish, and English, the cost of which is from £13 to £17 per ton, say £15 the average, or

	$66 66
Exchange, 10 per cent	6 66
Port charges, commission, and insurance	5 00
Freight	3 00
Duty	18 00
	99 32

Seventh. Cost of manufacturing a ton of iron from the pig in the United States, 28 cuts of pig, at $1 40 per cwt

	$39 00
340 bushels of charcoal, at 4 cents per bushel, (when the manufacturer has to buy)	13 60
Forgemen's wages for drawing the same	9 00
	61 60

Coals, if made on the place, do not cost more than 2½ cents per bushel, and the profits on the pig are equal to hauling to market. Selling price of the same at our seaports, $100 to $110 per ton, leaving the enormous profit to the manufacturer of upwards of $40 per ton, or from 70 to 80 per cent.—four times that of your petitioners.

Eighth. There are some articles of hardware or manufactures from iron on which there is a specific duty; such as cutting-knives, sledge hammers, anchors, chain cables, &c.; on the latter the duty is 3 cents per pound. The average price of them in England is £1 12*s.*, or 7¼ cents per pound; the average price here is 10 cents, or $2\frac{7}{8}$ cents per pound higher than in England. Chain iron costs the British manufacturer £12, or $53 33, free from fag or deficient ends on the bars; chain iron costs in the United States $120, with fag ends on the bars that waste at least 3 per cent.; or, in other words, the British manufacturer pays $2 $66\frac{5}{8}$ for 112 pounds of iron, free from deficient ends; whilst the domestic manufacturer pays $6 for the same quantity, or $3 $33\frac{3}{8}$ more than the foreign manufacturer, and has a loss of 3 per cent wastage on his iron. Foreign iron is free from this loss. So far are we from receiving any benefit from the duty that we actually work up 112 pounds of iron into chain for $33\frac{3}{8}$ cents less than the English manufacturer, although our coals cost us double what they do in England. Although we are willing to supply the wants of our shipping merchants for less than the foreigner, yet they are made to pay a bounty to the iron manufacturers of $3 $33\frac{3}{8}$ for every 100 pounds of chain they use about their ships. We have here taken the article of manufacture that pays the greatest rate of duty, to show that we have no participation in the benefit of the duty; but if it benefits any it is the iron-makers.

Ninth. In the report made to one of the branches of Congress, a proposition of an additional duty of $7 per ton on bar iron manufactured by rolling, (which, on the sizes included, is nearly 20 per cent.,) and an additional duty of 12½ on certain articles of hardware, is made. Now, the adoption of this new duty,

were it to take place, would still be an additional protection of 7½ per cent. to the Birmingham manufacturer on those articles of hardware the report proposes to increase the duty on, and of 19¾ per cent. on those articles that would remain as they are under the existing tariff.

Tenth. On account of the number of articles that cannot be manufactured and kept for sale, there is still a great quantity of iron wanted. We believe more than one-half is imported; and it is out of the power of our iron-makers to supply the demand. The sale of their iron is so great that they leave what is called a fag end at each of their bars, which is an imposition on us, and causes us at least a loss of 3 per cent., and of which all foreign iron is free. They are not willing to draw any heavy piece of iron, as is done in all other countries, by which a great deal of labor is saved; neither can we be supplied from other countries on account of the enormous duty. We are also precluded from participating in the supply of the West Indian and South American markets, which we could supply in many articles if we could obtain iron at a reasonable price. The duties themselves are of no great advantage to the iron manufacturers, as they cannot supply the demand; they, of course, get more than they would if iron were free; but were it free there would still be a demand for all their iron, and at a reasonable profit. Much of what is now imported in the shape of hardware would be imported in the bar, and would be manufactured here, and set our shops in the motion they ought to be kept in, and raise our wages and profits to the level of the British manufacturers; for, although cotton weavers and woolen manufacturers' wages are higher here than in Great Britain, your petitioners can prove that both their profits and journeymen's wages are lower here than there, which shows sufficiently that our business is more depressed than most if not all others.

Your petitioners humbly pray your honorable bodies to modify the existing tariff so that the duty on bar, bolt, hoop, sheet, rod, and all descriptions of iron manufactured by rolling, the cost of which is $53 33, or under, be reduced to 25 per cent. ad valorem, the same as the duty on hardware, without any addition for small sizes, as your petitioners conceive that the duty on raw materials should never exceed that on manufactured articles.

2d. That as your petitioners believe that the charges arising on the importations of hammered and such qualities of rolled iron as cost upwards of $53 33 are sufficient protection to the manufacturers, (if protected they must be,) they pray that the existing duty be reduced to $6 per ton.

3d. That the duty on steel be reduced to fifty cents per 112 pounds, as the American steel is now selling for 7 cents per pound, and the foreign from 16 to 23 cents; which is sufficient proof of the difference of quality.

4th. As pig iron is an article in a very raw state, and those of your petitioners engaged in the foundry business have found it to be their interest to pay from $50 to $70 per ton for a certain proportion of foreign pig iron, whilst they could buy domestic at $30 to $45 per ton, which shows a difference in quality, and is not a matter of competition; therefore your petitioners pray that the duty on pig iron be reduced to $5 per ton.

5th. That the duties or iron wire be reduced to 25 per cent. ad valorem, the same as the duties on hardware.

Your petitioners are persuaded that the above reduction of duties would not only be their interest, but would be a national benefit, and would neither injure the revenue nor the iron manufacturer, (as the latter would have a greater demand than he could supply.) The revenue would not be injured, because the importation of iron would be much increased; the shipping merchant would have much more freight than at present, and the nation be benefitted by the price of many things being reduced to the consumer. But as your petitioners claim, what has never been denied to them, that is, being the most useful mechanics in the world, being the tool-makers and machinists for all other trades, they consider iron in all its different shapes, of bar, bolt, hoop, sheet, rod, &c., a raw material, and therefore think that it ought not to be charged with half the duty that is charged on hardware. They further state that an additional duty on hardware would be injurious both to them and to the consumer. Under the existing duty the consumer evades the paying thereof by all the fair means he can devise. Your petitioners will particularize, for instance, the article of chain cables, the cost of which, for a ship of 400 tons, is about $1,800; a third part of that amount goes either for duties, or is paid as a bounty to the iron manufacturer. In order to evade this taxation, the merchant buys one set of chain of domestic manufacture or English, on which he pays the duty in either case; when he builds a second ship, he replaces them by a new set bought in England, on which he saves $600 that he would have paid either in bounty or duty. The new set he keeps on board the first ship; the old ones are landed and are used for the second ship, which may afterwards pass to a third, and so on to an infinitum; and by these lawful means one set of chains, paying the duty, or of domestic origin, might be used by twenty ships or more successively; nineteen sets out of the twenty would be bought in England, and of course would be free of duty or bounty. This sufficiently illustrates the doctrine that the system of high or prohibitory duties defeats the end it was intended to obtain. If iron were free, the merchants would buy their chain in their own market, and the manufacturing of them be secured to the domestic manufacturer. But under the present Chinese system of prohibitory duty, both the making of the iron and the chains is lost to the country, which can by no means benefit the iron manufacturer. With regard to the iron used in the hulk and rigging of a ship, amounting to about three thousand dollars, one thousand of which is paid in duties, or as a bounty to the iron manufacturers; yet this class of favorites of the tariff is not, in the United States, as one to a thousand to the class of your petitioners. Why then should such partial laws be suffered to exist one day longer under a Government professing republican principles?

Your petitioners hope that your honorable bodies will take their petition into consideration, and act thereon in your wisdom, like the representatives and legislators of a great and growing nation, and not like the representatives and legislators of any separate section or interest, but always aiming at the welfare of the great whole; and your petitioners will ever pray, &c.

PHILADELPHIA, *March* 18, 1828.

20TH CONGRESS.] No. 890. [1ST SESSION.

IMPORT OF IRON AND MACHINERY FREE OF DUTY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 17, 1828.

To the Senate and House of Representatives of the United States in Congress assembled:

The memorial of the President and Directors of the Baltimore and Ohio Railroad Company respectfully showeth: That your memorialists have it in contemplation and are at this time taking measures to construct a railroad, with at least two sets of tracks, from the city of Baltimore to the Ohio river, which will, it is estimated, unavoidably require not less than fifteen thousand tons of malleable iron.

Your memorialists, taking into consideration the actual quantity of this indispensable article now annually manufactured in our own country, and further considering the numerous lines of railroads already projected in different parts of the United States, are confirmed in the opinion that it will be difficult, if not impossible, to procure amongst ourselves a sufficient quantity for these numerous undertakings, and consequently, that an enormous enhancement of the present price must be the inevitable consequence, unless supplies to a considerable extent be drawn from abroad; which enhancement of an article so necessary both in the manufacturing and agricultural operations of the country would manifestly be injurious to both these important interests.

Your memorialists are persuaded that so enlightened a body as the representatives of the people of the United States are fully aware of the vast importance of the undertaking in which this company have embarked. It is, indeed, an enterprise in which every section of our country has a deep and vital interest. Its direct effect upon the prosperity of the nation, if successfully accomplished, and its beneficial influence in perpetuating the happy union of these States, is perceived and appreciated by all; at the same time it should not be overlooked that this great work, of such deep national concernment, and pregnant with such important consequences, has been undertaken, and so far conducted, by individual enterprise, and is still almost exclusively dependent upon private resources for its accomplishment.

Under these considerations, your memorialists take leave respectfully to ask of the National Legislature for the passage of an act authorizing the Baltimore and Ohio Railroad Company to import from abroad, if it should be found needful, such supplies of iron and iron machinery as may be requisite for the construction of the proposed road free of duty.

In presenting these views of an o bject essentially national to the representatives of their country, your memorialists rely on the wisdom and patriotism of Congress to afford such relief as may be deemed proper, either by an exemption from duty, or by a drawback upon the material actually used in the construction of the road; at the same time they confidently believe that, in granting the indulgence now asked for, the best interests of the nation will be substantially promoted, whilst no injury whatever will accrue, either to the manufacturing, agricultural, or other important interests of the country.

Signed on behalf of the Baltimore and Ohio Railroad Company.

P. E. THOMAS, *President.*

20TH CONGRESS.] No. 891. [1ST SESSION.

REDUCTION OF DUTY ON IRON AND STEEL.

COMMUNICATED TO THE SENATE MARCH 19, 1828.

To the honorable the Senate and House of Representatives of the United States in Congress assembled:

We, your petitioners, hardware manufacturers, smiths, and iron founders, respectfully show: *First.* That the existing tariff of duties on iron is to our different branches of business such an excessive burden that it has actually deprived us of any participation in the manufacturing of heavy articles of hardware; and should the existing high duties remain without modification they will continue to depreciate our business and lessen the consumption of iron in the United States, as will be shown by the following statements:

The duty on hardware is 25 per cent. on the greatest part of the iron that the same is manufactured out of; the present duty is 100 per cent., giving a protection to the foreign manufacturer of 75 per cent. against the domestic manufacturer, by making the raw material that much higher to the latter than it is to the former. The price of common English bar iron is about £7 to £9 per ton in Birmingham, the principal seat of heavy hardware manufactories. Taking the medium, which would be £8, or $35 55, or a fraction less than a penny per pound, allowing 12 per cent. wastage, all those articles that cost halfpenny per pound to manufacture are now introduced in the United States, at $50 55
Exchange, at 10 per cent 5 05
Commission, insurance, export duty, and port charges 2 50
Duty, 25 per cent. ad valorem, say 14 50
Freight 3 50

76 10

Second. The selling price of the same quality of iron is now, in the iron stores, the places from whence we are supplied, $5 50 per cwt., or $110 per ton, making to us the price of the raw material $33 45 per ton higher than this quality of hardware.

Take the above in view with the two following, and it will show that we are completely shut out of our own market by laws we are told were made for our protection. Such articles as cost one penny and one and one-half penny per pound to manufacture, which includes all those articles that could be manufactured here to the best advantage, but are now imported, and can be sold profitably at $107 20 per ton, or $2 80 less than the cost of the same quality of iron in most of our seaports, taking the three descriptions together, the average would be $107 20 per ton, as follows:

One ton of iron in Birmingham	$35 55
Cost of manufacturing it, at one penny per pound	35 55
Duty, 25 per cent. ad valorem, say	20 50
Exchange, say 10 per cent	7 10
Port charges, commission, and insurance	5 00
Freight	3 50
	107 20

As the iron does not cost quite one penny per pound, it would make hardware a trifle lower, but the above is as near the truth as can be, exclusive of fractions. The above is applicable only to common bar iron above the size of half-inch, round, square, or flat, above the size of hoop.

Third. Rods, round, square, slit, or rolled, from 3-16 to 8-16 cost, made of common English iron, are from £9 to £15 per ton, average £12, or	$53 33
Exchange, at 10 per cent	5 35
Commission, port charges, and export duty	4 00
Freight	3 50
The charges only are nearly 25 per cent., yet these sizes of iron are subject to the enormous duty of three cents per pound	68 20
Average cost price per invoice to the importer, per ton	134 38

Of which 150 per cent. nearly is duty and charges together, raising the raw material of our business to the present selling price of $9 per 112 pounds, whilst the same article costs the Birmingham manufacturer, in his market, only $2 66⅝ for the same quantity.

Then in those kinds of ware manufactured out of those materials, of which one-half is labor and the other iron, the ware will stand thus:

A ton of iron costs in Birmingham	$53 33
Cost of labor, &c., to manufacturers	53 33
	106 66
Exchange, at 10 per cent	10 66
Export duty, ½ per cent	51
Commission, 2½ per cent.; insurance, say 1½	4 28
Dock and town dues, porterage, and other contingencies, say	2 50
Duty, 25 per cent. ad valorem	31 03
Freight, say	5 00
	160 [illegible]

Or $19 36 less than the cost of the raw material in this country!!!

Fourth. Sheet iron, the average of which is, for single rolled, £12; double, £14; treble, £16 per ton. Take the average, say £14, or	$62 22
Exchange, say 10 per cent	6 24
Export duty, commission, insurance, and port charges	5 00
Freight	3 30
Duties, 3 cents per pound	68 20
	144 96

Here, again, is a duty of more than 100 per cent., and, taking the cost for importations into consideration, will make the cost and charges, duties included, $82 74 on $62 22, the first cost, or 133 per cent. duty and charges.

Again: one ton of frying pans cost from £20 to £24, say £22 per ton, or	$97 77
Exchange, say 10 per cent	9 77
Commission, insurance, port charges, &c	6 00
Freight	3 50
Duty, 25 per cent. ad valorem	28 34
	145 38

Selling price of sheet iron at our seaports, $9 per cwt., or $180 per ton, or $34 62 more per ton than the price of the manufactured article would cost in our seaports, which is within 93 cents of being as much as the foreign manufacturer gets for manufacturing the raw material into frying pans; or, in other words, a ton of double sheet iron costs £14 in Birmingham, the manufacturer gets £8 or $35 55 to manufacture it into frying pans, and sells the same for $34 62 less, after paying all charges, than the domestic manufacturer can buy the raw material for!!!

Now, we simply ask your honorable bodies what would be thought of any foreign Parliament that would lay a duty of upwards of 100 per cent. on our raw cotton, but only 25 per cent. if manufactured into cotton cloth?

Fifth. Hoop iron costs from £9 to £13 per ton, according to the size taken. The average, say £11, or	$48 88
Exchange, 10 per cent	4 90
Commission, insurance, port charges, &c., say	2 50
Freight	3 50
Duty, 3 cents per pound	68 20
	127 98

Or it costs $79 1C to import $48 88. The same reasons are applicable to hoop iron as a raw material, as to the above quality. The fact is, we are prevented from taking any share in the re-manufacturing of hoop or most other iron, the existing tariff being so enormously high on all kinds of iron.

Sixth. Hammered iron, including Russia, Swedish, and English, the cost of which is from £13 to £17 per ton, say £15 the average, or	$66 66
Exchange, 10 per cent	6 66
Port charges, commission, and insurance	5 00
Freight	3 00
Duty	18 00
	99 32

Seventh. Cost of manufacturing a ton of iron from the pig in the United States, 28 cuts of pig at $1 40 per cwt	$39 00
340 bushels of charcoal, at 4 cent per bushel, (when the manufacturer has to buy)	13 60
Forgemen's wages for drawing the same	9 00
	61 60

Coals, if made on the place, do not cost more than 2½ cents per bushel, and the profits on the pig are equal to hauling to market. Selling price of the same at our seaports $100 to $110 per ton, leaving the enormous profit to the manufacturer of upwards of $40 per ton, or from 70 to 80 per cent.—four times that of your petitioners!!!

Eighth. There are some articles of hardware, or manufactures from iron, on which there is a specific duty, such as cutting knives, sledge hammers, anchors, chain cables, &c.; on the latter the duty is three cents per pound. The average price of them in England is £1 12, or 7⅛ cents per pound; the average price here is 10 cents, or 2⅞ cents per pound higher than in England. Chain iron costs the British manufacturer £12, or $53 33, free from fag or deficient ends on the bars; chain iron costs in the United States $120, with fag ends on the bars that waste at least 3 per cent.; or, in other words, the British manufacturer pays $2 66⅝ for 112 pounds of iron, free from deficient ends, whilst the domestic manufacturer pays $6 for the same quantity, or $3 33⅜ more than the foreign manufacturer, and has a loss of 3 per cent. wastage on his iron. Foreign iron is free from this loss. So far are we from receiving any benefit from the duty, that we actually work up 112 pounds of iron into chain for 33⅜ less than the English manufacturer, although our coals cost us double what they do in England. Although we are willing to supply the wants of our shipping merchants for less than the foreigner, yet they are made to pay a bounty to the iron manufacturers of $3 33⅜ for every 100 of chain they use about their ships. We have here taken the article of manufacture that pays the greatest rate of duty to show that we have no participation in the benefit of the duty; but if it benefits any it is the iron-makers.

Ninth. In the report made to one of the branches of Congress a proposition of an additional duty of $7 per ton on bar iron manufactured by rolling, (which on the sizes included is nearly 20 per cent.,) and an addition of 12½ on certain articles of hardware is made. Now, the adoption of this new duty, were it to take place, would still be an additional protection of 7½ per cent. to the Birmingham manufacturer on those articles of hardware the report proposes to increase the duty on, and of 19¾ per cent. on those articles that would remain as they are under the existing tariff.

Tenth. On account of the number of articles that cannot be manufactured and kept for sale, there is still a great quantity of iron wanted. We believe more than one-half is imported; and it is out of the power of our iron-makers to supply the demand. The sale of their iron is so great that they leave what is called a fag end at each of their bars, which is an imposition on us, and causes us at least a loss of 3 per cent., and of which all foreign iron is free. They are not willing to draw any heavy piece of iron, as is done in all other countries, by which a great deal of labor is saved; neither can we be supplied from other countries on account of the enormous duty. We are also precluded from participating in the supply of the West Indian and South American markets, which we could supply in many articles if we could obtain iron at a reasonable price. The duties themselves are of no great advantage to the iron manufacturers, as they cannot supply the demand; they of course get more than they would if iron were free; but were it free, there would still be a demand for all their iron, and at a reasonable profit. Much of what is now imported in the shape of hardware would be imported in the bar, and would be manufactured here, and set our shops in the motion they ought to be kept in, and raise our wages and profits to the level of the British manufacturers; for although cotton weavers and woolen manufacturers' wages are higher here than in Great Britain, your petitioners can prove that both their profits and journeymen's wages are lower here than there, which shows sufficiently that our business is more depressed than most if not all others.

Your petitioners humbly pray your honorable bodies to modify the existing tariff so that the duty on bar, bolt, hoop, sheet, rod, and all descriptions of iron manufacture by rolling, the cost of which is $53 33, or under, be reduced to 25 per cent. ad valorem, the same as the duty on hardware, without any addition for small sizes, as your petitioners conceive that the duty on raw materials should never exceed that on manufactured articles.

2d. That as your petitioners believe that the charges arising on the importations of hammered and

such qualities of rolled iron as cost upwards of $53 33, are sufficient protection to the manufacturers, (if protected they must be,) they pray that the existing duty be reduced to $6 per ton.

3d. That the duty on steel be reduced to fifty cents per 112 pounds, as the American steel is now selling for seven cents per pound, and the foreign from sixteen to twenty-three cents, which is sufficient proof of the difference of quality.

4th. As pig iron is an article in a very raw state, and those of your petitioners engaged in the foundry business have found it to be their interest to pay from $50 to $70 per ton for a certain portion of foreign pig iron, whilst they could buy domestic at $30 to $45 per ton, which shows a difference in quality, and is not a matter of competition, therefore your petitioners pray that the duty on pig iron be reduced to $5 per ton.

5th. That the duties on iron wire be reduced to 25 per cent. ad valorem, the same as the duties on hardware.

Your petitioners are persuaded that the above reduction of duties would not only be their interest, but would be a national benefit, and would neither injure the revenue nor the iron manufacturer, (as the latter would have a greater demand than he could supply.) The revenue would not be injured, because the importation of iron would be much increased; the shipping merchant would have much more freight than at present, and the nation be benefitted by the price of many things being reduced to the consumer. But as your petitioners claim what has never been denied to them, that is, being the most useful mechanics in the world, being the tool-makers and mechanists for all other trades, they consider iron, in all its different shapes of bar, bolt, hoop, sheet, rod, &c., a raw material, and therefore think that it ought not to be charged with half the duty that is charged on hardware. They further state that an additional duty on hardware would be injurious both to them and to the consumer. Under the existing duty, the consumer evades the paying thereof by all the fair means he can devise. Your petitioners will particularize, for instance, the article of chain cables, the cost of which, for a ship of 400 tons, is about $1,800; a third part of that amount goes either for duties or paid as a bounty to the iron manufacturer. In order to evade this taxation, the merchant buys one set of chain of domestic manufacture or English, on which he pays the duty in either case; when he builds a second ship, he replaces them by a new set bought in England, on which he saves $600 that he would have paid either in bounty or duty. The new set he keeps on board the first ship, the old ones are landed and are used for the second ship, which may afterwards pass to a third, and so on to an infinitum; and by these lawful means one set of chains, paying the duty, or of domestic origin, might be used by twenty ships or more successively; nineteen sets out of the twenty would be bought in England, and of course would be free of duty or bounty. This sufficiently illustrates the doctrine that the system of high or prohibitory duties defeats the end it was intended to obtain. If iron were free, the merchants would buy their chain in their own market, and the manufacturing of them be secured to the domestic manufacturer. But under the present Chinese system or prohibitory duty, both the making of the iron and the chains is lost to the country, which can by no means benefit the iron manufacturer. With regard to the iron used in the hulk and rigging of a ship, amounting to about three thousand dollars, one thousand of which is paid in duties or as a bounty to the iron manufacturers, yet this class of favorites of the tariff are not, in the United States, as one to a thousand to the class of your petitioners. Why then should such partial laws be suffered to exist one day longer under a Government professing republican principles?

Your petitioners hope that your honorable bodies will take their petition into consideration, and act thereon in your wisdom, like the representatives and legislators of a great and growing nation, and not like the representatives and legislators of any separate section or interest, but always aiming at the welfare of the great whole; and your petitioners will ever pray, &c.

PHILADELPHIA, *March* 10, 1828.

20TH CONGRESS.] No. 892. [1ST SESSION.

IN FAVOR OF INCREASE OF DUTIES ON IMPORTS OF SLATE.

COMMUNICATED TO THE SENATE MARCH 19, 1828.

To the honorable the Senate and House of Representatives of the United States in Congress assembled:

The memorial of the Northampton Slate Quarry Company, of the State of Pennsylvania, respectfully represents: That your memorialists have for several years been engaged in the manufacture of slate for roofing, and would yet have been in the prosecution of the manufacture but that an influx of foreign slate has paralyzed their efforts, and instead of realizing an indemnity for their labor and the capital employed, they have met with a serious diminution in their investments in this pursuit.

The cause of this loss has arisen from the low rate of duty on the article as now fixed by law, the effect of which is to encourage the labor of foreigners, who will not permit the product of any labor of our fellow-citizens to be imported into their own country.

Your memorialists, therefore, respectfully ask of you a protective impost on the article of slate, suggesting, with due deference, the propriety of making the duty a specific instead of an *ad valorem* duty, for that the intrinsic value of the material out of which the article is made is scarce anything, and the labor in its manufacture in Wales, whence it is principally imported, is little more.

Your memorialists beg to suggest that a specific duty laid on per ton weight, or thousand tale, would afford such protection as to place the laborer in Wales and the laborer in Pennsylvania upon an equal footing, and tend to save to this country a portion of its capital otherwise disbursed abroad.

All which is respectfully submitted.

By order of the Board of Managers of the Northampton Slate Quarry Company of Pennsylvania.

DANIEL GROVES, *President.*

GEO. BILLINGTON, *Secretary.*

20TH CONGRESS.] No. 893. [1ST SESSION.

IN FAVOR OF INCREASE OF DUTIES ON IMPORTS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 20, 1828.

To the Senate and House of Representatives of the United States in Congress assembled:

The petition of the subscribers, citizens of the county of Alleghany, Pennsylvania, humbly showeth: That your petitioners reside in a district highly favorable to the business of growing wool and of manufacturing woolen cloth; they therefore respectfully claim the protection of both interests, so far as may be compatible with the general welfare. In regard to the manufacturing of *woolens*, they have the express admission of the committee by whom the late tariff bill was reported, "that if the cost of the wool and the cost of the foreign materials used for dyeing were the same in both countries, the process of manufacturing wool into cloth fitted for the market can be performed as cheap in this country as it can in England." It is admitted, on all hands, that under a fair protection the manufacture of woolens would be very soon extended, so as wholly to supply the country with American clothing. From these facts it is obvious that the encouragement of the manufacture cannot have the effect of a tax on the consumer, whether he be poor or rich; that the home competition would in this, as in every other instance of manufacture by machinery, regulate and reduce the price to the consumer. This has been the effect of the high duty on cotton goods, and no reason has been or can be given why a like cause should not produce like effects in regard to woolens. It is also clear, from the showing of the committee, that the price of woolen cloths can only be raised to the consumer by increasing the price of wool and of the dyeing materials used in its manufacture. If, then, the objection of taxing the consumer be a reason against the increase of duties on imported articles, it lies not against the duty upon cloth, "which is *made* in this country as cheap as in England," but applies, in substance and effect, to the "wool and dye stuffs" entering into its fabrication. And the report of the committee saves the *manufacture* from a stale objection, which the experience of the nation has refuted, and turns it, in effect, against the higher duties upon *raw wool*. But your memorialists have no fear of oppression from high duties upon either *wool* or *woolens;* nor have they ever heard a poor man complain of or deprecate the protection of the national industry by which he finds employment. The rich may, as they have often done, speak in his name against such protection; but they have spoken without authority, and misrepresented his wishes. We are anxious that the wool-growing interest of the country should be amply and decidedly protected; and that, for this purpose, a high duty should be laid on all foreign wool for which American wool can be substituted in the manufacture of cloth. Our wishes in behalf of the wool-grower have never led us to desire the destruction of manufactories which he cannot supply, and in the protection of which the nation has a deep interest. The prosperity of the wool-grower must depend upon the extent of the market for his wool. American wool cannot be exported to foreign countries; it must be consumed at home. The value of wool must, therefore, be regulated altogether by the *demand* at the manufactories, and that *demand* will be increased in proportion to the extent of the manufacture. If, then, the *manufacture* of cloth is carried on as cheaply in the United States as in Great Britain, and it is only depressed by a difference in the cost of the raw material, the *cloth* may be protected to any extent without the least danger of oppression or monopoly. Let it, therefore, be extensively and amply protected, and the market thereby extended for American wool; and if a further protection to wool, which all men desire, be calculated to embarrass the manufacturer, let the duty upon the cloth be raised proportionably, and the nation *clothe itself* from its *own flocks* instead of depending upon foreign countries.

With these sentiments, your memorialists earnestly pray that the amendment to that part of the tariff which relates to woolens, offered by Mr. Mallary, chairman of the Committee on Manufactures, and an abstract of which is subjoined, may be adopted by Congress.

TARIFF.—DUTIES PROPOSED IN THE BILL REPORTED BY THE COMMITTEE ON MANUFACTURES.

1. On raw wool 7 cents per pound, and 40 per cent. ad valorem until the 30th of June, 1829, and after that to be increased 5 per cent. annually until it amounts to 50 per cent.
2. On manufactures of wool, or of which wool is a component part, (except blankets, worsted stuff goods, bombazines, hosiery, mits, gloves, caps, and bindings,) the actual value of which at the place whence imported shall not exceed 50 cents the square yard, sixteen cents the square yard.
3. Exceeding 50 cents and not exceeding 100 cents per square yard, forty cents the square yard.
4. Exceeding $1 and not exceeding $2 50, one dollar per square yard.
5. Exceeding $2 50 and not exceeding $4, to be deemed to have cost $4, and to pay a duty of forty per cent. ad valorem.
6. Exceeding $4, a duty of *forty-five per cent. ad valorem.*

MR. MALLARY'S AMENDMENT.

To strike out the foregoing provisions of the committee's bill and insert as follows:

1. On raw wool, costing at the place whence imported more than 8 *cents per pound*, 20 cents per pound until 30th of June, 1829; after which time 2½ cents per pound to be added annually until it amounts to 50 cents.
2. On all manufactures of wool, or of which wool is a component part, (except as in the committee's bill,) the actual value of which at the place whence imported does not exceed 50 cents the square yard, to be deemed to have cost 50 cents per square yard, and to pay 40 per cent. until 30th of June, 1829; after which 5 per cent. to be added annually until it amounts to 50 per cent.
3. Exceeding 50 cents and not exceeding $2 50 the square yard, to be deemed to have cost $2 50, and to be charged as in this section before provided.
4. Exceeding $2 50 and not exceeding $4, to be deemed to have cost $4, and to be charged as in this section before provided.

5. Exceeding $4 and not exceeding $6, to be deemed to have cost $6, and to be charged as in this section before provided.

6. Exceeding $6, to pay 40 per cent. ad valorem, to be increased annually 5 per cent. until it amounts to *fifty per cent.*

20TH CONGRESS.] No. 894. [1ST SESSION.

AGAINST INCREASE OF DUTIES ON IMPORTS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 21, 1828.

ANTI-TARIFF MEETING IN SUMTER DISTRICT.

An adjourned meeting of the citizens of Sumter district (S. C.) was held at the court-house, on the 3d day of September, to receive the report of the committee appointed to draught a memorial to Congress on the subject of the proposed tariff on woolens. Colonel SPANN resumed the chair, and the meeting being organized, the following report of the committee was submitted by its chairman, the Hon. STEPHEN D. MILLER:

To the honorable the Senate and House of Representatives of the United States of America in Congress assembled:

Your memorialists respectfully show: That they are a portion of the citizens of the Union, and parties to the contract by which the Government of the United States was organized. As citizens, they have a right to expect that the General Government will respect their interests; as parties, they have a right to put their own honest and deliberate construction upon the great compact which binds together the various interests and communities within these United States.

They trust, because they are not in the habit of pressing their claims upon the General Government or continually asking favors, that, nevertheless, their attachments are as strong as any portion of this Union to the Federal Government.

Your memorialists beg leave to state that they are engaged in agriculture: principally in the cultivation of cotton as a staple for sale; that the low price of that article now makes the capital of those engaged in its cultivation almost a dead one. After paying the necessary expenses incident to their plantations, it requires the most rigid industry and economy to save their property from going into the hands of the sheriff. It is believed that no part of the Union is more depressed or derives less benefit from the capital invested than that engaged in cotton plantations.

No State is more attached to her own institutions than South Carolina; no one has more heartily sustained the General Government. In 1801 she sacrificed the political pretensions of one of her most illustrious sons to the great constitutional principles which we now maintain. We have, therefore, derived but little pecuniary assistance from the General Government. During the revolutionary war our district was the theatre of hostilities. Great Britain complimented us so far as to direct her operations to its almost entire destruction and devastation; yet that bounty conferred by Congress on the revolutionary soldiers never reached MARION'S or SUMTER'S men. This State pays, at this time, a very large sum of money to her revolutionary pensioners. No murmur is heard from us because the funds of the General Government are applied in payment of the northern regulars. We were particularly operated upon by the restrictive measures antecedent to the last war. We yielded a cheerful support to the general cause, and when, finally, war was declared, we embarked with the utmost zeal in its prosecution. When other States were crippling the operations of the General Government our Legislature assumed and paid our quota of the direct tax, and raised a brigade of troops to assist in the defence of our shores from the ravages of the conquerors of Bonaparte. We refer to these historical facts not as conferring merit upon us, but to repel a belief that we are influenced in our present opposition to certain powers claimed by Congress by factious or revolutionary views. Our creed is the same now that it was in 1798, and it is a minor point with us who administers the Government so that it is administered upon the constitutional principles which brought the republican party into power. The unmeasured and unmurmuring contributions heretofore paid to our grandparent, the General Government, proves how little we regard money, how much we regard national character. When has South Carolina asked a favor from the General Government? When has she received one? We have uniformly looked to our own industry and our own State institutions as the means of improving our condition. The people of this State would scarcely feel or know the existence of the General Government but for our foreign relations, in which the Carolinian character is lost in the United States citizen. "Let us alone" is now the sole prayer of your memorialists.

At the last session of Congress a bill passed the House of Representatives having for its professed object the protection of the manufacture of woolen cloths. We owe it to the Constitution, we owe it to our own interests, and we think we owe it to the permanency of the Union, to remonstrate against the principle and policy of that bill. We deny that Congress has the right to prohibit the importation of foreign articles with the direct view to the protection of domestic manufactures. This power was not directly delegated to Congress, nor can it fairly be claimed as an incidental one. A power to regulate commerce does not imply a power to annihilate it. The very language used supposes the existence of commerce. The principle upon which the prohibitory system is founded leads to its utter destruction. An embargo having for its object a permanent confinement of our products to our own market would be constitutional or not, dependent upon the motive for its adoption. If it were adopted with a view to compel foreign nations to concede a reciprocity of commercial privileges, it would be legitimate, as a mean incident to the power to regulate commerce. An embargo to abolish all commerce, and compel an

inter-exchange of commodities between citizens of this Union, with a view to the protection of domestic manufactures, would be unconstitutional—

1st. Because no direct power to impose an embargo is given. It cannot be claimed as an incident to the power to regulate commerce. It not only is not incident to the power to regulate, but it is at war with the power given in the very clause.

2d. If Congress had all power not reserved, it might fairly be shown that the assumed absolute sovereignty of the Government in this particular was limited by the insertion of this clause; since giving the power supposes it would be used. A direction to regulate commerce imposes on it a duty to preserve, not to destroy.

A total prohibition of all foreign importations is liable to the same objections. If Congress can furnish a partial protection by a partial prohibition, it can extend, and the same policy will make it extend, the principle to a total prohibition, and thereby abolish all commerce. This we maintain Congress has no right to do.

The only other clause which is supposed to confer this power is the revenue clause. We deny that Congress has the right to lay a direct tax to protect domestic manufactures, or an impost or excise for this purpose. The power to tax is given to pay the debts and provide for the common defence and general welfare. This is not an absolute and undefined power, and we respectfully submit that no substantive power is given by this clause, save the power of taxation, which is limited to the demand of funds necessary to fulfil the purposes for which specific powers are given. Congress has not the naked power to borrow money, or create a debt for the sole purpose of laying a tax to pay the debt; but being in debt according to some of the express powers of Congress, then the right to lay the tax is legitimately called into action. Nor do the other limitations of the use of the taxing power give any substantive power. They only constitute Congress trustees to lay out the funds, *not* according to their discretion, *but* for the purposes, *and those alone*, designated in the list of the powers of the General Government. It is perfectly fair in testing this power to negative its existence by its liability to abuse. It is fair to suppose that the convention would not have adopted a constitution with the power to do so much evil, when they were so cautious in specifying the powers to do good. If Congress has the power to lay imposts, &c., for any purpose which its wisdom regards as conducive to the general welfare, it follows as a fair inference that the right of private property does not exist in this country. Congress is then supreme, and the only security the citizen has for his estate and his rights is the will of a majority of Congress. A single illustration: A, B, and C, merchants in Boston, petition the General Government to grant them twenty millions of dollars, alleging that it would be for the general welfare to make the grant. Congress considers this petition, and determines it would be for the general welfare to make these three men rich, and then lays a tax for that purpose; or, in other words, they can at pleasure tax one man to enrich another. An extension of this doctrine covers the ground occupied by the manufacturer. He says it is for the general welfare that he should grow rich, and not being able to succeed himself, he asks Congress to tax his fellow-citizens for his use. Against such doctrine we protest, and say that Congress never was clothed with the power of taxation to make one citizen rich by making another poor.

It never formed one of the articles of the copartnership agreement that the firm, for what a majority considered a general benefit, should make a requisition on the private funds of the individual partners for the purposes not contemplated by the original association, or that the private property unpledged should be subject to contributions for purposes at war with the peculiar interests of some of the partners.

If the power to lay a tax to protect domestic manufactures is not given by the Constitution, it follows that obedience to such a law would involve neither a moral nor a legal duty; but rather the consideration how far "it is better to bear the ills we have than fly to others that we know not of." Our fathers assumed as a political axiom that the British Parliament could not tax them without their assent. It remains yet to be determined how far an American Congress can successfully indulge in experiments at the expense of those great truths which made us a free and independent people.

But, independent of constitutional objections, we think a wise and a just Congress will see abundant good cause to reject the inordinate claims of the manufacturers.

Your memorialists submit that it is the true policy of the General Government to interfere as little as possible with the domestic concerns of its citizens. Ours is a compound Government, and the great majority of the people in these States are more attached to their own laws and institutions than to the laws and regulations of Congress. We think we may state truly the abstract proposition, that the General Government will last inversely as it is felt. We all concede to Congress the management of external relations; but the moment Congress assumes a right to manage our household affairs, to drive our children and servants from the plough to the spinning-jenny, and our wagons to the mountains instead of the seashore for a market, a difficulty commences. These are matters that our State Legislatures profess also to regulate, and the people of this country will become tired of double duties and double allegiance.

We admire that policy that has heretofore induced Congress to omit to exercise certain powers expressly given. Congress has not passed a bankrupt law. The principal objection to the exercise of this power would be the extension of the judicial authority of the United States into the very bosom of the daily concerns of the citizens of the several States. In support of the general position that the exercise of concurrent power by Congress and the States upon the same subject-matter is calculated to throw Congress into the wake of State authority in the affections of the people, we remark, the most beneficial and popular powers of Congress are the exclusive ones. The mail department is an exclusive one, and certainly a most popular one; but the power to construct roads, being concurrent, is resisted, and, independent of its constitutionality, its popularity with the people would ultimately depend upon the extent of its interference with State authority. How extremely oppressive and expensive is the administration of justice in the federal courts! Were all these cases prosecuted in those courts over which they clearly have jurisdiction, it is thought the people would most reluctantly submit to their operation. Every person is familiar with his own courts; but when he is carried into the United States courts, his rights confided to strangers, subjected to other laws than those he is accustomed to, compelled to incur expense, delay, and trouble unknown to his domestic forums, federal laws and justice cease to be objects of veneration. It is easy to see that in this State, (and the same is supposed of other States,) if the full power of the federal court were brought into actual practical operation, it would become odious to the people. From choice only a few of the cases of concurrent jurisdiction are brought in that court. It is therefore cherished by us with affection, and regarded only as the umpire of great constitutional questions.

In the prosecution of the undisputed powers of Congress immense revenue is required. Should that policy prevail which dries up commerce instead of raising our revenue at the custom-house by an opera-

tion invisible, unfelt, but most efficient, we should be compelled to adopt direct taxation. It is obvious that this system must necessarily become odious in proportion as it is inconvenient and oppressive. We put it to the consideration of Congress, the most enlightened deliberative assembly on earth, whether this Union will not be in danger when the time shall have arrived that the prohibitory system shall drive Congress to direct taxation, with the ill feeling created by a belief that one portion of the Union is made tributary to the other, and that a resort to direct taxation is a consequence of such unequal and unjust legislation? We ask those in favor of the protecting system if its tendency is not to compel a resort to direct taxation? We have so far seen with pleasure the manufacturers satisfied to rely upon the protection created by our revenue laws; but when the demand is raised to such height as to produce as well an exclusion of foreign importation as of direct taxation, the manufacturers cease to be objects of partiality or respect. Much as we regard their success as a portion of the capital, enterprise, and industry of the country, we should prefer their total abandonment to the single evil of a permanent system of direct taxation. In justification of this opinion we beg leave to state some of our reasons.

We regard it as of the first importance that the people should respect the General Government. We ask, what would have been the state of public opinion at the conclusion of the last war if the direct tax had been continued with the avowed motive to protect domestic manufactures? Would Congress now venture a capitation tax in favor of domestic manufactures? It would require a military force to collect such a tax. When the revenue ceases to be collected from duties we shall have double taxation upon us—our State tax, our federal tax, a tax on light, a tax on our houses, our lands, wagons, stills, carriages, steamboats, and, last of all, a tax on population. What an unenviable spectacle to see a State collector, a federal collector, seizing the same article to exact from the impoverished citizen the double tax he pays for his double security from Government! In proportion as the expenditure of public money is removed, so will the people regard as useless and oppressive any tax paid by them to the support of an alien and distant Government! Under such a state of things the General Government will be regarded as a curse rather than as a blessing. But suppose our anticipations are not realized, and that the spirit of the people should bow down before the power of Congress and willingly pay the direct tax as a conscious duty they owe for the benefits conferred by Congress, a state of things will arise as much to be deprecated; an attachment to the General Government will bring contempt upon the State authority. When an habitual recurrence is had to congressional legislation, the State Governments will be finally superseded, and consolidation will be the order of the day. In such a state of things the rights of the minority (rather their interests, for they would have no rights) would be sacrificed. The ground assumed that the elective principle would save the minority is absurd. Were Congress what some desire it to be—absolute and supreme—a majority of the members of Congress might faithfully represent their constituents while they run rough-shod over the interests of the minority.

There is one other general consideration, which we respectfully submit, connected with the abolition of commerce. The maritime power of this Government will cease to exist when commerce ceases. The sailor in peace is easily made the successful defender of our rights in war. We may depend on the militia or conscription for defence on land, but experience will alone enable the seaman to triumph. With the demise of commerce the fame of our Navy will be escheated to Government and its proceeds applied to the use of the money-loving manufacturing monopolist.

The foregoing observations are general, but we have objections subordinate and peculiar to ourselves. It is at least the firm conviction of the southern planters that this law will operate injuriously to their interests, not only in hazarding the interests with a foreign market, but in subjecting them to a positive, direct, and intended contribution to the manufacturer.

We trust Congress will not be disposed to sacrifice our interests for the general welfare. We rely upon that article in the Constitution which says private property shall not be taken for public purposes without compensation as a shield against Government confiscation. It is vain for the manufacturer to tell us this law is for our benefit. Analyze the specious reasoning of the manufacturer, and it resolves itself into this practical argument: A, a manufacturer, tells B, a planter or mechanic, I have some homespun for sale at $1 per yard. B says this is forty cents per yard more than I can obtain the same quality for at another market. A then says I will apply to Congress, and you shall buy at my price. Can it be possible that an enlightened and just Government will sustain such pretensions?

There is one view of this question which ought to circumscribe the efforts of the manufacturer himself. It is a mistake to suppose that slave labor cannot compete with free labor in any form. If, in despite of our wishes, we are compelled to worship their idol, it is difficult to see why what is profitable in New England cannot be made more profitable in South Carolina.

Your memorialists beg leave to state, in conclusion, that they have great confidence in the justice and good sense of Congress. In stating some of their objections to the proposed measure they have been influenced more by a desire to repel an inference of their acquiescence from their silence than by the hope of producing conviction among such as differ from them. Their faithful and zealous Representatives understand their interest, and have heretofore justly spoken their sentiments. To them, and to the other able and eloquent champions of agriculture and commerce, they appeal to supply the argument; to that noble sense of justice which pervades your body they appeal to decide the question. And your memorialists will ever pray.

On motion, the foregoing memorial was unanimously adopted by the meeting.

It was then, on motion,

Resolved, That a standing committee of ten be appointed for the purpose of receiving such communications on the subject of the tariff as may be addressed by other committees to the citizens of this district, and for the purpose of communicating with the committees of such other districts as may be appointed for the occasion.

The following gentlemen were appointed to compose the above committee: Messrs. R. I. Manning, Moses Benbow, W. A. Colclough, James Haynsworth, F. I. Moses, W. Mayrant, jr., Robert Muldrow, Charles Williams, sr., Thomas Baker, and Samuel E. Nelson.

Resolved, That a copy of the memorial be forwarded to each of the Senators and Representatives in Congress from this State.

Resolved, That the proceedings of this meeting be published in the Charleston Mercury, the Columbia Telescope, and the Cheraw Spectator, and that the memorial be printed in a pamphlet form for distribution.

The meeting then adjourned.

JAMES G. SPANN, *Chairman.*

FRANKLIN I. MOSES, *Secretary.*

20TH CONGRESS.] No. 895. [1ST SESSION.

AGAINST INCREASE OF DUTIES ON IMPORTS.

COMMUNICATED TO THE SENATE MARCH 21, 1828.

ABBEVILLE DISTRICT, S. C.

According to previous notice, indiscriminately given and extensively circulated, a large meeting of the citizens of Abbeville district was held in the court-house on Monday, August 6. General Edmund Ware was called to the chair, and Wyatt W. Stark appointed secretary. Joseph Black, Esq., called the attention of the meeting to the *woolens bill*, and urged the necessity of memorializing Congress in opposition to it. D. L. Wardlaw, Esq., moved that a committee of nine should be appointed to prepare a memorial and resolutions on this subject, to be reported the first Monday in next month. After addresses from Mr. Wardlaw, Mr. Black, Colonel Bowie, Colonel Noble, and Major Bull, the motion was adopted; and the chairman nominated for the committee D. L. Wardlaw, Joseph Black, Patrick Noble, A. Bowie, W. A. Bull, James Calhoun, W. S. Campbell, W. W. Stark, and Edmund Ware—the last upon special motion. The meeting was adjourned until the first Monday of September.

On Monday, September 3, 1827, the assemblage of citizens was one of the largest ever seen at this place. The court-room, which is very large, was crowded to oppression, and many who could not find room to stand within thronged around the doors and windows. Mr. Wardlaw, from the committee appointed at the last meeting, after some prefatory remarks, introduced the following memorial and resolutions. These were sustained by Mr. Campbell, Colonel Noble, Major Bull, Mr. Stark, Mr. Black, John S. Pressly, Esq., and Colonel Bowie, and were *unanimously* adopted. On motion of Colonel Noble, it was ordered, *nem. con.*, that they should be entered as the *unanimous act of the citizens assembled.*

EDMUND WARE, *Chairman.*

W. W. STARK, *Secretary.*

To the honorable the Senate and House of Representatives of the United States in Congress assembled:

We, the citizens of Abbeville district, respectfully approach your honorable body as memorialists, to remonstrate against the passage of the *woolens bill*, or any other bill for imposing *protecting duties*, and to pray the repeal of all laws now in force of this character, and an abandonment of *the principle.*

We will not occupy your time by repeating arguments to show that the whole protecting system is contrary to the well-established doctrines of political economy everywhere applicable; and that in this country especially it is inexpedient, as it leads necessarily to entire prohibition, and even now subtracts from the whole sum of national wealth; diminishes the demand and value of our exportations; seriously affects our trade; is injurious to the only revenue system the country can well abide; and is well calculated to destroy our foreign commerce, shipping interest, commercial marine, and navy; to arrest the settlement of our public lands; to render the yeomanry of the country subservient to dangerous accumulations of capital; and to thwart all the correct policy of the country; nor will we attempt to expose the peculiarly offensive provisions of the woolens bill, and the inapplicability of the reasons urged in its support; but we will proceed to the representation of grievances felt by us immediately connected with the *principle* of this system.

When the oppressive tariff bill of 1824 was before your honorable body, its passage was in a great degree affected by its friends representing it as a final adjustment of the subject; and although we then believed, and now believe, that it was an adjustment wholly at the sacrifice of the great interests engaged in cultivating the principal staples for exportation, and in carrying on the foreign commerce of the country, yet such was our attachment to the union, peace, and harmony of the country that we felt disposed to acquiesce in the unequal terms of compromise. The consequence was such as experience ought to have taught would follow. Avarice is never satiated. Two years had not elapsed before the great monopolists of the eastern States, to whose advantage the tariff of 1824 almost exclusively operated, began to demand additional bounties by urging the passage of the woolens bill; and we now behold them resorting to new and dangerous measures to effect their schemes at the next session. To concentrate their force, a meeting has been held in the imposing form of a convention of thirteen States. The prejudices, interests, and feelings of various sections have been artfully invoked, and exchanges of monopolies arranged. Iron, hemp, whiskey, cotton goods, wool, and copper, offer the hopes of gain to those who have no share in the woolens; to others interested in none of these the profits of internal improvements and bounties of public lands promise rich rewards. Combining the whole under the misapplied name of the "American system," bold speculators in politics and manufactures hope, through the Congress of the United States, to achieve their purposes of self-aggrandizement at the expense of the great mass of the people, who have taken no share in their intrigues, or are deluded by party feelings and the vain expectation of advantage. No doubt now exists that total prohibition of all foreign fabrics, which by the most extravagant encouragement can be produced in this country, is contemplated. It may not be effected or proposed at once; but if not at once arrested by the intelligence and justice of Congress, the scheme will be persevered in while ever the other sections of the Union will bear burdens sufficient to compensate the increased burdens which the favors granted to obtain friends will impose upon the various classes of manufacturers in common with others. If once fairly established, the system will grow without the adventitious aids now called to its assistance, and will create in its progress interests and influences strong enough to support it long after general consent shall have pronounced it ruinous and intolerable. These things have brought the sense of past injuries forcibly to our minds, and caused us to look with apprehension to the future. We have borne too long; our only hope is to revert to first principles, to redress our past wrongs, and resist all future impositions! We see that our burdens are to be increased while a cent is left which may be wrung from us by an odious monopoly; and we feel justified, whatever may have been our disposition to acquiesce in the tariff of 1824, to remonstrate against the entire system, as we now solemnly do, under

the most sincere conviction that, if not arrested, it will lead to the poverty and misery of ourselves and our posterity, and finally to the extinction of the liberty of our country.

To be subject to no restraint which does not produce general good more than sufficient to counterbalance the individual hardships is our notion of civil liberty; and we deem all interferences of Government which are not plainly useful to the community as pernicious; if wilfully persevered in, tyrannical. Our Constitution may be abused no less in its exercise than in its violation. The powers essential to the public good may all, without transgressing the limits assigned, be perverted to inexpedient, dangerous, unjust, and tyrannical use; under the color of the terms in which several of them are granted may be performed acts wholly beyond the intention with which they were conferred. Much necessarily was left to the sound discretion of the agents, conscientiously to be exercised. Each branch of Government is bound to presume the purity of its co-ordinate members, and to attribute every act to such motive as is essential to its validity. The sovereign power of the people, enforcing the responsibility of the rulers, is necessarily the only check to most inexpedient exercises and dangerous perversions of the powers granted in the Constitution. From these premises we infer that many acts which the Supreme Court would rightfully pronounce constitutional, the people, free from all the trammels of presumptions which the court must make, may well pronounce to be unconstitutional; that many acts which are constitutional the people may well resist as tyrannical and unjust; and that against a determined majority the oppressed are often without remedy in the constitutional checks of power. *We* are not bound to presume a measure totally uncalled for by the state of our foreign relations, which is avowedly intended and plainly tends to the destruction of commerce, to be a regulation of commerce; *we* are not bound to presume a measure which will diminish, if not destroy, the revenue from imports, and which, throughout its discussion, and everywhere but on its face, appears to be a measure for the protection of one branch of industry to the prostration of others, to be a measure for increasing the revenue from imports. As part of the people who made the Constitution, and whose consent maintains it, who know its objects and can inquire into the motives of those who act under it, we refer ourselves and others to a higher standard of construction than the technical and necessarily constrained decisions of a judicial tribunal. We claim the benefit of the Constitution in its spirit and good sense, and not according to its terms extended to the furthest limit which the unconscientious exercise of one branch of Government might go without coming within the reach of a co-ordinate branch. We have searched in vain for the power given to Congress to lay duties for the protection of domestic manufactures. But on this subject we disdain to cavil about terms. As Americans, we know that equality of rights is the pervading principle of our Constitution, and we feel that no law by which one class of citizens is oppressed for the benefit of another can be reconciled with the rights of man, as they have been established by reason, as they were maintained in our Revolution, or as they are secured in the great charter of our liberties.

Without entering further into the consideration of the great political questions connected with this subject, we propose to consider it simply as it really is, and as it is stated by the manufacturers themselves. The tariff of protection is intended to relieve them from existing difficulties, so as to enable them to carry on profitably what they represent to be without it a losing business.

Every tariff for protecting any branch of industry is neither more nor less than a tax on the imported article, laid with a view of raising its price in order to give the home manufacturer a better market. Its very essence is a bounty founded on monopoly in favor of the producer, and against those who simply consume. The measure of the bounty to the former is the increased price of the article and the quantity consumed, and the measure of the tax on the latter is the same; so that the gain and loss to the parties are strictly reciprocal.

In representing the tariff as a tax intended to increase the price of the article for the benefit of the manufacturer we do not intend to assert that the advantage of the increased price accrues solely to him. Others, such as the laborers in the factories, the artisans employed in making the machinery, and the farmers employed in raising supplies, more or less participate. If, however, the operations of the monopoly secured by the tariff could be limited to the manufacturer himself and those participating in its profits with him, it is manifest they would stand in the double character of producers and consumers, and would lose in the one character what they gained in the other—which result could not fail, by proving the monopoly useless or pernicious, to render it odious. Very different is the case when the monopoly extends to others who are mere consumers of the articles, without participating, directly or indirectly, in the advantages of the increased price; to them it is a pure loss, and that loss, being added to the profit side of the manufacturer and those participating with him, constitutes their real gains; and it is clear, that as their profit will increase with the increase in number of the consumers on whom the monopoly may operate, if this number be large, the gains may be so great as to create a powerful interest in favor of preserving and increasing the monopoly. The result in this case must be, that opposite interests will be created in the community—the one demanding incessantly additional monopoly by additional tariffs, and the other resisting the injustice and oppression; and if it should happen that the country be extensive, and the manufacturers occupy one portion and the consumers the other, these opposing interests will assume a geographical character. Such your memorialists conceive to be the case in our country The United States consist of more than 12,000,000 of people, spread over nearly 2,500,000 square miles, with great diversity of situation and pursuit; some portions of this immense country being fully ripe for manufacturing, while others cannot be for generations to come. Over this greatly extended and diversified country the tariff acts uniformly in raising the price of the articles on which it may be imposed, while its benefit is limited to that portion of the country ripe for manufacturing establishments, which alone can take advantage of the monopoly thus secured, and on the rest of the community it acts simply as a tax on consumption. These two portions of the community are, for the most part, separated by well-marked geographical lines, which, however, we will not undertake the invidious task of drawing; sufficient it is to say that there are upwards of five millions of people grouped together on whom every tariff must act as a tax on consumption, and, consequently, from the nature of things, it must give to those residing in another section a monopoly to the extent of the tax. When to the number of the former are added the fertility of their soil, the favorable nature of their climate to produce the great staples of the country, and, above all, the extent of the existing tariff, it will be seen that a more profitable monopoly never existed than the latter now enjoy; nor is it in the least surprising that its mighty profits, diffused directly or indirectly over nearly the whole of their section of the country, should create there, as we now behold, an almost universal interest to maintain and increase it. In their zeal for the tariff, it is clear that the manufacturers and those participating with them do not aim merely at securing themselves against foreign competition or at the benefit of what may be truly called the home market—that of their own

States; but their aim is the great and profitable market of the consuming States, where the gains are pure gains to them, unaccompanied by burden or loss. For it is as much in the power of the Legislatures of the manufacturing States to secure their own home markets to their manufacturers, and thereby effectually protect them against foreign competition within their limits, as it is in the power of Congress to secure to them the market of the Union, and by the same means, under a different name. The difference between a tariff which may be laid by your honorable body in favor of the manufacturer and a bounty paid to him out of the Treasury is merely nominal. Both must be paid by a tax on the community, with this simple difference: that in the one case it is paid directly to the manufacturer by the consumer in the shape of increased price, and in the other it is first paid into the Treasury before it passes to him. A tax in his favor, in the latter shape, is in the power of State legislation, and, to the extent of the State, may be made effectual to exclude all competition. How happens it, then, that the manufacturers do not apply to their State Legislatures for protection, and that none of the manufacturing States have adopted the protecting policy by granting bounties? The answer is clear: a bounty thus granted would be a monopoly on the monopolists themselves; the profit and loss would fall together, and would neutralize each other. It is not, then, simple protection against foreign competition—which can be effectually granted by the States, through bounties—that the manufacturer desires, as he pretends, but a monopoly against the five millions of consumers inhabiting the section of country engaged in raising the great agricultural staples of the country. Such a monopoly can be created only through your honorable body by a tariff imposed for the purpose, which your memorialists do solemnly believe cannot be done without extending your power beyond the assigned limits of the Constitution, without interfering with the rights sacredly reserved to the States, and without the grossest injustice and oppression.

The reason why application for protection is made to your honorable body instead of the State Legislatures fully explains why the system of protection by Congress is so popular in the manufacturing portions of the country. Not that we would be understood as insinuating that our fellow-citizens in these States urge the system with a view of profiting at our expense. If such was the fact, it would prove that all political ties and sympathies had terminated, and would not constitute a case for remonstrance. On the contrary, we believe that the great body of the people in these States (always excepting the designing politician and the aristocratical monopolist) are sincerely in favor of the system on what they esteem honest grounds. They see and feel the benefits as to themselves and their portion of country. They see villages, towns, and cities springing up as by magic, improvement extending, and capital growing with unexampled rapidity, and they truly trace these wonderful effects to the tariff, but without suspecting that all their great profit and boundless prosperity are wrung through its agency from a large class of their fellow-citizens, with whom it is accompanied by poverty and misery equalling their own gains and prosperity. It is not unnatural to judge by what is seen and felt; and if it is expected that we should give implicit faith to the testimony of those in favor of the system who profit by it, surely it is not asking too much that we, who, on the contrary, are ground to dust by it, should claim equal faith in our adverse testimony. We see and feel embarrassment, distress, and decay, which we no less trace truly to the tariff. Great as may be the unanimity in favor of the system of monopoly throughout the manufacturing section, no less great against it is the unanimity among the millions who inhabit the other section. There can then be no rational doubt that the effects of the system are directly opposite in the two portions of the country; so much so, that the prosperity of the one may be measured by the adversity of the other so far as its operation is concerned. If such be the fact, as cannot be questioned, it is manifest that the only point which can be presented for the consideration of your honorable body on the passage of a tariff bill of protection is, whether, representing as you do these United States, confederated for mutual protection and benefit, you can justly and constitutionally promote the happiness of one part by sacrificing that of another, not much less numerous, and equally intelligent and patriotic?

That the interests of a country of great extent may, on a particular point, become thus opposed, and that the major interest, through perversion of the powers conferred on Congress, may exercise a despotic control over the minor, we have the authority of one of the ablest men the country has produced. "It is," he says, "of great importance in a Republic, not only to guard society against the oppression of the rulers, but to guard one part of society against the oppression of the other part. If a majority be united by common interest, the rights of the minority will be insecure." Again: "In a society under which the stronger factions can readily unite and oppress the weaker, anarchy may as truly be said to reign as in a state of nature, where the weaker individual is not secured against the violence of the stronger." Such is the opinion of ALEXANDER HAMILTON; and those who respect his memory ought seriously to reflect whether there be any case where adverse interests are more likely to spring up than the one under consideration, and what are the consequences which may follow from their urging on the dangerous state which he so forcibly depicts.

It is sacrificing substance to form to say that laws are equal because their terms are general, when circumstances beyond the reach of the laws control their operation. Every proposition to protect any branch of manufactures in this country, from the nature of things, we have shown, must be sectional; in this character it is discussed, and from this those who pray its passage promise to themselves their gain. Would the woolen manufacturers desire the passage of the woolens bill if the whole Union was equally prepared to seize its advantages, and domestic manufacture sufficient to supply the demand were likely to arise in every county, or even in every State? No; it would then be a common benefit or common burden. At present the benefit is to be enjoyed by others—the burden alone is extended to us. What would our northern brethren think of an act of Congress granting a bounty to every grower in the United States of cotton, rice, or other product peculiar to the climate of the south? Such a measure would be general in its terms; the mode of encouragement would be no less legitimate than by duties on imports; and the natural obstacles to their profiting by it would be no more insurmountable than the obstacles which preclude us from taking the benefit of the monopoly created for the protection of manufactures. Yet, if it were sufficiently strong to compensate us by one-half for the taxes we pay to their manufacturers, such a measure would produce amongst them a sensation very different from the complacency with which they now regard the duty upon the importation of raw cotton into this country, which was imposed unnecessarily in the beginning, where there was no danger of foreign competition, and has never yielded either revenue or protection, from which the cotton-growing country has never derived the least benefit, which is but the name of consideration for the grievous exactions taken in exchange, and which we pray may be first included in the repeal of all tariffs of protection, that we no longer may be taunted with the pretence of favor to us.

To the suggestion that, in time, all the sections of the Union will be in a situation to engage in manu-

factures, each, of the articles most suitable to its situation, and that the benefits and burdens of restriction will then be equal, we reply that justice forbids that, after others have enjoyed tribute from us for fifty years, we should then only be admitted into equal rights with them, and be obliged, upon equal terms, to contend with their superiority over us, greater than the superiority of foreign manufactures over them of which they now complain. When any section is ripe for manufactures no encouragement is necessary; before then it is inexpedient, and given through Congress is unjust and unconstitutional.

We are aware that the monopolists endeavor to reconcile the consumer to their profits by attempting to prove that protection does not enhance the price; but can there be an absurdity greater than to suppose that the home manufacturer, who now cannot persist in his trade, as he says, with an existing duty of about 50 per cent. on woolens, would be enabled to manufacture as cheap as the foreign manufacturer, provided all competition from abroad were inhibited, which would be substantially the fact if the woolens bill were passed? It is enough to oppress us, but to urge such arguments is to add insult to injury.

Nor can the instance of coarse cottons support the sophistry of the monopolist. It is known that our country has now an advantage in the raw material of cotton over all others; notwithstanding which, we learn from good authority that the coarse cotton goods are now so much cheaper in Manchester than in this country that were it not for the high duty on them they would still be imported. It is not enough to prove that coarse cotton goods are cheaper now than when the tariff of 1816 was laid. The price of the raw material and labor have greatly fallen since, while the machinery has greatly improved. If the article be cheaper still abroad, as we believe, the difference of price is the bounty continued to be paid to the monopolist.

It is a great mistake to conclude that there is no loss if an article does not rise on the imposition of a protecting tariff. Suppose there be neither rise nor fall in price, the country at least loses the old duty, which goes into the pocket of the monopolist as a bounty instead of going into the Public Treasury in the shape of duty. To indemnify the country, the price not only ought not to rise, but ought to fall the whole duty laid by the tariff; that is, if the woolens bill, which would almost entirely prohibit the foreign article, should pass, the price of woolens ought to fall about 50 per cent., which is about the present duty under which they are imported; and surely he must be a madman who could expect such a reduction in price, or who believed that if the manufacturers themselves expected it they would urge the bill.

Every measure which diminishes importation also necessarily lessens the demand and price of our staples of exportation in the foreign market, as well by the natural operation of trade as by retaliatory duties likely to be incurred; and although a new market is afforded at home, yet it purchases only what else would have been better sold abroad; and not only are we burdened in it by the monopoly price of articles we take in exchange, but the quantity it purchases is necessarily limited to the supply of this country, within which only the manufactures sustained by our bounty can avoid foreign competition; so that a new loss to us and a new gain to the manufacturer accrues in the superabundance and diminished price of our raw materials.

Are our profits sufficient to enable us, with economy, to bear the burden imposed upon us? They are derived from our honest industry unaided by restrictions or monopolies. If nature has given us advantages, Government has no right to take them away. We acknowledge not the principle of the Agrarian law. Cheerfully as we have ever afforded, and hope ever to afford, our assistance when required by our country, we maintain that no set of men have a right, without our consent, to take a portion of our property, and, without compensation to us, convert it to their own use. The injustice of such a proceeding becomes to us more galling when we reflect that the very manufacturers who are now most clamorous for higher gains at our expense receive a profit from their capital (as their acts, independent of their statements, show) greater than our most thriving farms afford. But prosperous or adverse, our principles are the same. We insist upon a right to the profits of our own labor, except what the exigencies of our country require; and we claim liberty, restrained only for the general good, and equality of public burdens and public benefits. If our manufacturing brethren will sell to us as cheap as we can purchase abroad, we will give them the preference; further we would not ask them to do towards us.

But we would present to your honorable body a feeble picture of our grievances if we were to limit our representation to the evils, great as they are, growing out of the measures adopted professedly to protect one branch of industry at the expense of another. It is with pain that a sense of duty compels us to probe the ulcer to the bottom; but be the consequence on those who, by tampering, have aggravated the disease to its present alarming state.

A great change has taken place since the commencement of our Government, which has rendered the whole of our fiscal system unequal and oppressive to the great interest in behalf of which we have attempted to raise our voice. Under the existing state of things, the burdens and benefits of the system are unequal as can be imagined. The great interest to which we have so often referred, while it almost exclusively bears the burden of supporting the Government, participates but slightly in its advantages.

Our revenue, with the exception in reality of not more than about half a million, (principally from the sales of public lands,) is derived from a tax on imports amounting to about $20,000,000 annually. Of this immense sum the greater part is derived from duties on articles of which the manufacturing section is perpetually demanding an increase of the impost, to prevent competition in the home market; of course it must be clear that they do not consider the duties a tax on them. We do not wish to be understood to say that none of the imported articles to which we refer are consumed in the manufacturing section, and consequently none of the duties levied on its inhabitants; but we do boldly assert that they are more than indemnified for whatever may thus be paid by them into the Treasury by the monopoly in the home market of the consuming States which these very duties secure; and surely higher proof cannot be given of the truth of this assertion than the zealous support which they give to every proposition to increase the duties. Such being the fact, it cannot be doubted that the whole burden of the Government, almost to the full extent of the revenue, fails substantially on the very States which also bear the burden of the tariff for the protection of manufacturing monopolists.

Very different was the fact when our revenue system was first adopted, and for a long time afterwards. No part of the country was then manufacturing; and, with the exception of food, almost every article consumed in the country was imported. In that state of things the system fell with nearly equal pressure on all the parts; but the great change which has since taken place in the industry of many of the States from the introduction of manufactures has substantially relieved the wealthy and flourishing part of the country from the burden of contributing to the public Treasury, and thrown its weight upon the poor and much exhausted section.

We present these facts, not with the hope of alleviating the great and unequal burden by a change

in the system of revenue. We know full well the almost insuperable objections to a change, and we must make up our minds to bear the load; but certainly these considerations offer a most powerful reason why burdens already so unequal should not be made still more so by the odious addition of tariffs, to take from the light and put to the heavy.

But unequal as the burden of taxation may fall, no less unequal are the disbursements from the Treasury. It is well known that equality of disbursements is not much less important than equality of taxation, which the framers of the Constitution were so solicitous to secure. A portion of a country may be rendered rich by an overflowing disbursement, or be impoverished by an incessant payment of taxes without a correspondent return through disbursements. The inequality of disbursements, of itself so oppressive, exists to a remarkable degree; and to render its operation infinitely more distressing, the grievance falls continually on the same section, and that the very section from which, in reality, the contributions to the Treasury are mainly drawn—thus producing an inequality heretofore unknown in any free country, which cannot be increased nor even continued without exposing the country to the most dangerous consequences. For it is not possible that men knowing their rights, and feeling conscious that they are entitled to participate equally in the benefits of Government, can long sustain so unequal a load imposed against the united remonstrance of themselves and their representatives, without a fearful diminution in their attachment to the institutions under which they live. But, admitting that the oppressed have not sufficient intelligence to see their wrongs, or to trace them to their true cause, or, seeing them, have not sufficient spirit or union to resist with effect, still, to every patriotic and intelligent mind the danger must appear great and alarming.

To the wily and corrupt politician it is the most favorable state that can be conceived. If it be permitted by the magic of legislation to enrich one section at the expense of another, who can doubt that the influential and corrupt, in order to gain or retain power, will seize on so potent an engine of bribery. And if it be permitted to be used as the means of bribery, who, in the least conversant with history, but must see that it will end in the destruction of free institutions, however skilfully constructed, by concentrating the whole influence and power in the hands of a crafty despot, or of an odious oligarchy. But, supposing it to be our good fortune to escape so great a calamity, how clear it is that the system must engender the most thoughtless prodigality! For what possible inducement can the majority have for economy in the public disbursements? To them the greater the impost the greater the monopoly; and the greater the revenue the greater the disbursements; and the greater the disbursements the greater the gains. The revenue is to them like a tribute from a conquered province, and we might as rationally expect that an Imperial Government would cease to devise ways and means to augment the tribute from its provinces as that the majority, under existing circumstances, will regard economy with a favorable eye. Even a public debt will soon be regarded as a public blessing; as one of the most effectual means of keeping up a system of tariffs and imposts; and we may accordingly expect to find new devices to increase it, just as the Sinking Fund may diminish its amount. Already we witness alarming indications of a disposition this way; and among others we behold an artfully got up scheme to assume an old claim of twenty-five years' standing on account of French spoliations, which will, in all probability, add an amount nearly equal to one-half of the existing debt, and which must not only, under the present revenue system, be paid almost wholly by funds drawn from the section of country already so grievously oppressed, but go almost exclusively to add to the capital of the already highly favored section; thereby producing in a single operation the double effect of greatly increasing the debt as the means to perpetuate the present system, and of transferring not less, in all probability, than twenty-five millions of dollars from one section to another.

In the exercise of our constitutional right we have thus decorously but freely stated some of the grievances under which we, in common with nearly one-half of the Union, labor, firmly believing that nothing short of the united and strong voice of remonstrance from the oppressed can arrest the great and growing evil, and thereby preserve our Union and liberty. To both we are deeply and strongly attached, and we are prepared, in order to preserve them, to make whatever sacrifice freemen ought to make. Against the growth of our manufactures we have not the slightest prejudice. On the contrary, we have always rejoiced to see their prosperity, when effected by the ingenuity and industry of our fellow-citizens; but our objection is insuperable to the employment of the unconstitutional and unjust means of protecting them at the expense of the consuming States.

In the hands of your honorable body the destiny of the country, under Providence, is in a great measure placed. To eradicate a disease so deep seated we know will require time and patience; but in the meantime we reasonably expect that it will not be aggravated by adding to the burdens of the oppressed; that means will be adopted to enforce the most rigid economy, the greatest practicable equality in the disbursements, and the speedy payment of the public debt, by which means the public expenditure may be reduced, and the burden that cannot at once be equalized at least be lightened.

By adopting this course your honorable body will preserve the peace and liberty of the country, and be entitled to the lasting gratitude of posterity; but should (which Heaven avert) the contrary course be pursued; should monopoly be added to monopoly, and oppression be heaped upon oppression, on them be the responsibility whose insatiate avarice or whose profligate ambition may impel the country to so fearful an extremity. Firm in the justice of our cause, we will have, even in the worst event, at least one consolation, though a poor one: that when the catastrophe comes, if come it must, those who are now pampered by the oppression of others will not have the least to lose.

EDM. WARE, *Chairman.*

W. W. STARK, *Secretary.*

ABBEVILE COURT-HOUSE, *September* 3, 1827.

Resolved, That we desire the repeal of the *whole system of protecting duties* and the abandonment of the *principle.*

Resolved, further, That this system, which we believe inexpedient upon sound principles of economy applicable to any country, is considered as a mere question of policy, particularly *inexpedient* in this country, as it necessarily leads to prohibition, and is even now injurious to the only revenue system which the country can abide; injurious to the great agricultural and commercial interests of the country; and calculated to lessen the whole sum of national wealth, to destroy our commerce, shipping interest, commercial marine, and Navy; to arrest the settlement of our public lands; to render the yeomanry of the country subservient to dangerous accumulations of capital, and thwart all the correct policy of the country.

Resolved, further, That, considering how extensive and diversified our country is, the system appears doubly pernicious, as being necessarily *sectional and unjust*, arraying against each other *hostile interests, geographically divided*, of which the protection of one is the oppression of the other.

Resolved, further, That the system is *unconstitutional*, for that the power thus to protect domestic manufactures is not given to Congress by the Constitution: which appears not only from the silence of that instrument as to such power, but from such powers being a virtual exercise of powers either expressly forbidden to Congress or in general terms reserved to the States, and from its necessarily impugning the principle of *political equality* in the States and among the citizens upon which our Government is founded.

Resolved, further, That the exercise of this power by Congress is at best a sacrifice of the spirit of the Constitution to extended construction of its *terms*, a perversion of rightful power beyond the intention of the framers of the Constitution to *dangerous* and *tyrannical* use, and a gross act of *oppression* upon a large minority by "*a majority united by common interest.*"

Resolved, further, That to us, in common with the great *consuming and exporting section* of the United States, the present tariff of protection is a tax upon consumption, which, whilst it operates upon the *manufacturing section* like a bounty from a foreign Treasury, burdens us grievously, as well by the increased price of our consumptions as by the reduced price and lessened demand of our staples of exportation.

Resolved, further, That by the operation of the present tariff, revenue system, and system of disbursements pursued by the Government, the immense bounty which we pay to the manufacturer, and the disproportionably great contributions which we make to the revenue, are *pure unrequited loss to our section of the country, and pure gain to the manufacturing section, to which both are regularly transferred;* while that section is indemnified against any loss of this great gain either from the tariff or revenue, its tax under the former being requited by the diffused benefits of the manufactures supported by our bounty, and its contributions to the latter being returned along with our contributions in the disbursements of the Government.

Resolved, further, That this state of things, if continued, will lead to *our poverty* and *misery*, and not less certainly to the *extinction of liberty* in the country by the barters of legislative favors, the bribery, corruption, *profligacy*, and utter destruction of fraternal sympathies which it will produce.

Resolved, further, That the Senators and Representatives in Congress from this State be all earnestly requested, and that our immediate Representative be solemnly enjoined, to oppose all further imposition of tariffs for protection as *utterly intolerable;* and to urge, in the most speedy mode practicable, a repeal of the whole system of protection and an abandonment of the principle; in the meantime taking care to provide for the enforcement of the most *rigid economy*, the *equal disbursement* of the revenue as far as practicable, and the speedy payment of the *public debt.*

Resolved, further, That the Legislature of our State be requested to take this subject into their most serious consideration, and guard the rights of *the State* and of its citizens.

Resolved, further, That the memorial to Congress reported by our committee be adopted, and copies furnished to our Representatives and Senators to be laid before Congress; that copies of it, and of these resolutions, be also furnished to the Senators and Representatives in Congress from this State and to the members of our State Legislature; and that the committee appointed at the last meeting be continued as a committee of correspondence and vigilance on this subject.

EDM. WARE, *Chairman.*

W. W. STARK, *Secretary.*

ABBEVILLE COURT-HOUSE, *September* 3, 1827.

20TH CONGRESS.] No. 896. [1ST SESSION.

AGAINST INCREASE OF DUTIES ON IMPORTS.

COMMUNICATED TO THE SENATE MARCH 21, 1828.

Pursuant to their adjournment, the citizens of Union district met in the court-house on Monday, the 3d instant, for the purpose of receiving the report of the committee which had been appointed at a former meeting to draught a memorial to Congress on the subject of the woolens bill. Colonel McKibbin, chairman of the committee, submitted the following memorial, and, having addressed the meeting in its favor, moved its adoption. The memorial having been read and considered, was then unanimously agreed to.

To the honorable the Senate and House of Representatives of the United States:

The memorial of the citizens of Union district, in the State of South Carolina, respectfully showeth: That they deprecate as amongst the greatest evils which could have befallen them individually and nationally the system of protecting duties which has found its way into the national code, and which was attempted to be extended and perpetuated by the bill introduced into Congress at the late session, usually called the woolens bill, and, as it is understood, will be revived in the next under circumstances but too well calculated to raise the apprehension that it will be adopted. We must be short-sighted, indeed, not to perceive in the past history and increasing demands of the advocates of this measure, and its aptitude to every article which can be manufactured in the United States, the entire exclusion of foreign competition and the consequent accumulated price at which we must purchase them.

We despair of throwing any additional light on a subject that has been already demonstrated, but may be permitted respectfully to unite our voices with those of our fellow-citizens of the south in protesting against a system fraught with so many and such alarming evils.

So far as a tariff of duties is necessary to the legitimate purpose of revenue, your memorialists, in common with the whole agricultural interest of the United States, have and would continue to meet it without a murmur, although its operation even in that shape would be in some degree unequal. But we hold that the proposed increase of the tariff on woolens, and the whole system of protecting duties in the present and probable condition of the United States, does now and will continue to act oppressively on that section of the Union to which we belong, and that the enforcement of such a system is unwise and arbitrary.

To demonstrate the truths of these conclusions, it would be sufficient to refer to the memorial of the Chamber of Commerce of the city of Charleston, and the resolutions adopted at a town meeting of the citizens of Columbia, in this State, for the reasons on which they are founded, and as containing a concise and at the same time comprehensive development of their truth. But we may be permitted to use the occasion to deplore the prevalency of a policy founded on personal and sectional considerations, tending to put in jeopardy our best interests; and the more so, that it has found its way into our National Councils.

That a nation, as well as an individual, is profited by purchasing articles of necessary consumption in that market which can and will supply her at the lowest rate and receive her surplus products in exchange, is a proposition which no sophistry can confute. That the proposed increase of the tariff is intended and will operate to compel us to purchase domestic manufactures at a higher rate than would result from a fair competition with foreign manufactures, is abundantly proved by the existing tariff and its proposed increase and extension, and that it will operate oppressively follows as a consequence.

If this burden was equally distributed amongst the different States, and was considered necessary to the public weal, we feel proud in the belief that South Carolina would be amongst the last to complain of it as an oppression; but when we feel but too sensibly the depressed and languishing state of agriculture, and the general embarrassment arising out of the sudden and violent fluctuations of the markets, and that it is imposed as a bonus to foster an influence already sufficiently powerful, silence would be criminal.

In advancing the proposition that such a measure is arbitrary, your memorialists have not overlooked the power conferred on Congress by the Constitution of the United States to lay imposts and to regulate commerce. They insist, however, that their application to the purpose of protecting domestic manufactures at the expense of agriculture and commerce is a provision at war with the spirit of the Constitution and genius of our Government. It is a tyranny which despotism would tremble to exercise, and to which freemen would disdain to submit; and we hope the day is far distant when we shall be called on to elect the alternative of submission or resistance.

Confiding in the correctness of our views and the wisdom of your councils, we submit these matters to your consideration in the earnest hope that they will be carefully weighed, and that in the end a system so unequal, oppressive, and unjust may be wholly abandoned.

Therefore, resolved, That copies of this memorial be transmitted to our Senators and Representatives in Congress to be laid before the same at their next session.

Resolved, That the proceedings of this meeting be published.

D. JOHNSON, *Chairman.*

B. M. PEARSON, *Secretary.*

SEPTEMBER 20, 1827.

20TH CONGRESS.] No. 897. [1ST SESSION.

AGAINST INCREASE OF DUTIES ON IMPORTS.

COMMUNICATED TO THE SENATE MARCH 21, 1828.

ANTI-TARIFF MEETING.

An adjourned meeting of the citizens of Kershaw district, in South Carolina, was held in Camden on the 18th instant, to receive the report of the committee appointed to draught a memorial and resolutions to Congress in opposition to the proposed tariff on woolens. Colonel J. S. Deas resumed his seat as chairman, and the following report of the committee was submitted by Colonel H. G. Nixon:

To the honorable the Senate and House of Representatives of the United States of America in Congress assembled:

The memorial of the citizens of Kershaw district, South Carolina, respectfully represents: That the citizens of Kershaw district most solemnly remonstrate against the passage of the proposed law, called the woolens bill. They believe, if enacted, that it would be unconstitutional in its tendency, unequal in its operation, and oppressive in its effects. They apprehend that it would provoke contending passions, which might disturb the harmony of the Union and convulse the operations of the Government. They think it would serve to substitute a policy doubtful and dangerous in its character for one certain and safe in its results, and tend to rivet upon them a system of restriction, Gothic in its origin, and which, through a long tract of time, has fettered the commercial spirit of the world. *Such a system* England now sincerely mourns, and from it she is this instant struggling to be free. And *such a system*, we are persuaded, if adopted here, would blight our agriculture, fetter our commerce, sap our revenue, and retard the march of our Republic to power, wealth, and greatness. The subject is a grave one; we feel it deeply. It appeals to us in the various relations of parents, freemen, patriots. We adopt with pain the monitory tone of the remonstrance, but we must firmly speak our wrongs; and we do so under the conviction that they will be heard patiently, vindicated boldly, and redressed nobly.

Your memorialists regret extremely that their manufacturing brethren continue to evince such an undying cupidity. Their grasping avarice must be checked, or the genius of the Government will depart. Glance, if you please, one moment at the short history of our manufactures. Mark how, at first, request induced encouragement; encouragement, importunity; importunity, protection; protection, in its turn, a still more eager importunity; until the system has at last almost degenerated into an odious monopoly. In 1789 woolen manufactures were encouraged by a duty of 5 per cent.; in 1816 they were protected by a duty of 25 per cent.; in 1824, by one of 33⅓ per cent.; and *now* they are indelicately craving from your liberality a duty which would amount to a prohibition of foreign fabrics. The petitions presented from New England to the last Congress professed that the tariff of 1824 was sufficient, but complained that it had been evaded at our custom-houses by false invoices and false oaths; all they prayed was to have the full benefit of that act. This could have been effected by introducing a bill to alter the act of 1824 so as to make the *report of appraisers* the rule of duty, and thus prevent the future operation of the decision of the federal court, that the *invoice shall be the rule of duty, unless proved fraudulent.* But, instead of a bill to prevent fraud upon the revenue, we were surprised by a new tariff upon woolens, utterly different in its features, and calculated to be very different in its effects from that of 1824. It contained four arbitrary minimums, ranging from 40 cents to $4, and would have operated upon coarse imported woolens as a tax of from 50 to 139 per cent.

If it be also urged that the tariff of 1824 was counteracted by England in the reduction of the duty on the importation of wool into that country, we reply, let it be met by a like reduction of duty on the importation of raw wool into the United States. It is an undisguised contest between rival manufactures; with them be the losses and the triumphs of the battle. We cannot recognize either justice or generosity in the act that would oppress and crush one branch of honest industry merely to relieve another from the slight operation of a foreign law.

The bill in question would not only operate as an inveterate tax upon the southern cultivator, but would press with invidious rigor upon the poor throughout the Union. But we oppose it not only upon the score of taxation, but upon the principle that it would be introductory of a scheme of policy which might ultimately deprive us of a market for our raw material. We believe that in proportion as we cease to import we will cease to export, for reciprocity is the soul of commerce; and in proportion as we cease to export, our agriculture will decline, for quantity will always be in proportion to demand; and as demand for our raw material decreases abroad, the less will be the quantity of the same raised at home. Besides, we apprehend that a prohibition of manufactured imports would provoke retaliation upon our agricultural exports, and this would inevitably drive our cottons from the principal manufacturing countries of the world. Interest would prompt them to trade with those nations with whom they could effect a mutual exchange of commodities. They are not dependent on us for our cottons. Brazil, with a territory extending 35° of latitude from the equator, with Egypt, Bengal, Ava, and other fertile climes, could soon be put into such a state of cultivation as to enable them to supply the world with this article. We have, therefore, just reason to dread that cumbrous system which the most enlightened nations are hurling off, in order to make commerce as bounteous as the ocean and as free as its winds.

But we are told, by way of consolation, that the north will shortly afford a market for our raw material. This yields not a ray to cheer us: it is a promise which will be "broken to the hope." We know that the manufactures of the world consume more than 1,000,000 of bales; that we now grow at least 900,000; and that of the number here grown not more than 150,000 are consumed by northern manufactures, while the remainder are exported to England, France, Germany, and other manufacturing countries. With all the protection of Government, we are persuaded that northern manufactures will not, for a long time to come, if ever, consume more than 200,000 bales. This assertion is predicated partly upon the fact that the aggregate population of this country do not consume 50,000 bales, and partly upon the principle that our manufactures cannot come in competition on equal terms, in foreign markets, with the manufactures of the Old World. True, we have sold a few coarse cottons in the Mexican and South American markets; and this has induced the wild vision that our manufactures can compete with all Asia—all Europe. But England can and will deprive us even of these limited markets on our own continent. The trade is now conducted chiefly in British vessels; and it will only be requisite for her to reduce the present duty on South American imports to induce a reciprocal reduction on English manufactured exports; and with this advantage she would drive our fabrics from those markets to seek a more friendly port, or to rot as a drug.

But without going into an argument to show the immense advantages enjoyed over us by other manufacturing countries in regard to capital, machinery, and the price of labor, we will merely state a stubborn fact, which cannot be conquered by fair argument: it is this; If, as is universally conceded, we cannot compete with the manufactures of certain other countries in our own market, after they import the raw material from us, export it manufactured to us, pay heavy excise duties upon it at home, and tonnage and other duties here—we repeat, if we cannot, with all these advantages, undersell them in our own market without levying an additional duty of 25, 50, 75, and 100 per cent. upon their commodities, is it not proof conclusive that we cannot cope with them on terms of equality in foreign markets? And if it be true that we cannot cope with them abroad, is it not equally clear that the dangerous system we are about to foster will, if encouraged, ultimately react upon the nation so as to embarrass her progress, impoverish her people, impair her energies, and, in short, produce a withering effect upon the interest it now protects, and upon every nerve of national industry?

Your memorialists also invite your serious attention to the present depressed state of southern agriculture: it is mournful indeed, and they regret to say that they attribute this depression in a limited degree to the legislation of the General Government. Taxation has quickly followed taxation in the nature of an insidious tariff on imposts, which has operated to lessen the net income of the southern cultivator. At one time, assuming the shape of a simple tax upon cordage and bagging, it fritters away more than $280,000 of his profits; at another, boldly taking the character of an onerous duty upon cottons, woolens, and other imports, it sweeps away his profits to the amount of millions. Within a few years past agricultural capital has declined at least 40 per cent. in Kershaw district; and we are a favored section compared with the low country of the State. This sudden declension has induced a general embarrassment, which must end in bankruptcy if further oppressed by Government. The planter does not realize upon his capital thus depressed more than 4 per cent. in consequence of the reduction in the price of the raw material. Without relief, we fear that it will be necessary for our labor to seek new channels, and for our capital to find other investments. At this moment we are seriously discussing the practicability and policy of adopting a rigid system of domestic economy, by cutting off all unnecessary

supplies, and making and raising what we can for use and consumption at home. And it may shortly be also necessary for us to ascertain whether we have not as abundant streams for machinery and as healthful situations for workshops; as fertile pastures for sheep, and as congenial a climate to breed them as the northern manufacturer; and whether, if the northern people will not reciprocate with us as brothers, we may not fearfully grapple with them as rivals. This, we confess, would be a last expiring alternative; for we proudly say, that the vigorous, manly, healthful pursuit of husbandry, with the mental independence it inspires, has more charms for us by far than the gloomy walls of pestilential workshop and the meagre, mindless, dependent spectres which inhabit them. We sincerely trust, then, that self-interest, if not principle, will prompt the citizens of the north to pause before they goad us into desperation. For though we would not violate the Constitution of our country for purposes of emolument, or of retaliation, or for anything earthly, still we are resolved to adopt every *constitutional* means which ingenuity can devise to evade or resist, thwart, or, if possible, crush any law or laws looking to a policy so unfeeling, unnatural, unjust, and unconstitutional, as that with which we are threatened; and if, after all our expostulations, domestic schemes, self-denials, sacrifices, and moral resistance, we find that we cannot breathe under the odious system imposed, we must make an effort to heave it off, whatever may be the shock of the Republic; for God knows we would infinitely rather die like martyrs than live and pay tribute like slaves. But we will not despair of your justice and magnanimity. We indulge the rational hope that, after hearing our complaints and weighing our cause, your "hearts will leap kindly to nature," and that you will indignantly frown on any proposition to oppress us, your brethren by birth and by political adoption. And we feel our present depressed situation the more keenly, from the fact that northern manufacturers crave additional duties at our expense, with a full knowledge of the oppression under which we groan; and this, too, at a time when they enjoy from 10 to 20 per cent. upon their capital. If correctly informed, there are manufactures in New England which realize at least 25 per cent.; manufacturing capital of a certain kind is said to be from 30 to 40 per cent. beyond par. Agricultural and mercantile funds have recently been invested in manufacturing stock at from 30 to 40 per cent. beyond par. These facts, together with the sudden increase of the capital of woolen manufactures from $10,000,000 to $40,000,000, and also the rapid investment of nearly $40,000,000 in those of cotton since the tariff of 1824, go to prove that manufacturing stock enjoys a premium which, under the existing circumstances of the country, ought at least to silence the importunity of a death-like avarice. By consulting also the amount of duties on importations, it will be found that the protection afforded by Government to *commerce, navigation,* and *agriculture united,* is not more than half as great as that extended to manufactures *alone.* The fact cannot be disguised that manufactures in this country enjoy more protection from Government, and contribute less to its support, than in any other on earth. In Great Britain the three great articles of cottons, woolens, and hardware, amounting at least to $350,000,000, including home consumption, receive no protection from custom duties, while we impose a tax of from 25 to 100 per cent. upon the two former commodities. This ought to be the last country on earth to oppress its agriculture. It should rather be protected as the most certain and bountiful source of national support. Even Great Britain, confined as she is to the area of a few thousand square miles, derives her national wealth chiefly from agriculture. The annual amount of property created in England and Ireland may be now estimated at about £440,000,000 sterling. Agriculture, in all its departments, produces at least £220,000,000. Manufactures, in all its branches, (exclusive of pasturage, which properly belongs to agriculture,) produces about £125,000,000. The number of persons engaged in agriculture are nearly five millions. The number engaged in manufactures, mechanical and other trades, exceed seven millions. Thus it appears that Great Britain, (including Ireland,) which, from local circumstances, cannot, in comparison with us, be denominated an agricultural nation, derives at least £100,000,000 more of national wealth from agriculture than from manufactures and other trades, when there are millions of people less engaged in agriculture than in all other occupations. Mark the relative quantity of labor engaged in these departments of industry, respectively, and calculate the profits of each, and you will find an almost incredible difference in favor of agriculture. Is it not to be presumed, then, if agriculture conduces so much more than manufactures to the national wealth of England, that the latter have resulted from a surplus of commercial and agricultural population? If, then, England derives such a great proportion of her wealth from agriculture, confined, as she is, to a small extent of country, and limited, as she is, in the variety of her staples, what should be the policy of the United States, with agricultural means as unlimited as her territory, which stretches from the Gulf of Mexico far towards the Artic, and expands towards the rising and the setting sun, until it meets the eastern and western oceans?

Your memorialists also believe that the proposed tariff would inflict an injury upon the commerce and navigation of the United States. In 1825 our imports amounted to $96,340,075, of which $91,902,512 were imported in American vessels; our exports the same year amounted to $99,535,388, of which at least $89,000,000 were exported in American tonnage. More than 880,000 tons of American shipping entered and 960,000 cleared the ports of the United States; while of foreign shipping about 92,000 tons entered and 95,000 cleared our ports. The past year our imports were 11,365,598 less; and our exports 21,940,066 less than those of 1825. Well, if an increased tariff should greatly decrease our exports, and even not affect our imports, it is rational to presume that the latter would be transported in foreign vessels, which is not now the case; but (to take the more gloomy, but correct view of the picture) if our imports and exports should both vastly decrease, and prohibition provoke retaliation, and these drive foreign commerce from our shore, our naval marine would fade from the ocean, and the ploughshare of ruin pass over the land.

Your memorialists also apprehend that the proposed bill would decrease the revenue. This is manifest from its real nature and object. What is its real object? To prohibit certain imports. If so, and if revenue is raised principally by duties on imports, it follows, as a necessary consequence, that as imports decrease revenue must decline. Again: it will not be contested by those the least conversant with our commercial history that the quantity of our imports have always borne a certain ratio with the quantity of our exports. In proportion, then, as we enhance the duty on importation we will raise the price of the imported article, and as we raise the price of the imported article we will reduce the quantity thereof, by reducing the means of procuring it; for it would be madness to imagine that we could purchase with the same amount an equal quantity of the same commodity taxed 25, 50, 75, and 100 per cent. as if a less tax were imposed. And as quantity decreases revenue must decline, and as revenue declines the land tax will rise; for it would be vain to attempt to raise revenue to any extent in this country by excise duties. If such would be the effect upon the revenue, the only alternative would be to resort to *direct taxation.* This the republican spirit of the American people would not brook. A pen

dipped in gall could not indite terms bitter enough to describe our antipathy of a policy which would warm into being swarms of tax-gatherers and excisemen, to prey like harpies upon our property, and to profane our very family altars by prying into our very household effects.

Your memorialists will conclude by simply protesting against the constitutionality of the bill. They decline a discussion of this point. They have not the vanity to presume that they could afford you a single gleam of light upon it. They merely glance at it as one of the strong grounds of remonstrance. They will only say that the power to "lay and collect duties" was granted to Congress for a specific purpose—revenue. This cannot be denied by the friends of the bill. If so, we ask, why does the bill, on its face, purport to be for revenue alone, when it is really intended to destroy it by prohibiting certain imports? Because, say its advocates, if thus enacted it would be pronounced unconstitutional by the federal judiciary. If, then, an object would be unconstitutional if expressed by a law, it follows that it would also be unconstitutional if implied by a law. A law constitutional in its features, but calculated and intended to be unconstitutional in its effects, is as gross a violation of the Constitution as if the purpose to be effected had been expressed. Hence it results that as the proposed bill purports to be for a constitutional object, but is insidiously intended for one not constitutional, it is a violation of the spirit of the Constitution. These views are confirmed by the 216th page of the Journal of the Federal Convention, where it will be seen that a proposition was distinctly made to give Congress the power to "establish rewards and immunities for the promotion of manufactures," and not adopted.

These are some of the reasons which have influenced this remonstrance. We trust they will not be in vain. They appeal to your justice, your liberality, your patriotism, your honor. They are made by citizens of the same Republic and by descendants of the same sires. They flow from bosoms which throb with patriotic devotion for the Government and for the Union. And be it not forgotten that they come from men who profess to be intimately acquainted with their rights, who have a keen sense of injustice, and who foster an immortal horror of oppression. We forbear to indulge our feelings. Could they speak, they would utter "words that burn." As American patriots, we will bury them in our hearts, and address you in the mild but firm tone of respectful remonstrance. Therefore—

1. *Resolved*, That we see in the proposed woolens bill, and the means now using to force its passage, the act of *interest* and *power* against *justice* and the *Constitution*.

2. *Resolved*, That it should be resisted by all *constitutional means*, both in its passage and its injurious operation on us, and that for that purpose a committee of three persons be appointed, whose duty it shall be to correspond with the other districts of this State generally, and that their attention be drawn to the following objects: First, to ascertain and communicate through the medium of the public prints all such modes of investiture of capital as may direct enterprise into other channels; and, second, how far it would be to our advantage to make at home all the articles used by us and in our occupations.

3. *Resolved*, That the only "true American system" is that which leaves to industry and enterprise its own reward, unshackled by restraints of any kind; that which encourages a liberal intercourse with all and gives a preference to none.

4. *Resolved*, That copies of the above memorial and resolutions be forthwith transmitted to the Governors of the several States, to our Senators and Representatives to be laid before Congress, and to the other districts of this State.

A short and animated discussion arose on the constitutionality of the proposed law, but the question was almost unanimously decided in favor of the report of the committee.

The following gentlemen were appointed a committee to carry into effect the objects embraced in the second resolution, viz: Colonel H. G. Nixon, W. W. Lang, Esq., and Colonel J. S. Deas, who was added on motion. The meeting then adjourned *sine die*.

JAMES S. DEAS, *Chairman*.

T. P. EVANS, *Secretary*.

20TH CONGRESS.] No. 898. [1ST SESSION.

AVERAGE ANNUAL AMOUNT OF PUBLIC MONEYS IN THE BANK OF THE UNITED STATES AND ITS BRANCHES.

COMMUNICATED TO THE SENATE MARCH 24, 1828.

TREASURY DEPARTMENT, *March* 21, 1828.

SIR: In obedience to a resolution of the Senate of the 12th instant, "directing the Secretary of the Treasury to report to the Senate the average annual amount of public moneys in the Bank of the United States and its branches from the years 1817 to 1827, inclusive," I have the honor to submit a communication of the Treasurer of the United States which contains the information required.

I have the honor to be, very respectfully, your most obedient servant,

RICHARD RUSH.

Hon. the PRESIDENT *of the Senate*.

TREASURER'S OFFICE, *March* 20, 1828.

SIR: I have the honor, in compliance with your reference to this office of the resolution of the Senate of the 12th instant, to report that the average annual amount of public money in the Bank of the United States and its branches from 1817 to 1827, inclusive, as ascertained by the accounts settled quarterly at the Treasury, was $3,554,756 50.

I have the honor to be, sir, with great respect, your obedient servant,

MICHAEL NOURSE, *Acting Treasurer of the United States*.

Hon. RICHARD RUSH, *Secretary of the Treasury*.

20TH CONGRESS.] No. 899. [1ST SESSION.

UNEXPENDED BALANCES OF APPROPRIATION, SURPLUS IN TREASURY, AND AMOUNT APPLIED TO THE SINKING FUND, FROM 1817 TO 1827.

COMMUNICATED TO THE SENATE MARCH 26, 1828.

TREASURY DEPARTMENT, *March* 24, 1828.

SIR: In obedience to a resolution of the Senate of the 10th instant, "directing the Secretary of the Treasury to inform the Senate what amount of unexpended balances of appropriations remained in the Treasury of the United States on the first day of each year, and at the adjournment of Congress in each year, from 1817 to 1827, inclusive; also what amount of surplus money above the sums appropriated for the service of each year remained in the Treasury at the adjournment of Congress in each year, from 1817 to 1827, inclusive; and in what years of said term any part of said surplus, and how much thereof, was paid to the Commissioners of the Sinking Fund, according to the fourth section of the act of the 3d of March, 1817, entitled "An act to provide for the redemption of the public debt," I have the honor to transmit the statements marked A, B, and C, accompanied by an explanatory letter from the Register of the Treasury, which contain the information required.

I have the honor to be, very respectfully, your obedient servant,

RICHARD RUSH.

Hon. the PRESIDENT *of the Senate.*

TREASURY DEPARTMENT, *Register's Office, March* 20, 1828.

SIR: I have the honor, in compliance with your reference to this office of the resolution of the Senate of the 10th instant, relative to the unapplied balances of appropriations in the years 1817 to 1827, inclusive, and to what years any application was made, under the 4th section of the act of the 3d of March, 1817, towards the redemption of the public debt, to transmit a statement (A) exhibiting as far as practicable the information required. In explanation, permit me to state that, as the accounts of receipts and expenditures are adjusted quarterly at the Treasury, and the balances of appropriations at the adjournment of Congress not exhibited on the records, the close of the quarters in which the adjournments took place have therefore been assumed as a day approximating sufficiently near to the period specified to meet the spirit of the resolution, to wit, on the 31st of March, in the years 1817, 1819, 1821, 1823, 1825, and 1827, and on the 30th of June in every alternate year.

I beg leave also to observe, that it was found impracticable to state the balance of the appropriations for the services of the year distinct from what might have remained of the balances of the previous years, as the payments prior to the adjournment of Congress have been made without specific reference to either; I have therefore added in the statement (A) the previous balances (column No. 1) to the appropriations for the service of the year, (column No. 2,) as exhibited in the third column. No. 4 exhibits the payments during three or six months, and No. 5 the total balances of appropriations to be satisfied at the close of the quarters in which Congress adjourned. Column No. 6 shows the means in the Treasury to meet the appropriations, and No. 7 the amount that would be required over the means then in the Treasury fully to satisfy all demands for the year. Column No. 8 presents the only payment made, under the 4th section of the act of the 3d of March, 1817, on account of the public debt, which payment, however, left in the Treasury at the end of the year a sum (exclusive of unavailable funds) short of half a million of dollars, and short of the appropriations then to be satisfied of nearly five millions, as is exhibited in the statement (marked B) herewith also enclosed.

As the balances of appropriations in column No. 1, statement A, are exclusive of the balances remaining unapplied of the annual appropriation of $10,000,000 on account of the debt, I beg leave to enclose a statement (marked C) in which those balances are particularly stated.

I have the honor to be, sir, with great respect, your obedient servant,

JOSEPH NOURSE, *Register.*

Hon. RICHARD RUSH, *Secretary of the Treasury.*

A.

Statement of the balances of appropriations which were unsatisfied on the first day of each year from 1817 *to* 1827, *inclusive; the amount of appropriations for each year; the aggregate of the balances at the commencement of and the appropriations for each year; the payments on account of these appropriations to the end of the quarter in which the adjournment of Congress took place in each year, from* 1817 *to* 1827, *inclusive; exhibiting also the balances of appropriations that remained to be satisfied at the end of the said quarters, and the means in the Treasury to meet those balances; also the payments on account of the debt under the fourth section of the act of the* 3d *of March,* 1817.

Years.	No. 1. Balances of appropriations which were to be satisfied on the first of each year, from 1817 to 1827, inclusive.	No. 2. Appropriations for each year, from 1817 to 1827, inclusive.	No. 3. Aggregate of these appropriations and balances.	No. 4. Payments on account of these appropriations from the beginning of each year to the end of the quarter in which the adjournment of Congress took place.	No. 5. Balances of appropriations that remained to be satisfied at the end of the quarter in which the adjournment of Congress took place in each year.	No. 6. Means in the Treasury (including unavailable funds) to meet these appropriations.	No. 7. Funds requisite over the means in the Treasury to meet all unsatisfied appropriations at the end of the quarter in which the adjournment of Congress took place.	No. 8. Payment on account of the debt under the fourth section of the act of the 3d March, 1817.

a Balance against the Treasury on the 1st of April, 1821, $776,746 60.

b As this sum was actually applied in 1818, under the fourth section of the act of the 3d March, 1817, it is presumed that the state of the Treasury did at some period of the year justify the application, although the money in the Treasury (including unavailable funds) at the end of the year amounted to only $1,478,526 74, (per statement B,) and the unsatisfied appropriations at the same period to $5,432,379 12.

c The balances are exclusive of the balances unapplied of the annual appropriation of $10,000,000 on account of the debt, as particularly noted in the accompanying statement C.

JOSEPH NOURSE, *Register.*

TREASURY DEPARTMENT, *Register's Office, March* 19, 1828.

C.

Statement of the amount which remained unapplied of the annual appropriation of $10,000,000 *on account of the public debt at the end of each year, from* 1819 *to* 1827, *inclusive.*

1819	$2,296,178 13
1820	3,667,663 85
1821	5,300,570 23
1822	7,451,410 56
1823	11,921,604 70
1824	5,353,210 94
1825	3,256,166 16
1826	2,214,721 56
1827	2,213,135 57

JOSEPH NOURSE, *Register.*

TREASURY DEPARTMENT, *Register's Office, March* 19, 1828.

B.

Statement exhibiting the balances in the Treasury on the 1st day of January of each of the years from 1817 to 1828, inclusive; showing also the amount of unsatisfied appropriations and unavailable funds; the balance in the Treasury, exclusive of those sums, at the commencement of the years in which a balance over those sums existed; and the amounts in other years requisite, in addition to the available money in the Treasury, to meet the amount of unsatisfied appropriations; exhibiting also the amount paid on account of the principal and interest of the public debt in each year, with references to the appropriations under which the payments were made.

Years.	Balance of money in the Treasury on the 1st of January.	Amount of unapplied appropriations and unavailable funds, 1st of January, exclusive of the balances of the annual appropriation of $10,000,000 for the public debt.	Balance in the Treasury, exclusive of unsatisfied appropriations and unavailable funds, 1st of January.	Amount requisite, in addition to the money in the Treasury, (exclusive of unavailable funds,) to meet unsatisfied appropriations, 1st January exclusive of those for the debt.	Years.	Amount paid in each year on account of the principal and interest of the debt.	APPROPRIATIONS OUT OF WHICH THE PAYMENTS ON ACCOUNT OF THE DEBT WERE MADE.				
							Of $10,000,000, per 2d section of the act of the 3d March, 1817.	Of $9,000,000, per the 3d section of the act of the 3d March, 1817.	Of the $4,000,000, per the 3d section of the act of 3d March, 1817.	Out of the appropriation by law for the redemption of Treasury notes.	Out of so much of the surplus money in the Treasury, agreeably to the 4th section of the act of the 3d March, 1817.
1817	$22,033,519 19	$5,686,012 04	$16,347,507 15		1817	$25,423,036 12	$10,000,000 00	$9,000,000 00	$2,830,108 52	$3,592,927 60

1827	6,358,686 18	5,294,175 71	1,064,510 47		1827	10,001,585 99	10,001,585 99				
1828, (est.)	5,801,015 87	4,773,021 50	†1,027,994 37		1828						
			17,416,763 55	16,705,508 49							

* There was no debt to which part of this balance could be applied.
† This sum is larger than that exhibited in the Secretary's report, arising from the receipts in 1827 being more than was estimated at the time th report was presented, and from amounts carried to the surplus fund.

JOSEPH NOURSE, *Register.*

TREASURY DEPARTMENT, *Register's Office, March* 19, 1828.

20TH CONGRESS.] No. 900. [1ST SESSION.

PRODUCT OF THE CUSTOMS, 1824-'25-'26.

COMMUNICATED TO THE SENATE MARCH 28, 1828.

TREASURY DEPARTMENT, *March* 26, 1828.

SIR: In obedience to a resolution of the Senate of the 12th instant, "directing the Secretary of the Treasury to lay before the Senate a detailed statement of the product of the customs for the last three years, so as to show the annual and the average amount of revenue derived from each article subject to duty for that period," I have the honor to submit a letter of the Register of the Treasury, accompanied by the statement required.

I have the honor to be, sir, very respectfully, your most obedient servant,

RICHARD RUSH.

Hon. the PRESIDENT *of the Senate.*

TREASURY DEPARTMENT, *Register's Office, March* 26, 1828.

SIR: I have the honor to transmit herewith a statement in detail, exhibiting the product of the customs for the years ending on the 31st of December, 1824, 1825, and 1826; and also an average of the same; prepared in obedience to a resolution of the Senate of the United States of the 12th instant.

I have the honor to be, with great respect, sir, your obedient servant,

JOSEPH NOURSE, *Register.*

Hon. RICHARD RUSH, *Secretary of the Treasury.*

Statement exhibiting the gross amount of duties which accrued on merchandise imported during the years ending the 31st December, 1824, 1825, and 1826, together with an average of the same for three years.

	25,482,119	31,656,397	26,083,886	27,740,900 63
Duties on duck imported previous to June 30, 1824	3,212	25	4	1,080 33
Total	25,485,631	31,656,422	26,083,890	27,741,980 96

NOTE.—Articles which paid a duty of 7½ per cent. ad valorem previous to the 30th of June, 1824, are now subject to a duty of 12½ per cent. Said duck, previous to said day was subject to specific duties, now pays a duty of 15 per cent. ad valorem. Duties accruing in 1827 cannot now be stated, as the accounts of the customs are under adjustment.

JOSEPH NOURSE, *Register.*

TREASURY DEPARTMENT, *Register's Office, March* 26, 1828.

20TH CONGRESS.] No. 901. [1ST SESSION.

AGAINST INCREASE OF DUTIES ON IMPORTS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 31, 1828.

At a numerous meeting of the inhabitants of the town of Red Hook, in the county of Dutchess, opposed to the prohibitory system, and without reference to their political opinions, held at the house of David Wagar, pursuant to notice, on the 7th instant, Dr. Abijah G. Benedict was chosen chairman, and John J. Waldorf appointed secretary. It was

Resolved, That the chairman, together with George A. Shufeldt and John R. Ostrom, be a committee to draught and report resolutions to this meeting. The committee accordingly reported the following resolutions:

Resolved, That we, as free citizens of the most prosperous and free country in the world, regret that a portion of our fellow-citizens have, for the purpose of carrying into effect a measure ruinous to our commerce, revenue, and the agricultural interests of the country, represented us to the Congress of the United States as in a depressed and impoverished condition, when, in truth and in fact, the district of country which we inhabit, and as far as our acquaintance extends, the farming and agricultural interests were perhaps never, since the Federal Union, more prosperous and flourishing, and when their prospects, under the protection of Divine Providence, were never more flattering.

Resolved, That in the sense of this meeting the present duties are a sufficient protection to the gradual increase of our manufactories, which have done, and will continue to grow up prosperously with the increase of population, the accumulation of wealth, and the development of the physical and moral power, and the display of the energies of this vast and extensive country.

Resolved, That in the sense of this meeting the proposed system would create manufactories without solid and substantial capital, consequently liable to the slight changes and fluctuations of the times, which, under less prosperous circumstances under which we now live, a miserable, unhealthy population would be thrown upon this community.

Resolved, That John B. Roose, John Morsel, Jacob Benner, William Waldorf, William Bunner, Nicholas Pulner, and John R. Ostrom, be appointed a committee to procure the names to these resolutions of the inhabitants of said town who did not attend this meeting and who are opposed to the prohibitory system.

Resolved, That we concur in the memorial adopted by the meeting held at the house of William Germond, in Pleasant Valley, on the 18th day of February last, of which William Bard, Esq., was chairman, and Joseph Williams and Joseph C. Hoffman, Esqs., secretaries; and that the proceedings of this meeting be signed and published.

A. G. BENEDICT, *Chairman.*

JOHN J. WALDORF, *Secretary.*

20TH CONGRESS.] No. 902. [1ST SESSION.

FOR SPECIFIC DUTY ON IMPORTED SLATE.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 31, 1828.

To the honorable the House of Representatives of the United States:

The petition of the New York Slate Company respectfully showeth: That your petitioners formed an association in the year one thousand eight hundred and two, and were incorporated by the Legislature of the State of New York in the year 1810, with a capital of two hundred thousand dollars, for the purpose of opening and working slate quarries in said State, on the borders of the Hudson river.

That your petitioners raised a capital, and applied the same in purchasing, opening, and working said quarries, and in making the necessary arrangements for transporting the slate to market.

That your petitioners have continued to work the said quarries since the time of their association, and have furnished large supplies of slate of the best quality for covering the roofs of houses, which have been used in most of the principal cities of the United States; that the said quarries are abundant and capable of furnishing increased quantities of this valuable and important material for building.

That your petitioners, after the most frugal and industrious prosecution of the business for twenty-five years, greatly to the advantage of the public and saving to the country, have not been able to make but two dividends of profits in the whole time, and none for the last fifteen years, owing to the importation of foreign slate and the supply of the market at low prices by reason of the low rate of duty charged thereon.

That your petitioners are discouraged in their business, and must abandon this branch of productive labor, so beneficial to the country, and, by retiring from competition, leave the market to be supplied by foreign importation, and at increased prices, unless they can receive from your honorable body the same protection and support which has so wisely and beneficially been extended to other manufacturing and productive labor of the United States.

Your petitioners therefore humbly pray that such specific in lieu of the present ad valorem duty may be laid on all slates imported into the United States, as in the wisdom of Congress may be found just and proper.

And your petitioners, as in duty bound, will ever pray, &c.

ANTHONY STEENBACH, *President.*

JNO. MCCOMB, *Secretary.*

The memorial of inhabitants of the towns of Rhinebeck and Clinton, in Dutchess county, State of New York, respectfully represents: That the New York Slate Company owns a large tract of land in the last mentioned town, on which were extensive quarries of slate, which have been worked for near *twenty-five* years past, and on which they have expended large sums of money in procuring a domestic material, and giving employment to many poor men and their families, besides affording an article so essential in building, at a price far below what the imported would be were none of our own obtained, and which the increasing opening of the country will further afford; but that, owing to the present mode of collecting the duty on imported slate, they have been compelled to suspend their operations and discharge their men until some protection is afforded by the General Government; they therefore respectfully solicit your honorable body to consider this matter, and, in place of the present ad valorem duty, to enact a specific one, in order that all imported slate may pay a duty on the quantity landed in the United States, and not on the amount of the foreign invoice cost, as at present estimated.

All of which is respectfully submitted.

RHINEBECK, *December* 30, 1827.

NEW YORK, *March* 16, 1828.

SIR: Indisposition has prevented me from handing you the enclosed papers relative to the importation of foreign slate. The statement from the custom-house books will show the duty collected on slate imported here for 1826, and amounts to a small sum *on the quantity*. The importations for 1827 have been still larger, but we have not obtained a statement from the custom-house, thinking sufficent is shown of the present unfair impost; and you will please observe that it is the small and middle sizes, say 12, 14, and 16 inches, which mostly interferes with us, being freighted by the ton, and duty collected on the cost instead of the quantity. The larger sizes cost too high in Wales, and the expenses of freight is not in proportion to the others, so that they cannot be delivered here as low; and if a manufacturer has a surplus stock of small slate on hand, he obtains an advance on them from a London or Liverpool agent, and sends them off to this country for sale. Besides, the present mode of building and slating by contract has caused the small and middle sizes to be more generally used, owing to their thinness, in not requiring so many rafters, and more despatch in handling and laying on the roofs, but many recent fires have shown their insecurity.

Enclosed is also a petition from the inhabitants of Dutchess county in our behalf. They are very desirous of having the quarries again worked, as it employed many people and caused considerable circulation of money among them.

Any further information or service that I can render in showing the present improper mode of collecting the duties on imported slate will be given whenever required.

I am, respectfully, sir, your obedient servant,

J. C. NEWTON, *Treasurer*.

LYNDE CATLIN, Esq.

Statement of duty paid on Welsh slate imported at New York in the year 1826, *as taken from the custom-house entries.*

	Cost sterling		Duty paid.
203,360 countesses	£1,116 12 8, or	$5,454 00	$1,363 50, 20 by 10 inches.
952,000 small ladies	1,358 8 6, or	6,635 00	1,658 75, 14 by 7 inches.
864,220 ladies	2,087 3 8, or	10,194 00	2,548 59, 16 by 8 inches.
609,120 doubles	796 15 11, or	3,892 00	973 00, 12 by 6 inches.
20,360 dutchesses	161 0 2, or	786 00	196 50, 24 by 12 inches.
2,640,060			
50 tons of imperials	140 10 0, or	686 00	171 50, 30 by 16 inches

20TH CONGRESS.] No. 903. [1ST SESSION.

IN FAVOR OF INCREASE OF DUTIES ON IMPORTS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 31, 1828.

To the honorable the Senate and House of Representatives in Congress assembled:

The subscribers, inhabitants of the county of Delaware, in the State of New York, respectfully petition: That the tariff pending before your honorable body may be passed the present session in such adapted form as to give effectual protection and encouragement to the various internal industry of the country, agricultural and manufacturing equally with commercial.

Waiving to reiterate further than to refer to the facts and arguments of the case so often and justly urged, your petitioners, feeling the ruinous effects of inadequate protection, prefer but to glance at these and to pray for relief.

For lack of adequate protection our internal industry universally languishes.

For want of the more judicious distribution and application of our labor which such protection alone can invite and assure, agriculture is overstocked, overdone, and unproductive.

For want of the home market which the same protection can alone create, perpetuate, and increase to any required extent, our surplus produce and raw materials are rotting on our hands or selling at impoverishing prices.

For want of that adequate protection to our own in contradistinction to foreign industry, which can alone induce a wiser distribution and direction of our labor, and create, increase, and assure the home market, so indispensable to our welfare, the whole grain-growing and grazing districts of our country are in distress; our surplus of cultivation and pasturage has fallen an average of at least one-half, our live stock no less; our lands and farms, following the down-hill suit, have sunk thirty, fifty, and sixty per cent., producing total ruin to thousands and tens of thousands of families in all parts of by far the greater portions of the Union.

For lack of the same relief various and important of our manufactures drag heavily and spiritless; and that of wool, which ought to be the great staple of the east, and north, and west, stricken and sickened with foreign importations, struggles but with barely equivocal life.

In the depression all participate; midst a fulness scarcely less fatal than famine, the farmer sees his surplus perishing on his hands or selling for less than cost; his stock unsaleable at bare saving; his lands depreciating under his feet. The manufacturer hears the transatlantic cry, "crush him," "crush him," and sees the country inundated with foreign commodities bearing down all competition. Every description of laborers in each vendor of foreign goods beholds a collector of tribute for foreign countries, a gleaner of the scattered shillings left us to send athwart the Atlantic to pamper and aggrandize the self-same monarchy that would still inthral us by guile, as erst by force, and from which, till we encourage and protect our own industry and manufacture for ourselves, we are but half emancipated.

The vortex of depression and despondence drags down all in its gorge. The rich and honorable, disdaining to fatten on distress, above converting others' necessities into their own opportunities, are less rich. The middling classes are growing poor; the poor yet poorer.

In this situation fellow-sufferers in a calamity, not local but national, not confined but spread, and spreading far and wide, and that unless stayed must of necessity speedily overtake and overwhelm city as well as country, the south as well as the east, and north, and west; and not unconscious of our rights as well as of our privileges, we look to Congress as the Conscript Fathers of the country, and pray them without further delay to pass a tariff, not inert or partial, but one that, by inviting and inciting to a more judicious distribution and application of our labor, will create and perpetuate the home market so indispensable to our prostrate agriculture; one that, by amply protecting American industry in its multiplied forms from being crushed by foreign competition, by equally protecting the triple sisters—agriculture, manufactures, and commerce—will encourage, and in the end relieve all, give new impetus to our dejected ardor, and restore to our country the thrift and progressive prosperity which her protected, encouraged, and properly directed energies and inexhaustible means will not fail to assure.

And your petitioners will gladly avail themselves of the opportunity of rejoicing in the thus enhanced welfare of our beloved country.

DELAWARE COUNTY, *New York, February* 23, 1828.

20TH CONGRESS.] **No. 904.** [1ST SESSION.

IN FAVOR OF IRON AND IRON MACHINERY FOR RAILROADS FREE OF DUTY.

COMMUNICATED TO THE SENATE APRIL 2, 1828.

Mr. SMITH, from the Committee on Finance, to whom was referred the memorial of the Baltimore and Ohio Railroad Company, praying that they may be permitted to import iron and iron machinery for said road free of duty, reported a bill to admit iron and machinery necessary for railroads duty free, and laid on the table the following document which, with the memorial (Doc. 140) heretofore printed, were ordered to be printed.

Extracts of a letter from Colonel Long to P. E. Thomas.

BALTIMORE, *January* 8, 1828.

DEAR SIR: Agreeably to your request I have the honor to submit, in general terms, my opinions as to the cost of the contemplated railroad between this city and the Ohio river, together with the cost of transportation thereon.

I take the liberty to premise, however, that the practical results afforded by this country in reference to works of this character are too limited to admit of any definite conclusions as to their cost or best mode of construction. England has been looked to for example in the construction of roads and canals, and is still regarded as furnishing the best models for railroads. In respect to the former, our imitations, though they may have proved inferior in point of workmanship, have certainly surpassed the originals in economy of construction. In reference to railroads, we have every reason to expect that they will be placed on a similar footing; although iron, which is an indispensable article in their construction, is somewhat dearer here than in England, yet timber and stone, which are not less essential, are far more

abundant, convenient, and less expensive in this country. Accordingly, if we adopt a mode of construction embracing the facilities, and avoiding the inconveniences here presented; or, in other words, if the quantity of iron employed in the construction be the least practicable, and timber or stone be used in its stead, so far as they may be adequate to the purpose, the cost may be proportionably reduced. With views similar to these, a mode of construction thought best adapted to the condition of the country has been suggested, and is briefly as follows:

1st. That the road be located in conformity to a system of graduation adapted exclusively to the use of horses in the first instance, and at the same time to the use of mechanical power, whenever its introduction may be deemed advisable.

2d. That the foundation or bed of the road be prepared in conformity to said system.

3d. That in all cases of *level* or *deep cutting* the rails be formed of stone, plated with iron, the plates being of rolled iron 2¼ inches broad by half an inch thick.

4th. That in all cases of embankment rails of wood plated with iron as above be first employed, with a view of having stone rails substituted as soon as the embankment shall have been sufficiently consolidated, or the wooden rails decayed.

5th. That the stone rails be supported and confined by rubble or broken stone, which are to embrace the bottom and sides of the rail, and with the latter form a covering for the road-bed impervious to water, and of course render the foundation inaccessible to frost.

6th. That the wooden rail be supported and confined by sleepers, laid transversely of the road, and furnished with notches fitted for the reception of the rails, and keys to confine them; to these rails the iron plates, as before described, are to be attached by means of nails or wood screws.

The cost of a road constructed in this manner may be safely estimated at the following rates per mile:

Clearing, grubbing, and grading deep cuts, embankments, bridges and culverts included.....	$7,000
Stone rails for a double railroad, laid, dressed, and fitted for the reception of the iron plates, at 20 cents per foot run for each rail	4,224
Wrought iron plate rails, ½ by 2¼ inches, amounting to 36 tons per mile, at $80 per ton.....	2,880
Cost per mile for a macadamized pavement	1,000
For laying and riveting rails.....	500
Contingencies.....	396
Aggregate cost per mile.....	16,000

Extract from a letter from William Brown, Esq., of the firm of Messrs. William & James Brown & Co., Liverpool.

"We continued our route from Stockton past Darlington to West Awkland, ascending and descending one of the inclined planes, a distance, as near as we could judge, of about two miles, and having an inclination of about *one inch* in every *thirty inches*.

"Two stationary steam engines of about 30-horse power each are placed at the summit of the planes, which draw the wagons on one side about 1¼ mile, and ¾ on the other, by means of ropes of two inches in diameter, winding upon drums by the force of the engines. The engines will draw eight loaded wagons of coal, containing two tons and a half each, up one side of a plane and down the other, a distance of about two miles, in 10 minutes. The ropes are carried down the hill by empty or full wagons, as the case may be, and on being adjusted to others going in a contrary direction, a signal is made at the foot of the hill, when the engine is put in motion, and the whole speedily drawn up again."

Extract of a letter from Thomas Perkins, Esq., of Boston, to William Lorman, Esq., of Baltimore.

"Since your friend, Mr. Thomas, and party, visited the Quincy railroad, we have completed an inclined plane at the quarry by which we take up one empty wagon of about a ton, and let down a full one of about nine tons, with great ease and perfect safety, in four minutes. The elevation is about 36 degrees, and the distance about 500 feet; this is a great saving of labor, as in the present case we use one horse and one man to perform what would require seven yoke of oxen, seven teamsters, expenses of drays, and nearly two hours' labor divided amongst them."

1*st question.* Probable distance?

Answer. Probably 300 to 330 miles.

2*d question.* Probable expense of simply grading the road?

Answer. It is estimated the cost of grading the road will be $7,000 per mile.

3*d question.* Probable expense per mile to the foot of the Alleghany mountains?

Answer. See Colonel Long's letter.

4*th question.* Probability of getting over the mountains?

Answer. See Colonel Long, W. Brown, and T. Perkins' letters.

5*th question.* Probable greatest degree of elevation of hills?

Answer. The hills may be graduated to conform to the machinery employed in transportation across them.

6*th question.* How much iron per mile if done on iron?

Answer. If the rails be made of iron entire, it would take 117 tons per mile; if they be made of iron plates on wood or stone, 36 tons per mile will suffice.

7th question. How much iron per mile if on wood?

Answer. See the above answer.

8th question. When will it commence?

Answer. Immediately, as the necessary arrangements can be made.

9th question. What the capital required for the whole work?

Answer. From six to seven millions of dollars, including machinery.

10th question. What thereof supplied by citizens of the State?

Answer. The State has taken $500,000, the city of Baltimore $500,000, and the individual subscriptions are $3,000,000; making in all $4,000,000.

11th question. Can the balance (if any) be supplied by new subscription?

Answer. It is confidently hoped and believed it can.

12th question. Are there any iron works in Maryland that can supply the quantity of that article wanted?

13th question. Are there any in other States convenient and capable in time to supply the quantity required?

Answer. It is believed that the necessary quantity of iron cannot be obtained in the United States in time for the work.

14th question. If any, what would be the effect on the other interests of the agricultural and other pursuits of the people?

15th question. Would it raise the price of iron in the market?

Answer. If supplies of iron be not obtained from abroad, the effect of such an increased demand for it must inevitably be to create an immense rise in the price, and of course produce serious injury, both to the manufacturing and agricultural interests in the country.

To the Senate and House of Representatives of the United States in Congress assembled:

The memorial of the President and Directors of the Baltimore and Ohio Railroad Company respectfully showeth: That your memorialists have it in contemplation, and are at this time taking measures to construct a railroad, with at least two sets of tracks, from the city of Baltimore to the Ohio river, which will, it is estimated, unavoidably require not less than fifteen thousand tons of malleable iron.

Your memorialists, taking into consideration the actual quantity of this indispensable article now annually manufactured in our own country, and further considering the numerous lines of railroads already projected in different parts of the United States, are confirmed in the opinion that it will be difficult, if not impossible, to procure amongst ourselves a sufficient quantity for these numerous undertakings; and, consequently, that an enormous enhancement of the present price must be the inevitable consequence, unless supplies to a considerable extent be drawn from abroad; which enhancement of an article so necessary, both in the manufacturing and agricultural operations of the country, would manifestly be injurious to both these important interests.

Your memorialists are persuaded that so enlightened a body as the Representatives of the people of the United States are fully aware of the vast importance of the undertaking in which this company have embarked. It is, indeed, an enterprise in which every section of our country has a deep and vital interest.

Its direct effect upon the prosperity of the nation, if successfully accomplished, and its beneficial influence in perpetuating the happy union of these States, is perceived and appreciated by all; at the same time it should not be overlooked that this great work, of such deep national concernment, and pregnant with such important consequences, has been undertaken and so far conducted by individual enterprise, and is still almost exclusively dependent upon private resources for its accomplishment.

Under these considerations your memorialists take leave respectfully to ask of the National Legislature for the passage of an act authorizing the Baltimore and Ohio Railroad Company to import from abroad, if it should be found needful, such supplies of iron and iron machinery as may be requisite for the construction of the proposed road free of duty.

In presenting these views of an object essentially national to the Representatives of their country, your memorialists rely on the wisdom and patriotism of Congress to afford such relief as may be deemed proper, either by an exemption from duty or by a drawback upon the material actually used in the construction of the road; at the same time they confidently believe that in granting the indulgence now asked for the best interests of the nation will be substantially promoted, whilst no injury whatever will accrue, either to the manufacturing, agricultural, or other important interests of the country.

Signed on behalf of the Baltimore and Ohio Railroad Company.

P. E. THOMAS. *President.*

20TH CONGRESS.] No. 905. [1ST SESSION.

EXPENDITURES IN THE DEPARTMENT OF STATE.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES APRIL 5, 1828.

Mr. BLAIR, from the Committee on so much of the Public Accounts and Expenditures as relates to the State Department, who are required by the 75th standing rule of the House to inquire and report "whether the expenditures of the Department are justified by law; whether the claims, from time to time, satisfied and discharged by the Department are supported by sufficient vouchers establishing their justness both as to character and amount; whether any, and what, provisions are necessary to be adopted to provide more perfectly for the proper application of the public moneys and to secure the Government from demands unjust in their character or extravagant in their amount; whether any, and what, retrenchment can be made in the Department, without detriment to the public service; whether any, and what, abuses at any time exist in the failure to enforce the payment of moneys which may be due to the United States from public defaulters or others; and to report from time to time such provisions as may be necessary to add to the economy of the Department and the accountability of its officers," reported:

That they proceeded to the discharge of the duties assigned them, commencing their investigations with the year 1825, as, on the 3d of February of that year a preceding committee had, in their report to the House, embraced the disbursements of the State Department up to the 31st of December, 1824, and which is on file in the office of the Clerk of the House. From reference to the appropriation laws it will be seen that the expenditures of the Department are specific and contingent. To the first, consisting of the salaries of the Secretary and clerks of the Department and the Patent Office, the committee have only inquired whether they have been kept within the appropriation acts, which they find has been the case. The second has more especially claimed the attention of the committee, which must, from its nature, be (in its application) greatly at the discretion of the head of the Department. It consists of the appropriations for the expenditures of the Department; for the contingent expenses of foreign intercourse, and the contingent expenses of all the missions abroad.

For the expenditures of the Department was appropriated, in the year 1825, the sum of	$25,550 00
For the year 1826	28,095 00
For the year 1827	28,050 00
Making an aggregate of	81,695 00

For the contingent expenses of foreign intercourse.

For 1825	$40,000 00
For 1826	40,000 00
For 1827	30,000 00
Making an aggregate of	110,000 00

For the contingent expenses of all the missions abroad.

In 1825	$20,000 00
In 1826	30,000 00
In 1827	20,000 00
Making in the whole	70,000 00

The committee, having ascertained the sums appropriated under the several heads before specified, addressed a letter to the Secretary of State requesting to be furnished with a statement of the disbursements made out of the first mentioned appropriations, to whom paid, and for what services, with the vouchers for such payments; also a statement of the disbursements made out of either of the latter appropriations so far as they had been expended under his authority and upon his voucher. To which, on the 4th instant, he returned his answer, accompanied by the statements A and B, together with the letters of the Register of the Treasury, the Fifth Auditor, and a letter addressed by Mr. Adams, then Secretary of State, to the Committee on the Expenditures of the State Department, dated April 18, 1822, in explanation of the manner of transacting the pecuniary concerns of the office, and which are annexed to this report. Statement A contains the disbursements of the State Department, except for the printing and distribution of the acts of Congress, from the 31st of December, 1824, to the 1st of January, 1828; B, the disbursements of the appropriations for the contingent expenses of foreign intercourse from the 4th of March, 1825, to the 31st of December, 1827, distinguishing between those items which had been allowed upon the certificate of the Secretary of State from those which had been otherwise vouched. That no statement had been furnished of the disbursements of the appropriation for defraying the contingent expenses of all the missions abroad; because it appeared, upon examination of the accounts during the period particularized by the committee, that no item had been allowed upon the special approval of the Secretary of State. In the letter of the Register of the Treasury of the 12th instant, in answer to further inquiries made by the committee, it is stated that the appropriations for outfits, salaries, and the contingent expenses of missions abroad have been uniformly blended in one account, denominated diplomatic department, and that payment for these various objects had been as uniformly made out of that general fund without specification of object. In the same letter it is stated that the payment to John A. King, Chargé, &c., for salary and outfit, was made out of that fund, but that it had not been allowed upon the sole and exclusive voucher of the Secretary of State, but had been endorsed thus: "The President approves the

above charges, December 22, 1826. H. Clay." That upon re-examination of the accounts it had been found that Beaufort T. Watts, Chargé d'Affaires at Bogota, had been allowed by the chief clerk, in the name of the Secretary, the sum of six hundred and fifteen dollars for newspapers, postage, and letter carrier; which communication is also annexed to this report.

The committee will first notice the accounts of the disbursements in statement A, which are said to be all the disbursements made of the appropriations for defraying the contingent expenses of the Department from the 31st of December, 1824, to the 1st of January, 1827, (except for the printing and distribution of the acts of Congress,) which for the same period amounted to the sum of $38,243 35. The manner in which these disbursements are made will be seen from the statement itself and the letter of the Secretary of State to the committee. William Brown, a clerk in the office, is allowed to receive sums in gross from the Treasury upon requisitions of the Secretary of State, which are deposited by him in the office of the Bank of the United States within this District, upon which from time to time he draws for the current expenses of the Department. The check upon him is, (it is said,) that after making his quarterly disbursements, an account thereof is furnished the Secretary of State, who writes his approval, which is understood to be an approval of the objects only, but not as dispensing with the exhibition of vouchers in any instance, except where, from the nature of the expenditure, it is impracticable to produce them; in which case the propriety of the charges is judged of and decided by the head of the Department. As the head of the Department only approves the object of expenditure without reference to the value of the articles purchased or services performed, the committee were led to examine into the means afforded the Auditor in deciding upon the justness of the variety of claims discharged by the agent. The vouchers submitted to him are nothing more in the general than an uncorroborated statement of account, with the receipt of the claimant to Mr. Brown, as agent for the State Department. The statement A, though not as full as some of the originals in the Register's office from whence they are taken, may, to a very great extent, be said to furnish as ample means of ascertaining the correctness of the claims as the original vouchers in the Register's office. Hence they conclude that, as to form, it is true that the disbursements of the agent are submitted to the Fifth Auditor for adjustment; but it is also true that, from all the evidence furnished him, (of which the committee can have any knowledge,) the almost endless variety of articles and services for which compensation had been made may not yet have been delivered or performed, and, if they were, at extravagant prices, without reference to their intrinsic value. The committee are of opinion that some higher standard than the judgment or discretion of a clerk in the office (however virtuous and intelligent) should have been provided for testing the adequacy of compensation involving the payment of so large an amount of the public money.

The committee have found it impossible for them to enter into a critical examination of the justness of the multiplied items in that account, many of them made out without such specification of the extent of services as to enable the committee to form any opinion of the adequacy of the compensation, and which (if practicable) would consume more time than the committee could promise to devote to it consistently with their other duties. They have so far analyzed the account in statement A as to ascertain that the following amounts were disbursed by the agent for the purposes there stated:

For extra clerk hire in copying and map tracing.

In the year 1825	$2,552 79
In the year 1826	7,561 00
In the year 1827	3,597 45
Total	13,711 24

Extra printing.

In the year 1825	$2,488 35
In the year 1826	1,784 81
In the year 1827	1,036 36
Total	5,309 52
Which is exclusive of the sum of $550, which in said statement is blended with stationery, part of which is for printing, and the residue stationery; hence the committee were unable to sever the respective amounts; which sum, if added to the above, would amount to	5,859 52

For stationery.

In the year 1825	$1,304 36
In the year 1826	2,058 42
In the year 1827	1,988 28
Total	5,351 06

Newspapers.

In the year 1825	$370 69
In the year 1826	608 47
In the year 1827	444 00
Total	1,423 16

For book and newspaper binding.

In the year 1825	$70 76
In the year 1826	829 23
In the year 1827	1,431 75
Total	2,331 74

Postage on letters to Messrs. Brent and Thornton, (said to be on public business.)

In the year 1825	$53 05
In the year 1826	146 55
In the year 1827	94 30
Total	293 90

For carpenter's and cabinet work.

In the year 1825	$1,382 87
In the year 1826	609 88
In the year 1827	1,659 36
Total	3,602 12

Miscellaneous work, such as painting, plastering, graduating public ground, bricklaying, &c., and materials.

In the year 1825	$2,779 80
In the year 1826	1,102 97
In the year 1827	1,831 25
Total	5,714 02

The committee have not carried out the residue of the accounts in said statement, inasmuch as they are so various in their character that they would not fall under general heads, nor indeed would they be susceptible of classification under any one head in the general estimates furnished by the Secretary of State, upon which the appropriations were founded. Such are the charges of $250 for the portrait of Washington, and $10 for a medal, and $13 for a print of the President of the United States, which, though of inconsiderable amount, nevertheless involve principle to as great an extent as would a larger amount. If the head of a Department can (consistently with principle) apply the contingent funds appropriated for the current expenses of his office to such objects, the committee can see no limit to his discretion, save that of the fund at his disposal; which, if sufficiently ample, he might apply to the erection of a monument on the public ground to perpetuate the memory of whomsoever he might think proper.

The committee likewise would remark upon the compensation to Thomas Miller and Thomas M. Baily, who were severally employed by the Secretary of State; Miller to Accomac, Virginia, $140 for nine days' services; Baily for twice travelling from the same place to Washington and returning; for the first trip he was paid $284 40; for the second $379 20, without specification of time. They assume the data furnished in the case of Mr. Miller as being the criterion by which to judge of the justness of the compensation in each. In that case the compensation is stated at $8 per day, making $72, and the remaining $68 is given for his expenses of a journey which the committee believe does not exceed the distance of two hundred miles. At that rate of allowance the daily compensation and expenses would fall but little short of $16, which the committee believe to be extravagant. They find in the statement charges for carpeting purchased for the office during the period embraced in their inquiries, and for making and laying them, near the sum of five hundred dollars, which is not included in either of the specifications which they have made in this report.

The committee have seen with surprise that, whilst the appropriations have increased for the last three years, that the disbursements of the Department have for the same time greatly exceeded the annual appropriations, which will be seen from comparing the statement furnished the committee by the Register of the Treasury with the amount of appropriations, (exclusive of those for printing and distributing the laws of Congress,) and which statement or summary the committee annex to this report, and for its better identification they designate it by the letter D. That statement exhibits only an excess of expenditure (exclusive of publishing and distribution of the laws) for the years 1825, 1826, and 1827, of the sum of $10,600, the amount of the unexpended balance at the close of the year 1824.

From reference to the statement A it will be seen that the actual expenditures of the Department (exclusive of printing and publishing the laws) in fact amount to the sum of $52,359 75, instead of $44,805, as stated in statement D; making an additional excess of expenditure over the unexpended balance of 1824, and the annual appropriations of the sum of $7,554 75. That excess, the committee apprehend, has been met by the fees received from the Patent Office, and the unexpended balance of the appropriations made for printing and distribution of the laws, which they find in the same statement amounted on the 31st of December, 1824, to the sum of $5,558, and on the close of the year 1827 to the sum of $7,558; being at that time about equal to the excess of expenditure before stated.

The committee, upon contrasting the expenditures of the State Department for the last three years with those years which preceded them, cannot (consistently with that economy which should be exercised in the disbursement of public money) account for the increased expenditure. From the statement annexed to the report of the former committee, made to the House in the session of 1824–'25, the expenditures of the Department for those years amounted to the sum of $35,311 18, averaging something more than

$17,000 per annum, when the expenditures for each of the years embraced in the inquiries of the committee will average more than $32,000.

The committee have viewed the appropriations for the current expenses of the Department as being strictly contingent, which, though technically true, cannot be so in point of fact. However indefinite the appropriation laws may be, they are predicated upon an estimate furnished by the Secretary of State, specifying the various objects to which there is a necessity for the appropriation of public money; which estimate, owing to the faith reposed in the public officer, founded upon his experimental knowledge of the necessities of the Department, is received as the basis on which such appropriations are made. Hence an unlimited exercise of discretion cannot be assumed in the after disbursements of the money, in disregard of the enumeration which he has made of the objects, without violating that faith which was reposed in his estimate. The committee, from that consideration, have adverted to the estimates presented for each of the years to which they have extended their inquiries as to the sum necessary to meet the exigencies of the Department for extra clerk hire, which they find has uniformly been $1,000; that sum for the three years would amount to $3,000, when, in fact, there was expended during that period more than four times that amount. Under the act of 20th April, 1818, (which regulated the amount of the specific appropriation for the clerks of the Department,) there was appropriated for the years 1825 and 1826 each the sum of $15,900 for clerks. By the act of the 2d of March, 1827, there was an addition of $4,400 made to the former appropriation, making the sum of $20,300 for that year; notwithstanding which, there was expended of the contingent fund for extra clerk hire more than $1,000 over the expenditure of 1825 for the same object.

The committee are unable to say whether the mechanical and other labor and materials furnished, constituting so large an item in their former classification, were necessary, and if so, were performed and furnished at their equitable value, as it was impossible for them to traverse so wide a field in their investigations; but this they will say, that if such expenditure was called for, instead of resort being had for $9,000 to the contingent fund, an appropriation should have been made by Congress for these objects, and the precaution used of disbursing it under the Superintendent of the Public Buildings rather than the discretion of a clerk who, in the nature of things, must have been more incompetent to the task than one skilled in mechanics. The committee can recommend no mode better calculated to promote economy in the disbursements of the Department than (where practicable) to specify in the appropriation laws the several objects to which such appropriations shall be applied, leaving as little as possible to the discretion of the officer. That all the objects of expenditure could be foreseen, so as to be provided for, is not to be expected; allowance must ever be made for unforeseen cases; but the committee are of opinion that much greater precaution could be used than has hitherto characterized the legislation of Congress on that subject.

The committee have herein before stated that the amount appropriated for the printing and distribution of the laws of Congress for the years before stated amounted to the sum of $47,500, which, with $5,558, the unexpended balance of former years, amounted to the sum of $53,058.

Of that sum was expended for these objects in the year 1825	$11,500
In 1826	16,500
In 1827	17,500
	45,500

Leaving unexpended of that fund, on the 31st of December, 1827, the sum of $7,558. The expenditure of those appropriations, and, indeed, for printing generally, are at the discretion of the head of the Department, except so far as there is a limitation fixed by the third section of the act of 1818 upon that discretion in regard to the compensation of the proprietors of newspapers in which the laws, resolutions, &c., shall be published. As this subject was so fully discussed in the House during the last Congress, and must be so well understood, the committee forbear to make any recommendation thereon.

The committee beg leave to add, that from the document A it appears that the sum of $197 was paid to Peter Force out of the contingent fund of the Department for publishing proclamations of Indian treaties, when, from a reference to the act of Congress of May, 1826, it will appear that the publication of such treaties are expressly confined to one paper, and that to be within the limits of the State or Territory to which the subject-matter of such treaty shall belong.

They are of opinion, from the best information which they can obtain, that the distribution can still be made through the Post Office Department without detriment to the public service, certainly by the mail contrators, for a very trifling amount compared with that of private agents as now practiced. They therefore recommend the expediency of withholding the appropriation of $3,500 from future acts, and that said distribution be made through the agency of the Postmaster General.

The committee have been induced to examine the library of the State Department, from having seen a standing annual estimate of $2,000 per annum for the purchase of books. It embraces the statutes, compilations, and digests of the laws of the United States and of the several States and Territories, foreign statutes and digests, national law, common, civil, and municipal law, and reports thereof; treaties, conventions, and histories of negotiations, journals and histories of legislative bodies, and State papers; scientific geography, voyages and travels, history, biography, medicine, chemistry, and anatomy, statistics, political economy, &c.; miscellaneous, with the magazines, reviews, newspapers, and public journals of the States as well as foreign countries; atlases, maps, charts, &c. The committee can discover no necessity for so extensive a library in that Department, embracing works which cannot possibly be required in the discharge of official duties, and which involve so much expense without being called into use. They are induced to recommend the expediency of withholding that appropriation (to a great extent) in future from the following considerations: 1st, the inutility of very many of these books. 2d, that access to the Library of Congress could be afforded to each of the officers of the Government for such books as might be desired, and which were not necessary to impart information in the discharge of official duties; such as law, medicine, chemistry, anatomy, miscellaneous, &c.; 3d, from the fact that a librarian, at the annual salary of $1,400, appears now to be incompetent to make out the catalogue of so extensive a library, without employing assistants at an expense of $90 to the Government, as appears from the statement A, hereto annexed.

The committee will now notice the second statement denominated B, which, with an after supplement attached to it, purports to be a full exposé of the disbursements made of the appropriations for the contingent expenses of foreign intercourse from the 4th of March, 1825, to the 31st December, 1827;

distinguishing in different columns between the items which had been allowed under the authority and upon the voucher of the Secretary of State from those which had been otherwise vouched. It appears from the exhibit D that on the 31st of December, 1824, there was, of the appropriations to that object, an unexpended balance of $17,306 39; which, with the sum of $113 66 repaid into the Treasury during the years 1825, '26, and '27, will, when added to the amount of the annual appropriations as herein before stated, amount in the whole to the sum of..... $127,420 05

Of which sum there was expended—

In the year 1825.....	$25,572 68	
In the year 1826.....	18,633 00	
In the year 1827.....	36,258 63	
		80,567 97
Leaving an unexpended balance, on the 31st of December last, of.....		46,852 08

From the fact that to the Committee on Public Expenditures and the Select Committee on Retrenchment belong more properly the consideration of most of the subjects growing out of that disbursement, your committee have only noticed such parts thereof as fall within the legitimate scope of their inquiries. They have ascertained that, for the years 1825, '26, '27, there was paid out of that fund for extra clerk hire the sum of $1,971 78, which, with the sum of $13,711 24, expended for that purpose, of the contingent fund of the State Department within the same period, amounts in the whole to the sum of $15,683 02; a sum nearly equal to one-third of the amount annually appropriated for the whole clerks of the Department and Patent Office. The committee are of opinion that the compensation to each clerk employed in the Department (whether for general or special purposes) properly devolves upon the appropriations for the Department, and ought to be paid out of that fund, if for no other reason than that the disbursements would be more simple, less difficult to understand, and not so liable to abuse.

The committee have also extracted from the said statement the amount paid out of that fund for extra printing during the same period, which they find amounts to the sum of $2,967 52; $2,455 33 of which amount was for publishing notice to the St. Domingo exiles.

They also find that of the sum herein before stated to have been paid for printing out of the contingent appropriations for the State Department, $1,205 was for the same object; making (according to those statements) the sum of $3,660 72 paid for the publication of that notice out of the different appropriations before specified. The committee are unable to perceive why, for the same services, disbursements have been made out of both those funds. Surely the appropriations for the contingent expenses of the Department, and that of foreign intercourse, are dissimilar in their character, and could not have been intended by Congress to be thus blended. The committee will not particularize the persons employed to publish that notice, or the amounts paid, as the respective accounts are annexed to this report, to which reference can be had for that purpose. They will here repeat what they have said on the subject of printing in the first statement: that the compensation for that service is exclusively at the discretion of the head of the Department, and the House will be better enabled to judge of the expediency of regulating by law that compensation than the committee. From the statement B it will be seen that $16,304 92 of the appropriations for the contingent expenses of foreign intercourse has been expended upon the certificate of the Secretary of State; the greater part whereof has been paid to the bearers of despatches. The committee have no means of ascertaining the necessity for employing special agents to the extent practiced; that must necessarily be referred to the discretion of the head of the Department, and the greatest security against the misapplication of that fund will be found in his integrity. They are unable to say by what rule the Secretary of State determines upon the amount of expenses incident upon such agencies, which (in the case of John Mason, jr.) more than doubles the amount of daily compensation. In that account there is an item of $278 for hire of a coach from Mexico to Vera Cruz; also expenses from Mexico to Vera Cruz, including two days' detention at the latter place, $78; making $356 for carriage hire and expenses. In the account of Theodore W. Clay allowance is made for carriage hire from Mexico to Vera

Cruz.....	$75 00
Expenses to Vera Cruz.....	23 25
	98 25

Making a difference in charge for the same distance, and travelling in the like manner, of $258 in favor of Mr. Mason.

They find in the same statement the sum of $1,940 paid to John H. Pleasants for bearing despatches to Buenos Ayres and Rio Janeiro, and his expenses. That Mr. Pleasants was employed by the Secretary of State to perform that service, and did set out on his journey, the committee believe to be true; but that he performed the journey particularized on his account, and for which he was paid, they believe to be untrue. Whether prevented by indisposition or otherwise from performing the service, the committee are of opinion the facts should have been stated, and the records of the country been made to prove the services for which the public money was disbursed. As the case now stands, they are furnished with no means of determining upon the adequacy of the compensation paid. All they can say, from the evidence furnished from the statement B, is, that the said John H. Pleasants was not entitled to compensation for bearing despatches to Buenos Ayres and Rio Janeiro, as stated in his account. They recommend to the House the propriety of fixing by law the compensation of special agents on such basis as would do justice to them and exempt the Government from impositions. In the same statement they discover an item of $200 paid, upon the certificate of the Secretary of State, to W. Prentiss for his expenses in delivering a box of books to the Governor of Maine. The vouchers furnish no evidence of the description of books or of their quantity, so as to enable the committee to judge of the justness of the compensation or of the fund out of which it should have been paid. They were informed at the Register's office of the Treasury that they were the acts, journals, or documents of Congress. If so, such claim was not chargeable upon the contingent fund for foreign intercourse, but upon the current expenses of the Department, and should have been supported by proper vouchers.

The committee will now advert to the appropriations "for defraying the contingent expenses of all the missions abroad;" for the disbursement of which no statement has been furnished them, because it appeared on examination that no disbursements of that appropriation had been made upon the certificate

of the Secretary of State, save the cases of John A. King, Chargé d'Affaires at London, and Beaufort T. Watts, Chargé d'Affaires at Bogota, mentioned in the letter of the Register of the Treasury, annexed to this report. The attention of the committee has been directed to the former case, because it was brought before the last Congress by a member of this committee, and has since been a subject on which much has been said in the House. The whole amount of that claim is $5,258 15, and is stated thus:

"John A. King, Chargé d'Affaires at London, for his salary from the 1st of July, 1826, the day on which his duties commenced, to the 31st of August following, when they terminated, sixty-two days, at $4,500 per annum	$758 15
"For amount of his outfit, equal to one year's salary	4,500 00
	5,258 15

Endorsed thus: "The President approves the above charges, December 22, 1826.

"H. CLAY."

John A. King had been appointed secretary of legation to Rufus King, minister to the Court of St. James, in 1826, by the President, with the advice of the Senate, proceeded with the minister to that Court, and after the President had been notified by Mr. King of his intention to return, and after his successor had been appointed, and was on his way to relieve him, the minister retired from the Court, leaving the said John A. King in charge of the legation for the period of sixty-two days, for which the beforementioned compensation was allowed. The payment of this claim (in the opinion of the committee) was not authorized by law, nor was it of that description of claims which were designed to be paid out of the contingent fund. They have necessarily adverted to the act of Congress fixing the compensation of public ministers, in the acts of 1810, chap. 61, sections 1 and 2, and which is in the following words: "That the President of the United States shall not allow to any minister plenipotentiary a greater sum than at the rate of nine thousand dollars per annum, as a compensation for all his personal services and expenses; nor to any Chargé d'Affaires a greater sum than at the rate of four thousand five hundred dollars per annum, as a compensation for all his personal services and expenses; nor to the secretary of any legation or embassy to any foreign country, or secretary to any minister plenipotentiary, a greater sum than at the rate of two thousand dollars per annum, as a compensation for all his personal services and expenses; with this proviso, that it shall be lawful for the President of the United States to allow to a minister plenipotentiary, or Chargé d'Affaires, on going from the United States to any foreign country, an outfit, which shall in no case exceed one full year's salary of such minister or Chargé d'Affaires." The second section enacts, "that to entitle any Chargé d'Affaires, or secretary of any legation or embassy to any foreign country, or secretary of any minister plenipotentiary, to the compensation therein before provided, they shall respectively be appointed by the President of the United States, by and with the advice and consent of the Senate; but, in the recess of the Senate, the President is hereby authorized to make such appointment, which shall be submitted to the Senate at the next session thereafter for their advice and consent; and no compensation shall be allowed to any Chargé d'Affaires, or any of the secretaries hereinbefore described, who shall not have been appointed as aforesaid."

The committee are of opinion that, under the provisions of the before recited law, the appointment of a Chargé d'Affaires can only be made by the President of the United States, by and with the advice and consent of the Senate, (if in session;) if not, then to be nominated to the Senate at the next session thereafter for their advice and consent. The compensation, when thus appointed, cannot exceed four thousand five hundred dollars per annum "for all his personal services and expenses," with this exception, "that, on going from the United States to a foreign country," the President of the United States, at his discretion, (which discretion can only be exercised when the appropriation is made,) may allow an outfit, which shall in no case exceed the amount of one year's salary. In the case now under consideration, Mr. King was not appointed by the President of the United States with or without the consent of the Senate, nor had he "gone from the United States to a foreign country" as Chargé d'Affaires, but was, at the time of the appointment being conferred on him by the minister, the acting secretary of legation, and in the pay of his Government as such. The committee will not controvert (upon the death or absence of the minister) the necessity of the secretary of legation taking charge of the archives and transacting the ordinary business of the legation; nor would they be tenacious of the title conferred by such contingent agency; but they do deny the right to compensate for such appointment when forbidden by the plain and direct provisions of the act of Congress before recited, more especially when no appropriation had been made therefor, and when Congress was in session at the time the allowance was made to Mr. King out of the contingent fund; which fund (in the opinion of the committee) was not subject to the payment of salaries and outfits of ministers and chargés, their compensations being specific subjects of appropriation. If the committee be correct in their construction of the law, a long series of departure from its provisions cannot justify the act of usurpation, but, on the contrary, calls more loudly for a strict compliance with them. The committee discard precedents made in violation of law, because usurpation to-day may (and frequently does) become precedent to-morrow. They can recommend no rule which promises more safety than frequently to inquire into delegated power; compare the act done with the authority for doing it; and in that way circumscribe the agents of the Government (without respect to grade) to the limits of their authority.

The committee, from inspection of the records and accounts of the Treasury Department, have ascertained that much if not the greater part of the annual appropriation for the contingent expenses of all the missions abroad has been disbursed for the contingent expenses of ministers and chargés abroad; some of which have been settled, and others remain unsettled. They have called for and obtained an abstract of the accounts settled for the year 1825, as for that year a greater portion of the accounts have been settled at the Department than for subsequent years, which statement they annex to this report, and marked G. The committee will again advert to the before recited act of Congress, in order to show that whatever may have been the causes which superinduced the practice of defraying the expenses of ministers abroad out of this fund, that such practice is without legal sanction, and can only be supported by construction. That part of the act aforesaid which provides for compensation is, "that the President of the United States shall not allow to any minister plenipotentiary a greater sum than at the rate of nine thousand dollars per annum, as a compensation for all his personal services and expenses." The committee believe that it was the intention of Congress to fix, in the act of 1810, the salaries of ministers and Chargés d'Affaires, so that nothing should thereafter be left to discretion; else why use the strong

language, "for all his personal services and expenses?" If it was intended only to regulate the compensation for personal expenses, as contradistinguished from official, why not provide for such expenses as were not included in the salary? They are of opinion that eighteen thousand dollars per annum to a minister and nine thousand dollars to a Chargé d'Affaires are amply sufficient to cover all the expenses contingent upon such missions. If in this they are mistaken, still it must be conceded that direct legislation upon the increase of salary is preferable to the present practice, which leaves to the discretion of the Department the extent to which allowances shall be made, and which necessarily must depend upon the naked memorandum furnished by the secretary of legation. Believing that the appropriation for defraying the contingent expenses of all the missions abroad has been expended at the discretion of the Department and without the authority of law other than the appropriation acts, the committee recommend in future withholding that appropriation; but if, in the opinion of the House, the salaries allowed by the act aforesaid are insufficient to cover all expenses, then, and in that case, to make such specific additions as shall be deemed amply sufficient.

DEPARTMENT OF STATE, *Washington, March* 4, 1828.

SIR: I have the honor to acknowledge the receipt, on the 6th ultimo, of your letter bearing date on the 4th, as chairman of the Committee on so much of the Public Accounts and Expenditures as relates to the State Department; and also, on the 7th of the same month, your letter of the 5th. By the former the committee request to be furnished, first, "with a statement of the incidental and contingent disbursements of this office, showing therein the respective sums paid, to whom, and for what services, with the vouchers for such payments;" and, secondly, "a statement showing the disbursements made out of either of the appropriations for the contingent expenses of all missions abroad," and "for the contingent expenses of foreign intercourse," so far as either of these appropriations have been expended under the authority of the Secretary of State, and upon his voucher, for the use of that Department; leaving it to my discretion whether I would recur or not to a period beyond the commencement of my service in the Department of State. In your second letter you state that the Committee on the Expenditures of the State Department having examined the accounts of the Department and reported up to the year 1824, inclusive, it will not be necessary that the statements previously required by you should embrace any period prior to the commencement of the year 1825.

In compliance with the request of the committee, I transmit herewith a statement of the contingent expenses of the Department of State from January 1, 1825, to December 31, 1827, marked A. The account has been settled by the proper officers of the Treasury for the whole period. The vouchers supporting the various charges in the account, after having been examined and scrutinized by the proper Auditor, have been passed to the Register of the Treasury, in whose office they now remain on file. A copy of every one of them would occupy much space, and require considerable time to prepare it. Mr. Brent, the first clerk in the Department having understood from you that it would not be wanted, it is not, therefore, now sent. If he misunderstood the wishes of the committee in that respect, I will, upon receiving information to that effect, direct a transcript of the vouchers to be made.

I have also the honor to communicate to the committee a letter from the Fifth Auditor, transmitting the second statement (which is designated by the letter B) requested by the committee, accompanied by an explanatory letter from the Register of the Treasury. This statement shows all the disbursements made out of the appropriation for the contingent expenses of foreign intercourse from March 4, 1825, to the end of the last year, distinguishing between those items which have been allowed on my authority and upon my certificate of approval from those which have been otherwise vouched. In examining the accounts containing the contingent expenses of all the missions abroad during the period particularized by the committee, no item was found to have been allowed on my special approval; and, consequently, there is no statement to be furnished of disbursements from that appropriation, according to the request of the committee.

So far as disbursements take place at home of appropriations at the disposal of the Department of State, they are made by an agent of the Department for that purpose designated. This practice has prevailed for a long time. It can be traced back at least as far as the ministry of Mr. Madison. The person selected for the agency has been most generally for many years past exclusively one of the clerks in the Department. He draws from time to time, upon the requisitions of the head of the Department, the necessary sums under particular appropriations for covering the ordinary disbursements. These sums are placed to his credit in the office of the Bank of the United States within this District, where he keeps his account, and upon which he draws from time to time for the current expenditures. No part of the money appropriated to the public service under the direction of the Department of State has ever been placed to my private credit. The accounts of the agent are settled quarterly, and are examined by the head of the Department, who usually writes his approval at the foot of them. This approval is understood by the Auditor as sanctioning the *object* of expenditure, but not as dispensing with the exhibition of vouchers in any instance, except where, from the nature of the expenditure, it is impracticable to produce them; in which cases the propriety of the charge is judged of and decided by the head of the Department. Due attention is of course paid to the amount drawn from the Treasury by the agent, so as to prevent an unreasonably large sum at any period accumulating in his hands. The clerk who, when I entered the Department, was charged with its pecuniary agency continues to execute it.

The above mode of transacting the pecuniary affairs of the office was fully explained by my predecessor in a letter which he addressed to a former committee of the House of Representatives, under date of April 18, 1822, to a copy of which herewith transmitted the committee are respectfully referred, marked C.

Upon an examination of the statement exhibiting the disbursements out of the appropriation for the contingent expenses of foreign intercourse which have been made in the last three years, under my authority, and upon my certificate or voucher, it will be observed that the principal item is for the employment, during those years, of bearers of despatches. Their compensation and allowances have not varied, as far as any traces of them can be perceived in the Treasury, since the establishment of the Government. Their compensation was fixed at a per diem of six dollars, with an allowance of their travelling expenses, including the price of their passage by sea when they do not proceed in a public vessel. Whenever a messenger is despatched upon this service he is furnished with a letter of instructions, in which his duty and destination are mentioned, and in which also it is stated that the above compensation and allowances

will be made him. Upon the return of the messenger, it is of course known in the Department how long he has been absent on the public service; and it is not difficult to judge of the reasonableness of his charges for travelling expenses and passage money. This latter sum is, indeed, usually fixed from the ordinary charges in similar cases, information of which is obtained through the customary channels, and the amount is specified in the instructions. The statement, therefore, that the compensation and charges allowed to bearers of despatches are unvouched is not substantially, if it be technically, correct. Their accounts are first carefully examined in the Department of State, where they are checked by the means in the possession of that Department, and then approved and certified by the head of the Department, and passed over to the Fifth Auditor.

The employment of bearers of despatches is limited to important occasions, in which the Department cannot avail itself of the agency of regular packets, periodically sailing, or where, from the high interest and confidential nature of the despatches, it is deemed best to expose them to as little casualty as possible. They are generally employed in the transmission of treaties prior to their promulgation, in consequence of the magnitude of the interests which they involve and the respect which is due to existing usage in national intercourse. To most of the persons who have been employed in that character during the last three years were confided either treaties or the credentials and the general instructions to some of our ministers abroad. Thus, in 1825, John H. Pleasants was engaged to carry their credentials and general instructions to our Chargé d'Affaires at Rio de Janeiro and Buenos Ayres, where they were then respectively residing; and, in 1827, John Mason, jr., was paid, as a bearer of despatches, for bringing home a treaty which had been negotiated at Mexico, and Theodore W. Clay was engaged, in March last, to carry back to Mexico the same treaty after it had been submitted to the Senate; and also to carry other highly confidential despatches to Mr. Poinsett, and despatches to Mr. Sergeant, who had left the United States the preceding November.

The greater part of our despatches to and from Europe generally pass through the hands of our consul, Mr. Maury, at Liverpool, and hence the heavy charge for postage which forms the first item in the statement now transmitted.

I have the honor to be, with great respect, your obedient servant,

H. CLAY.

Hon. JOHN BLAIR, *Chairman, &c.*

Mr. Pleasonton to Mr. Clay.

TREASURY DEPARTMENT, *Fifth Auditor's Office, February* 27, 1828.

SIR: I have had the honor to receive you letter of the 16th instant, requesting a statement, for the use of the committee, on so much of the public accounts as relates to the State Department, showing the disbursements made out of either of the appropriations "for the contingent expenses of all missions abroad," and "for the contingent expenses of foreign intercourse," *so far as either of those appropriations have been expended under the authority of the Secretary of State, and upon his voucher, for the use of that Department;* and, as the accounts relative to those appropriations, after being audited by this office and passed by the Comptroller, are transmitted to, filed, and retained in the office of the Register of the Treasury, I referred your letter to that officer without delay, with a request that he would comply with its requisitions. He has, accordingly, prepared and transmitted a statement, in which is distinguished the accounts which have been settled on your authority and certificate and those settled upon the customary vouchers. There are some items of expense in the statement which were authorized and incurred by and during the late administration, but for which the accounts were not rendered, settled, and paid until after the commencement of the present. Such are the accounts of Mr. Thomas Randall, agent at Havana, and of Ether Shepley, for collecting testimony in relation to outrages upon certain American fishing vessels near Halifax. As the payments were made during the period specified in the call of the committee, though the service was previously performed, it was thought proper to comprehend them in the statement.

It may be proper to remark that the per diem allowances to bearers of despatches, and their expenses whilst absent, contained in the statement, are in conformity with those uniformly made in similar cases under the administrations of Mr. Jefferson, Mr. Madison, and Mr. Monroe.

In regard to this description of accounts, it being impossible for this office accurately to ascertain the period for which payment ought to be made, in all cases, and for the party rendering the amount to produce vouchers for his travelling expenses, to dispense with which the authority of the Secretary of State is considered necessary, recourse has generally been had to the Secretary of State for his sanction to such part of the account as he should approve; those accounts are, therefore, generally entered as being approved by him. The receipt of the agent claiming the account due is always exacted and filed in the proper office upon payment being made.

In further explanation of the statement, I have the honor to enclose the letter of the Register of the Treasury to me upon the subject.

I have the honor to be, very respectfully, sir, your obedient servant,

S. PLEASONTON, *Fifth Auditor of the Treasury.*

Hon. HENRY CLAY, *Secretary of State.*

Mr. Nourse to Mr. Pleasonton.

TREASURY DEPARTMENT, *Register's Office, February* 25, 1828.

SIR: In compliance with the letter of the Secretary of State of the 16th, addressed to you, and which was referred to this office on the 18th instant, I have the honor to transmit herewith a statement showing the disbursements made out of the appropriation for the contingent expenses of foreign intercourse, so far as it has been expended under the authority of the Secretary of State, and upon his voucher, for the use

of that Department, from the 4th of March, 1825, to the present time; all which has been extracted from the accounts as settled at your office.

In making up this statement you will perceive that we have set down, as vouched by the Secretary, all those accounts upon which his name is endorsed as approving the same, except the accounts of the disbursing agent of the Department; and from these we have selected and so set down such items as were specially approved. Upon this we must remark that many items in these accounts, though without vouchers, have no doubt been allowed upon the common principles of settlement, as not requiring the special sanction of the Secretary for their admission; but, from the want of specific data in the accounts themselves, we have been unable to make distinctions.

In examining the accounts containing the contingent expenses of missions abroad for the above period, we have not been able to discover any item as allowed upon the special approval of the Secretary of State.

I have the honor to be, sir, your most obedient servant,

JOSEPH NOURSE, *Register.*

STEPHEN PLEASONTON, Esq., *Fifth Auditor of the Treasury.*

A.

Statement of the disbursements made by William Browne, agent for paying contingent expenses of the Department of State, during the years 1825, 1826, and 1827, as appears by the vouchers on file in the office of the Register of the Treasury. [The items of this statement, being merely contingent expenses of the office of State Department, are omitted here.]

B.

Statement showing the disbursements made out of the appropriation for the contingent expenses of foreign intercourse from the 4th March, 1825, to the 31st December, 1827; distinguishing between those items which have been allowed under the authority and upon the certificate of the Secretary of State from those which have been otherwise vouched.

	In whose favor and for what purpose.	Approved by Secretary of State, without vouchers.	Accounts vouched.
1825.	To James Maury, consul at Liverpool, for postages on letters and packages to and from ministers and other public agents in Europe, from July 1 to December 31, 1824, including a premium thereon for exchange between Liverpool and the United States	$272 17	
	To William J. Stone, for engraving two copy plates for ciphers and printing 92 impressions of plates, including paper	298 80	
	To Lary Anderson, for his services from December 29, 1824, to February 18, 1825, making 51 days, at $6 per day, and travelling expenses from Carthagena to Bogota, and from thence to Washington, as bearer of the convention between the United States and Colombia	1,190 00	
	To Thomas Randall, agent for commerce and seamen at Porto Rico and Havana, and for balance of his salary from April 10, 1823, to March 18, 1825, at $4,500 per annum		$4,540 39
	To George S. Watkins, special messenger of the United States to the minister at London, for compensation from March 12 to July 1, 1825, making 112 days, at $6 per day, including his passage out and returning, travelling expenses from Washington to New York, from Liverpool to London, and from London to Liverpool, on his return, and from New York back to Washington	1,347 68	
	To John H. Pleasants, bearer of despatches to Buenos Ayres and Rio Janeiro, for his compensation from April 19 to August 22, 1825, making 126 days, at $6 per day, including his passage going and returning, his travelling expenses and boarding from the time of his leaving Richmond, on April 19, to May 28, 1825, in which interval he was seeking, from Baltimore to Boston, the means of getting to Buenos Ayres, and his expenses in returning from New York to Richmond	1,940 00	
	To Peter Force, for publishing exequaturs		42 00
	To William Maul, for sealing Mediterranean passports		6 00
	To L. Child, sign board for the legation at Buenos Ayres		30 75
	To H. Niles, for 52 copies of the Weekly Register		152 75
	To S. Masi, for a great seal, and a box for the same, and three treaty boxes		406 00
	To Ether Shepley, for expenses in relation to capture of fishermen by British brig Dotterill	250 00	
	To Joseph Milligan, for two portfolios for treaties		200 00
	To W. J. Stone, for printing passports and impressions of ministers' coats		37 00
	To Mary Lengthall, for painting signal flags		5 00
	To Patrick Rogers, for diplomatic trunks		91 00
	To J. Milligan, for four portfolios for treaties		400 00
	To W. Slade, jr., for bearing despatches to New York		100 00
	To F. C. Baker, for bearing despatches to Norfolk to Mr. Miller		40 00
	To Patrick Rogers, for diplomatic trunks		26 09
	To Peter Force, for publishing exequaturs		11 50
	To W. J. Stone, for engraving flags		16 00
	To James Maury, consul at Liverpool, for postages in England		266 58
	To Peter Force, for publishing exequaturs		6 00
	To H. Niles, for 52 copies of the Weekly Register		153 25
1826.	To Gustavus H. Scott, bearer of despatches from the Secretary of State to the minister at Bogota, for his travelling expenses from his residence in Virginia to Washington, and thence to Norfolk, *via* Baltimore, to take passage on board the John Adams frigate; for sea stores, stationery, expenses of transmitting the despatches from Carthagena to Bogota; passage from Carthagena to New York, and travelling expenses from New York to his residence in Virginia, *via* Washington, including the sum of $792 for his services in said capacity, at $6 per day, from March 11 to July 20, 1826	968 32	496 77

B—Continued.

In whose favor and for what purpose.	Approved by Secretary of State, without vouchers.	Accounts vouched.
1826. To John Marshall, bearer of despatches from the Chargé d'Affaires at Guatemala to the Secretary of State, for his compensation from August 5 to October 31, 1826, making 88 days, at $6 per day, including his expenses from April 19, when he was detailed from the frigate John Adams for the purpose of attending Mr. Williams, to August 31, 1826	$1,528 00	....
To Clifton Wharton, bearer of despatches to Colombia, for his compensation from May 22 to October 26, 1826, making 159 days, at $6 per day, including his travelling and necessary expenses from Washington to New York; expenses while there; necessary expenses at the Caicos islands, after his shipwreck, passage, &c., from Turk's island to Carthagena; medical aid at Carthagena; passage from thence to New York, and travelling expenses from New York to Washington, including also sundry articles of clothing purchased at Turk's island after being shipwrecked, he having landed there in a state of destitution	1,191 50	$830 75
To John A. Dix, bearer of despatches to Copenhagen, for compensation from May 17 to October 14, 1826, at $6 per day, including his travelling expenses from Washington to New York; passage from thence to Liverpool; travelling expenses, &c., from Liverpool to Copenhagen, and from thence to Paris and Havre, including passports, postages, carriage hire, passage from Havre to New York, and travelling expenses from New York back to Washington	1,608 20	17 15
To Robert Anderson, bearer of despatches from Carthagena to Washington, for his travelling expenses and passage from Carthagena to New York, and from thence to Washington, including his compensation from July 24 to September 21, 1826, making 52 days, at $6 per day	504 00	.....

1827. To A. Ford, for tracing maps 12 days, 6 hours each day, at $3		$21 00
To S. L. Dashiell, for 17 days, at $2, and 6 days, at $3		52 00
To James Coucheval, for part payment as bearer of despatches from Stockholm to Washington, and returning by way of London		450 00
To James Coucheval, for his services in the legation at Stockholm, in transcribing, &c		100 00
To Lucy Baker, for copying 94,518 words, at 10 cents per hundred		94 52
To M. M. Cruikshank, for copying 81,624 words, at 10 cents per hundred		81 62
To Meade Fitzhugh, for copying 102,695 words, at 10 cents per hundred, and 3 maps, at $10		112 70
To James Haig, for advertising		33 10
To A. Rentzel, for copying maps 6 days, at $3 per day		18 00
To S. L. Dashiell, for copying maps 9 days, at $3 per day		27 00
To Thomas Munroe, for sundry articles of arms and equipments of an American soldier transmitted, through Thomas Munroe, jr., to the Archduke Constantine and certain Russian and Polish officers		56 54
To A. Rentzel, for copying maps 5 days, at $3 per day		15 00
To A. L. McIntire, for copying maps 17 days, at $3 per day		51 00
To A. Ramsay, jr., for copying 35,732 words, at 10 cents per hundred		35 75
To James Ord, for copying 95,040 words, at 10 cents per hundred		95 04
To A. Ford, for tracing maps 22 days, at $2 per day		44 00
To R. Patton, for copying 52,500 words, at 10 cents per hundred		52 50
To W. B. Page, for copying 120,960 words, at 10 cents per hundred		120 96
To Jonathan Elliott, for 100 copies Treaties and Conventions		1,000 00
To Gales & Seaton, for advertising exequaturs, &c		46 00
To James Maury, consul at Liverpool, for postages in England		164 59
To James Martin, for copying 91,687 words, at 10 cents per hundred		91 69
To Dobbin, Murphy & Bose, for advertising		135 00
To James Ord, for 3½ days examining records in relation to treaty of Ghent, at $2 50 per day		8 33
To Ballard & Wright, for advertising		116 25
To A. L. McIntire, for 3½ days examining records in relation to treaty of Ghent, at $2 50 per day		8 33
To B. Russell, for advertising		6 00
To Edward Wyer, bearer of despatches to London, for his compensation from December 28, 1826, to March 19, 1827, making 82 days, at $6 per day, including passages and expenses	$1,267 00	
To W. Prentiss, for his compensation and expenses in delivering a box of books to the Governor of Maine, at Portland	200 00	
To M. M. Cruikshank, for copying 18,576 words, at 10 cents per hundred		18 38
To S. D. King, for copying part of an old map of North America		9 50

TREASURY DEPARTMENT, *Register's Office, February* 28, 1828.

JOSEPH NOURSE, *Register.*

Statement explaining the differences between the "statement showing the disbursements made out of the appropriations for the contingent expenses of foreign intercourse; distinguishing between those items which have been allowed under the authority and upon the certificate of the Secretary of State, from those which have been otherwise vouched, from March 4, 1825, *to December* 31, 1827," *(marked B,) and the actual amount of payments made from the Treasury during the years* 1825, 1826, *and* 1827, *(as per statement A.)*

Expenditures (as per statement B) from March 4, to December 31, 1825		$11,828 83
To which add the following expenditures from January 1 to March 3, 1825, viz:		
Andrew Armstrong, commercial agent at Port au Prince, (salary)	$250 00	
Daniel Turner, bearer of despatches from Montevideo to Buenos Ayres	150 00	
William Taylor, agent of the United States at Alvarado	500 00	
Condy Raguet, agent for commerce and seamen at Rio Janeiro	2,500 00	
John B. Prevost, agent of the United States in South America	500 00	
Walcott Chauncey, for passage of Edward Wyer, and Consul Stith and family, in the years 1821 and 1822	1,150 00	
Joseph Milligan, for a port folio for a treaty	100 00	
President's certificate, without specification	700 00	
President's certificate, without specification	1,000 00	
	6,850 00	
And expenditures from March 4, to December 13, 1825, viz:		
Andrew Armstrong, commercial agent at Port au Prince, (salary)	750 00	
*John B. Prevost, agent of the United States in South America	2,000 00	
*Condy Raguet, agent for commerce and seamen at Rio Janeiro	400 00	
Carried forward	10,000 00	11,828 83

*Advances—accounts unsettled.

Brought forward	$10,000 00	$11,828 83
†Richard C. Anderson, jr., late minister at Colombia, for writing done for the legation of the United States at Bogota, from December 10, 1823, to January 2, 1825	2,125 24	
*John J. Appleton, special agent at Naples	1,125 00	
‡John M. Forbes, Chargé d'Affaires at Buenos Ayres, for the funeral expenses of Cæsar A. Rodney, deceased, late minister at Buenos Ayres	471 12	
		13,721 36
To which add the following:		
For this sum paid to George S. Watkins, more than accounted for by him	186 07	
And this sum advanced to John H. Pleasants, more than accounted for by him in this year; both repaid in 1827	10 00	
		196 07
		25,746 26
From which deduct the following:		
Balance due by the agent of the Department of State, January 1, 1825	218 38	
Balance due to the agent of the Department of State, January 1, 1826	44 80	
		173 58
Total payments made from the Treasury in the year 1825		25,572 68
Expenditures (as per statement B) for 1826		$12,656 04
To which add the following expenditures for 1826, viz:		
James Bowdoin, formerly minister at Madrid, for balance due to him	$86 31	
Andrew Armstrong, commercial agent at Port au Prince, (salary)	1,000 00	
President's certificate, without specification	1,666 66	
		2,752 97
Add also—		
Balance due from the agent on the 1st January, 1827	3,268 79	
Balance due to the agent on the 1st January, 1826	44 80	
		3,223 99
Total payments made from the Treasury in the year 1826		18,633 00
Expenditures (as per statement B) for 1827		$11,579 44
To which add the following expenditures for 1827, viz:		
Andrew Armstrong, commercial agent at Port au Prince, (salary)	$750 00	
*John Rainals, consul at Copenhagen	500 00	
*William Tudor, consul at Lima	9,800 00	
*Robert M. Harrison, consul at Trinidad	875 00	
Vincent Gray, for amount paid by him at Havana for the relief of sundry American citizens confined there in prison in 1815	1,275 00	
President's certificate, without specification	967 38	
President's certificate, without specification	979 73	
President's certificate, without specification	1,052 90	
President's certificate, without specification	4,458 00	
President's certificate, without specification	1,500 00	
		22,158 01
Add also—		
Balance due from the agent on the 1st January, 1828	5,789 97	
Balance due from the agent on the 1st January, 1827	3,268 79	
		2,521 18
Total payments made from the Treasury in the year 1827		36,258 63

JOSEPH NOURSE, *Register.*

TREASURY DEPARTMENT, *Register's Office, March* 22, 1828.

C.

The Secretary of State to S. Wood, Esq., Chairman of the Committee of the House of Representatives on the Expenditures of the Department of State.

DEPARTMENT OF STATE, *Washington, April* 18, 1822.

SIR: The usual public expenditures under the superintendence of the Department of State are as follows:

1. The expenses of the Department, specific and contingent, as particularly set forth in annual estimates of appropriations presented to Congress.

2. Printing the laws in the newspapers and in pamphlets, from session to session.

3. Intercourse with foreign nations—diplomatic; Barbary intercourse; relief of seamen; contingent expenses of foreign intercourse.

To these expenses, which are of a permanent character, are to be added *occasional* disbursements by virtue of particular acts and appropriations; of these occasional expenditures, two of the heaviest charges of the last year have been—

° Advances—accounts unsettled. † Allowed by the President. ‡ Allowed by ex-President Monroe.

4. For taking the Fourth Census, the appropriation for which, by act of April 11, 1820, was $240,000.

5. For carrying into execution the treaty of February 22, 1819, with Spain; appropriation by act of March 3, 1821, $100,000.

6. For the Boundary Commissioners under the treaty of Ghent.

7. Colonel Trumbull's pictures.

8. Printing the journals of the Convention and the journals of the Congress of the Confederation.

The practice of the Department in the direction of these disbursements is as follows:

The moneys are drawn from the Treasury by letters of requisition from me to the Secretary of the Treasury, requesting, from time to time, warrants for specified sums, to be charged upon the several objects of appropriation for which the amount of each requisition is wanted.

These requisitions, in the cases of the diplomatic and Barbary funds, and part of those for seamen, and contingent expenses of foreign intercourse, are, that *remittances* of a specified amount should be made to the bankers of the United States at London and Amsterdam, who are debited with the amount, and credited, upon the production of their accounts, with the sums paid by them to the ministers of the United States in Europe, and other public agents who are authorized to draw upon them. These remittances are made by the Treasury Department itself, and no part of the money comes to the disposal of any person in the Department of State.

The requisitions for expenditures within the United States are of two kinds: 1st, for warrants in favor of particular individuals having acknowledged claims to payment in every part of the Union, and the amount of which is remitted to them, or paid upon their drafts; and 2d, warrants for gross sums, in favor of Fontaine Maury, one of the clerks in the Department, charged with the keeping of the accounts of the Department and paying the current expenses chargeable upon it.

These payments, many of them of small sums, the occasions of which occur from day to day, are made by checks upon the Bank of the Metropolis, with which a bank account is kept by Mr. Maury, upon a moderate deposit of moneys drawn from the Treasury, from time to time, and at all times liable to be withdrawn from the bank by a single check.

The account with the Bank of the Metropolis was kept before I had charge of this Department, and before the existence of the present Bank of the United States. I had not thought it necessary to direct that the deposit and the account should be transferred to the Branch Bank of the United States, principally because the Bank of the Metropolis affords, gratuitously, facilities for remitting moneys to various parts of the Union, which the branch bank declines, unless upon the payment of a commission. Some insinuations, however, having appeared in a recent publication tending to question the District banks, the whole of the balance which was in deposit there has been withdrawn and deposited in the branch bank.

It has been observed that the balance of the deposit in that bank is always small. In the month of April, 1821, there was, however, deposited there $100,000 by one draft. It was for the payment of the accounts of the marshals for taking the census, which were then coming in almost daily, and this sum was, in fact, drawn for from the branch bank, not at once, but as the accounts of the marshals were brought in for payment. The whole sum was absorbed in less than two months.

No part of the deposit has ever been to my individual credit, but all to that of the agent for the Department, who regularly settles his accounts at the Treasury at the close of every quarter. Should it suit the convenience of the committee to call at the office of the Department, the books will be submitted to their inspection, and any explanation given of them which they may think desirable. The vouchers, excepting those of the current quarter, are at the Treasury, where they will also be at the inspection of the committee if desired.

The public expenditures under the direction of this Department are of two kinds: 1st, those the amount of which is prescribed by law, such as the salaries of officers, the compensation for printing the laws in the newspapers; that to the marshals and their assistants for taking the census, &c.; and 2d, those which are occasional, contingent, and discretionary. With regard to all those of the second description, having made the most rigorous economy the invariable principle of my conduct in relation to them, I am unable to suggest to the committee any measures by which that economy could be more effective.

If the committee will have the goodness to refer to the estimates of appropriation for the present year, they will perceive, in pages 28 and 29, that the items of contingent expenses of foreign intercourse, Barbary intercourse, and relief of seamen, being all items of permanent appropriation over which this Department has any discretionary control, the balances of former appropriations are more than sufficient for the estimated service of this year, and that no part of the appropriations of the last year to these items has been drawn from the Treasury.

The application of the appropriations for the contingent expenses of the Department of State is also in a considerable degree at the discretion of the head of the Department. It has by me been made chiefly in the purchase of useful though somewhat costly collections of books, among which are the new editions of the Parliamentary History and Debates of Great Britain, the Statutes at Large, and the Statutes of the Realm, now in the process of publication by the special authority of the British Parliament, the State Trials, the Annual Register, the Transactions of the Royal Society, the Memoirs of the French Academy of Sciences, and the Repertory of Arts and Manufactures, complete sets of which works have been procured. Some expense has also been incurred in procuring collections of the statute laws of the several States of the Union, and the reports of decisions of their judicial courts. To these have been added duplicates, procured from France and England, of their respective standards of weights and measures, including copies of the Platina Metre and Kilogramme of the French Archives. Orders have been recently given for the large editions of the works of Humboldt and Bonpland upon South America, and Cook's and Vancouver's Voyages, and some others, the want of which has been occasionally felt in the transaction of the current business of the Department, and may probably be still more sensibly hereafter. By comparing the amount of the bills for these articles with the amount of appropriations for contingent expenses under the direction of this Department since the year 1817, the committee will be enabled to judge how far the discretion of expense has been properly exercised.

I take this occasion to inform the committee that in the note B, annexed to the estimate of the present year, page 60, it is erroneously stated that no part of the appropriation for printing the laws, &c., was in the Treasury on the first of January, 1822. The chairman of the Committee of Ways and Means of the House has been furnished with a certificate from the Register of the Treasury that there was in the Treasury on the first of January, 1822, the sum of $9,600, being part of that appropriation. It still remains in the Treasury at this time.

I have the honor, &c., &c.,

JOHN Q. ADAMS.

D.

Summary statement of moneys appropriated and expended under the following heads of appropriation during the years 1825, 1826, *and* 1827.

Contingent expenses of the Department of State.

Balance of appropriation December 31, 1824	$10,600 00
Appropriation for 1825	12,050 00
Appropriation for 1826	11,095 00
Repayment in 1826	10 00
Appropriation in 1827	11,050 00
	44,805 00
Expenditure made from the Treasury in 1825	$16,800 00
Expenditure made from the Treasury in 1826	16,045 00
Expenditure made from the Treasury in 1827	11,960 00
	44,805 00

Printing, publishing, and distribution of the laws of the United States.

Balance of appropriation December 31, 1824	$5,558 00
Appropriation for 1825	13,500 00
Appropriation for 1826	17,000 00
Appropriation for 1827	17,000 00
	53,058 00
Expenditure made from the Treasury in 1825	$11,500 00
Expenditure made from the Treasury in 1826	16,500 00
Expenditure made from the Treasury in 1827	17,500 00
	45,500 00
Balance of appropriation December 31, 1827	7,558 00
	53,058 00

Contingent expenses of foreign intercourse.

Expenditure of the $20,000 *appropriated annually for the purpose of defraying the expenses of all the missions abroad for one year, extracted from ministers', &c., accounts.*

Richard Rush, minister, London. Contingent, 1st January to 31st May, 1825	$473 06		
Richard Rush, return home allowance	2,250 00		
		$2,723 06	
Rufus King, minister, London. Contingent, 1st June to 31st December, 1825		348 66	
John A. Smith, Chargé d'Affaires, London. Contingent, 16th May to 30th September	306 44		
John A. Smith, salary as Chargé d'Affaires between the departure of Mr. Rush and arrival of Mr. King, from 26th May to 11th November, 1825	2,083 63		
		2,390 07	
			$5,461 79
James Brown, minister, Paris. Contingent, from 1st January to 31st December, 1825			789 26
Henry Middleton, minister, St. Petersburg, from 1st January to 31st December, 1825			933 44
Hugh Nelson, minister, Madrid. Contingent, from 1st January to 10th July, 1825	$347 19		
Hugh Nelson, allowance for return home	2,250 00		
		$2,597 19	
Alexander H. Everett, minister, Madrid, for contingent, from 8th July to 31st December, 1825		521 00	
			3,118 19
Thomas L. L. Brent, Chargé d'Affaires at Lisbon. Contingent, from 1st July, 1824, to 30th September, 1825			382 70
Christopher Hughes, Chargé d'Affaires at Stockholm. Contingent, from 1st January to 30th June, 1825	$312 47		
Christopher Hughes, allowed him on a special mission at the Court of Denmark, in 1825, equal to half an outfit	2,250 00		
			2,562 47
John J. Appleton, special agent at Naples, for contingent, from 1st October, 1825, to 19th August, 1826			80 10
Richard C. Anderson, minister, Bogota. Contingent, from 26th March, 1825, to 31st March, 1826			205 00
Heman Allen, minister, Chili. Contingent, from 1st January to 31st December, 1825			289 67
Joel R. Poinsett, minister, Mexico. Contingent, from 8th March, 1825, to 31st March, 1826			1,030 24
Beaufort T. Watts, Chargé d'Affaires at Colombia. Contingent, from 1st January to 31st December, 1825			779 50
Condy Raguet, Chargé d'Affaires at Rio Janeiro. Contingent, from 29th October, 1825, to 31st December, 1826			111 88
John Williams, Chargé d'Affaires at Guatemala. Contingent, from 3d December, 1825, to 2d December, 1826			20 40
John M. Forbes, Chargé d'Affaires at Buenos Ayres. Contingent, from 1st January to 31st December, 1825			177 00
			15,941 64

I hereby certify that the foregoing are true extracts from the accounts of ministers and Chargé d'Affaires on file in this office, with the exception of those of the ministers at St. Petersburg and Madrid, and Chargé d'Affaires at Rio Janeiro, and agent at Naples, they being yet unsettled.

JOSEPH NOURSE, *Register.*

TREASURY DEPARTMENT, *Register's Office, January* 8, 1828.

TREASURY DEPARTMENT, *Register's Office, March* 12, 1828.

SIR: In making up the statement which has been furnished from this office relative to the disbursement of moneys appropriated for foreign missions and foreign intercourse, we have endeavored to comply, as far as practicable, with the terms of the letter of requisition. In doing this, we have considered that these terms embraced only such items of expenditure as have accrued and been authorized since the commencement of the present administration; and in relation to allowances made upon the voucher of the Secretary of State that such only were intended as have been admitted upon his sole and exclusive authority.

The appropriations for contingent expenses of foreign intercourse have been always kept under one distinct and separate account, unblended with others, so that payments out of this fund have been generally made for such contingencies only; though there have been instances of advances made from this fund on account of outfits.

The appropriations for outfits, salaries, and contingent expenses of missions abroad have been uniformly blended in one account, denominated "Diplomatic Department," and payments for these various objects have been as uniformly made out of this general fund without specification of object. The materials for the statement rendered were obtained by dissecting the settled accounts of individuals: First, under the head of contingent expenses of foreign intercourse; second, under the head of Diplomatic Department.

With the first there could have been no misapprehension. With the second there might have been;

for not being able to distinguish between those allowances for outfit and salary which were properly payable out of the appropriations for these objects, and those which were perhaps more properly payable out of the appropriation for the contingent expenses of missions abroad, we were constrained to arrange all the items according to their designation on the accounts themselves; and thus the statement may have exhibited a result differing from your expectations; but this, if so, has been unavoidable for the reasons above stated.

In the case of payments made to John A. King, to which you have alluded, we find his account stated for outfit and salary; it was paid out of the fund for the Diplomatic Department, and we have no authority for saying it was properly a charge upon the contingent part of that fund; therefore we have arranged the items as designated.

The account is endorsed thus: "The President approves the above charges, December 22, 1826. H. Clay." Therefore we have not stated it as allowed upon the sole and exclusive authority of the Secretary of State.

It may be well, perhaps, to remark that the warrants upon these two funds, for balances due on settled accounts, are made out in the office of the Secretary of the Treasury, and are drawn upon the one or the other fund, as their corresponding entries in the office of the Fifth Auditor may indicate.

In my letter of the 25th February last, to the Fifth Auditor, it is stated that, "In examining the accounts containing the contingent expenses of missions abroad, for the above period, we have not been able to discover any item as allowed upon the special approval of the Secretary of State."

Upon a re-examination of these accounts we have found the following items, which accrued in the year 1825, blended with others of a prior date, and allowed by the chief clerk of the State Department, in the name of the Secretary, viz: to Beaufort T. Watts, Chargé d'Affaires at Bogota, for newspapers, postages, and letter carrier, $615.

I have the honor to be, sir, your obedient servant,

JOSEPH NOURSE, *Register.*

Hon. JOHN BLAIR.

20TH CONGRESS.] No. 906. [1ST SESSION.

IN FAVOR OF IRON FOR RAILROADS FREE OF DUTY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES APRIL 7, 1828.

To the honorable the Speaker and members of the House of Representatives of the Congress of the United States:

The petition of the City Council of Charleston, in the State of South Carolina, showeth: That an act of the Legislature of the said State was ratified on the thirtieth day of January, in the year eighteen hundred and twenty-eight, authorizing the formation of a company to be incorporated by the name of the South Carolina Canal and Railroad Company;

That the stock required by the said act of the Legislature has been subscribed according to the terms of the act upon which the charter of incorporation was to take effect;

That by the terms of the said act, five weeks' public notice, in certain newspapers of the State, must now be given to the stockholders of the said company to meet and organize the company;

That in the meantime the present session of Congress is drawing to a close;

That it is very desirable, during the present session, that the objects of this petition should be accomplished, so as to afford to the said company the earliest opportunity of commencing and completing their contemplated works.

Your petitioners, therefore, show that the said South Carolina Canal and Railroad Company are required, by the aforesaid act of the Legislature, to direct and confine their first efforts and enterprise to the formation and completion of the railroad communication between Charleston and the Savannah river, at or near Hamburg, and other points or places on the said river; and when such communication shall be completed, or before, if the company shall find it practicable and advantageous, they are authorized to construct railroads to Columbia and to Camden, in the said State.

Your petitioners further show that, for the purpose of constructing the said railroads, a large quantity of iron will be required, which will constitute a great portion of the cost of these extensive roads.

That the construction of railroads being but a new undertaking in this country, it is thought safest and best that the iron required should be procured from England, where it can be worked up in the proper manner, so as to insure greater certainty in the execution of the projected roads.

Your petitioners further show that it is contemplated to propel carriages upon the said railroads by means of locomotive steam engines. That, after encountering many difficulties in constructing such engines, so as to afford the power required of them, they have at length succeeded in England in accomplishing that object. That, as yet, no such engines have been constructed in the United States. It is therefore obvious that the locomotive engines to be used on the said railroads should be imported, until the manufacturers of the United States have acquired skill in constructing them.

That the duties to the Government on iron imported, especially when worked up, constitute a very large portion of the expense of procuring such iron.

Your petitioners, therefore, pray that an act of Congress may be passed authorizing the South Carolina Canal and Railroad Company to import, free of duty, all such iron, manufactured or not manufactured, as may be required for the formation and completion of the roads they are authorized to construct by the aforesaid act of the Legislature of this State; and, likewise, all such steam and other engines and carriages as may be required in constructing the said railroads, or in propelling carriages thereon when first completed.

Your petitioners now present some reasons which to them seem sufficient to authorize the aid asked of Congress. Of the projected roads, that required by the act of our Legislature to be first undertaken and completed by the company will afford the safest, cheapest, the most direct, and the most expeditious and certain communication between Charleston and Augusta, in Georgia, which town is opposite Hamburg, in this State.

Not only the commercial prosperity of these places will be thereby promoted, but Augusta being a military depot of the United States, this road may properly claim the attention of Congress as one of national importance. All the reasons in favor of the best military roads between such important points as Charleston and Augusta are here strictly applicable.

The other roads contemplated by the company, though not communicating directly with places where the United States at present have military depots, are yet important in many points of view, as well for military as for commercial purposes.

To promote objects similar to those now contemplated by the South Carolina Canal and Railroad Company, Congress have authorized large amounts of stock to be taken by Government in several companies, and have directed officers of the Government, in the pay of the Government, to make the necessary surveys, and to discharge the other duties as civil engineers required by the companies.

As yet no aid in either of these ways has been afforded to this section of our country, and what we now ask is neither the money of the Government nor the services of its officers, but merely that we be permitted to act for ourselves, and to procure the necessary materials where they can be best obtained, if we are not trammelled by the operation of laws which, at all events in this case, will act, if permitted to act, a public as well as a private injury.

JOHN GADSDEN, *Intendant.*

By the Intendant:
WILLIAM ROACH, *Clerk of Council.*

20TH CONGRESS.] **No. 907.** [1ST SESSION.

IN FAVOR OF IRON FOR RAILROADS FREE OF DUTY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES APRIL 7, 1828.

DELAWARE AND HUDSON CANAL COMPANY, *New York, April* 2, 1828.

DEAR SIR: Under directions of our board I take the liberty of sending to you a memorial of this company to Congress, with documents attached; and I am instructed to ask the favor of you to make such disposition of it as you may deem best calculated to effect our object.

There is one point in my letter of the 3d ultimo, a copy of which is attached to the memorial, to which I beg leave to call your particular attention. It is this: that the subject of importation was suggested by one of the oldest iron manufacturers, who is in nowise interested in our company, who was among the first, if not the very first, that engaged in rolling iron on a large scale. He frankly stated that the manufacturers of iron in this country had not acquired that accuracy in rolling plates to which they had attained in England. It was this consideration, and a most important one, that induced us to look abroad; and we subsequently found that there would also be a considerable saving in expense if the plates should be classed as iron manufactures. This point being determined by the letter of the Hon. Secretary of the Treasury, we then, and not till then, decided on sending out an engineer to purchase and superintend the manufacture of the plates, also four locomotive engines, and have allowed him three months to travel through the country for information on all the subjects connected with his profession. And as the engineer is well qualified, both from scientific and practical knowledge, we hope to be instrumental in adding largely to the common stock of information on all the means of facilitating internal transportation.

I have the honor to be, very respectfully, your obedient servant,

JOHN BOLTON, *President.*

Hon. G. C. VERPLANCK.

The Hon. Mr. Martin, of the Committee on Manufactures, has expressed a friendly disposition towards our case.

The Hon. Mr. Wright, of the same committee, when a Senator of this State, took a friendly part in favor of our application for aid in the winter of 1827.

To the Senate and House of Representatives of the United States in Congress assembled:

The memorial of the president, managers, and company of the Delaware and Hudson Canal Company respectfully showeth: That your memorialists, under charters from the States of Pennsylvania and New York, are engaged in constructing a canal from the Hudson river to the Delaware, up the valley of the latter to the mouth of the Lackawaxen, and up the valley of the Lackawaxen about twenty-four miles; making, in all, one hundred and five miles from the Hudson. This canal is very nearly finished, and will be complete in the course of this year.

Between the head of said canal and the coal mines a railroad, over an uneven and elevated part of the country, is to be constructed, the length of which will be about fifteen miles. In order to make said railroad it becomes necessary to procure about 360 tons of iron plates, and an engineer has been accordingly sent to England for that purpose.

Your memorialists refer to the annexed copies of letters, of the dates of November 9, December 15, and December 21, 1827, to show the circumstances under which they have acted; and they further refer to the copy of a letter dated March 3, 1828, also annexed hereto, as explaining more fully the views which have induced them to appeal for protection to your honorable body.

Relying upon the construction of the existing laws in relation to duties upon iron manufactures by the Treasury Department, your memorialists concluded to import their iron plates, and they humbly hope that the National Legislature will not fail, in any law that may be passed on the subject, to exempt the said plates from the payment of any higher duties than those which now exist. These materials are to be actually used in the construction of the road; and, considering the objects of your memorialists in the construction of their canal and railroad, they confidently appeal to the National Representatives to be exempted from the operation of any increase in the duties on iron that may hereafter be imposed.

Your memorialists further beg leave to represent, that they consider the construction of railroads of so much public importance and utility as to justify the exemption altogether of the iron used in making roads from the payment of duty. Every facility ought certainly to be afforded to companies engaged in the construction of such roads by the National Government; and the true policy of the country would seem to point out encouragement to internal communications as the first object and most important interest of the nation. If the Representatives of the nation ought to foster and protect those efforts tending to the benefit of the country generally, your memorialists humbly conceive that the companies engaged in making artificial roads are entitled to ask that protection and aid at the hands of the Government. And your memorialists think that in affording aid to such laudable undertakings the best interests of the nation will be subserved in a manner which will promote rather than interfere with either the manufacturing, commercial, or agricultural concerns of the country. Considering the very large capital that has been expended by your memorialists in the prosecution of these internal communications, and the hazards to which they were necessarily exposed in their undertakings, your memorialists most respectfully but earnestly submit whether the supplies of iron which they may find it necessary to obtain from Europe for the making of their road ought not to be wholly exempted from the payment of duty. And they make this appeal to the enlightened Representatives of the nation, in the confidence that if it is favorably received and their prayer granted, the operation of the exemption, without impairing any other obligations of the Government, will promote the public convenience and advance the cause of internal improvements.

With these views your memorialists humbly pray that they may be entirely exempted from the payment of duties on articles of iron imported by them for the construction of their said railroad; or that, at all events, in consideration of the before stated circumstances, which are more fully set forth in the annexed documents, your honorable body will be pleased, in any law that may hereafter be passed altering the existing duties on iron, to exempt the said articles so to be imported by your memorialists from the operation of such law.

All which is respectfully submitted by order of the said company.

JOHN BOLTON, *President.*

S. FLEWWELLING, *Treasurer.*

The following are the managers of the Delaware and Hudson Canal Company:

John Bolton.

William H. Ireland.

DELAWARE AND HUDSON CANAL COMPANY, *New York, November* 9, 1827.

SIR: This company intend to construct a railroad from the termination of their canal near Bethany, in Pennsylvania, to the coal mines on the Lackawanock, in length about fifteen miles, and will require for that purpose from three to four hundred tons of rolled iron plates, about two inches wide and about fourteen feet long, pierced with square or round holes to admit the fastenings about eighteen inches apart, and the ends of the plates cut to be inserted into each other.

The main object of the proposed railroad is to transport coal to the head of our canal, which is to be taken down the canal to tide-water on the Hudson river. The principal part of the canal is complete; the residue is in course of construction, and is expected to be completed in the course of the summer of next year.

My object in addressing you on this subject is to ascertain whether rolled iron plates, prepared in the manner described, if imported from Europe would be admitted as manufactured iron.

I should be much obliged by a reply at your earliest convenience; and remain, with great respect, your obedient servant,

JOHN BOLTON, *President.*

Hon. JAMES BARBOUR, *Secretary of the Treasury.*

TREASURY DEPARTMENT, *Comptroller's Office, December* 15, 1827.

SIR: Your letter of the 9th ultimo to the Secretary of War, being on a subject properly coming under the cognizance of this Department, has been referred to me through the Secretary of the Treasury.

The question propounded by you is, whether rolled iron plates, about two inches wide and about fourteen feet long, pierced with square or round holes to admit the fastenings about eighteen inches apart, and the ends of the plates cut to be inserted into each other, the same being intended for a railroad, will be admitted to entry as "*manufactures of iron*" on their importion from England?

In reply, I have to observe that iron of this description, without the holes and the ends cut, would

simply be *rolled bar iron*, and be liable to a specific duty of $30 per ton; but I am of opinion that the operation of making so many holes in and cutting the ends of each bar so far changes the character of the iron as to constitute *a manufacture of iron* within the meaning of the law.

I deem it proper to add, that the point to be decided being involved in some difficulty, it required considerable time to examine the case in all its bearings; and such were the difficulties which it presented that it was deemed necessary to consult the Secretary of the Treasury on the subject, who, after much consideration, accords in the opinion above expressed.

This will account for the delay in answering your letter.

Respectfully,

JOS. ANDERSON, *Comptroller.*

JOHN BOLTON, Esq.

DELAWARE AND HUDSON CANAL COMPANY, *New York, December* 21, 1827.

SIR: I have the honor to acknowledge your esteemed favor of the 15th instant, in answer to mine of the 9th ultimo, which was inadvertently addressed to the honorable Secretary of War.

The delay is very satisfactorily accounted for; it had induced a reference to the copy of my letter and the sending of a copy with the address of the honorable Secretary of the Treasury. Our board have now decided on sending to England for the iron plates, and I have to tender you my acknowledgments for your very satisfactory communication.

I am, very respectfully, your obedient servant,

JOHN BOLTON, *President.*

Hon. JOSEPH ANDERSON, *Comptroller, Washington.*

Copy of a letter written to several members of Congress.

BANK OF THE DELAWARE AND HUDSON CANAL COMPANY, *New York, March* 3, 1828.

SIR: Under charters from the States of Pennsylvania and New York this company is engaged in constructing a canal from the Hudson river to the Delaware, up the valley of the latter to the mouth of the Lackawaxen, in Pennsylvania, and up the valley of the Lackawaxen about 24 miles; making, in all, 105 miles from the Hudson. For the greater part of the distance the canal is complete and navigable, and the remainder will be finished in the course of this year. The principal object of this work is to bring coal into the State of New York from the mines in the valley of the Lackawanock. Between the head of our canal and the coal mines the country is uneven and elevated, and a railroad now in course of construction is to connect them, the length of which is a little short of 15 miles. Early in the last fall the point at which our canal terminates was settled, and our engineer was instructed to prepare a plan for the railroad. His report on the subject was received late in October, and our inquiries were then directed to the procuring of the iron plates. The quantity required is about 360 tons. Only two manufacturers would undertake the work; another, and the oldest in the business, had the candor to acknowledge that the manufacturers in this country had not acquired that accuracy in rolling iron to which they had attained in England; and the most perfect accuracy being necessary to avoid friction, and to give us all the advantages of which railroads were susceptible, he advised us to import our plates from England. We consequently sought information as to those particulars on which to found a comparative estimate of the cost for English iron; and other kinds, both foreign and American, would not come so low. The lowest offer made to us here was 5¼ cents per pound; and we ascertained that the price of rolled iron plates in England was £9 10*s.* sterling per ton, and the workmanship to prepare them for our use would cost about £3 sterling, making £12 10*s.* The duty on rolled bar iron is $30 per ton, and on iron manufactures not enumerated is 25 per cent. on the cost, with an addition of 10 per cent. We believed that the plates we required ought to come under the latter denomination, but in order to ascertain whether our opinion was correct I addressed a letter to the honorable Secretary of the Treasury, describing the plates as they would be when prepared for use, and asking the favor of him to inform me whether they would be admitted subject to the duty on iron manufactures. Some time being taken in examining the question, the Comptroller finally answered in the affirmative. This being laid before our board I was authorized to employ an engineer to go to England to contract for the iron and superintend the manufacture, and he sailed from hence for Liverpool on the 24th of January. I am now advised that measures have been or will be attempted to get a provision introduced into the tariff bill now before Congress to deprive us of the pecuniary advantage upon which, and the superior accuracy in forming the plates, we predicated our determination to import them. One mode suggested is to have a high specific duty on railroad plates, and another to except from iron manufactures chargeable with 25 per cent. duty all such as shall not have cost for workmanship 50 per cent. on the price of the bars. If the latter suggestion should be adopted and the duty on rolled bar iron should even remain as it is, we shall be subject to a duty of $30 per ton, instead of $15 27, making a difference against us of about $5,500. Of the difference, if the former mode be adopted, I can form no estimate, not knowing the rate of specific duty proposed; but either I should conceive to be an act of injustice to us, because the time at which the increase of duties is proposed to take effect being sufficient to consummate pending mercantile orders will be insufficient for ours. If ours were merely for rolled bar iron we could have the whole here before the 30th of June. But our plates must be formed with more exactness in breadth and thickness, and must be made perfectly straight on the edges; the corners of the upper surface are to be rounded; the plates are to be of certain equal lengths, are to be cut at each end so as to fit into each other, and to have holes made in them eighteen inches apart, countersunk to admit the heads of the screws to go below the surface, and to have an oval form, rather longer than wide, to admit of contraction and expansion without disturbing the fastenings; the making of the holes of this form will require two if not three operations. The time that will be necessary to prepare the plates will therefore put it out of our power to get them here before the 30th of June, and it may be late in the fall before they will all

arrive. I presume to believe that the benefits which the agricultural interests, and even those of the iron manufacturers, will derive from the construction of railroads are entitled to quite as much consideration as the further encouragement of iron manufactures by an increase of duty; and I think I should not be out of the way in supposing that an encouragement of the construction of railroads by reducing even the present duty on iron prepared for such purpose would be well worth the consideration of Congress. Over heights and an irregular surface, such as we have to encounter, the expenses of transportation, compared with that by common teams on turnpike roads, will be full nine-tenths less, and on a more level country not requiring machinery the difference would be greater. In Pennsylvania and New Jersey several railroads are contemplated besides ours, with a view to transportation to this State. In this State one company has been chartered to make a railroad from Ithica to Oswego, and from Albany to Schenectady, and several others are proposed. Our work will serve as a model for all others, combining, as it will, all the varieties in form of country, of ascending and descending planes worked by machinery, and levels and small inclinations admitting of the use of locomotive engines and horse-power, and conforming to the circumstances of the country. Where wood is the cheaper material we shall depend on timber for the required strength, using iron only for the benefit of a hard, durable, and even surface.

I have taken the liberty of going into this detail for the purpose of placing the whole case before you, and in the hope that the estimate you will form of the general benefits to be derived from the construction of railroads may induce you to resist any attempt that may be made to enhance the expense of such works, and especially in our case, which, in our opinion, presents peculiar claims on the liberality and justice of Congress for an exception if an increased duty should be laid on future importations.

I am, very respectfully, your most obedient servant,

JOHN BOLTON, *President.*

P. S.—We are now paying $2 75 per ton for hauling coal to the head of our canal over a good turnpike road. The expenses by railroad will be 29½ cents per ton.

Third general report of the president, managers, and company of the Delaware and Hudson Canal Company to the stockholders, March 4, 1828.

The managers of the Delaware and Hudson Canal Company, pursuant to the requisitions of the act of incorporation, present to the stockholders the following report:

At the date of the last annual report a bill granting to you a loan of the credit of the State of New York for five hundred thousand dollars had passed both houses of the Legislature, but with an amendment in the Assembly, offered by a delegate from this city, requiring the payment of premium into the State Treasury. The Senate rejected the amendment unanimously, and returned the bill to the Assembly, and a motion to recede was supported by a large majority; but, it being considered a two-thirds bill, the motion to recede failed.

Under these circumstances, and being advised against submitting the bill to a committee of conference, your agent interceded with the Senate to concur with the House, and, notwithstanding the repugnance of the Senate to the principle of the amendment, they finally concurred, and the bill became a law by the approval of the Governor.

The confidence in your good faith, and the spirit of liberality manifested by a large majority in both houses of the honorable Legislature; the zealous support which your agent experienced from his excellency the late Governor, and from many honorable members of the Senate and Assembly whilst the bill was pending, are duly appreciated by your board of managers, and, they trust, by you also. It is no small gratification to the managers that their application in your behalf for legislative aid was supported on its simple merits, and was granted on the ground of public utility. This fact offers a strong inducement to pursue honorable ends by honorable means, and to faithfulness in performing all the duties imposed on those who receive legislative grants.

The loan of the credit of the State relieved your board of managers from the pecuniary difficulties with which they were threatened, and assures the completion of the great work in which you are engaged; a work not inferior in quality to any other, and for rapidity and cheapness of execution is, so far, without a parallel in our country, and, when completed and in full operation, will furnish a liberal remuneration for your outlay of capital. It will confer, also, a lasting benefit on a large and populous portion of this State, by furnishing, at a reduced price, an abundant supply of a species of fuel that is daily appreciating in the public estimation. Besides the preference which it is steadily gaining over other kinds of fuel for all domestic purposes, its superiority in cheapness and effect in generating steam is beginning to be understood, and the successful application of it to this important purpose, both in this State and in Pennsylvania, warrants the belief that it will ere long become the most favored article for the same purpose in steamboats. When this shall be realized, it will remove the chief obstacle, which the expense and bulk of other kinds of fuel have hitherto presented, to extending the facilities of steamboat navigation from this city to all the seaports of the United States, to South America, and to Europe.

In support of this opinion your managers can state, on unquestionable authority, that a steam engine of one hundred-horse power is worked twenty-four hours with three tons of anthracite coal; that another, of eighty-horse power, consumes one chaldron and a half during the working hours of each day; and other smaller engines in proportion; with the additional advantage of dispensing with the firemen and laborers usually employed with other fuel, the engineer alone being adequate to all the service of supplying fuel and attending those engines that work during the day only.

After the loan of the credit of the State was obtained, a resolution passed the board of managers authorizing contracts for completing the canal from the narrows of Lackawaxen to the forks of Dyberry. Here it was determined, after much reflection and examination, to stop the canal, and from thence to construct a railroad to the coal mines—a distance of fifteen miles nearly. This termination of the canal is seven miles short of that which was suggested in the original plan; and the estimated cost of this seven miles of canal is about equal to the estimated cost of the whole line of railroad, with its machinery and stationary power.

Contracts have been made for the remainder of the canal and for the railroad, and the work on both is progressing.

The canal, according to the contracts, is to be finished in July, but the work was much retarded by the almost unexampled bad weather in a portion of September and during the greater part of the two succeeding months. The mildness of the winter has, however, enabled the contractors to retain about six hundred men on the work, and, from a late report from the line, it is hoped their progress will, in a great degree, make good the deficiency occasioned by the bad weather in the fall.

A turnpike road has been constructed from Carbondale (the coal mines) to the Milford and Owego turnpike, and another from the head of the canal to intersect this turnpike six miles lower down. The first was made at the expense of the company; the latter by the company and individuals.

Over this road coal is hauling by common teams to the head of the canal at two dollars and twenty-five cents per ton on sledges, and at two dollars and seventy-five cents per ton on wheels; and at the date of the last accounts from thence from twenty to thirty teams were at work, carrying from one to two tons each. By one or the other mode as much coal will be transported as may be deemed proper until the completion of the railroad. The cost at tide-water, allowing an extra price for canal transportation, whilst lock-tenders and boatmen are in training, is estimated at four dollars and seventy-five cents, and five dollars and twenty-five cents per ton, according to the mode of transportation to the head of the canal.

The consumption above the Highlands will take off all that will probably be brought to tide this season; and it is not unreasonable to suppose that it will be sold at the company's landing at eight dollars per ton—fifty cents per ton less than the price of such coal in this city.

The roads formed by the company and individuals will be useful after the railroad shall be completed. That from the main western road to the coal mines will bring Carbondale into the line of travel from east to west, and will assist in bringing that place into value.

Carbondale, as a place of deposit for the west, will become a village of some importance. The railroad terminating there will furnish a conveyance to and from the canal cheaper by nine-tenths than by common teams. The road which connects the main turnpike with the canal will always be beneficial in furnishing an easy communication between the country and the canal, and, being accepted as a public road, will be kept in repair at the public expense.

The canal terminates in Pennsylvania on a tract of land of about one hundred acres, lying favorably for a village site. It cost the proprietor four thousand dollars, who gives one-half to the company in consideration of the benefits that will accrue to the other half from the company's operations. From this point it is contemplated by individuals to construct a canal up the Dyberry, carrying canal navigation from six to ten miles nearer the Susquehanna, and will present a strong inducement to connect by railroad the head of the latter canal with the Susquehanna at the great bend. An examination of the map will justify the belief that a large portion of the trade of the Susquehanna will by such means find the best and cheapest communication with this city. This will unquestionably be the case, unless this State should make a canal from the termination of yours on the Delaware to Deposit, and thence across to the Susquehanna. But either work will furnish a heavy transportation to the canal, and the interests of a large and fertile country will cause one or the other to be made. Such, at least, is the opinion of Judge Wright, and also of the board of managers. One and a strong ground for this opinion is, that your canal will open on an average a fortnight earlier in the spring, and continue as much later in the fall, than the Erie canal, and will, therefore, furnish a water transportation between this city and the valley of the Susquehanna more nearly corresponding with the opening and closing of the navigation of that river. Another ground is, that the route will be shorter, and consequently cheaper than any other.

A railroad being necessary to connect the coal mines with the canal wherever the latter might terminate, Judge Wright, our then chief engineer, was requested in the summer of 1826 to examine the subject in reference to the peculiarities of the country over which it must pass; since which it has more or less occupied the attention of the board and their engineers. In the course of the last summer a committee of the board decided on the place of terminating the canal; and the present chief engineer, J. B. Jervis, was then requested to prepare and report a plan of the whole work. The report was accordingly made late in October last, and reflects great credit on its author by the evidence it affords of patient research and investigation, of scientific knowledge and talent in adapting the work to the form of the country and other local circumstances of the line.

The construction and use of railroads was new in our country. Only one, of a few miles length, had been tested by a winter's cold, and another was a temporary and imperfect work. Differences of opinion existed among the engineers in England in various particulars, but all agree in their great superiority over turnpike roads, and in their near approach to canals in respect to cheapness and facility of transportation. Under these circumstances it was deemed advisable to submit the chief engineer's plans to the examination of Judge Wright and Professor Renwick, not from any distrust of the capacity or skill of the chief engineer, but from an adherence to that system of caution which had hitherto been observed in all the measures of the board of managers. With the sanction of such high authority, your board of managers proceeded in executing the work, under a firm conviction that the railroad and its appendages will serve as models for future works of this kind in our country, and will realize to the company all the advantages expected from it. The expense of the railroad with iron plates, together with stationary engines, chains, friction rollers, and a new and ingenious application by the chief engineer of a known power to the descending planes, (which may well deserve the name of an invention,) and allowing ten per cent. for contingencies, is estimated at one hundred and seventy-eight thousand two hundred and twenty-eight dollars. The expense of transportation upon it from the coal mines to the canal is estimated at 29½ cents per ton, or nearly 1 8-10 cents per ton per mile; being three-tenths of a cent more than the estimated cost of transportation on the canal.

The railroad and its appendages are calculated by the chief engineer for transporting five hundred and forty tons per day in one direction only; that is, so much coal may be conveyed upon it each day, and, allowing two hundred and forty working days in a year, will give one hundred and twenty-nine thousand six hundred tons per annum, besides returning transportation from the head of the canal to Carbondale.

The structure of the railroad is of timber, so arranged as to insure durability, with rolled iron plates securely fastened to the timber rails with screws. The plates are estimated to weigh eight hundred and two thousand nine hundred pounds, or nearly three hundred and sixty tons. Upon a comparison of the cost of the iron plates in this country with their cost in Europe and expense of delivery here, it was determined to import them; and Mr. Allen, an engineer well qualified for the service, was engaged, and has sailed for Liverpool to procure and superintend the manufacture of the plates, to procure the locomotive engines, and obtain information of all the latest improvements in works of the same kind in England.

Superior accuracy in forming the plates, a fact admitted by our oldest manufacturers, and of great importance in avoiding friction and giving steadiness to the motion of the carriages, and an estimated saving in the cost of about eighteen thousand dollars, offered inducements to sending to England for the plates, which the managers, acting as your agents, felt to be irresistible.

In respect to the canal in this State, it was expected that the new work in the valley of the Delaware to the mouth of the Lackawaxen, except the locks, would have been completed in the last season; but it was much retarded by wet weather in the best working months; many sections are, however, complete, and the remainder will be finished by midsummer. The locks are to be finished by the 1st of May. The most formidable work on the whole line, that at Butler's Falls, was accepted and settled last fall.

On this line (the Delaware) a farm has been purchased for two thousand dollars, containing about one hundred and forty acres. It has a good saw-mill and other improvements upon it, and, being on both sides of the Mongaup, a river nearly equal to the Neversink, secures the entire control of the water. It will give an abundant supply to the canal on a line of more than thirteen miles, and will yield a large surplus for hydraulic works at a well located site, (owned by the company,) where the canal turns out of the valley of the Neversink into that of the Delaware. The position of this site in respect to Orange county, in New York, Sussex, in New Jersey, and the valley of the Delaware below, its hydraulic advantages, and large basins for accommodating boats, warrant the belief that it will become a village of some importance.

It may be proper here to state that the same delay which has been experienced in rendering the canal navigable between the Delaware and Hudson rivers is not to be expected on the canal in the valleys of the Delaware and Lackawaxen. The latter is a more costly work than that between the rivers, but is also of a more permanent character, will require less repairs, and may be expected to be fit for navigation immediately or very soon after its construction.

Respecting the finished line between the two rivers, the managers are aware of the disappointment which public expectation experienced in the lateness of the season when it was rendered fit for navigation.

It was constructed during a season of unusual drought; the banks in many parts were, consequently, not well settled until, by the introduction of water, they became saturated with moisture; and this could not be done safely at once. The banks were generally tight, and more so than usual, as stated by the engineers in similar works at the same distance of time from their formation; but, from the cause above noticed, they were found in some places deficient of height, and required raising and strengthening. A large portion of the summit level consists of porous earth, mixed with coarse gravel and stones; at least it was interspersed with portions of earth of that character. The banks were, however, generally tight, and stood well, but the water escaped through the bottom and natural earth next to the hills. Taking the stone out of the botton, lining with earth more suitable to resist the water, and in some cases facing with earth the berm bank of the canal, was a tedious process. All this might have been done by transporting with common teams during the progress of the work, but at a very heavy expense. To avoid this expense the work was deferred until the water was taken in, and the transportation was then performed chiefly with scows. Towards the close of the season the work of tightening was effected, and boats were passed through the whole line from river to river, taking with them the lock-irons for locks on the Delaware and in Pennsylvania, and a weighing machine made in this city, and now using in weighing coal at the head of the canal. In many cases it was difficult to discover the leaks, especially in some of the large natural basins; for whilst no moisture appeared on the outside of the towing-path bank, the water gradually subsided in the canal, and, after the lapse of half a day or more, showed itself at various distances in the valley below. From these causes the transportation on the canal was chiefly limited to short distances from tide-water—some few boats only extending their trips to Wurtsborough, forty miles from tide. The year previous the inhabitants of the country and their teams had been employed in constructing the canal until late in the season; they could not, therefore, provide much for market. Even the lumbering business had been so much neglected that it was difficult to obtain a supply for the wooden structures on the canal; added to this, the opening of the canal for navigation was so long deferred that most of the articles for maket that would bear the expense had been previously transported in wagons. The navigation was not extended quite to the summit, when the excessive rains commenced, and continued until winter set in. The lock-tenders were inexperienced and, in some instances, neglectful; and even some of the overseers on the line, who had had no experience in long-continued rain and high waters, were deficient in the discharge of their duties; breaches ensued, boats were detained, and the boatmen became discouraged. These difficulties were, however, finally surmounted; and, although at some expense, the fitness of lock-tenders and others has been tested, and as they were successively found incompetent were dismissed and others substituted. The work performed in 1826 was, in respect to magnitude and extent of line, unparalleled in this country. All the labor that could be procured was employed, and, as previously stated, the cutting and sawing of lumber were neglected.

From these causes the building of houses for the lock-tenders, and of sluices to pass the surplus water and for filling the lower levels, were deferred until the last year. A large portion of the houses were not finished when the canal was opened for navigation, and some of the defects in attendance were owing to this cause, and some injuries to the canal were occasioned by the want of sluices.

The board of managers, consistently with their practice hitherto in forbearing to present to the stockholders merely conjectural benefits, will still refrain from offering any estimate of the revenue of the canal for the ensuing season. They intend to have it open for business as early in the spring as it may seem prudent; and, from information derived from those acquainted with the country, they believe that the inhabitants have been and are busily employed in preparing to avail themselves of the facilities that the canal will afford them. Neither the price of the stock nor the operations of speculators will hasten or retard the measures of your managers. They have heretofore held on their course, regardless of those circumstances, looking only to the interests of permanent holders who have invested their money with a view to ultimate results; and equally conscious of their ability to complete the work, as unvarying in their confidence in its successful issue and of a fair remuneration to the stockholders, they will, if your confidence be continued to them, persevere in the discharge of their duty until all your reasonable expectations shall be realized.

While on this topic, or influenced only by a sense of duty to you, the board of managers will, for once, depart from that line of conduct which they have hitherto prescribed to themselves in regard to the attempts that have been made to alarm your fears by setting forth the superior advantages of other

companies over yours, by alleged discoveries of coal more convenient to market or deliverable at a less expense, and by various disingenuous comparisons to the prejudice of this company.

Rightly viewed, these efforts to detract from the merits of your work should induce conclusions the reverse of those intended to be produced.

They are aware of your superior advantages in having the entire control both of the coal mines and of the means of transportation to the North river. Hence their anxiety to prejudice the public mind, in the hope of retarding or defeating your operations.

Let it not be understood that the charge of disingenuousness is applied to all; it is intended only for such as are conscious of having given occasion for it.

Some facts will be stated respecting the companies alluded to who claim to be your competitors, and in relation also to the discoveries of coal above noticed. The object is not to detract from them, but to inform you.

First, then, as to the Lehigh Company and in reference to this market. When that company shall have made their canal down the Lehigh to the Delaware, and Pennsylvania shall have made her canal from the mouth of the Lehigh to tide on the Delaware, and New Jersey shall have made her canal from the Delaware to the Raritan—when all these projected works are accomplished, how will they stand? Forty-six miles of canal their own, after having sunk a large sum in river work, much of which will then be useless, sixty miles of canal belonging to Pennsylvania, and fifty miles of canal belonging to New Jersey, making one hundred and fifty-six miles of canal, and from the place of transhipment on the Raritan to New York forty miles.

The Morris Canal Company is dependent on the Lehigh Company for the coal they propose to bring to New York. The Lehigh Company will not, it is presumed, supply the Morris Canal Company without some profit to themselves. The Lehigh canal, when finished, will be forty-six miles, and the Morris canal ninety-eight miles, making one hundred and forty-four miles of canal.

The charge of raising the coal, transporting to the canal, and handling, will not be less than one dollar per ton.

Cost of transportation, according to the estimate on your canal, 1½ cent per ton per mile: this, in one hundred and forty-four miles, gives	$2 16
Toll on the Lehigh, 1½ cent per ton per mile, (and they cannot probably afford it at less)	69
Is it not reasonable to suppose the Lehigh Company will charge the Morris at least a portion of the profit they could make by taking their coal to Philadelphia? This charge may, therefore, be put low enough at	1 50
Making, per ton	5 35

The actual outlay of money, and allowing nothing for toll on the Morris canal.

The Schuylkill Company has 108 miles of artificial navigation on the Schuylkill; 34 miles of river navigation to reach the commencement of the projected canal across New Jersey; thence by the latter canal 50 miles; and from the place of transhipment on the Raritan to New York 40 miles; equal to 162 miles of canal and 74 miles of river navigation.

The Delaware and Hudson canal is 105 miles in length from its head to tide; and although the river transportation is 50 miles greater than that which the Lehigh Company may have at some future day when all the indicated works shall be completed, yet the fact that freight is no higher from Albany than it is from Newburg admits the belief that the expense of transportation from the terminations of the canals to this market will be about equal in both cases. In your favor it is also to be remarked, that, without transhipment, you will supply the consumption of the towns and factories on and near the North river, above the Highlands, which may now be computed at eight to ten thousand tons, and is rapidly increasing.

With these facts, and taking into view that each of the companies named will be subject to charges beyond their control by States and other companies owning portions of the navigation which they must use, is it assuming too much to claim for this company a decided superiority over all others that look to this market for the sale of their coal?

Having, as the managers believe, disposed of the claims of those companies who assume to be your most formidable competitors, a brief notice of the minor projects will suffice.

The Tioga coal, so much talked of last winter, lies in Pennsylvania, from 40 to 50 miles from the point at which a navigable feeder must be taken out of the Chemung to supply the projected Chemung canal. Supposing a canal made in Pennsylvania to the Chemung, and thence to the head of Seneca lake, it is not believed that this coal could then compete with yours eastward of Utica, and its quality is unquestionably inferior to yours.

The same kind of coal lies in the same region about 25 miles up the valley of Lycoming creek, which empties into the west branch of the Susquehanna, about 110 miles above Harrisburg. The expense of transporting this coal to sloop navigation near the head of Chesapeake bay cannot be less than that from Wilkesbarre, which, including losses on the river, a dangerous navigation, is stated, from inquiry on the spot, at about $5 per ton to Port Deposit; and the quantity cannot be great, as the average of spring freshets, during which boats must run to reach tide-water, does not exceed three to four weeks. The small extent to which this business has been carried on from Wilkesbarre, where they have an abundance of coal within a mile of the Susquehanna, shows that it is not susceptible of advantageous extension.

Another mode of getting Lycoming coal to market is, however, spoken of, to wit, by railroad to the Susquehanna, 25 miles; to construct which, and furnish it with wagons, will cost at least two hundred thousand dollars; and, then, if Pennsylvania should make a canal up the west branch, to pass down that to the Union canal, and through this last and the Schuylkill navigation to Philadelphia, making about 260 miles of canal; by this route the coal will cost from $7 to $7 50 per ton, delivered in Philadelphia.

In connexion with the foregoing comparative advantages of this company with others, and for the information of the stockholders, the following estimates are offered respecting the coal business of this company, to wit:

	Per ton.
Clearing off the covering, getting out and piling the coal	$0 50
Railroad transportation, per engineer's estimate	0 29½
Carried forward	79½

Brought forward		$0 79½
Canal transportation, viz:		
	Per day.	
Boat per day	$0 50	
Two men	2 00	
Boy and horse	1 00	
Making	3 50	
Ten days per trip, and 25 tons each boat, give $35 for 25 tons, but the usual estimate is a little more, say 1½ cent per ton per mile: this, on 105 miles, is		1 57½
Handling		25
Expense of delivery at tide, per ton, exclusive of toll		2 62

It is believed that this estimate will not be exceeded after the lock-tenders, boatmen, and other persons employed in the work shall have had some experience and become expert in the performance of their respective duties.

Of the general transportation that may be expected upon the canal information has been given in former reports. A brief notice of it may therefore suffice on the present occasion, and a reference to maps will enable the stockholders to estimate its importance. The head of the canal is 33 miles from the great bend of the Susquehanna river, and the railroad terminates 22 miles from the valley of Wyoming, on the same river. From both points the canal offers the best and cheapest route to this market. The same may be said of Susquehanna and Bradford counties, in Pennsylvania; of the descending trade of the Delaware above the termination of the canal on that river; and also of Pennsylvania and New Jersey, bordering on the Delaware, embracing at least 40 miles below Carpenter's Point.

On the subject of funds, the board of managers have to state that they have received in State stock $500,000, and having disposed of $400,000 they have paid the premium thereon into the State Treasury, but they do not despair of getting a refund of this premium. In the language of members of both houses of the Legislature, it was derogatory to the State to attach such a condition to a loan of its credit to a company giving ample security, paying the interest at their own office, and investing the amount in a work of great public utility. Such at least was the view taken of this measure by the honorable the Senate and a large majority of the House of Assembly.

Your managers mean to make an appeal to the magnanimity and justice of the Legislature on this subject, and, when the works shall have demonstrated your good faith and a judicious application of the funds, they have full confidence that the appeal will be met in a manner consistent with the high character of the State of New York.

There have been expended on the line of canal and railroad, including salaries to agents and engineers, turnpike roads in Pennsylvania, and all other expenses		$1,370,000
In the purchase of real estate in Wall street and on the line of the canal, and in improvements thereon		61,000
Paid Messrs. Wurts and associates for their coal lands and privileges in Pennsylvania		40,000
Canal boats		7,000
		1,478,000
Capital stock	$1,500,000	
State stock	500,000	
	2,000,000	
Deduct bank capital	500,000	
		1,500,000
Leaving a surplus of		22,000

The agent and engineer having been called upon for a statement of the balances that will be due on the completion of pending contracts, the following is the result of their report:

On the canal		$283,704
On the railroad		155,000
		438,704
From which may be deducted surplus of capital and State stock	$22,000	
And surplus profits, which may be temporarily applied to this object, although intended to be divided among the stockholders when refunded by the canal, or by an increased capital	49,000	
This deducted from the above		71,000
Leaving to be provided for		367,704

This amount will be gradually expended in the course of the year, and a loan may be required some time in next fall, unless it should be deemed best to await the next session of the Legislature and apply then for a further loan from the State. The works of the company will then be complete, and their benefits to a populous portion of the State and productiveness to the stockholders will be more justly estimated than they can be at this time.

In the meantime it is the settled purpose of your managers, if re-elected, to push forward the work to its final completion, and in this determination they have the decided concurrence of the largest stockholders.

With respect to the bank, it may suffice to remark that its condition is unchanged, excepting that there has been some reduction in current expenses, and that its surplus fund amounts to $49,000 after paying dividends, semi-annually, of three per cent. It has a reasonable share of business, and is doing as well as could be expected of a comparatively new institution, competing with fourteen banks previously established.

In conclusion, the managers feel authorized to state that from the commencement of their canalling operations they have enjoyed advantages that have not been and cannot be surpassed in any work of the same kind. Science of the first order, great experience, and a faithful performance of duty have pervaded the engineer department; and the multifarious and highly important duties of an agent, which can be properly appreciated only by those who are well acquainted with the construction of canals, could not have been performed with more ability, industry, and faithfulness than have been exhibited by Mr. Wurts, who has filled that appointment from the beginning of the work to the present moment.

Mistakes have been avoided; no work has been done until plans and lines have been well investigated; all has, consequently, been progressive and suited to that which was done and that which remained to be performed; and whilst no contractor has had to wait for his money after having performed his contract, advances have been so judiciously made as to avoid loss by those who failed to complete their work.

By order of the board:

JOHN BOLTON, *President.*

DELAWARE AND HUDSON CANAL COMPANY, *March* 4, 1828.

NOTE.—The measures which have been adopted for excavating the coal, and for completing the railroad before next spring, warrant the belief that the transportation of coal to the head of the canal will commence some time in advance of the opening of the canal in the spring of 1829; and that, in the course of the year, forty thousand tons of coal will be delivered at tide-water on the Hudson, which is less than one-third of the quantity that the railroad will be capable of delivering.

20TH CONGRESS.] No. 908. [1ST SESSION.

IN FAVOR OF IRON FOR RAILROADS FREE OF DUTY.

COMMUNICATED TO THE SENATE APRIL 7, 1828.

To the honorable the President and members of the Senate of the United States:

The petition of the City Council of Charleston, in the State of South Carolina, showeth: That an act of the Legislature of said State was ratified on the 30th day of January, in the year 1828, authorizing the formation of a company to be incorporated by the name of the South Carolina Canal and Railroad Company;

That the stock required by the said act of the Legislature has been subscribed according to the terms of the act upon which the charter of incorporation was to take effect;

That by the terms of said act five weeks' public notice in certain newspapers of the State must now be given to the stockholders of the said company to meet and organize the company;

That in the meantime the present session of Congress is drawing to a close;

That it is very desirable, during the present session, that the objects of this petition should be accomplished, so as to afford the said company the earliest opportunity of commencing and completing their contemplated works.

Your petitioners, therefore, show that the said South Carolina Canal and Railroad Company are required by the aforesaid act of the Legislature to direct and confine their first efforts and enterprise to the formation and completion of the railroad communication between Charleston and Savannah river, at or near Hamburg, and other points and places on the said river; and when such communication shall be completed, or before, if the company shall find it practicable and advantageous, they are authorized to construct railroads to Columbia and to Camden, in the said State.

Your petitioners further show that, for the purpose of constructing the said railroads, a large quantity of iron will be required, which will constitute a great portion of the cost of these extensive roads.

That the construction of railroads being but a new undertaking in this country, it is thought safest and best that the iron required should be procured from England, where it can be worked up in the proper manner, so as to insure greater certainty in the execution of the projected roads.

Your petitioners further show that it is contemplated to propel carriages upon the said railroads by means of locomotive steam engines. That after encountering many difficulties in constructing such engines, so as to afford the power required of them, they have at length succeeded in England in accomplishing that object. That as yet no such engines have been constructed in the United States. It is therefore obvious that the locomotive engines to be used on the said railroads should be imported until the manufacturers of the United States have acquired skill in constructing them.

That the duties to the Government on iron imported, especially when worked up, constitute a very large portion of the expense of procuring such iron.

Your petitioners therefore pray that an act of Congress may be passed authorizing the South Carolina Canal and Railroad Company to import free of duty all such iron, manufactured or not manufactured, as may be required for the formation and completion of the roads they are authorized to construct by the aforesaid act of the Legislature of this State, and likewise all such steam and other engines and carriages as may be required in constructing the said railroads or in propelling carriages thereon when first completed.

Your petitioners now present some reasons which to them seem sufficient to authorize the aid asked of Congress.

Of the projected roads, that required by the act of our Legislature to be first undertaken and completed by the company will afford the safest, the cheapest, the most direct, and the most expeditious and certain communication between Charleston and Augusta, in Georgia, which town is opposite Hamburg, in this State.

Not only the commercial prosperity of these places will be promoted, but Augusta, being a military depot of the United States, this road may properly claim the attention of Congress as one of national importance. All the reasons in favor of the best military roads between such important points as Charleston and Augusta are here strictly applicable.

The other roads contemplated by the company, though not communicating directly with places where the United States at present have military depots, are yet important in many points of view as well for military as for commercial purposes.

To promote objects similar to those now contemplated by the South Carolina Canal and Railroad Company, Congress have authorized large amounts of stock to be taken by Government in several companies, and have directed officers of the Government in the pay of the Government to make the necessary surveys and to discharge the other duties, as civil engineers, required by the companies.

As yet no aid in either of these ways has been afforded to this section of our country; and what we now ask is neither the money of the Government nor the services of its officers, but merely that we be permitted to act for ourselves and to procure the necessary materials where they can be best obtained, if we are not trammelled by the operation of laws, which at all events, in this case, will act, if permitted to act, a public as well as private injury.

JOHN GADSDEN, *Intendant.*

By the Intendant:
WILLIAM ROACH, *Clerk of Council.*

20TH CONGRESS.] No. 909. [1ST SESSION.

AGAINST INCREASE OF DUTIES ON IMPORTS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES APRIL 8, 1828.

To the Congress of the United States:

The memorial of the undersigned, inhabitants of the county of Dutchess and State of New York, respectfully represents: That your memorialists would feel themselves unwarranted in presenting themselves to the notice of your honorable body were they not justified in the measure by the example of a portion of their fellow-citizens who entertain different opinions, and did we not believe it to be our duty to correct, so far as we can, what we are constrained to think are erroneous representations of the condition and sentiments of the inhabitants of Dutchess county.

We have lately seen in circulation amongst us a memorial to your honorable body, soliciting additional protection for wool-growers and manufacturers, praying for the imposition of prohibitory duties upon foreign importations, and representing the agricultural, mechanical, manufacturing, and laboring population of this country as in a state of extreme depression, from which no relief could be hoped or expected unless through the interposition of Congress, by the adoption of the prohibitory, or, as it is sometimes termed, "the American system," and that those classes of our citizens were generally importunate and eager that such an interference by Congress should be immediately attempted in their behalf.

To the advocates of that memorial the undersigned very freely concede their claims to considerable numbers, great respectability, intelligence, and wealth, and undenied sincerity in their opinions; but with the same freedom we must beg leave, respectfully, to dissent from their representations, and to differ from their opinions. We have no wish to intimate or prescribe a policy for the adoption of Congress; we rather confide in their wisdom to discover and establish those just and equal measures of national legislation which will operate for the public benefit, and do not presume that our sentiments or suggestions will enlighten their deliberations or affect their decisions; we therefore shall not in this memorial, except in a very limited degree, enter into a discussion to show the foundation of our belief, nor to point out the mistakes as to facts, nor the fallacies as to reasoning, in which our opponents have indulged with a latitude so unbounded, and with absurdities so glaring, as to produce great surprise on the part of this community, and almost an entire immolation of their own theories. We have an humbler object; we only claim that our condition, our opinions, and our wishes may be neither misrepresented nor misunderstood; and we therefore most respectfully represent to Congress that, in our judgment, the agricultural, manufacturing, and laboring population of Dutchess county is not in a depressed condition. We believe that our agriculturists are substantially prosperous and flourishing, and we think we hazard little in asserting that they were never more so; the time has been when their incomes were numerically greater, but the present prices which their produce commands affords them the means of purchasing land and all the necessaries of life, at the present value, in much greater abundance than was ever known before. It is with them as with every other class—one dollar is now worth what two were in former times; and if constant progressive improvement in cultivation, in buildings and enclosures, in stock and in implements; if freedom from embarrassment and debt; if the enjoyment of great abundance of the necessaries, comforts, and even luxuries of life; if the regular and steady accumulation of capital and wealth be any evidences (as we think they are) of the prosperity of those who possess and enjoy them, then do we confidently assert that our agricultural citizens are a prosperous and happy people.

It is generally admitted that the wages of labor never before have been so high, in proportion to the expenses of subsistence; and the scarcity of labor, with the attending difficulty of procuring it, for all the common and domestic occupations of society, are subjects of universal complaint in this section of the

country. So far from there being an excess of labor there is a deficiency, and the industry of the people, instead of languishing and declining, is now actually impelled to unusual exertions by the almost unexampled productiveness of its efforts in every manual employment.

We know of no distress among that meritorious class of our citizens who are engaged in mechanic occupations; their general comfort, independence, and success are plainly evident to all who are familiar with their condition; and their welfare and prosperity, being common to their fellow-citizens of the laboring and agricultural classes, become and present a just occasion of public congratulation to all, and of sincere and unaffected gratitude to Heaven.

Of the wool-growing and wool manufacturing interests in this country, had we relied on the common indications of prosperous circumstances, we should have believed that they also were participators in the general weal; and now entertain a different opinion only from a reliance on, and respect for, their uniform and reiterated declarations of their great disadvantages, and the imminent distress overshadowing their prospects. We respectfully present to Congress that we know of no class of our citizens, with the exceptions aforesaid, (if, indeed, these are exceptions,) who do not now receive a reasonable and competent recompense for their capital, skill, labor, and industry, employed in the various and diversified business of the country; that we know of no other interests which require additional encouragement or legislative protection.

The transition of the civilized world from war to peace has terminated the career of hazardous speculation, uncertain pursuits, great vicissitudes, and individual extravagance incident to the one, and restored that serene condition of moderate emolument, regular employment, permanent uniformity, and practical economy which the benignity of Heaven has rendered inseparable from the other. Having accomplished this change, we believe that our country is now moving onward to the destiny which awaits her with sufficient rapidity for the development and establishment of her resources, her industry, and her wealth; that the natural increase and condensation of her population will of itself spontaneously supply the manufactures, and the undirected ingenuity of her citizens discover the proper time for the necessary and advantageous employment of her industry and capital; and that such an improvement is preferable to an artificial and premature cultivation of the pursuits and employments peculiar and appropriate to a more advanced period of our national existence. We therefore deprecate the introduction of any system which may change the present happy aspect of our affairs, and, by attempting to prove what is now reasonably good, lead to evils and injuries beyond the power of correction, and leave us worse instead of better.

Against the prohibitory system, and against the bill now before the House of Representatives as a part of that system, and in our judgment amounting, if passed in the present form, to an interdict upon foreign importations, we beg leave, most respectfully and seriously, to remonstrate.

We have long enjoyed, and as long flourished in the enjoyment of a system of moderate imports, unrestricted industry, and universal intercourse and interchange of our commodities with the other nations of the earth. Their restrictions and prohibitions have injured us less than themselves; what we have had to sell they have bought, and our purchases have been made with surplus productions for which no adequate demand could be furnished in the establishment of home manufacturing. When we cease to buy, we must also cease to sell; and the redundancy of our southern agricultural productions, consequent upon the loss of our foreign markets, must produce a ruinous reaction and destruction of the great and invaluable internal trade between the south and the north. The diminution of our national revenue, and the establishment of direct taxation, with the corrupting increase of smuggling, are evils which, in the minds of your memorialists, seem inseparable from the introduction of the prohibitory system.

The destruction of much of our foreign commerce, and the ruin of a portion of our commercial and shipping interests, seem to us plainly incident to the same policy; and we cannot but advert to the encouragement which the wisdom of our country has hitherto bestowed upon them, as an argument most irresistibly enforced by all our past and present prosperity for still fostering and protecting them. Nor can your memorialists believe that a further increase of the tariff is necessary for our national independence and honor. Our present advances furnish the elements of any requisite extension of manufacturing, and warrant the belief that any exigency of war or non-intercourse, however unexpected, would be soon met by the enterprise and habitual energy of our people.

Unable to comprehend how the necessity of higher prices for woolen manufactures, so loudly asserted by the high tariff advocates, can possibly be reconciled with that reduction which these same men promise from domestic competition, we are constrained to aver our belief that the embarrassments and distress of which they now complain are to be imputed to their own injudicious investments and improvident management, rather than to any inadequacy of recompense for skill, industry, and capital, when properly and economically employed in manufacturing. Still less can we comprehend the necessity of that exorbitant encouragement which they demand; and we trust that the wisdom and firmness of Congress will long hesitate before anything is conceded, and then yielded only on conviction, in moderate measures, and in gradual and almost imperceptible impositions. Especially do we hope this when we reflect that an increase of price in woolens (which, disguise it as they may, is the certain object and consequence of an increased tariff,) will fall with peculiar severity upon the laboring and poorer classes of our community, and be, in effect, helping those who least of all need assistance, by still more impoverishing those who most of all should be protected.

We disclaim any hostility to domestic manufactures; we wish them success and improvement, and we believe them in the path of prosperity and permanence; but we should regret to behold their advancement accelerated by any infringement upon other interests, or purchased at the expense and sacrifice of those branches of national industry which we have been taught to regard as equally, and perhaps more important and indispensable.

In proclaiming these sentiments, your memorialists are aware that they incur the heavy censures of their opponents, who do not hesitate to impute our conduct to infatuated ignorance, or to motives of a more censurable character and still darker complexion. We have no wish to recriminate; and without professing more than common zeal and devotion for the public welfare, and claiming no more patriotism than we trust belongs to the great body of our citizens, we only ask that consideration for our opinions which they may rightfully expect from having received the sanction of our revolutionary sages, and the approbation of no small portion of the wisdom, and talents, and virtue of the succeeding and present generations.

In conclusion, your memorialists would respectfully repeat that the county of Duchess is now substantially prosperous and flourishing; that the agricultural, laboring, and mechanical population are

gradually and permanently increasing in independence, comfort, and wealth; that if (as we should doubt) her wool-growers and wool manufacturers do require additional encouragement, a very moderate augmentation of that which they now enjoy would be amply sufficient; and that the proposed increase of the tariff is, in our judgment, beyond the bounds of moderation and wisdom, and would inflict upon the great body of our citizens an injury infinitely greater than could be recompensed by any possible benefits to those who are its only advocates. And further, we do confidently represent to your honorable body that the views and opinions expressed in this memorial, in relation to the prohibitory system and the proposed tariff bill, are the common views and opinions of a large majority (if not of four-fifths) of the inhabitants of Dutchess county, and who, with us, humbly trust to the independence and wisdom of Congress to protect us from the adoption of a system of no general utility, but pregnant with consequences of universal and indiscriminate public injury.

20TH CONGRESS.] No. 910. [1ST SESSION.

CHANGE OF FISCAL YEAR AND ITS EFFECT ON REVENUE AND EXPENDITURE.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES APRIL 11, 1828.

TREASURY DEPARTMENT, *April* 5, 1828.

SIR: I had the honor to receive your letter of the 20th of last month, informing me that the Committee of Ways and Means had come to the conclusion that it was expedient to make an appropriation during the present session for the first quarter of the year 1829, and asking any suggestions from me as to the effect of such an appropriation upon the accounts and estimates of future years; and whether, if the future appropriations should be made for an entire year, the fiscal year for expenditures would not be different from that for revenue; and, if this would be the case, whether any unavoidable confusion in the accounts of the Treasury would be the result, so as to render it more difficult to compare the annual appropriations with the annual expenditure. A wish is intimated in the conclusion of your letter that should any mode occur to me by which the confusion above apprehended may be avoided, otherwise than by two separate estimates and appropriations in each year, I would state it.

Many of the returns and accounts of the year, relating to the revenue, being first received and formally made up at the Register's office, and the estimate of appropriations being also, in part, formally made up there, I referred your letter to that office in the first instance, and beg leave to enclose herewith, for the information of the committee, two communications in reply, dated the 26th and 28th of March.

On considering the subject-matter of your letter, my belief is that the best mode of reconciling the determination of the committee to make an appropriation during the present session for the first quarter of 1829, with the convenience of the Treasury and the public service generally, will be to give permanence to the change by altering the fiscal year also; making the latter terminate for the future with the first three months of the year, and always passing the appropriation bills before the first of April. I do not see how the evils hinted at in your letter, and confirmed by the statements of the Register, are otherwise to be avoided. The change of the fiscal year will, doubtless, lead to some inconvenience. But it is believed that it will be temporary. There is no necessary connexion between the close of the fiscal and that of the calendar year; and the change proposed, once in operation, may be expected, with the aid of time, and the repeal of such existing laws as the change may call for, to accommodate itself to all parts of the public business. A distinct set of Treasury books may be necessary for the first quarter of the year as stated by the Register; but this will be necessary only for a single year, should the change become permanent.

I enclose the estimates of the first quarter of 1829, in answer to that part of your letter desiring to be furnished with them. Also, drafts of the bills, in blank, as usual. It is only to-day that they have been completed.

I have the honor to remain your most obedient servant,

RICHARD RUSH.

Hon. GEORGE MCDUFFIE, *Chairman Committee of Ways and Means, House of Representatives of the United States.*

TREASURY DEPARTMENT, *Register's Office, March* 26, 1828.

The Register has the honor to submit to the Secretary of the Treasury the following statement in relation to the proposed change in the fiscal year.

It has been the practice since the commencement of the present Government to open annually a new set of books, which embrace a period from the 1st of January to the 31st of December, in which are entered all receipts, expenditures, and appropriations, together with all personal accounts which are operated on within that period. If the proposed change is carried into effect, a new set of books would be required for the three months from the 1st of January to the 31st of March, 1829, and thereafter to commence with the proposed new fiscal year on the 1st of April, 1829.

The annual printed public accounts of receipts and expenditures are, by a resolution of the House of Representatives of the 30th of December, 1791, required to be rendered to Congress to the last day of December in each year. That resolution would require amendment, so as to provide for the proposed change, and also for the three months which would occur between the 1st of January and the 31st of March, 1829.

By the 8th section of the act of the 1st of May, 1820, to the annual estimates of appropriations is required to be annexed the balances of the appropriations of the previous year; that section would require to be amended also, so as to provide for any change in the fiscal year.

The contemplated change in the fiscal year cannot, in any manner, affect either the books of the revenue or the annual statements. Estimates of revenue from duties on imports will continue to be made as usual, and the payments into the Treasury from customs be made up quarterly.

In rendering two separate estimates, and making two separate appropriations, none of the changes mentioned in the foregoing would be required, as the appropriations made for the first quarter of each year would not interfere with those made for the preceding year; they would be entered in the books of the year to which they relate, subject to be drawn only in the year for which they were appropriated.

If the proposed change is not carried into effect, it would greatly facilitate the passage of the appropriation acts, by authority to transmit the estimates to Congress within the first week of the session, accompanied with the probable amount of balances of appropriations, instead of the actual specific balances as now rendered; to effect which, the only change necessary to be made would be to amend the 8th section of the act of the 1st of May, 1820. The Committee of Ways and Means would thereby gain three or four weeks, and the balances of appropriations could be rendered, as heretofore, within the first week in January.

Respectfully submitted.

JOSEPH NOURSE, *Register.*

TREASURY DEPARTMENT, *Register's Office, March* 28, 1828.

SIR: I have perused with attention the letter of the honorable the Chairman of the Committee of Ways and Means relative to the effect the making an appropriation during the present session for the first quarter of 1829, and the making, hereafter, appropriations for an entire year from the 1st of April, would have upon the accounts and estimates of future years; particularly whether it would not necessarily result from that measure that the fiscal year for expenditures would be different from that of revenue; and, in case the appropriations were so made, whether a comparison would not be rendered more difficult between the annual appropriations and the annual expenditures, and beg leave to observe that, with respect to reconciling the annual appropriation and expenditures no difficulties are anticipated; but that, in every other respect, those suggested by Mr. McDuffie will, to a great degree, be occasioned by the contemplated measure, unless a change is also made as regards the revenue year; this change, however, may be effected with but little inconvenience; without it, the confusion suggested, it is apprehended, can only be obviated by having two separate estimates and two distinct appropriations included in one act for the year; and even should this plan be approved of, some inconvenience may arise from the impracticability of rendering to Congress the balances of appropriations that would remain unapplied on the 31st of March, and an estimate of the sums then to be carried to the surplus fund.

Should the contemplated changes as to the periods for the appropriations not be adopted, it is respectfully submitted, as a measure that would facilitate the passage of the appropriation acts for the calendar year as heretofore, that the estimates for the services of the following year be laid before Congress within the first week of the session, and that in lieu of the statements required by the act of the 1st of May, 1820, they be accompanied with estimates; and that the statements, contemplated by that act, of the balances of appropriations remaining unsatisfied on the 31st of December, and of the specific sums that will now be required to defray expenses incurred in a previous year, be laid before Congress during the first week of January; to effect this arrangement, it will be necessary to amend the 8th section of the act above referred to; its adoption will place in the hands of the committee the annual estimates sooner in the session by three weeks than they have heretofore received them.

The estimates for the first quarter of 1829, requested by the committee, are in preparation, and will be transmitted at an early day.

I have the honor to be, sir, your most obedient servant,

JOSEPH NOURSE, *Register.*

Hon. RICHARD RUSH, *Secretary of the Treasury.*

[N. B.—The estimates of appropriations for the first quarter of 1829 are omitted here.]

20TH CONGRESS.] No. 911. [1ST SESSION

OPERATIONS OF THE MINT IN 1827.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES APRIL 16, 1828.

TREASURY DEPARTMENT, *April* 14, 1828.

SIR: I have the honor to transmit herewith three statements, marked A, B, and C, which have been prepared by the Comptroller of the Treasury, pursuant to the seventh section of the act of Congress passed on the 2d of April, 1792, entitled "An act establishing a Mint, and regulating the coins of the United States."

These statements contain all the information relative to the transactions of the Mint which the settlements made at the Treasury afford.

I have the honor to be, very respectfully, your obedient servant,

RICHARD RUSH.

Hon. the SPEAKER *of the House of Representatives.*

A.

Statement exhibiting the balance of the gold and silver bullion remaining in the hands of the officers of the Mint December 31, 1826; the amount deposited from January 1 to December 31, 1827; the different species of coins made and paid on account of deposits; allowances for wastage; and the balance remaining in the hands of the officers of the Mint December 31, 1827, to be accounted for on a future settlement, viz:

20TH CONGRESS.] No. 912. [1ST SESSION.

ASSAYS OF FOREIGN COINS AT THE MINT IN 1827.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES APRIL 16, 1828.

TREASURY DEPARTMENT, *April* 14, 1828.

SIR: I have the honor to transmit herewith a report, received at this Department, from the Director of the Mint, of assays of foreign coins made at that institution during the past year.

I have the honor to be, very respectfully, your obedient servant,

RICHARD RUSH.

Hon. the SPEAKER *of the House of Representatives.*

MINT OF THE UNITED STATES, *Philadelphia, December* 31, 1827.

SIR: Comformably to general instructions from the Treasury Department, assays have been made of the foreign coins current by law in the United States, and the result thereof is now respectfully submitted.

FOREIGN GOLD COINS.

From the assayer's report it appears that the gold coins of Great Britain contain 22 parts of fine gold in 24 parts; those of Portugal, 21 31-32 parts of fine gold in 24 parts; those of France, 21 11-16 parts of fine gold in 24 parts; and those of Spain, 20 15-16 parts of fine gold in 24 parts.

Standard gold of the United States contains 22 parts fine in 24 parts; and the eagle, of ten dollars, contains 270 grains of standard gold. The value per pennyweight of the gold coins of Great Britain, deduced from the present assay, will therefore be 88.89 cents; that of the gold coins of Portugal, 88.76 cents; that of the gold coins of France, 87.62 cents; and that of the gold coins of Spain, 84.59 cents.

In relation to the gold coins of Great Britain and Portugal, the above values correspond with the mean of former assays. In relation to those of France and Spain, this conformity is less exact; the deviation from it is not, however, of such moment as to disturb the ordinary estimate of their value founded on average results. By a careful investigation of the subject in 1826, the value of the gold coins of France was ascertained to be 87.37 cents per pennyweight, and that of the gold coins of Spain, 84.28 cents per pennyweight.

FOREIGN SILVER COINS.

The Spanish milled dollar appears, from the assayer's report, to contain 10 ounces 15 pennyweights 12 grains of fine silver in 12 ounces. Standard silver of the United States contains 10 ounces 14 pennyweights 4 5-13 grains of fine silver in 12 ounces; and the dollar of the United States contains 416 grains of standard silver. The value, therefore, of Spanish milled dollars, according to the present assay, will be 116 1-10 cents per ounce. Their ordinary value by tale may be estimated at 100 cents 3 mills.

The legal currency of the crowns of France and five franc pieces having ceased within the present year, those coins have not been considered as requiring a formal examination and report. It may be satisfactory, however, on the present occasion to remark that, according to the result of former assays, the value of the crowns of France is 117 7-10 cents per ounce, and that of the five franc pieces, 116 4-10 cents per ounce. The ordinary value by tale of the French crown may be estimated at 109 cents 3 mills, and that of the five franc piece at 93 cents 2 mills.

With great respect, your obedient servant,

SAM'L MOORE.

Hon. RICHARD RUSH, *Secretary of the Treasury.*

20TH CONGRESS.] No. 913. [1ST SESSION.

SURPLUS REVENUE, PAYMENT OF THE PUBLIC DEBT, AND REDUCTION OF DUTIES.

COMMUNICATED TO THE SENATE APRIL 21, 1828.

Mr. SMITH, of Maryland, from the Committee on Finance, to whom was referred the following resolution, offered by Mr. Benton—

Resolved, That the Committee on Finance be instructed to inquire whether any error has occurred in the construction of the fourth section of the act entitled "*An act to provide for the redemption of the public debt*," passed the 3d day of March, 1817, in reference to the amount of surplus revenue to be retained in the Treasury; and if so, to report an amendment for restoring the section to its true intent and meaning;

Also, that the same committee be instructed to inquire into the expediency of so altering and amending the same section (if no error be found in the construction thereof) as to reduce the amount of surplus revenue required by that section to remain in the Treasury from two millions of dollars to one million, or less;

Also, that the same committee be instructed to inquire into the expediency of so altering and amending the fifth section of the same act as to vest the Commissioners of the Sinking Fund with a *discretionary* instead of a *limited* authority in making purchases of the public debt *at its market price*, whenever, in their judgment, such purchases can be made beneficially for the interests of the United States, and when the state of the Sinking Fund and existing engagements will permit them to do so;

Also, that the same committee be instructed to make a report to the Senate, showing within what *time* the present debt of the United States may probably be paid off, and upon what articles, and to what amount, the present duties may *then* be reduced or abolished, consistently with the general interests of the whole Union—

Reported: That, with a view that the Senate may have the subject fully before them, the committee have deemed it proper to submit the fourth section of the "Act to provide for the redemption of the public debt," passed 3d March, 1817.

"SECTION 4. *And be it further enacted*, That after the year one thousand eight hundred and seventeen, whenever there shall be, at any time after an adjournment of Congress in any year, a surplus of money in the Treasury above the sums appropriated for the service of such year, the payment of which to the Commissioners of the Sinking Fund will yet leave in the Treasury at the end of the year a balance equal to two millions of dollars, then such surplus shall be, and the same is hereby, appropriated to the Sinking Fund, to be paid at such times as the situation of the Treasury will best permit; and shall be applied by the Commissioners thereof to the purchase or redemption of the public debt."

The operation of that section did not, it appears, commence until after the expiration of the year 1817; the third section directed how the surplus funds in that year should be applied, viz: That, in addition to the ten million appropriated annually as a Sinking Fund for the discharge of the principal and interest of the public debt, there should be paid during the year 1817 a further sum of nine millions towards the redemption of the principal; and a further sum of four millions to be paid to the Commissioners of the Sinking Fund, to be considered by them as an advance on the appropriation for the ten millions payable in the year 1818.

The committee are of opinion that the construction of the fourth section of the act to provide for the redemption of the public debt, "in reference to the amount of surplus revenue to be retained in the Treasury," as at present understood, is correct; and that, of course, it is deemed by the committee unnecessary to propose any amendment.

The committee are also of opinion that it would be inexpedient to reduce the amount of surplus revenue, required by the 4th section to remain in the Treasury, from two to one million.

The committee understand that the construction at the Treasury of the fourth section and the operation under it is, that if at any time after the adjournment of Congress it should appear that there will be in the Treasury at the expiration of the year a surplus over and above two millions of dollars, after satisfying all claims on the Treasury, then such surplus must be applied to the redemption of the principal of the public debt.

The Treasurer appears to have considered the reservation of two millions of dollars as discretionary, to be retained or not, as the Secretary might deem advisable for the public interest. It does not appear that the two millions has ever been retained; a more particular view, however, of that point will be taken hereafter.

The committee addressed a note to the Secretary of the Treasury on all the points of the resolution. His answer, with the documents A, B, C, are herewith submitted as part of their report, viz:

TREASURY DEPARTMENT, *March* 24, 1828.

SIR: I had the honor to receive, some days ago, your letter of the 11th instant, and immediately gave directions for preparing the further information which you request. Such, however, has been the pressure of business on the Department that it has not been completed as early as was desired.

In the statement which is herewith enclosed, marked B, the Register has incorporated with the substance of his former statement, transmitted to you with my letter of the 10th instant, some additional matter, which it is believed will exhibit the subject in a clearer view.

It will be perceived that the balance stated to be in the Treasury in 1817 was the balance on the first of January of that year, and was applied, together with a larger sum, to the payment of the debt, under the several provisions of the Sinking Fund act, which was passed on the 3d of March following. But after applying all that could be employed in that way, a large balance remained on the 1st of January, 1818, which also was applied, with other moneys, in that year to the payment of the debt. It was during that year, and that alone, that any applications of moneys under the 4th section of the Sinking Fund act has been made. The state and prospects of the Treasury at the time that application was determined upon did, no doubt, authorize the determination; yet it appears probable that the estimate of the receipts

into the Treasury, upon which it was formed, was not realized; it being apparent from this statement that the Treasury was exhausted by the application, and left at the close of the year without the means of satisfying the outstanding appropriations. In the next six years the amount of debt redeemable was not sufficient to absorb even the amount of the annual appropriation of ten millions for those years. Consequently, there could have been no application of any surplus, if any surplus had existed. During part of that time, however, so far from there being a surplus, the means of the Treasury proved inadequate even to discharge such portions of the debt as were then redeemable, and recourse was had to loans. On January 1, 1823, there appears, as you have remarked, to have been a small surplus; but it was a surplus remaining after the application to the debt of all that could be so employed—no more being then redeemable. The surplus of upwards of five millions, which remained on the 1st of January, 1824, was under the same circumstances. That sum was, however, applied, with other moneys, during that year to the purchase of 7 per cent. stock, under the authority of an act passed on the 22d of January, 1824. Indeed, the payments on account of the debt during that year were so great, amounting for principal and interest to upwards of sixteen millions and a half, as again to exhaust the Treasury. During the years 1825, 1826, and 1827, when the amount of the public debt redeemable was sufficient to give full activity to the operation of the Sinking Fund, the payments on account of the principal and interest exceeded twelve millions, eleven millions, and ten millions, for those years successively. It was not, however, until the close of the years 1826 and 1827 that any surpluses of money remained in the Treasury; and these amounted, as statement B shows, to little more than a million. But whether there would be such a surplus could not be clearly foreseen at the time when the Commissioners decided upon the amount of the last payment to be made in the year. That decision was made in the month of September in those years, it being deemed equitable and proper to give three months' notice to the holders of the stock which was to be paid off. At those periods the condition and prospects of the Treasury were not considered such as to render prudent the application of a greater sum than was then determined upon; and as that sum would in each case exceed the ten millions appropriated for the year, no sufficient reason was perceived for exposing the Treasury to the hazard of making engagements beyond its means.

In their deliberations upon those occasions the Commissioners of the Sinking Fund had fully under view the 4th section of the act of the 3d of March, 1817. In determining upon the amount that should be applied to the debt, it has been intended, at all events, to pay within each year the annual appropriation of ten millions, and to pay also such further sum as would leave in the Treasury at the end of the year an amount adequate to the discharge of such appropriations as the public service would require to be satisfied. As long as there remained from previous years any sum unpaid of the annual appropriation of ten millions, they have not considered themselves as precluded from applying such further sum to that object, although the surplus in the Treasury should, by such application, be reduced below two millions. In doing so, they have believed that they were giving to the Sinking Fund act the most liberal interpretation of which it is susceptible; for it may perhaps be doubted whether the balances of the annual appropriations of ten millions ought not to be carried to the surplus fund at the end of two years in the same manner as other unapplied appropriations. Indeed, there is high authority in favor of this disposition of those balances, the opinion that they should be so disposed of having been expressed in a report of the Committee of Ways and Means made to the House of Representatives on April 14, 1820. My predecessor in this Department inclined to the same opinion, as would appear by a report made by him to the House of Representatives on February 5, 1823, though he did not act under that opinion.

The conclusion to which the Commissioners came in examining this subject, viz: that those appropriations which would remain unsatisfied at the close of the year, and which the public service required to be satisfied, must be provided for before any moneys in the Treasury can be held applicable under the 4th section of the Sinking Fund act, is believed to be a sound one. It is in accordance with the opinion which has heretofore prevailed at the Treasury, and with that decisively expressed by the Committee of Ways and Means in their report to the House of Representatives of February 5, 1826. The balances of appropriations which are presented in the annual Treasury report as chargeable upon the balance in the Treasury at the close of the year, and which are also exhibited in connexion with the estimates under the directions of the act of May 1, 1820, are believed to be fully within the terms of the 4th section of the Sinking Fund act, as "the sums appropriated for the service of such year;" and if so, no part of that balance can be applied under the 4th section, unless it is "a surplus of money in the Treasury above such sums," and a surplus, too, "which will yet leave in the Treasury a balance equal to two millions of dollars." It may be remarked in favor of this construction, that a comparison between the balance of the sums appropriated for the service of the year and the amount of money in the Treasury would, if made at any other period of the year, present a result less favorable to the application; as will be seen by a statement which has just been prepared for the Senate, and a copy of which is enclosed, marked A.

By an examination of the two statements which accompany this letter it will be perceived that, since the first year after the passing of the Sinking Fund act, in which the sum of four millions nine hundred and seventy-eight thousand one hundred and seventy-seven dollars and sixteen cents was applied, there has not been, at any time, any surplus of money in the Treasury after the adjournment of Congress which could be applied under the 4th section of the act, according to any construction that can be given to it.

In examining whether the limitation contained in the 4th section should be repealed, there are many circumstances to be taken into consideration. It is to be observed that the revenue of the United States, which is derived almost entirely from foreign commerce, must, from its nature, be precarious. And while the credit system prevails, (a system, however, under which both the commerce and revenue of the country have, in the main, prospered,) it is exposed to additional uncertainty. Any great commercial disaster which would put it out of the power of a considerable portion of the merchants to discharge their custom-house bonds at any given time with punctuality would in all probability put it out of the power of the Government to fulfil its engagements; for, it will be seen that all the money in the Treasury at any given time is not equal, upon an average of the last ten years, to one-fifth of the annual expenditure, and would suffice for the public service for but little more than two months. It would seem, therefore, the part of a prudent Government not to expose its operations unnecessarily to any increased hazard, or, indeed, to any hazard, for the prospect of an inconsiderable advantage. For the sake of fulfilling those engagements for which the public faith is pledged some risk is to be encountered. And although the experience of the past has not been without warnings, as will be recollected in regard to one of the instalments of the Louisiana debt, yet it may be fairly considered as justifying all the actual risks. But beyond that, the question becomes altogether one of policy, in which the probable pecuniary gain—a probability, perhaps remote, is to be weighed against the higher advantages of certainty in all those operations

of the Government which depend upon pecuniary means, and in the fulfilment of all the national obligations.

It is also to be kept in mind that, as the money in the Treasury is collected and disbursed at various places throughout the Union, it is for the public convenience distributed among various banks of deposit, including the Bank of the United States, its nineteen branches, and several State banks. In the principal cities the payments by the banks amount frequently to very large sums in the course of a day; and as it cannot always be foreseen at what precise times, or to what amount, these payments may be required, it is necessary that a considerable sum should be generally in bank to meet them. It appears, by a statement prepared for the Senate, that the average amount of public money remaining on deposit in the Bank of the United States and all its branches, for the last ten years, is less than three millions of dollars; which sum, divided between the bank and its branches, yields an average of less than one hundred and fifty thousand dollars for each. And of this sum a portion is often in transitu between the branches at which it has been collected and those at which it is required for the public service.

It was, doubtless, upon a view of these, among other considerations, that the Legislature limited the application of the surplus in the Treasury to the amount of the excess over two millions. The reasons of policy which prevailed then exist still. And since the act of May 1, 1820, which, at the close of every year, casts aside those appropriations which will not be required, and confines the estimated charge upon the Treasury to such as are necessary for the public service, the limit is the more necessary to be preserved. And I am free to confess, in answer to your inquiry as to my own opinion, that it does not appear to be advisable to alter the law.

I have the honor to remain, with the greatest respect, your obedient servant,

RICHARD RUSH.

Hon. S. SMITH, *Chairman of the Committee on Finance, Senate.*

A.

Statement of the balances of appropriations which were unsatisfied on the first day of each year, from 1817 *to* 1827, *inclusive; the amount of appropriations for each year; the aggregate of the balances at the commencement of and the appropriations for each year; the payments on account of these appropriations to the end of the quarter in which the adjournment of Congress took place in each year, from* 1817 *to* 1827, *inclusive; exhibiting also the balances of appropriations that remained to be satisfied at the end of the said quarters, and the means in the Treasury to meet those balances; also the payments on account of the debt under the fourth section of the act of the* 3d *of March,* 1817.

Years.	Balances of appropriations which were to be satisfied on the first of each year, from 1817 to 1827, inclusive.	Appropriations for each year, from 1817 to 1827, inclusive.	Aggregate of these appropriations and balances.	Payments on account of these appropriations from the beginning of each year to the end of the quarter in which the adjournment of Congress took place.	Balances of appropriations that remained to be satisfied at the end of the quarter in which the adjournment of Congress took place in each year.	Means in the Treasury (including unavailable funds) to meet these appropriations.	Funds requisite over the means in the Treasury to meet all unsatisfied appropriations at the end of the quarter in which the adjournment of Congress took place.	Payment on account of the debt under the fourth section of the act of the 3d March, 1817.

a Balance against the Treasury on the 1st of April, 1821, $776,746 60.

b As this sum was actually applied in 1818, under the fourth section of the act of the 3d March, 1817, it is presumed that the state of the Treasury did at some period of the year justify the application, although the money in the Treasury (including unavailable funds) at the end of the year amounted to only $1,478,526 74, (per statement B,) and the unsatisfied appropriation at the same period to $5,432,379 12.

c The balances are exclusive of the balances unapplied of the annual appropriation of $10,000,000 on account of the debt, as particularly noted in the accompanying statement C.

JOSEPH NOURSE, *Register.*

TREASURY DEPARTMENT, *Register's Office, March* 19, 1828.

B.

Statement exhibiting the balances in the Treasury on the 1st day of January of each of the years from 1817 to 1828, inclusive; showing also the amount of unsatisfied appropriations and unavailable funds; the balance in the Treasury, exclusive of those sums, at the commencement of the years in which a balance over those sums existed; and the amounts in other years requisite, in addition to the available money in the Treasury, to meet the amount of unsatisfied appropriations; exhibiting also the amount paid on account of the principal and interest of the public debt in each year, with references to the appropriations under which the payments were made.

Years.	Balance of money in the Treasury on the 1st of January.	Amount of unapplied appropriations and unavailable funds, 1st of January, exclusive of the balances of the annual appropriation of $10,000,000 for the public debt.	Balance in the Treasury, exclusive of unsatisfied appropriations and unavailable funds, 1st of January.	Amount requisite, in addition to the money in the Treasury, (exclusive of unavailable funds,) to meet unsatisfied appropriations, 1st January, exclusive of those for the debt.	Years.	Amount paid in each year on account of the principal and interest of the debt.	APPROPRIATIONS OUT OF WHICH THE PAYMENTS ON ACCOUNT OF THE DEBT WERE MADE.				
							Of $10,000,000, per 2d section of the act of the 3d March, 1817.	Of $9,000,000, per the 3d section of the act of the 3d March, 1817.	Of the $4,000,000, per the 3d section of the act of 3d March, 1817.	Out of the appropriation by law for the redemption of Treasury notes.	Out of so much of the surplus money in the Treasury, agreeably to the 4th section of the act of the 3d March, 1817.
1817	$22,033,519 19	$5,686,012 04	$16,347,507 15		1817	$25,423,036 12	$10,000,000 00	$9,000,000 00	$2,830,105 52	$3,592,927 60

JOSEPH NOURSE, *Register.*

TREASURY DEPARTMENT, *Register's Office, April* 8, 1828.

In considering the document A, the Senate will recollect that the line for 1817 has no connexion with the subject, the large surplus for that year having been applied specifically by the third section of the act. The operation of the 4th section commenced with the 1st January, 1818. On the 1st January of that year it appears that there was a surplus in the Treasury of $9,370,669, owing to the fact, as stated in the note, "that there was no debt to which part of this balance could be applied." In that year, 1818, it appears that the large sum of $21,296,306 was applied to the payment of the principal and interest of the debt; which excessive payment could only have been made under a full belief that the estimates of receipts for 1818 would warrant it. The receipts, however, fell short of the estimate in the sum of $3,500,000, as appears by the letter (herewith) of the Secretary of the Treasury dated 4th April, 1828. That extreme desire to pay off the debt occasioned, in part, perhaps, the distress in which the Treasury was involved in the year 1819, and aided in making loans necessary for the years 1820 and 1821. The document B shows that there was no surplus applicable under the 4th section during the years 1819, 1820, 1821, 1822, and 1823; during those years the whole of the ten millions was not applied, and could

* The Commissioners of the Sinking Fund have directed that $5,000,000 of the debt be paid on the first of July next.

not be applied to the payment of the debt, as well for want of funds in the Treasury as that, fortunately, there was little of the public debt payable; the consequence was, that a debt to the Commissioners of the Sinking Fund went on accumulating until it actually amounted in the year 1823 (per document C) to the sum of $11,921,604 70. In the year 1824 the Treasury reduced that debt to $5,353,210 94 by a payment of the debt and interest thereon to the amount of $16,568,393 76, and in the years 1825, 1826, and 1827, further deductions of that debt were made; the debt to the Commission on the 1st January, 1827, was reduced to the sum of $2,213,135 67; a further reduction was made to a trifling amount during the year 1827, and as the Commissioners of the Sinking Fund have ordered a payment of the principal of the public debt to be made on the first day of July next of five millions of dollars, the probability is that a considerable reduction of the debt now due the Commissioners of the Sinking Fund will be made in the present year.

The committee have considered the subject fully, and are of opinion that the Commissioners have executed the trust reposed in them with fidelity, and in strict accordance with the 4th section of the act. That in no year from 1819 until 1826, inclusive, (except the year 1824,) has there been any surplus of consequence in the Treasury which could have been applied to the payment of the debt, even if the reservation of the two millions had not been authorized; that, in that year, they appear not to have retained any material surplus. On the 1st January, 1827, (see document B,) there appears to have been a surplus of only $1,064,510, and on the same day in 1828 a surplus of $1,027,994.

The committee have seen that a full reliance cannot be placed on estimates. A fair view of that subject will be found in the Secretary's letter. That therefore a change from two to one million of the sum reserved might be attended with danger to the finances. The Secretary's report stated that on the 1st of January, 1828, there would be a surplus of about $2,200,000 in the Treasury; and the Committee on Finance, believing in the accuracy of the report, reported a bill to apply one million thereof to the payment of the debt due to the Commissioners of the Sinking Fund. Fortunately the bill did not pass; for, by the report of the Secretary of the Treasury at the commencement of the present session, it appears that there was, as estimated, only a surplus of $471,705 in the Treasury; which surplus was afterwards ascertained to be $7,027,994. From a view of the whole subject, the committee repeat, as their opinion, that a change from two to one million is inexpedient.

The 5th section of the act authorizes the purchase of 3 per cent. stock, provided it can be purchased at the rate of $65 for the $100, and of 6 per cent. stock if purchasable at the par and true value thereof. Since the passage of that act, stocks have been created bearing an interest of 4½ and 5 per cent., for the purchase of which there is no authority by law. These debts will be paid off as they shall become due. Is it necessary to make provision for their purchase before they are payable? The opinion that it is proper to make such provision must be bottomed on the idea that the Treasury will have means adequate, not only to the payment of the ten millions annually, but such as will enable it to purchase in advance. The committee have no means by which to calculate whether that idea be correct or incorrect. It may be correct from an increase of revenue, or from a decrease of expenditures; from either or both of which a surplus applicable to a purchase might exist; at present the committee can perceive nothing to justify a certainty in the one or the other; and without a great probability, amounting nearly to a certainty, the committee would not feel themselves justified in recommending any change in the present system.

The committee would deem it imprudent to authorize the purchase of those stocks at a price beyond the par value thereof, unless, indeed, there were in the Treasury large sums inapplicable to the payment of other debts, the loss of interest on which would be equal to the excess beyond the par value.

The committee submit a statement from the Treasury Department, marked D, exhibiting the payments on account of the principal and interest of the public debt by the semi-annual payment of five millions of dollars; by which it appears that by the simple operation of the Sinking Fund the whole of the public debt, including the bank debt and 3 per cents., will be extinguished on the 1st day of January, 1836, except the small amount of $885,496 10, which it is highly probable will be extinguished in that period by an application of funds beyond the annual sum of ten millions.

The committee, in answer to the last part of the resolution calling on them to report "upon what articles and to what amount the present duties may be reduced or abolished, after the extinguishment of the public debt, consistently with the general interest of the whole Union," ask leave to submit a statement, marked E; that statement is bottomed on the state of the country at present; great changes may and probably will take place before the 1st January, 1836, which may make it necessary to refrain from the repealing of the duties specified on some of the items, or from reducing the duties on those articles mentioned for reduction. It may be that our citizens may cultivate the vine to a greater extent than at present; they may cultivate the olive, silk, &c., &c. The committee have confined themselves as much as they could to such articles as will not interfere with the growing manufactures of the country; and yet it is possible that prior to 1836 it may be found that the people can manufacture linen of all kinds, worsted stuffs, and some other articles, on which is contemplated a reduction of the duties; in fact, the scheme submitted by the committee may be found in many of the items wholly improper when Congress come to act on the subject.

The committee submit the following resolution:

Resolved, That it is inexpedient at this time to make any alteration in the "Act to provide for the redemption of the public debt."

TREASURY DEPARTMENT, *April* 5, 1828.

SIR: In answer to the inquiries made by you this morning, through Mr. Dickins, I have the honor to state that the sum applied in the year 1818, under the 4th section of the Sinking Fund act, was applied to the reimbursement of the Louisiana stock on the 21st of October, 1818; and that this application was determined upon by the Commissioners of the Sinking Fund on the 24th of April preceding.

I have also to state that the actual receipts into the Treasury during the year 1818 fell short of the estimate made by the Secretary of the Treasury nearly three millions and a half of dollars.

I have the honor to remain, very respectfully, your obedient servant,

RICHARD RUSH.

Hon. S. SMITH, *Chairman Committee on Finance, Senate United States.*

JOSEPH NOURSE, *Register.*

20TH CONGRESS.] **No. 914.** [1ST SESSION.

IN FAVOR OF INCREASE OF DUTIES ON READY-MADE CLOTHING.

COMMUNICATED TO THE SENATE APRIL 28, 1828.

To the honorable the Senate and House of Representatives of the United States in Congress assembled:

The memorial of the undersigned, merchant tailors of the city of Philadelphia, respectfully showeth: That your memorialists are greatly alarmed by the provisions of the bill for the regulation of the tariff, now pending before you, which, in its present form, appears to threaten the existence of their business, and to annihilate the hopes of subsistence of many thousand persons who are employed and supported by the trade.

Your memorialists, although silent, have not been insensible of the various laws which have from time to time been passed by Congress materially affecting their business. They knew they were under the protection of a Government of the people, instituted to promote the general welfare. And although at the last revision of the tariff the duty on ready-made clothing was stationary, while that on the material was advanced, they submitted without complaint, confiding in the wisdom of the Government. Nothing but impending ruin now urges them to this remonstrance, and they trust they will not ask in vain for a hearing.

They cannot believe that the effect of the pending bill upon them has been perceived by any. They are slow to believe that Congress, in violation of the principle of the bill, would willingly destroy a

branch of domestic industry indispensable to civilization, which stands in the way of none, which gives employment to decrepitude, otherwise helpless, and support to indigent females, by one of the few trades in which they can be suitably employed, to drain the country of money to nourish and support that foreign skill and industry which they are struggling to rival, and all this at the expense of a most serious diminution of the revenue

When the duty was raised by the act of 1824 to 30 per cent. ad valorem on all goods above the value of 33⅓ cents per square yard, that on ready-made clothing was suffered to remain at 30 per cent., which abolished the protection which the manufacture at home had previously enjoyed; but no complaint was made, as the trade could still compete on nearly equal terms with the foreign artist.

If the present bill should unfortunately pass without reference to the duty on ready-made clothing, foreign fabrics, instead of being imported in the piece, to be made into clothing, will be imported ready made; and it will not be surprising if the enormous profits which the saving of duty alone will give should turn half the capital now employed in the import of such fabrics into ready-made clothing.

By the present bill your petitioners understand that a duty per square yard is contemplated of 20 cents on goods not exceeding the value of 50 cents per square yard; of 40 cents not exceeding $1; of $1 not exceeding $2 50; and of $1 60 not exceeding $4; and of 45 per cent. ad valorem on all goods exceeding the value of $4 per square yard It will therefore follow that cloth of the value of $1 01 will pay the same duty as that of the value of $2 50, being $1 per square yard; whereas, in ready-made clothing, the same cloth will pay a duty of 30 cents, thus saving 70 cents, or seven-tenths of the duty on cloth unmade. Cloth of the value of $2 51 will pay the same duty as if it were worth $4, being $1 60 per square yard; whereas the same cloth, in the shape of ready-made clothing, will pay a duty of 75 cents; thus saving 85 cents per square yard, or more than one-half of the duty. On all cloths above the value of $4 per square yard, the duty of 45 per cent. ad valorem will leave a saving to the importers of ready-made clothing of 33⅓ per cent. on the amount of duties.

Profits as enormous as these savings from Government would constitute must operate as a bounty on foreign industry which domestic industry could not compete with, even if they should do their work gratuitously, and soon open a trade in ready-made clothing to an extent never before thought of.

It therefore becomes your memorialists most respectfully to warn the Government of the evils which an omission to make a correspondent alteration in the duty on ready-made clothing would entail on it as well as themselves, and to submit the case to your wisdom. And your memorialists, as in duty bound, &c., &c.

PHILADELPHIA, *April* 25, 1828.

20TH CONGRESS.] No. 915. [1ST SESSION.

IN FAVOR OF DUTY ON SALES AT AUCTION.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES APRIL 28, 1828.

To the honorable the Senate and House of Representatives of the United States of America in Congress assembled:

The memorial of the subscribers, merchants, traders, and other citizens of the city of New York, respectfully represents: That the evils of the auction system, as detailed in memorials addressed to your honorable bodies in 1817, 1818, 1821–'22, and again in 1824, have increased in an alarming degree, and may ow emphatically be denominated a national evil. The system, as now conducted, is, in reality, a MONOPOLY, and that of the most *unjust* and *odious* character. In effect, it concentrates in the hands of a very few individuals of our city three-fourths or nearly all of the business which is transacted; and, moreover, it lays the foundation and affords facilities for the practicing of frauds and impositions on the Government as well as the people. It has wrested from the American merchant and trader all those advantages originally intended by our Government for the encouragement of her own citizens, and of converting them to the benefit of the merchants and manufacturers of foreign nations. From the facilities afforded of effecting speedy sales of all kinds of goods at auction; concealing the owner and importer; relieving every one concerned from all responsibility, either for frauds on the buyer or on the Government, most powerful inducements are constantly offered to foreign merchants and manufacturers to pour the whole of their refuse and surplus productions into our market, to the serious injury of the American trader, and the certain ruin of our manufacturing establishments. The long credit on the duties comes into their aid; it operates as a bounty; and in the course of a short time it furnishes the foreigner with United States funds equal to the whole of his capital originally invested.

If we refer to the practice of England, the first commercial nation in the world, we will find that her Board of Trade long since applied a corrective to this destructive system, and, by a well-timed and reasonable tax on auction sales, arrested the evil without infringing on the just *rights* of her citizens. If we may also refer to the practice of another great commercial nation, France has, by the imposition of a tax on sales at auction, amounting to a prohibition of the same, given a striking illustration of the injury resulting to fair trade by a continuance of the system which is so loudly and generally denounced.

Your memorialists hope that your honorable bodies will interpose to correct the evils resulting from this oppressive and desolating system, to which they earnestly solicit the attention of the Government—a system which, in its direct effects, encourages frauds on the revenue, depresses domestic manufactures, facilitates impositions on the public, destroys the mercantile character, and is ruinous to that class of citizens to which your memorialists belong; and the injurious results of which must inevitably fall upon the agricultural and laboring part of the population. They therefore respectfully pray your honorable bodies to impose a duty of 10 per centum on sales by auction, excepting the effects of bankrupt and of deceased persons, goods sold for the benefit of underwriters, shipping, and real estate.

20TH CONGRESS.] No. 916. [1ST SESSION.

IN FAVOR OF INCREASE OF DUTIES ON YARNS, THREAD, AND TWINE, MADE OF FLAX.

COMMUNICATED TO THE SENATE APRIL 30, 1828.

To the honorable the Senate of the United States in Congress assembled:

The memorial of Garsed, Raines & Co., of Frankford, in the county of Philadelphia and State of Pennsylvania, most respectfully showeth: That your memorialists have, at great expense and with great exertion and anxiety, established a manufactory at the above named place for the purpose of hatchelling, preparing, and spinning flax by machinery, in the best and most approved manner, and that they have succeeded in manufacturing a number of useful and necessary articles—such as sewing or *sail twines, shoe threads, flax yarns,* and flax tow yarns for hair seating, boot webbing, floor cloths in oil, and for gray half-bleached and full-bleached linen threads, and colored threads, for tailors' and other useful purposes, which have been sold and consumed in most of the principal cities in the Union, and are found to equal in every respect the same articles imported from Europe.

Your memorialists likewise respectfully represent to your honorable House that the importation and consumption of the flaxen manufactures they have enumerated are of considerable magnitude and importance, equal or superior in amount to sail duck, and entitled to equal attention and protection.

But the proposed additional duty upon raw flax, without a corresponding increase of duty upon threads, yarns, and twines made from flax, will seriously injure, if not entirely prostrate, the manufactory of your memorialists and others engaged in similar establishments.

Further, your memorialists respectfully represent to your honorable body that the present low rate of duties upon flax yarns, threads, and twines made from flax, do not form an adequate protection for the manufacturer here against the British manufacturer. As the British manufacturer imports his flax from other countries into England at a nominal duty of about one dollar per ton, and the manufacturer here having now to pay an ad valorem duty of fifteen per cent. upon the raw flax, which includes the tow as well as flax, leaves him without any protection by the existing tariff; consequently, if the duty upon raw flax be increased, as is proposed, without increasing the duty upon yarns, threads, and twines made from flax, it will, in the opinion of your memorialists, operate as a bounty to the foreign manufacturer, and enable him to deluge this country with these articles, and to entirely prostrate the manufacturer here, while it is clear and certain that these articles can and ought, under a different regulation as to duties, to be made at home, which would also cause the raw material ultimately to be produced in sufficient abundance and of good quality at home also.

Your memorialists, further, most respectfully state to your honorable House that the protection of flax yarns, threads, and twines against the foreign manufacturer must be equal to the protection of the farmers against the foreign flax-grower; otherwise the foreign flax-grower and foreign flax manufacturer will have the American market for these articles entirely to themselves, and the foreign farmer will have a still greater advantage than merely growing the raw flax in supplying the foreign manufacturer with all the rest of farm produce whilst these manufactures are being produced.

Thus your memorialists most respectfully urge upon your honorable House that, without adequate protection be afforded to the manufacturer, in conjunction with the farmer, the hopes and expectations of the farmer will be entirely disappointed, as foreign manufacturers will, without this, continue their ascendency, and purchasers to any extent will not be found for improved American flax when it is grown.

Your memorialists beg, most respectfully, further to state to your honorable House that they anxiously labored for between three and four years to manufacture yarns, threads, and twines from domestic flax, but were compelled to give it up because of its inferiority in strength, cleanness, and bleaching, and which inferiority they entirely attribute to bad management in its cultivation, in its sowing, pulling, rotting, and cleaning, all which might be remedied if the farmers were to deem it an object of sufficient importance, and grow it for flax rather than for the seed. Your memorialists, therefore, most respectfully represent that, if the proposed duty upon raw flax be retained, the present comparatively low duty upon flax yarns, threads, and twines may be advanced fifteen per cent. in aid of the revenue without public injury or inconvenience; and from the disposition of your honorable House to favor the agricultural interest of our country, bounties might be granted out of these additional duties to such of the growers of flax as would produce an article of such quality as would supersede the imported, and which your memorialists verily believe would materially advance the proper cultivation of hemp and wool, as well as flax, and essentially promote the interests of our country.

Finally, your memorialists most respectfully state to your honorable House that, with all their skill, economy, and experience, resulting from the practice of flax spinning upon a large scale for nearly twenty years, at Leeds, in England, they have not hitherto been able to derive a living profit from their manufacturing establishment, although it has now been five years in operation, and their want of success is *entirely* owing to the inadequate protection afforded this branch of manufacture by the tariff of 1824. But your memorialists confidently hope that your honorable House will, in its wisdom, make such an addition to the duty on the importation of flax yarns, threads, and twines, as will protect them from ruin, and will enable them to persevere in their exertions to increase the manufacture in which they are now engaged, and by this means to promote the interests of this the country of their choice, and which will ever demand the high respect and regard of your memorialists.

GARSED, RAINES & CO.

FRANKFORD, *Pennsylvania, April* 25, 1828.

FRANKFORD (near Philadelphia) FLAX FACTORY, *April* 25, 1828.

HON. SIR: Observing the tariff bill to have passed the House of Representatives, with an addition to the duty upon raw flax, without any additional duty upon *threads, yarns,* and *twines,* which we are engaged in making from *flax,* we have taken the liberty to trouble you with the enclosed memorial to the Senate on this subject. In doing this, we beg to say that, as the duties now stand, we are left without protection. We pay fifteen per cent. ad valorem upon *rough* flax, which we import from Russia, Prussia, and Holland, and which, being upon the tow as well as the flax, makes the duty upon the dressed flax, from which we make threads, yarns, and twines, fully equal to the duty of twenty-five per cent. ad valorem, which is paid on these articles when imported. One-third in value and near two-thirds in quantity of the *rough* flax is dressed into tow, which cannot be made into any but low-priced articles that will not bear one-fourth of their proportion of duty, which causes the duty to fall chiefly upon the dressed flax from which we make our threads, twines, and yarns, such as are imported.

For the encouragement of the growth of domestic flax, which we especially wish to promote, we are quite in favor of a sufficient duty upon flax imported; but this must also be attended by a corresponding duty upon threads, yarns, and twines made from flax, when imported manufactured, or we shall not be able to continue to manufacture.

The British manufacturer imports his flax from Russia, Prussia, and Holland, on a nominal duty of about one dollar per ton; and as he only sends articles manufactured from the dressed flax, and pays only twenty-five per cent. duty here, he now meets us here on equal terms, which, considering the superior facilities afforded in England for manufacturing purposes, becomes an unequal contest for us. This being the case as the duty now stands, an additional duty upon the raw flax, without an additional duty upon threads, yarns, and twines made from flax, becomes a premium to the foreign flax manufacturer to send his goods here, and in this way the advantage will be entirely lost to the farmer, as these articles, being imported manufactured, have all the labor and farm produce consumed in their manufacture upon them, which ought to be put upon them by their manufacture here; thus destroying the market to the farmer both as to raw material and the produce consumed in their fabrication.

We most earnestly crave your attention to this subject. We also beg reference to the honorable members of the House of Representatives from this district; and from the office you sustain in the Committee on Manufactures, we feel great confidence that you will succeed in obtaining such an addition to the existing duties upon *flax, yarns, threads,* and *twines* as will save us from the necessity of giving up our present manufacturing pursuits, and, if successful, will become an object of great national importance.

We abstain from further remarks from an unwillingness to trespass further on your valuable time.

We are, honorable sir, your very obedient servants,

GARSED, RAINES & CO.

General J. D. BARNARD, *Senator from Pennsylvania, Washington.*

20TH CONGRESS.] **No. 917.** [1ST SESSION.

COMPARATIVE STATEMENT OF RATES OF EXISTING AND PROPOSED DUTIES.

COMMUNICATED TO THE SENATE APRIL 30, 1828.

A comparative statement of the duties under the bill altering the several acts imposing duties on imports, and the present rate of duties.

Articles.	Proposed duties.	Present duties.
On iron, in bars or bolts, not manufactured in whole or in part by rolling.....	1 cent. per pound	90 cents per 112 pounds, or 8-10 of a cent per pound.
On bar or bolt iron made wholly or in part by rolling.....	$37 per ton.....	$30 per ton.
On iron in pigs	62½ cents per 112 pounds	50 cents per 112 pounds.
On iron or steel wire, not exceeding No. 14.....	6 cents per pound.....	Not exceeding No. 18, 5 cents per lb.
On iron or steel wire, exceeding No. 14.....	10 cents per pound.....	Exceeding No. 18, 9 cents per pound.
On round iron or brasiers' rods of 3-16 to 8-16 of an inch diameter; and on iron in nail or spike rods, slit or rolled; and on iron in sheets, and hoop iron; and on iron slit or rolled for band iron, scroll iron, or casement rods.	3½ cents per pound.....	3 cents per pound.
On axes, adzes, drawing-knives, squares of iron or steel, bridle bits, steel-yards, scale beams, socket chisels, and vises.	35 per cent. ad valorem.....	25 per cent. ad valorem.
On cutting-knives, sickles, reaping-hooks, scythes, spades, shovels, and on iron screws, called wood screws.	40 per cent. ad valorem.....	30 per cent. ad valorem.
On steel	$1 50 per 112 pounds.....	$1 per 112 pounds.
On wool unmanufactured, 4 cents per pound and 40 per cent. ad valorem, until June 30, 1829, and progressively 5 per cent. per annum until it amounts to 50 per cent.	Specific duty 4 cents per pound, and ad valorem duty progressively from 40 to 50 per cent.	On wool under 10 cents value, 15 per cent. ad valorem; over 10 cents value, 30 per cent. ad valorem.
On manufactures of wool, except carpets, blankets, worsted stuff goods, bombazines, hosiery, mits, gloves, caps, and bindings, value not exceeding 50 cents per square yard.	20 cents per square yard.....	33⅓ per cent. ad valorem.
On all manufactures of wool, except flannels and baizes, the value of which shall not exceed 33⅓ cents the square yard.	14 cents the square yard.....	25 per cent. on the minimum of 33⅓ cents per square yard.
On manufactures of wool, excepting as before excepted, value exceeding 50 cents and not exceeding $1 the square yard.	40 cents the square yard.....	33⅓ per cent. ad valorem.

STATEMENT—Continued.

Articles.	Proposed duties.	Present duties.
On manufactures of wool, exceeding $1 and not exceeding $2 50 the square yard.	$1 per square yard	33⅓ per cent. ad valorem.
On manufactures of wool, exceeding $2 50 and not exceeding $4 the square yard.	40 per cent. ad valorem	Do. do.
On manufactures of wool, exceeding $4 per square yard	45 per cent. ad valorem	Do. do.
On woolen blankets, hosiery, mits, gloves, and bindings	35 per cent. ad valorem	25 per cent. ad valorem.
On Brussels, Turkey, and Wilton carpets	70 cents per square yard	50 cents per square yard.
On Venetian and ingrain carpets	40 cents per square yard	25 cents per square yard.
On all other carpets or carpetings, of wool, flax, hemp, or cotton	32 cents per square yard	20 cents per square yard.
On all patent floor cloths	50 cents per square yard	30 per cent. ad valorem.
On oil cloth, other than floor cloth	25 cents per square yard	Do. do.
On furniture oil cloth	15 cents per square yard	Do. do.
On floor matting, made of flags or other materials	do do	30 per cent. ad valorem.
On unmanufactured hemp, until June 30, 1829	$45 per ton, and thereafter $5 a year to be added until it amounts to $60 per ton.	$35 per ton.
On cotton bagging, until June 30, 1829	4½ cents per square yard	3¾ cents per square yard.
Afterwards	5 cents per square yard	
On unmanufactured flax, until June 30, 1829	$35 per ton, and thereafter $5 a year to be added until it amounts to $60 per ton.	15 per cent. ad valorem.
On sail duck	9 cents the square yard	Do. do.
On molasses	10 cents per gallon	5 cents per gallon.
On spirits, 15 cents per gallon in addition to present duties, which would be, on spirits from grain—		
1st proof	57 cents per gallon	42 cents per gallon.
2d proof	60 cents per gallon	45 cents per gallon.
3d proof	63 cents per gallon	48 cents per gallon.
4th proof	67 cents per gallon	52 cents per gallon.
5th proof	75 cents per gallon	60 cents per gallon.
Above 5th proof	90 cents per gallon	75 cents per gallon.
On spirits from other materials—		
1st and 2d proof	53 cents per gallon	38 cents per gallon.
3d proof	57 cents per gallon	42 cents per gallon.
4th proof	63 cents per gallon	48 cents per gallon.
5th proof	72 cents per gallon	57 cents per gallon.
Above 5th proof	85 cents per gallon	70 cents per gallon.
On window glass, of sizes above 10 by 15 inches	$5 per 100 square feet	$4 per 100 sq. feet, if above 10 by 12.
On window glass, in plates or sheets	do do	$4 per 100 square feet.
On roofing slate, not exceeding 12 by 6 inches	$4 per ton	25 per cent. ad valorem.
On roofing slate, exceeding 12 and not exceeding 14 inches in length	$5 per ton	Do. do.
On roofing slate, exceeding 14 and not exceeding 16 inches	$6 per ton	Do. do.
On roofing slate, exceeding 16 and not exceeding 18 inches	$7 per ton	Do. do.
On roofing slate, exceeding 18 and not exceeding 20 inches	$8 per ton	Do. do.
On roofing slate, exceeding 20 and not exceeding 24 inches	$9 per ton	Do. do.
On roofing slate, exceeding 24 inches	$10 per ton	Do. do.
On cyphering slates	33⅓ per cent. ad valorem	15 per cent. ad valorem.
On all cotton cloths (except nankeens direct from China) the cost of which, together with the addition of 20 per cent. if from the Cape of Good Hope or beyond, and 10 per cent. if from elsewhere, shall be less than 35 cents the square yard, shall be rated at 35 cents the square yard, and be charged with the present duty of 25 per cent.	25 per cent. on the minimum of 35 cents the square yard.	25 per cent. on the minimum of 30 cents the square yard.

20TH CONGRESS.] No. 918. [1ST SESSION.

IN FAVOR OF INCREASE OF DUTIES ON READY-MADE CLOTHING.

COMMUNICATED TO THE SENATE MAY 5, 1828.

To the honorable Senate and House of Representatives of the United States in Congress assembled:

This memorial of the undersigned, merchant tailors of the city of Boston, respectfully showeth: That in their opinion, should the tariff bill now pending before Congress be enacted with its present provisions, it would be of destructive consequence to their business, and give to other branches of industry a partial and disproportionate encouragement. Your memorialists beg leave to recommend their particular interest in this subject to your further consideration, and to suggest the justice and expediency of affording their trade greater encouragement and protection than the tariff bill in its present form provides. They are urged to address you by a conviction that the business in which they are engaged, and which affords an honest and respectable support to a very large number of their fellow-citizens, is not only threatened with serious injury, but with entire ruin. Should the provisions of the bill before you be adopted, the business of your memorialists would be immediately ruined, and the large number of persons who depend upon it for support be entirely deprived of employment, and the enterprise and exertions of the fraternity of artists to which your memorialists belong would be discouraged and paralyzed by the hand from which they have a right to claim and expect protection, while foreign interests would be advanced and foreign artists encouraged and enriched. We come, therefore, to Congress, whom the Constitution has appointed the

guardians of the equal rights and privileges of the citizens of these United States, and solicit them to dispense to us that portion of governmental assistance which the nature and extent of our business requires, and to which your justice and wisdom may consider us fairly entitled. Your memorialists are enemies to monopoly, however plausible its origin and specious its name; they do not desire it for themselves, and feel compelled, respectfully, to remonstrate against its being granted to others.

Hitherto your memorialists have been silent in respect of Congressional enactments, whose results they were convinced would be decidedly unfavorable to their business. They have witnessed the increase of duty on cloth, while no corresponding additional duty was imposed on ready-made clothing; they have seen this virtual invitation held out to foreign artists to increase the importation of the article on whose manufacture your memorialists have relied chiefly for subsistence without petitioning for relief. Notwithstanding the laws passed in relation to this subject were likely to injure them, they hoped to be able, by skill, industry, and economy to compete with foreign artists; and were they not thoroughly persuaded that the passage of the bill now before Congress would take from them all ground of hope, your memorialists would continue to observe unbroken silence. They believe that the provisions of this bill, when duly examined in a statistical form, will expose its character too palpably to receive the sanction of Congress. Its tendency is to discourage the endeavors and repress the exertions of a very necessary and considerable branch of domestic industry. The existing bill proposes a duty of twenty cents on fabrics not exceeding the value of fifty cents per square yard; of forty cents, not exceeding one dollar; of one dollar, not exceeding two dollars and fifty cents; and of one dollar and sixty cents when the value of the cloth does not exceed four dollars, and forty-five per cent. ad valorem on all goods valued above four dollars per square yard. By comparing this scale with that by which the duties on ready-made clothing have been graduated, the differences appear very important, and the consequences obvious. The duties upon the raw material are fixed at one dollar per yard, while the value may vary from one dollar and one cent to two dollars and fifty cents. The same cloth, when manufactured into ready-made clothing, pays only thirty cents; thus saving seventy cents, or seventh-tenths of cloth not made up. Between cloth valued at two dollars and fifty cents, and under four dollars, the proposed duties are the same; yet when made into clothing it pays but seventy-five cents—saving half the duties. On cloth above the value of four dollars per square yard the importer of ready-made clothing will save thirty-three and a half per cent. by the proposed bill. By existing laws the foreign artists obtain an advantage which operates, to a considerable extent, to the prejudice of your memorialists. Individuals are allowed to import, with themselves, their clothing free from duty; and it is well known that individuals coming from abroad are in the habit of bringing with them, as their own clothing, clothes for others, which are admitted free from duty; which operates both to defraud the public revenue, and prejudice the American artists. In the present state of easy, constant, and large communication with Great Britain, this practice is attended with no inconsiderable consequences, both to the revenue and to your memorialists. The proximity of Boston to the British provinces would be likely to render the operation of the proposed tariff, in its present form, peculiarly injurious to your memorialists. A merchant tailor, by establishing himself in the neighboring province of New Brunswick, and connecting himself with a house at Boston, might, from his workshop in New Brunswick, furnish clothing for Boston with little more, if any, inconvenience than if he in fact resided here. Thus foreign artists and laborers would monopolize the business, not only of manufacturing the material, but of making the garments for American use, while our own artists and laborers would be driven from their chosen and appropriate employments, or languish without support.

Your memorialists would not presume to speak particularly of their importance as a class or body of citizens; but trust they may be allowed to say their business is of indispensable importance and necessity in every improved community, and considered merely with reference to the numbers who derive from it employment and support, there are few callings which can present stronger claims to Government for protection at least.

Your memorialists, furthermore, beg leave to assure you that they do not address you in the character or with the views of partisans; that they are not the advocates of any particular system of duties; that they speak simply for themselves, and in support of their own interest, and firmly rely on the justice of their cause for a favorable consideration with Congress.

20TH CONGRESS.] No. 919. [1ST SESSION.

IN FAVOR OF IRON FOR RAILROADS FREE OF DUTY.

COMMUNICATED TO THE SENATE MAY 6, 1828.

The following letters were laid on the table by Mr. SMITH, of Maryland, and ordered to be printed.

BALTIMORE, *January* 14, 1828.

GENTLEMEN: Agreeably to the advertisement under date of the 3th November, 1827, for proposals for furnishing bar iron for the Baltimore and Ohio railroad, I beg leave to offer to deliver, during the year 1828, thirty tons per month of rolled bar iron, made according to the drawing, say 2¼ inches wide by ½ inch thick, with the upper surface rounded or curved, at four and a half cents per pound. In case the bars should be sheared at the ends and cut in any given lengths, at four and three-quarter cents per pound.

I remain, with respect,

C. RIDGELY, *of Hampton.*

The PRESIDENT AND DIRECTORS *of the Baltimore and Ohio Railroad Company.*

BALTIMORE, *May* 2, 1828.

SIR: We have to acknowledge the receipt of your letter of this date, stating that it had been intimated to you that our establishment was prepared to contract for the supply of a proportion of the rail iron required for the construction of the Baltimore and Ohio road. Some years since we prepared a rolling mill to make bar iron from blooms, and although we are contiguous to the great iron district of this country, we have never yet been able to procure as many blooms as would make the bar iron necessary to meet the *current* demands of our ordinary business; consequently, we are unable to offer you any iron for the use of the railroad company. Nor do we think you will be able to obtain your rails in this country, as, although the rolling mills are now paying from $75 to $80 per ton for blooms, and would be desrious to purchase at that price a much larger quantity than has ever yet been brought into the market, they have hitherto found that the actual supplies, even at that price, have never yet been such as to keep pace with the increasing demands upon them. There are numerous very powerful rolling mills in various parts of this country amply sufficient to manufacture the iron into the form you require if the material could be procured; indeed, we know our mill alone could be prepared to furnish the rails as expeditiously as your company could lay them down. It is, therefore, not from any inability to make the rails that we are deterred from offering you a contract, but, as we before remarked, from an absolute impossibility of procuring the blooms in sufficient quantities.

Whilst blooms, as we have already remarked, are readily commanding in this country from $75 to $80 per ton, we are confident you can at this time obtain your rails in Wales for about £9 sterling per ton, delivered at Bristol. You will at once, therefore, perceive that necessity, as well as your interest, will lead you to seek your supplies of this material abroad, (at least until you extend your road to the bituminous coal region,) for we are fully convinced that should you rely upon the *forges* of this country you will be disappointed.

We remain, respectfully, yours,

J. W. & E. PATTERSON.

P. E. THOMAS, Esq., *President of the Baltimore and Ohio Railroad Company.*

BALTIMORE, *May* 2, 1828.

SIR: In answer to your letter of this date, wherein you state "it has been suggested to the directors of the Baltimore and Ohio Railroad Company that I am disposed to furnish a quantity of iron suitably prepared for rails," I beg leave to state, in reply, that, from the present price of "blooms" of $75 per ton, and the difficulty of procuring any considerable quantity, I should not feel at liberty to make any proposal to the company for furnishing any part of the iron they might require.

If the blooms were to be had in quantity at $75 per ton, $120 per ton would be the lowest price per ton I should ask for such iron rails as the company might want delivered at the rolling mill; but as there is no prospect of procuring blooms I do not wish this to be considered as an offer.

I remain, with great respect, sir, your most obedient servant,

ISAAC M'KIM.

PHILIP E. THOMAS, Esq., *President of the Baltimore and Ohio Railroad Company.*

BALTIMORE, *May* 3, 1828.

GENTLEMEN: Your letter of yesterday has been received, stating that it has been suggested to you that the Avalon Company are prepared to furnish rails suitably formed for the purposes of constructing the proposed road from Baltimore to the Ohio river, and inquiring what price they can be delivered at, and what quantity can be annually furnished.

The Avalon Company have never authorized any person to make the suggestion you mention; nor are they prepared at this time to furnish the iron suitable for the railroad, nor can they name a price at which they can, at any future time, furnish any portion of the iron, without first receiving a particular description of the size, shape, and quality which will be required. The quantity of iron which could be furnished would be very great if the price to be paid is sufficiently high to induce a steady application of the works already erected, and to increase them as far as they may with facility be carried.

The company are, however, prepared to say that they cannot furnish the iron upon as cheap terms as it can be imported, even if the present duty be exacted upon it. Nor is it probable they will be able to furnish it cheaper than the present rates until the railroad shall be extended into the mineral coal region, whence a supply of that article may be brought at a cheap rate to the inexhaustible iron ore beds in the neighborhood of this city.

The Avalon Company are aware that objections have been made by certain individuals to the introduction of iron by the railroad company free of duty. They have neither joined in these objections nor seen their force and justice in others. They have not been of the opinion that the importation of iron for the specific object of railroads can operate prejudicially to the interests of the present iron manufactories in the country, inasmuch as those establishments will be left in precisely the same situation they would be in if no railroads are made. The quantity of American iron consumed will not be diminished, but may be greatly augmented by those public improvements, while the community at large would, if American iron be used in their construction, suffer greatly by an increased price, occasioned by a new source of consumption for many thousand tons. It would seem equally reasonable that the laborers and mechanics of the country should interfere, and pray Congress to interpose and prevent a private company, engaged in a patriotic and hazardous enterprise, involving great national interests, from introducing foreign labor and skill to execute the work.

It appears to the Avalon Company that the only objection of any force which can be urged against the importation of the iron necessary for the construction of the railroad is the necessity it involves of sending money out of the country to pay for foreign labor. But this objection will vanish when it is considered that the construction of the road will call into action and profitable employment the labor of

millions of inhabitants, which is now unproductive, because of the expense in transporting its produce to market, and that it will increase our exports and *tonnage* to an amount which the most sanguine advocates of the measure will not venture to predict; the consequence of which must be a greatly increased importation of foreign goods, and augmentation of the revenue annually to a much greater amount than any duty which could be exacted on fifteen or twenty thousand tons of iron.

I am, respectfully,

THO. ELLICOTT, *President Avalon Company.*

The PRESIDENT AND DIRECTORS *of the Baltimore and Ohio Railroad Company.*

20TH CONGRESS.] No. 920. [1ST SESSION.

AGAINST IRON FOR RAILROADS BEING FREE OF DUTY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MAY 12, 1828.

To the honorable the House of Representatives of the United States in Congress assembled:

The memorial of your petitioners respectfully showeth: That they have seen with profound surprise a petition which has been laid before you, and which has been acted upon by one of the honorable Houses of Congress, wherein the Legislature of the United States is asked to exempt from duties or customs such iron as shall be consumed in the construction of the Baltimore and Ohio railroad.

Your memorialists ask leave to state to your honorable House that one of the chief inducements held out by many of the advocates of the said railroad to those whose influence was considered useful in procuring the passage of the necessary acts of incorporation by the Legislature of this State, and of permission to pass the same through the territory thereof, was the advantage which would ensue from the creation of a market for a large portion of the iron produced within the said territory and in the other States of the Union; and that, without such inducement, it is probable the act for incorporating the said railroad company, and for granting to it privileges, would not have been passed by the Legislature of this State on account, among other reasons, of the great interest of the State in the vast lines of canals, in construction of which the funds of the State are now employed, and which will afford means of transportation for the major portion of the productions of our interior, whereof the iron is a material item; that the future facility of transportation for the said produce and iron is only a prospective benefit from the construction of the railroad, but the introduction of so large a supply of iron as will be wanted for the railroad will not only be immediately of essential detriment to the iron works already established in this country, but will also afford facility for illicit importation of a much larger quantity than the railroad will consume, and thus the most injurious effects will be produced by diminution of the price of the material which is drawn from the bowels of our own soil, and prepared by the industry of our own citizens—effects which will not be confined to the duration of one year, or of the time occupied in constructing the railroad, but will spread disaster over the iron establishments and over the country surrounding them during many consecutive years; that the iron works now in operation in this country are, and will be, fully able to suffice to all the demand of the said railroad for iron of the best kind, at moderate and reasonable prices; that the amount of the price to be paid for iron imported for the said railroad, and the premium of exchange thereon, if your honorable body shall pass an act permitting the company to import it duty free, will be so much taken and deducted out, and exported, of the current specie of the country, as is positively demonstrated by the existing state of things among us, which is sufficiently known to your honorable body; and that, according to the most favorable statements of the advocates of the measure proposed, this will amount to $855,000 for the cost of the iron; and, computing the premium of exchange, which will be from eleven to twelve per cent. on this amount, say, together, $949,050 to $1,044,100, all will have to be paid to England in silver withdrawn from our circulation. But it is the confident belief of your memorialists, some of whom are well acquainted with the article merchantly, that iron of the description requisite for the railroad cannot be imported from England free of duty at less than $75 per ton, instead of $57, which is the basis of the above calculation, and on which some of the partisans of the exemption found their recommendation of this destructive measure. The cost of fifteen thousand tons, at $75 per ton, would be, with twelve per cent. premium of exchange, $1,260,000 to be added to the balance of trade already so much against us with England; thus draining the country of its current medium, without even the feeble advantage of contributing to our fiscal resources in shape of customs. It is manifest that in order to insure punctual supply of the material to be imported the railroad company must resort to contracts, and in this way a very few foreign individuals will realize immense profits, and accumulate fortunes by the exclusion and to the detriment of the native manufacturers and of the farmers who reside near the iron works, and supply them with articles of consumption and of domestic produce.

Your memorialists most respectfully submit that it appears to them that to admit the iron for the said railroad duty free would be an act of unprecedented partiality, because all public works wherein iron is used—the works for supplying cities with water, bridges, &c., &c.,* for example—have a claim upon the indulgence of Congress equal to any claims of the railroad; and, on the other hand, a general act to allow the importation of iron duty free for all public works would be, in effect, an act for the suppression of iron works in the United States. Public works are designed for the common benefit, and it would be destroying with one hand what is intended to be effected by the other if the money devoted to a public work is to be transported and expended out of the country. The reason which reconciles citizens to the accumulation of funds for public works, whether by taxation or by private voluntary con

*An application by the city of Philadelphia was made to Congress for permission to import iron pipes free of duty, but it was rejected.

tribution, is, that those funds are expended through our own country. Not that we would impeach the right of individuals or associations to use their money as they think fit, according to the universal laws of the country, but the case is very different of an incorporated company, itself the special creation of the law, asking a dispensation from the general laws, and which has already been endued with large privileges, among which are rights over the soil of individuals and of levying tolls.

Your memorialists, however, would by no means be understood to intend any disparagement to the railroad company, or to desire to place any impediment in the way of the execution of that work; so far from this, they consider the work as of the greatest public utility, and they highly commend and respect the liberality and genius which have devoted such large funds and so much talent to that magnificent enterprise; and they would see, with great satisfaction, an appropriation by Congress, to the purpose of aiding it, of much larger amount than the sums asked to be deducted from the price of the material employed in the shape of reduction of the duty, and they would cheerfully bear their share of the public contribution so applied. But your memorialists do earnestly protest against changing the uniform and impartial operation of the custom laws, in a manner which will deeply affect the welfare of the iron establishments, and of all those parts of the country which surround them or depend on them for a market for agricultural produce.

Your memorialists further entreat the attention of your honorable body to another subject of major importance.

Several kinds or qualities of iron are intermediate between pig iron and iron wrought into bars, bolts, sheets, and other descriptions of the metal, when it has been subjected to the operations of rolling or hammering; those intermediate descriptions of iron are known to the trade by various names, as blooms, slabs, loops, billets, bricks, ankonies, finer's iron, and others, and are all refinements or preparations of the metal, made at considerable cost and labor, preparatory to its being rolled, hammered, or otherwise wrought.

Your memorialists are informed that, in consequence of the omission to specify the said descriptions of iron, intermediate between pig iron and wrought iron, in the existing tariff, and in the bill which has recently passed one of your honorable Houses, it is considered and conceded at some custom-houses to be a non-enumerated article, and, as such, liable to a duty of only fifteen per cent. ad valorem, and that it will be admitted at several ports at that rate of duty; that there is great probability that a vast influx of such iron will be immediately imported from abroad; and that orders have actually been sent out, or are on the point of being despatched, for the importation of a very considerable quantity of such iron.

Your memorialists respectfully represent that if a large importation of the said descriptions of iron shall take place, at so low a rate of duty, as they apprehend will be the case, without the immediate interference of Congress, domestic iron of similar qualities will be entirely thrown out of the market; because, not only will the vending of our own iron of such qualities be interfered with by the competition of foreign, particularly English iron, which can be afforded by the English manufacturer at lower prices than it can be afforded by the American manufacturer, when the cost of transportation is added to the cost of making it, but also the influx of the foreign iron will, by adding excessively to the stock on hand and constantly produced, diminish the price of such iron to a degree that will be ruinous to the domestic manufacturer, and deeply injurious even to the importing merchants. If the foreign iron be admitted at the rate of duty affixed to non-enumerated articles, the domestic iron of such descriptions will be effectually excluded from the market, and that iron alone will be worked up into the various descriptions of wrought iron, and the iron works in the country will be confined entirely to the manufacture of the coarsest descriptions of castings—a result which must infallably terminate in the utter ruin of all the establishments which have been made in consequence and under faith of the inducements constantly heretofore held out by the Legislature of the Union, and in the destruction of a manufacture which has been sedulously fostered by the country as essential to its prosperity in peace, and to its defence in war.

Your memorialists respectfully represent that the iron business is not one whose welfare concerns alone the interest of those who are engaged in the manufacture, but that it also directly involves the interest of very large numbers of the agriculturists, inasmuch as the works are gene..lly, of necessity, situated in rugged or mountainous regions, to which the establishments alone give a value by creating a demand for timber land, otherwise comparatively worthless, and certainly without any price; and the establishments being scattered through the interior afford a market for all the produce of farms near them, which would perish on the hands of the producers without such a market; or, what is even more to be deprecated, the residents on those farms, for want of an inducement to raise supplies beyond their mere animal wants, would cease to raise them, and would lapse into indolence, equally prejudicial to the general welfare, and subversive of the intelligence, industry, and happiness of the cultivator, whose activity of mind and body is the surest foundation for the prosperity of a nation.

Your memorialists therefore pray that the application of the Baltimore and Ohio Railroad Company for permission to import iron duty free may be rejected by Congress, as inconsistent with justice, with the welfare of the country, and with the uniform course of its customs, and of its political economy.

They also pray that provision may be made in the tariff bill now before Congress for protecting American iron against the ruinous competition of foreigners, in those descriptions of iron which are intermediate between pig and wrought iron; and if the said bill shall not pass into a law with such protection, then they pray that Congress will be pleased to grant such protection by passing a special law on the subject.

PHILADELPHIA, *May* 8, 1828.

20TH CONGRESS.] No. 921. [1ST SESSION.

AVERAGE ANNUAL AMOUNT OF PUBLIC MONEYS IN THE BANK OF THE UNITED STATES FROM 1817 TO 1827.

COMMUNICATED TO THE SENATE MAY 13, 1828.

Mr. SMITH, of Maryland, from the Committee on Finance, to whom was referred the following report from the Secretary of the Treasury—

TREASURY DEPARTMENT, *March* 21, 1828.

SIR: In obedience to a resolution of the Senate of the 12th instant, "directing the Secretary of the Treasury to report to the Senate the average annual amount of public moneys in the Bank of the United States and its branches from the year 1817 to 1827, inclusive," I have the honor to submit a communication of the Treasurer of the United States, which contains the information required.

I have the honor to be, very respectfully, your obedient servant,

RICHARD RUSH.

Hon. the PRESIDENT *of the Senate.*

TREASURER'S OFFICE, *March* 20, 1828.

SIR: I have the honor, in compliance with your reference to this office of the resolution of the Senate of the 12th instant, to report that the average annual amount of public money in the Bank of the United States and its branches from 1817 to 1827, inclusive, as ascertained by the accounts settled quarterly at the Treasury, was $3,554,756 50.

I have the honor to be, sir, with great respect, your obedient servant,

MICHAEL NOURSE,
Acting Treasurer of the United States.

Hon. RICHARD RUSH, *Secretary of the Treasury.*

Reported: That the committee deemed it proper to call on the Secretary of the Treasury for a more specified view of the subject, and have received from him the document A, which is herewith submitted.

That document shows that the average deposits of the Treasury in the Bank of the United States from 1819 to 1827, inclusive, amounts to the sum of $2,633,584, and on which it may be supposed that the bank might, with propriety, operate as if it were so much of capital, this being believed to be the calculation of banks generally in their operations.

It may be presumed that the report has been referred to the Committee on Finance that they might consider whether any legislative act could be bottomed thereon. For a full understanding of the subject the committee submit the 15th, 16th, and 20th sections of the "act to incorporate the Bank of the United States," being the sections most applicable to the subject before them.

"SEC. 15. *And be it further enacted*, That during the continuance of this act, and whenever required by the Secretary of the Treasury, the said corporation shall give the necessary facilities for transferring the public funds from place to place within the United States or the territories thereof, and for distributing the same in payment of the public creditors, without charging commissions or claiming allowance on account of difference of exchange; and shall also do and perform the several and respective duties of the Commissioners of Loans for the several States, or of any one or more of them, whenever required by law.

"SEC. 16. *And be it further enacted*, That the deposits of the money of the United States, in places in which the said bank and branches thereof may be established, shall be made in said bank or branches thereof, unless the Secretary of the Treasury shall, at any time, otherwise order and direct; in which case the Secretary of the Treasury shall immediately lay before Congress, if in session, and if not, immediately after the commencement of the next session, the reasons of such order or direction.

"SEC. 20. *And be it further enacted*, That, in consideration of the exclusive privileges and benefits conferred by this act upon the said bank, the president, directors, and company thereof shall pay to the United States, out of the corporate funds thereof, the sum of one million and five hundred thousand dollars, in three equal payments; that is to say, five hundred thousand dollars at the expiration of two years; five hundred thousand dollars at the expiration of three years; and five hundred thousand dollars at the expiration of four years after the said bank shall be organized and commence its operations in the manner herein before provided."

The 16th section directs "that the deposits of the money of the United States shall be made in the bank and its branches." No change can be made therein without a direct violation of the charter, which the faith of the nation is bound to sustain; no view of that kind could be contemplated by any person, and none, it is presumed, has been contemplated. There was no obligation of deposit in the charter of the old bank, but Congress thought proper to direct, by law, that the custom-house bonds should be deposited in it and its branches, being more secure in every point of view, especially as a check on the Collectors of the Customs, who, prior to that act, had all the receipts at their disposal, and who might have been tempted to lend the public money to their friends, by which, and incorrect conduct in some of them, much of the public money might have been lost.

The 15th section compels the bank to transfer the money received in any one part of the United States to any other without charge of commission or allowance for any difference of exchange that may exist between the different parts of the Union, and to perform the duties of Commissioners of Loans in the several States and Territories without any charge or allowance therefor. The transfer of the money of the United States by the Treasury from one part to another would be attended with great risk and some expense. In the transfer, time is lost on a part, so that so much thereof thus passing and repassing cannot be considered by the bank as that kind of deposit on which it could with safety operate as a fund to justify discounts thereon. It may and probably does lessen the operative deposits at least half a

million of dollars annually, for the bank could not extend their discounts on money in transitu as if it were actually in their vaults. The bank is bound to draw the money of the United States from any one part of the Union to any other without any allowance for loss of exchange. This, it is presumed, is a considerable saving to the United States in the exchange, and a security against the risk of transport and fraudulent agents. For example, there is collected annually in New Orleans, of public money, an amount probably not wanted in that part of the Union; the balance must be transferred to some of the Atlantic States where the public debt, the expenditures for the Navy, Army, and civil list, are to be paid. The exchange almost always is in favor of New Orleans; the difference of exchange is believed to be from two to four, and sometimes five per cent., which is a saving to the United States; not a positive loss to the bank, because it may, and probably does, save itself by the purchase of bills of exchange on Europe, which it can sell in the Atlantic States without loss, an operation which would be very difficult and expensive (and perhaps dangerous from bad agents) for the Treasury to perform. The bank is also obliged to perform the duties of Commissioners of Loans without charge. The old bank was not compelled to do those duties; and Commissioners of Loans were appointed by Government. What were their duties? To pay the principal and interest of the public debt, and also to pay all the pensioners of the nation; for this latter service they were allowed a commission of two per cent. on the amount paid by each, and a similar commission is now paid to agents employed where there is no branch of the bank. The document B shows that the annual average amount for the last three years paid by the bank to pensioners without charge is $995,672, which, at two per cent., is a saving of $19,813 44 per annum to the Treasury. Document C shows the annual payments made to the Commissioners of Loans for salaries and contingencies, when the amount paid to pensioners was inconsiderable. If the Commissioners had continued to perform the duties, their salaries and contingencies must have amounted at the least to $40,000 per annum, which is so much saved to the Treasury in consequence of the duties being performed gratis by the bank. It is no small advantage that bad agencies are completely avoided by the present mode, and that it lessens the number of officers and makes the accounts more clear and easier to be understood.

The 20th section says: "That, in consideration of the exclusive privileges and benefits conferred upon the bank, there shall be paid to the Treasury, out of the corporate funds of the bank, the sum of $1,500,000 in three annual payments, commencing after the expiration of the second year." The benefits can be reduced to calculation: they are, it is believed, considered to be the profit derived to the bank from the Treasury deposits. What is the pecuniary advantage?

That derived from the deposits of the Treasury on the annual average of.....	$2,633,584
From which might fairly be deducted a half million on account of the money in transitu, which cannot be considered a deposit on which the bank could operate.	
The annual interest on $2,633,584 at 6 per cent. is.....	158,015
For which the bank has paid $1,500,000 as a bonus, which sum divided into 17 years (per document E) amounts annually to.....	$88,235
Average annual interest thereon from the time the instalments on account of the bonus were actually paid until the expiration of the charter, amounts (per same document) to.....	85,682
Duties of Commissioners of Loans, performed by the bank gratis, would have cost, as already shown	40,000
	213,917

If this statement be correct, and it is believed to be, then the bank (in a pecuniary point of view) has not been a gainer; the United States have (it would appear) been *amply* paid for all the advantages derived from the deposits of their funds in the bank and its branches.

The committee ask leave to take a more extensive view of the subject that it may be more fully understood by Senators who have not particularly turned their attention to the subject.

The bank was chartered on the 10th of April, 1816; its capital thirty-five millions of dollars, of which the United States were to hold one-fifth or seven millions, which seven millions was to be paid by a deposit of stock paying an interest of only five per cent. The subscribers were bound to pay one-quarter of their subscription in specie, and the other three-quarters in specie or in stock of the United States, bearing an interest of six per cent., when the Government made its payment in stock only, and that bearing an interest of one per cent. per annum less than that paid in by individuals or corporations. The charter authorized the Government to redeem the stock paid by individuals at par at any time it thought proper, although such stock would not have been redeemable until other such stocks should have become payable. The object of the subscribers in paying with stock above par at the time was that, bearing an interest, it would enable the bank to make dividends until it could get into complete operation. The subscribers were completely and quickly deprived of that advantage; for the act of Congress, dated March 3, 1817, immediately after the bank had commenced business, authorized and directed the Commissioners of the Sinking Fund to redeem the public debt held by the bank, and they did so, by which the bank suffered an actual loss of $251,641, estimated at the then value of such stock in the market.—*(See Document D.)*

The exclusive privilege given to the bank was highly important to that institution. Without the security given by the charter, "that no other bank should be established during its term," it is not probable that a sufficient number of subscribers could have been obtained. The provision was also useful to the nation: it prevented all application to Congress for other banks, and effectually prevented it from granting other charters. The example furnished by the States show how difficult it would have been to have resisted such applications.

What facilities does the bank give to the Treasury as compensation for the exclusive privilege? It collects all the custom-house bonds; it receives and keeps safe the receipts for public lands, wherever it has a branch; it tranfers the money of the nation from any one part of the Union to any other where it may be required; it makes those transfers without any charge for a difference of exchange, which would be no little expense to the Treasury; it pays the public debt, by which it is subjected to large drains of specie highly injurious to its other operations, inasmuch as those drains compel the bank to lessen its discounts. It is peculiarly so at the present time, when the principal of the public debt is paying off rapidly; nearly one-third thereof is owned by foreigners, who, finding it difficult to reinvest, do probably draw the specie for remittance in preference to remit in exchange at its present high rate. The bank also pays off almost all the pensioners, which is a saving, as already shown, of nearly $20,000 per annum; and all those acts are performed by it free of any charge whatever to the Treasury. In addition, it is

considered a safe deposit for the public funds, by which losses similar to those heretofore incurred by the deposit of the public money in State banks to the amount of a million of dollars is completely avoided.

It has not been deemed proper to include the deposits of 1817 and 1818 in the average; they were incidentally large, arising from a variety of causes such as cannot happen again; one of them was, the bank had agreed with the Treasury to assume and account for the debts due by some of the State banks to the Treasury, which were immediately charged to the bank, and which could not be drawn immediately from those institutions without endangering them; and some of them have not yet repaid all that the bank had assumed to pay for them. But if those years had been included, the general result would still have shown that the bank had amply paid for the benefit derived from the Treasury deposits.

From the preceding view, and the committee believe it to be correct, it has appeared to them "that there is no necessity for legislating on the subject."

A.

TREASURER'S OFFICE, *March* 29, 1828.

SIR: I have the honor, in compliance with your reference to this office of Mr. Smith's letter of the 28th instant, to state that the annual average amount of public moneys in the Bank of the United States and its branches during the years 1819 to 1827, inclusive, was $2,633,584 04; that the average quarterly amounts for each year from 1817 to 1827, inclusive, were as follow:

For 1817	$10,153,589 53
1818	5,246,475 82
1819	742,766 14
1820	1,130,936 08
1821	199,427 88
1822	1,510,352 21
1823	5,415,252 34
1824	3,762,335 47
1825	3,642,546 06
1826	3,546,913 12
1827	3,751,726 94
Total for 11 years	39,102,321 59
Average per annum	3,544,756 50

With reference to the report from this office of the 20th instant, permit me to observe that the average annual amount of deposits for the years 1817 to 1827, therein exhibited, was predicated upon the quarterly average amounts as stated above, by adding the whole together and dividing by 11, the number of years embraced in the period called for.

I have the honor to be, sir, with great respect, your obedient servant,

MICHAEL NOURSE, *Acting Treasurer.*

B.

TREASURY DEPARTMENT, *Third Auditor's Office, April* 26, 1828.

SIR: In pursuance of your reference to this office of that part of the last paragraph of the letter of the Hon. S. Smith, chairman of the Committee on Finance of the Senate of the United States, which relates to it, I have ascertained the amount of pensions paid by the Bank of the United States and its branches for the last three years as far as the accounts have been rendered; and where they have not been rendered, the amount has been averaged according to former payments, viz:

Amount paid in 1825	$1,057,160 35
Do. in 1826	1,003,514 50
Do. in 1827	926,343 70
Total	2,987,018 65

The rate of commissions allowed for paying pensions, where any are allowed to agents or institutions other than the Bank of the United States and its branches, is two per cent. At this rate the annual amount of commissions would be as follows, viz:

In 1825	$21,143 20
1826	20,070 29
1827	18,526 87

I have the honor to be, with great respect, your obedient servant,

PETER HAGNER, *Auditor.*

Hon. RICHARD RUSH, *Secretary of the Treasury.*

C.

Statement of the amount annually paid to the loan officers of the United States for salaries and contingencies, from the year 1790 to 1818, inclusive.

1790	$373 63	1806	$27,325 32
1791	13,285 03	1807	26,565 33
1792	32,396 74	1898	26,692 19
1793	46,580 24	1809	24,197 16
1794	36,110 72	1810	26,675 63
1795	23,195 25	1811	26,101 70

20TH CONGRESS.] No. 922. [1ST SESSION.

ON RETRENCHING THE EXPENSES OF THE GOVERNMENT.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MAY 15, 1828.

Mr. HAMILTON, from the Select Committee to whom the subject was referred, made the following report:

The Select Committee appointed under the following resolution: *Resolved*, That a Select Committee be appointed, whose duty it shall be to inquire and report to this House if any, and what, retrenchment can be made with safety to the public interest in the number of the officers of the Government of the United States and in the amount of salaries which they may respectively receive; more especially to report specifically on the following heads:

1. What reductions of expense can be made in the State Department in the number and salaries of the officers and clerks attached to this Department, in the expenses regulating the foreign intercourse, and in the printing and distribution of the public laws of the United States.

2. What reductions in the Treasury Department, and whether an effective system of accountability and for the collection of the public dues is there established.

3. What reductions of expense can be made in the Navy Department in the clerks and officers now acting subordinately to the Secretary of the Navy.

4. What reductions of expense can be made in the Department of War, in the Indian Department, and in the clerks and officers now acting subordinately to the Secretary of War.

5. What reductions of expense can be made in the number of officers, and the amount of compensation which they may receive, in the Postmaster General's Department.

6. And that the committee be further instructed to examine the several contingent funds of each of these Departments and to report the amount and objects for which disbursements have been made from these funds, and that they report the amounts, vouched and unvouched, which have been paid from the secret service fund since the first day of July, 1790, or the fund regulating the contingencies of foreign intercourse, and of the fund for the expenses of the intercourse with the Barbary Powers.

And that they further report whether the compensation of members of Congress should be reduced, and whether the fixed salaries of the officers of this House and its contingent expenses can with propriety be diminished.

And further, that they inquire whether any modification of the Sinking Fund act can be made with a view of producing a more speedy extinguishment of the public debt, respectfully report, in part:

That, in obedience to the injunctions contained in the foregoing resolution, they have taken the several subjects referred to them into consideration; and before exhibiting the results of their labors, they desire to propitiate the indulgence of the House for the imperfect manner in which they may have discharged their duty by a statement of the difficulties which belong to the subject and have characterized their examination of it.

In the first place, the field of inquiry is coextensive very nearly with the whole operations of this Government. An inquiry to do justice to which, from its multiplied relations, the patient and uninterrupted labors of a year would scarcely suffice; but when it is considered that the session had made no inconsiderable progress before your committee were appointed, and that since their appointment a question of eminent magnitude, exciting the deepest interest, affecting nothing more or less in its influence than the entire industry of the country, has been before the House for a period of seven weeks, by which the attention of every member of the committee representing, as they ought, the sympathies as well as the interests of their constituents, has been called off from the specific duties of this trust, and that, besides this unavoidable abstraction, the first four weeks after the primary organization of the committee were consumed in obtaining answers to their several calls on the Departments, and the last six of their session have unfortunately been interrupted by the severe indisposition of one of their number and the continued illness of another;—notwithstanding these disadvantages, they nevertheless cherish the hope their labors will not prove altogether fruitless, and that they have ascertained and elucidated many facts on which sound principles of administration may hereafter be superinduced, leading to a judicious frugality in the disbursements of the public money and enforcing a rigid accountability in the public agents.

Your committee considered it as their first duty to address a letter, a copy of which is marked No. 1, (in the Appendix,) to each of the heads of the Executive Departments, the Postmaster General, and the Clerk of the House of Representatives, calling on them for precise information as to the reductions which might be made without injury to the public service in the number and salaries of the clerks and officers in their respective Departments and in the contingent expenses of the same. Their several answers, marked No. 2, 3, 4, 5, 6, 7, will be found in the Appendix.

It will be seen from these documents that each of the Secretaries of the Executive Departments conceives that neither the number nor the salaries received by the officers and clerks in their respective offices can be diminished with safety to the public interest.

Your committee feel great difficulty in concurring in this opinion. This difference between their impressions and the opinions of these officers has convinced them of what could, in no event, have been doubtful, that without the cordial aid of the Executive no effective scheme of retrenchment can be instituted; hence it is that the conviction expressed by these officers, added to the fact that it was impossible for the committee to ascertain by their own examination the amount of labor done by each clerk in the several offices, has prevented them from proposing any specific reduction in the number of clerks in the several offices, because they were apprehensive, without the concurrence of opinion and co-operation of the chief of each Department, they might cut off some useful branch of the public service in aiming at the excision of some unnecessary one. Your committee, however, as will be seen in the testimony reported in the Appendix, obtained information enough to satisfy them that by a judicious system of reform, instituted by the Executive officers themselves, at least one-third of the present number of clerks in the Departments might be reduced with safety to the public interest. We believe that there are, in fact, a

corps of invalid pensioners attached to some of these offices, and just in proportion to their increasing disability to discharge their duties is an increased necessity for the appointment of new clerks; to say nothing of the fact disclosed in the evidence, that an actual incumbent is considered to have such a sort of property in the office as to enable him to farm out its duties and to receive a part of its revenues for doing nothing. We also think that, by a new distribution of the office hours, there would be an addition of at least one-third to the amount of labor actually performed, which, in itself, would involve a reduction of one-third of the number of clerks employed; and this might be effected by a standing regulation that the public offices should be open during the winter from nine to one and from three to five in the afternoon; and in the summer from nine o'clock in the morning until three o'clock p. m. The offices being open during the afternoon would afford great facilities to members having business with the Departments after the daily adjournment of the two Houses of Congress. At present the public offices are not actually open for the discharge of public business more than, on an average, four hours each day. With a hope of applying a remedy to these abuses your committee have prepared and will report a bill.

As your committee have not interpreted your instructions as extending to their considering any reduction of the officers in the Army, Navy, judiciary, and custom-house department, they have forborne to investigate subjects sufficiently various and important for a separate inquiry; they will, therefore, proceed, in the order of the series presented by the resolution, to give the result of their examination of each Department.

1. STATE DEPARTMENT.

"What reductions of expense can be made in the State Department in the number and salaries of the officers and clerks attached to this Department, in the expenses regulating the foreign intercourse, and in the printing and distribution of the public laws of the United States."

For the reasons assigned in the preliminary part of this report, your committee will recommend no specific reduction in the number of the clerks in this Department; although they feel satisfied that, had the officer at its head concurred with them in the opinion, they might have presented a plan for not only a gradual reduction of the number of clerks, but for an actual increase in the efficiency of their labors.

The office contingencies in this Department will be noticed in a subsequent part of this report.

"In the expenses regulating the foreign intercourse" your committee are decidedly of opinion that the diplomatic relations of the country are on a scale unnecessarily expensive; that instead of hereafter having ministers of the first grade at Colombia and Madrid, chargés ought to be substituted; and that consuls general or commercial agents will be adequate to all the public objects at Naples, Guatemala, Chili, and Buenos Ayres, with a plenipotentiary at Mexico.

Your committee concur entirely in the view taken, in their report, by the Committee on the Expenditures of the State Department, made during the present session, on the propriety of abolishing the fund created in the appropriation act under the denomination of defraying "*the contingent expenses of all missions abroad*," as they believe that it merely enables, in point of fact, the Secretary of State to make such additions to the compensation of ministers and diplomatic agents as he thinks proper. In some cases the allowance made for contingencies to ministers and chargés, annually, is nearly one-eighth of the amount of their salaries. They would, therefore, recommend a fixed appropriation for the contingencies of each mission, varying from $300 to $600, according to the exigencies of each mission, but in no case exceeding the latter amount, which sum is to cover the expenses of stationery, postage, office, clerk hire, and all other contingencies whatsoever.

In relation "to the printing and distribution of the public laws," (an item of no small importance,) your committee will postpone their remarks and suggestions on this point until they present, as they will do in the sequel of their report, their views on the public printing generally, a topic of sufficient importance to claim a separate discussion.

Your committee, whilst they propose meeting all the requirements of the resolutions under which they are acting, have taken the liberty of adopting an order, in bringing out the information they have collected, not exactly conformable to the series of topics presented in the resolutions themselves as subjects of inquiry; but as they have believed that the connexion of the different parts of this report could be better maintained and the continuity of the text better preserved by so doing, they will arrange specifically, under the head of each Department, the entire results of their examination of such Department, both as to the practicability of future retrenchments and the objects and amounts of its past disbursements; although, under the resolution, the latter investigation would seem more properly to belong to the sixth division of the same.

In pursuance of this plan, your committee will now proceed to exhibit, first, the general expenditures of the State Department, and next, a more detailed exposition of its particular disbursements; and in the discharge of this portion of their duty, (which requires them to "examine the contingent fund of each of the Departments, and to report the objects and amounts for which disbursements have been made, &c,") in beginning with the Department of State, it is necessary to premise that there are three distinct contingent funds under the control of this Department: one to defray the contingent expenses of the Department itself, including the expenses of printing and publishing the laws; another for the contingent expenses of foreign intercourse, and a third for the contingent expenses of missions abroad. Indeed, the whole expenditure on account of these missions, stated as well as contingent, depends on the discretion of the Executive, exercised through the Department of State; for though the salaries and outfits paid to the functionaries of the nation abroad are regulated by law, yet the number and grade of these functionaries, and of course the total amount expended for their support, are primarily determined by the will of the Executive, to whom it belongs, under the Constitution, to "appoint ambassadors, other public ministers, and consuls."

For this reason, and for the further one that the committee are expressly instructed to inquire into the "expenses of the foreign intercourse" of the country, the whole amount of these expenses will be embraced in the view about to be submitted of the disbursements of public money through the agency of the State Department. The committee feel the less difficulty in taking this extended view of the expenditures of the Department of State, because in doing so they are only following the example of the head of that Department, in a letter addressed by him to the committee, and which will be found annexed to this report, marked No. 2. In that letter, purporting to be in compliance with a resolution of the committee requesting the expression of his opinion whether the number or salaries of the officers employed

in his Department, or any other expenses incident to it, could be reduced without detriment to the public service, he took occasion to exhibit several statements in relation to past disbursements of the Department, embracing the whole range above mentioned, and founded thereon certain comparisons of its expenses during equal periods of the late and of the present administrations. Though these statements and comparisons were uncalled for, the committee avail themselves of the facts disclosed by them, as having the sanction of the highest authority and bearing the stamp of unquestionable authenticity. It appears from the statements contained in this letter that the expenditures of the State Department for the various objects intrusted to its management were, during the last three years of the late administration, and the three years just elapsed of the present administration, as follows, to wit:

LAST ADMINISTRATION.		PRESENT ADMINISTRATION.	
1822	$173,879 51	1825	$306,731 74
1823	314,668 56	1826	255,296 20
1824	270,731 27	1827	287,463 42
	759,279 34		849,491 36
			759,279 34
Making the expenditure of the present exceed that of the last administration by			90,212 02

From reference to the document marked B, which accompanied and is referred to in the Secretary's letter, and from which his statements are compiled, it appears that, besides the contingent expenses of the Department and the general expenses of foreign intercourse, including the intercourse with the Barbary Powers and the relief and protection of distressed American seamen, there are included in the amounts given by him, as above, three other items, depending upon wholly different principles in regard to any discretionary control of the Department over them, and which ought not, therefore, in the opinion of the committee, to enter into a comparison like that instituted by the Secretary. The three items alluded to are the treaty with Spain of the 27th February, 1819, the sixth and seventh articles of the treaty of Ghent, and the first article of the treaty of Ghent. These are subjects of expense growing necessarily out of the obligation of international compacts, and not to be affected in any way by the discretion of the Executive or any of its officers. The first item, particularly, being the expense incident to what has been commonly called the Florida Board of Commissioners, whose existence and functions terminated under the last administration, and the whole burden of whose support, amounting to $63,114 31, fell upon that administration, excepting only the small sum of $1,125 paid under the present, cannot, it seems to the committee, upon any principle of propriety, be brought into the comparison. Taking these items out of the comparison, the account between the late and the present administration, in regard to disbursements over which the State Department has a discretionary control, will then stand thus:

	Late administration.	Present administration.
The amounts stated above are	$759,279 34	$849,491 36
Deduct expenses under treaty with Spain, 6th and 7th articles treaty of Ghent, and 1st article of the same	126,603 97	71,679 63
	632,675 37	777,811 73
		632,675 37
Difference		145,136 36

This difference the committee believe to be the true result of a comparison made, upon correct principles, between the late and present administrations as to the expenditures with which the State Department is connected.

The Secretary of State, in the letter already referred to, says that the excess of the expenditures of the present administration, in this branch of the public service, over those of the last administration, may be satisfactorily accounted for, first, by the fact of "a remittance in December last to our European bankers of $70,000, which is charged to the service of the year 1827, although it will be disbursed in the year 1828;" and secondly, by the circumstance that no part of the appropriation of $100,000, made in 1822, for missions to South America was applied until the succeeding year. In relation to the first circumstance, the committee would remark that although a requisition was made on the 5th day of December last by the State Department on the Treasury for the sum of $70,000 to be remitted to our European bankers, yet it appears that only $39,000 of that sum was remitted in that month, and that that amount only is charged in the accounts of the expenditures of 1827. The balance of the sum, $31,000, was not remitted until the 17th of January of the present year, and is charged among the expenditures of 1828.—(See letter of Secretary of State, marked D, and the accompanying statement of chief clerk of the Treasury; see also letter from Joseph Nourse, Register, marked E.) It moreover appears that, in providing for the foreign service of the Government, nothing is more common than to make remittances to Europe toward the close of one year, which cannot be disbursed till the succeeding year, as for example, in 1824 there were remitted to Europe, between the 7th day of October and the last day of December of that year, for the service of the State Department, in bills drawn payable sixty days after sight, the sum of $54,686 66, while the whole amount remitted in like form, between the same dates in the last year, was only $30,000.—(See letter from Joseph Nourse, marked E, and accompanying statement.) This circumstance, therefore, so far as it affects the comparison which has been made between the late and the present administrations, with reference to the expenditures of the State Department, operates in favor of instead of against the present administration.

In relation to the other circumstance mentioned by the Secretary of State, as satisfactorily accounting for the difference in the expenditures of that Department under the late and present administrations, it is true that no part of the appropriation made in 1822 for missions to South America was applied

until the following year; but it was then applied under the disadvantage incident to the original equipment of the missions, of sustaining a double charge, including outfits, as well as salaries, which would thus make the expenditures of one year equal to those of two in ordinary circumstances. Such would have been the effect if what was understood to be the plan of the last administration, in regard to our diplomatic establishment in South America, had been adhered to by the present. It is in the recollection of a majority of the committee that, in some proceedings of the House of Representatives on that subject, during the session of 1823–'24, it was stated by the chairman of the Committee of Ways and Means, on the authority of communications derived from the then Secretary of State, that the Government contemplated, after that year, having only one minister of the highest grade in South America, and for such interests as were not committed to him to employ chargés, commercial agents, or consuls, according as one or other of these kinds of functionaries might be deemed most proper. An arrangement of this sort, the committee believe, would have been fully adequate to the protection of all our interests, and the fulfilment of all our obligations as a nation, and would have avoided much of the expense that has been incurred. But if the present administration have been *necessarily* subjected to a greater expense than the last, from an extension of our diplomatic establishment in America, they have, at the same time, been relieved by a reduction of that establishment in Europe. During the last three years of the late administration we had a Minister Plenipotentiary at Lisbon, who was recalled shortly before the close of that administration and replaced by a Chargé d'Affaires. The return of our minister at Madrid, about the same time, afforded a good opportunity of reducing, in like manner, the grade and expense of the mission to that Court; and it was, indeed, distinctly stated to the House of Representatives, on the occasion before alluded to, that such was the intention of the Government. The committee, therefore, cannot recognize, in either of the circumstances appealed to by the Secretary of State, the force and effect which he attributes to them.

The Secretary of State, after presenting the comparison above mentioned, embracing equal periods of three years, suggests a comparison between the last two years of the late administration, and the first two of the present; the effect of which is to select from the last administration the two years of *heaviest expenditure*, and put them in contrast with two of the present administration, exempt from those peculiar and extraordinary charges which devolved upon the two years of the last administration chosen for the comparison. The committee, for the reasons just mentioned, consider the comparison first made altogether fair, and, as embracing longer periods of time, less liable to be influenced in its results by casual or temporary circumstances.

The committee will now advert to some views which the Secretary of State has presented in his letter in relation to the *appropriations* for the service of that Department. Although, in the comparison exhibited by him of the expenditures of that Department under the late and present administration, he puts the year 1825 to the account of the present administration, yet, in the view presented by him of the appropriations for the service of the two administrations, he transfers the appropriations of 1825 to the account of the last administration. The appropriations of 1825, however, were for the use of the present administration—they came to the hands of the present administration, and they have been expended by the present administration. In this view the committee think the appropriations of 1825 ought clearly to be carried to the account of the present and not of the last administration; and even if the question were who is responsible for the justness and propriety of those appropriations, the committee are still of opinion that the same classification would be correct, for they find that the appropriations of 1825 for the service of the State Department were, in fact, made upon estimates furnished by the present Chief Magistrate, (then Secretary of State,) contemplating and providing for the expenses of a new administration, of which there was every probability he was to be the head. Putting the year 1825 to the account of the present administration, the comparative statement of appropriations for the service of the State Department, as collected from the document marked C, which accompanied and is referred to in the Secretary's letter, will then stand thus:

1822	$239,450	1825	$336,050
1823	154,800	1826	350,932
1824	309,350	1827	290,550
	703,600		977,532
			703,600
Difference			273,132

The Secretary of State refers to the diminished amount of appropriations for the service of that Department during the present year, which it seems is only $89,500. But it is proper to add that this *diminished appropriation* for the present year does by no means imply a *diminished expenditure* during the present year. In addition to the sum appropriated, there are large amounts in the hands of the Department, consisting of balances of former appropriations, still applicable to the service of the present year, and as such included in the estimates for the support of the Government during the present year. These balances, for the various objects under the control of the State Department, are given in the document marked C, (which has already been referred to as accompanying the Secretary's letter,) and will be found to amount to the sum of $228,273, which, added to the sum of $89,500 recently appropriated, forms an aggregate of $817,823 at the disposal of the State Department *for the service of the present year.*

The Secretary of State proceeds to observe that "the small amount of appropriation required for the service of the present year is the result of economical savings out of previous appropriations;" and for the purpose of showing this presents "a combined view of the appropriations and expenditures during the years 1825, 1826, and 1827, under those heads of appropriation, in the application of which a discretionary control is exercised through the Department of State." Those heads, he adds, are "1st, contingent expenses of foreign intercourse; 2d, intercourse with the Barbary Powers; 3d, relief and protection of American seamen; and 4th, the contingent expenses of the Department." In this view, the Secretary gives the whole amount at *the disposal* of the Department for each of the above-mentioned objects, which, in some instances, consists of repayments and balances of former appropriations, as well as the cotemporary appropriations of each year. The view of the Secretary is taken from a document, designated by the letter C, which accompanied and is referred to in his letter, and has been several times already referred to by the committee. The committee, for the purpose of bringing the whole subject under the

eye at once, will throw the statement presented by the Secretary into a tabular form, and will then exhibit a similar statement compiled from the same document, showing the same amounts at the disposal of the Department and expended by it during the years 1822, 1823, and 1824. This comparison will enable the House to determine how far the "small amount of appropriation required for the service of the present year is the result of *economical savings* out of previous appropriations." The statement of the Secretary of State for the year 1825, 1826, and 1827, reduced to a tabular form, is as follows:

	Contingent expenses foreign intercourse.	Barbary Powers.	Relief of seamen.	Contingent expenses Department.	Total.
Amount disposable	$127,420 05	$100,450 00	$99,678 84	$97,863 00	$425,411 89
Amount expended	80,567 87	55,700 29	87,698 17	90,305 00	314,271 43
Surplus unexpended	46,852 08	44,749 71	11,980 67	7,558 00	111,140 46

The following statement shows the amounts disposable and expended under the same heads for the years 1822, 1823, 1824:

	Contingent expenses foreign intercourse.	Barbary Powers.	Relief of seamen.	Contingent expenses Department.	Total.
Amount disposable	$103,231 57	$115 846 12	$130,357 28	$69,708 00	$419,142 97
Amount expended	76,926 86	22,459 34	79,517 30	53,550 00	232,453 50
Surplus unexpended	26,304 71	93,386 78	50,839 98	16,158 00	186,689 47

It appears from these statements that although the last administration had at their disposal, for the objects specified, a smaller sum than the present, yet the *savings* of the last out of that sum have been greater than those of the present by $75,549 01; and that the expenditures of the present administration, during a term of three years, for objects in regard to which it is said "a discretionary control is exercised through the Department of State," have exceeded those of the last administration, for the same objects during an equal term, by the sum of $82,817 93. The committee, therefore, cannot concur in the suggestion of the Secretary of State, that "the small amount of appropriation required for the service of the present year is the result of economical savings out of previous appropriations." They think a more satisfactory explanation of the fact is to be found in the *large excess* already exhibited of the appropriations asked for and granted during the years 1825, 1826, and 1827, over those of an equal period of the last administration.

The committee, considering the views which the Secretary of State, *in replying to a specific call*, thought proper to present in relation to the comparative expenses of the late and present administration, to be materially erroneous in several respects, have felt it their duty to submit the foregoing observations on those views to the House. At the same time, they do not intend to recognize the principle which such a comparison seems to imply, that the last administration is to be appealed to as a standard of economy; on the contrary, they are aware that that administration was thought by many to be *profuse* in its expenditures; and the committee themselves are of opinion that for many years past there has been far too little regard to economy in the operations of the Government *in several* of its branches.

Your committee will now proceed to exhibit some statements respecting particular heads of expenditures through the State Department confided exclusively to the discretion of the President.

That portion of the contingent fund for foreign intercourse which has been expended by the present Executive for objects not deemed by him expedient to disclose, generally denominated "*secret service money*," is found, by reference to the document No. 8, greatly to exceed in amount the expenditure of the last three years of the late administration.

Expenditure for 1822, nothing.		Expenditure for 1825	$1,700 00
1823	$3,000 00	1826	1,666 66
1824	2,130 00	1827	8,958 01
	5,130 00		12,324 67

It will be seen by the statement referred to, that there was expended during the late war with Great Britain for secret service, that is to say, from 1812 to 1815, $77,346 30 "upon the certificate of the President, without specification." This expenditure may seem to be large at first sight, but when it is recollected that the only crisis in which there would probably be any occasion to use a secret service fund in our Government to any considerable extent would be in a period of war, during which bribery is one of the means sanctioned by the practice of nations for the procurement of information, it must be manifest that a war epoch furnishes no standard for expenses of this character that belong to a period of peace.

For example: Of the $77,346 30 which appear to have been expended during the war with Great Britain, it is now notorious that $50,000 were paid to John Henry for disclosures which were supposed might be important to the safety of the country and to the integrity of the Union; and if the particular occasions of the rest of this expenditure were known, it is confidently believed that they would be found referable to that necessary vigilance and precaution, which, in a period of war, not only watches the movements and designs of the enemy, but pries into the dispositions and intrigues of third Powers.

That the legitimate occasions of this expenditure are confined almost exclusively to periods of war is further manifested by the fact that although their investigations, in pursuance of the instructions of the House, were carried back to July 1, 1790, yet the statement obtained from the Treasury failed to furnish any example of such an expenditure previous to September 16, 1812. The two payments mentioned by the Register as appearing from the *printed* public accounts to have been made to the Secretary of State in 1794 and in 1796, on account of the "contingent charges of Government," the committee are satisfied

cannot properly be referred to the *secret service* fund. They find that, by an act of Congress passed March 26, 1790, a sum of $10,000 was expressly appropriated for defraying the "contingent charges of Government," but, at the same time, the President was required to "cause a *regular* statement and account of such expenditures to be laid before Congress at the end of the year." Similar appropriations were made occasionally afterwards, "when the balances of former appropriations had been carried to the surplus fund." These appropriations the committee consider to have been applicable exclusively to *domestic* purposes; and they have not been able to find any instances of a *secret service* expenditure in the domestic operations of the Government, except two, which occurred under the administration of Mr. Adams, who, on the 21st of December, 1799, signed two certificates of that character—one for $500, paid to James Ross, and the other for $1,320, paid to Samuel Lewis, sr., expressed to be for expenditures "in relation to the duties of the War Department," but both of which were reported by a committee of the House of Representatives to be in violation of law.

Rejecting a war crisis as furnishing any standard for these expenditures in time of peace, your committee would invite a reference to the disbursements during a pacific era. By the table it will be seen that this administration expended, during the last year alone, $2,578 more than was disbursed by the two preceding administrations in a period of nine years.

Your committee felt themselves inhibited by the practice of the Government, if not by the authority of law, (the latter, however, they conceive somewhat questionable,) to require an exhibition of the items of the expenditure of this appropriation; but in the course of their investigations they travelled up, as they have reason to suppose, to the door of this secret fund, which was offered to be opened to them on terms to which they did not feel it their duty to assent.

In the Appendix it will be seen that your committee received a communication apprising them that the late Daniel P. Cook, late member of Congress from the State of Illinois, had received the sum of $5,500 for some services connected with the foreign relations of the country. As no record appeared of this item on any of the accounts transmitted either from the Treasury or the Department of State, your committee called on the Secretary of State to inform them, if, in point of fact, Mr. Cook had been so employed, where they were to look for the settlement of the account. This call resulted in an overture on the part of the Secretary of State to make to the committee "*a confidential communication*" respecting this expenditure, which "he neither admitted nor denied." On full consideration, your committee decided to decline receiving a communication burdened with such an obligation, as they desired to make no report to this House which might not be common to the people, whose trustees and servants we are.

That Mr. Cook, after the adjournment of Congress in the spring of 1827, received an appointment from the President, connected with our foreign intercourse; that one thousand dollars were paid to him in advance, and in part compensation for his services; that he actually embarked from New York for Cuba towards the end of April, (which it appears was the place of his public destination;) that he arrived early in June at St. Louis, Missouri, on his return home; that he was in exceedingly critical health, and in doubtful condition to attend to any business, more especially of a diplomatic character, requiring so much labor and anxiety; that he did not understand the language of the people among whom he was sent—probably as a secret agent; that he must have been less than one month in Cuba on this service; that he was to receive, and has probably received, a further sum than the amount of the advance made him in remuneration for his services, and that this remuneration came out of the secret service fund, are facts which your committee think abundantly appear from the testimony in the Appendix. They coerce, on their face, the solemn inquiry why Mr. Cook, under such circumstances, was appointed a *secret* agent, and why he was paid out of this fund? Whilst your committee feel the force of this question, they feel it likewise their duty to leave it where they find it, with the remark that such payment, made from such a fund, finds no sanction from the precedent of an agency to Cuba, instituted during the administration of Mr. Monroe, which was filled with eminent ability by Mr. Thomas Randall, and whose compensation was paid with specification out of the contingent fund of foreign intercourse, and audited under the ordinary circumstances of official notoriety at the Treasury.

It will be seen in the journal of the proceedings of your committee that a resolution was moved by one of its members requesting the Secretary to inform the committee, confidentially, "what portion of the secret service fund money paid since the 4th March, 1825, was paid for services directed to be performed under the administration of James Monroe, late President of the United States." It is due to a majority of your committee to avow the motive which influenced their vote, independently of the objectionable condition of secrecy which the resolution itself involved. They thought it unjust to make the administration of Mr. Monroe responsible for agencies of which, even if he had directed them, the duration and expenses were exclusively under the control of his successor.

Your committee, considering that the Constitution has, with a wise jealousy, especially exacted publicity in the fiscal transactions of the Government, are of opinion that this secret fund, from the abuses to which it is liable, ought to be abolished in time of peace; and that, if allowed during a war, it should be regularly accounted for by the President in a message, on the termination of hostilities, to both Houses, which they may or may not consider confidential; and your committee, for this purpose, report a bill.

Your committee find, by an examination of the fund for the contingent expenses of foreign intercourse, that the expenses of bearing despatches have been greatly increased during the three years of the present, when contrasted with the last three years of the late administration, as appears by the following exhibit:

For 1822	$375 00	For 1825	$4,727 68
For 1823	3,822 00	For 1826	9,131 69
For 1824	2,630 00	For 1827	5,026 75
Total	6,827 00	Total	18,886 12
			6,827 00
		Excess	12,059 12

They think that the discretion which the Secretary of State in fact employs, both in appointing and compensating bearers of despatches, is liable to strong objection. In practice we fear it is prone to degenerate into a species of favoritism altogether adverse to the public interest; for your committee

have reason to apprehend that it is little short of a convenient mode of sending favorites abroad to travel for their pleasure, health, or instruction, out of the public coffers.

Amidst the numerous appointments of messengers made by the present administration, they will select the account of J. H. Pleasants, editor of the Richmond Whig, because that case, in their estimation, presents the most flagrant example of abuse.

It appears that on the 19th of April, a little more than a month after the inauguration of the President, this gentleman received the appointment of bearer of despatches to Rio Janeiro and Buenos Ayres. The circumstances of his journey from Richmond to Boston in seeking a passage; his ultimate embarkation at New York, on the 28th of May, in the William Tell, for South America; the incidents which occurred on board that vessel; his leaving his "important despatches" in charge of the captain of the William Tell and going on board another vessel bound to Antwerp; his again debarking from this vessel and embarking at sea on board a ship bound to Liverpool; his spending the summer in England "in seeing the country," and his ultimate return to New York in October, are detailed in his letters, narrative and penitential, to Mr. Clay, in the Appendix, marked No. 9; whilst the subjoined account shows at whose expense these extraordinary voyages were made, viz:

Department of State to John H. Pleasants.	*Dr.*
To this sum for voyages out and home	$900 00
To actual expenditures in travelling expenses and board, from the time of leaving Richmond, on the 19th of April, 1825, to 28th May of the same year, in which interval I was seeking, from Baltimore to Boston, the means of getting to Buenos Ayres	247 00
To expenses on my return from New York to Richmond	37 00
To per diem allowance, at $6, from the 19th April to the 22d August, is 126 days, inclusive	756 00
	1,940 00

Approved December 7, 1826.

H. CLAY.

This account was approved by the Secretary without vouchers.*

In the first place, your committee are of opinion that Mr. Pleasants was entitled to no allowance for voyages, not one of which he performed in the public service; at all events, if he paid his passage to Buenos Ayres in the William Tell before embarking, this was the extent of the allowance which should have been made him.

Either his despatches were or were not of importance; if they were of importance, like a soldier on post, no consideration should have induced him to have deserted them; if they were of no higher importance than to have rendered it safe that they should be confided to the captain of an ordinary merchant vessel, then they should have gone through this channel, and Mr. Pleasants ought not to have been appointed. The item of $900 for voyages is exorbitant, your committee believe, beyond the comparative rates of passage money to parts of the habitable globe the most remote. By looking at some of the accounts of other bearers of despatches employed and paid during the present administration the committee find no corresponding rates. For example: Mr. George Watkins, who was sent to London with despatches, eight days after the inauguration of the President, at a cost of $1,347 68 for about 112 days' service, charged and received but $466 for passage money, as per the subjoined account:

United States to George Watkins, bearer of despatches to England in 1825.	*Dr.*
Compensation from the 12th March to 1st July, 112 days, at $6 per day	$672 00
Allowance for the voyage out and home	466 00
Travelling expenses from Washington to New York	36 00
POST CHAISE AND PAIR FROM LIVERPOOL TO LONDON, AT TWO SHILLINGS STERLING PER MILE	97 68
Expenses on the road	10 00
Mail coach from London to Liverpool	25 00
Expenses on the road	5 00
Travelling expenses from New York to Washington	36 00
	1,347 68

It moreover appears that Mr. Edward Wyer received, in 1826, but $600 for passage money out and home to Russia; and that Theodore W. Clay, as bearer of despatches to Mexico, who, for 107 days' occupation, received $1,205 compensation, had allowed to him but $300, out and home, for passage money to Vera Cruz.

If this excessive allowance for passage money to Mr. Pleasants be objectionable, his per diem compensation is not the less so, as your committee are clearly of opinion he was not entitled to one cent after the day on which he left the William Tell and abandoned his despatches; and if any person had a claim for such allowance, it was the captain of the William Tell, to whom the duty of bearing these despatches had been assigned by Mr. Pleasants. Viewing this case, together with the large expenditure made by this administration "for bearing despatches," as an abuse, your committee will report a bill for regulating the compensation of bearers of despatches.

The attention of your committee has been attracted to the amount paid out of the contingent fund of the State Department, as also out of the contingent fund for foreign intercourse for extra clerk hire for the last three years; first, on account of the magnitude of the sum, when compared with the expenditures for the same object for the three years of the last administration; secondly, on account of the misapplication and perversion of the fund appropriated by Congress to defray "the contingent expenses of foreign intercourse," to the purposes of extra clerk hire in the Department of State.

If the money of the Government appropriated by Congress for one object can, at the unlimited discretion of the head of the Department, be applied to any other objects, the whole benefit of specific appropriations may be defeated, and Executive discretion made to control legislative will. Under the last administration there was paid by the State Department for extra clerk hire, out of the appropriate

* So marked in the accounts reported in the report of the Committee on the Expenditures of the State Department.

fund, during the years 1822, '23, and '24, $4,010 88. In 1825, '26, and '27 there was paid $15,591 42, part out of the appropriate fund, and part out of the "contingent fund for foreign intercourse." The amount expended during the years 1825, '26, and '27 exceeds that of 1822, '23, and '24 by the sum of $11,580 54; and this increase has taken place while the present Secretary has had, for the last year, three clerks more than were in the Department during the last administration—making the whole number fifteen, with fixed salaries.

The committee will next proceed to designate such items disbursed out of the contingent funds of the Department which they deem objectionable, and which have been paid, where the payment, as to amount and object, seeks its justification in the exercise of Executive and official discretion. They cannot do more than refer to the items.

First. As to the contingent fund for foreign intercourse.

Printing.—The amount expended for the publication of a notice in relation to a convention between the Government of France and that of St. Domingo, providing certain indemnity for the losses of the former inhabitants of that island, paid, in part, out of the contingent fund for foreign intercourse, and part out of the contingent fund to defray the incidental expenses of the Department, has been stated by the Committee on the Expenditures of the State Department to be $3,660 72.

Upon a minute investigation of the items charged for printing in the two accounts sent to the committee, and an inspection of vouchers filed for other items not specified, this committee make the sum paid somewhat greater. They will, however, give the names of the editors or papers and the amount paid for this publication, so that if they err their error may be detected without difficulty.

Gales & Son	$350 00
D. & J. Faust	350 00
Edward Charles	350 00
G. & W. Robertson	350 00
Amos Kendall	206 00
Morgan, Lodge & Fisher, printers for C. Hammond	350 00
Ballard & Wright	116 00
Dobbin, Murphy & Co.	125 00
Benjamin Russel	113 00
James Haig	148 00
S. S. Simpson, (Ten.)	350 00
Gales & Seaton	350 00
Peter Force	350 00
Norfolk Herald	245 00
Rhode Island Republican	125 00
Cameron & Krause, Pennsylvania Intelligencer	125 00
National Advocate	125 00
John Binns, Democratic Press	125 00
Total paid	4,253 00

The committee have noted this expenditure because they are satisfied it greatly exceeds in amount that which ought to have been paid for such an object; and a part of the payment was made out of an inappropriate fund.

The committee find $500 paid to William Wirt, Esq., Attorney General of the United States, as a fee in the case of the United States *vs.* Gooding, in the Maryland district, charged to the contingent fund for foreign intercourse. Mr. Gooding was indicted in the State of Maryland, in the court of the United States, upon a charge of having violated the laws of Congress to suppress the African slave trade. The United States have their attorney in that district, (who receives a salary, &c.,) competent, it is believed, to represent the interests of the United States within their own courts in that State. This consideration might suggest the impropriety of the employment of other counsel; but it cannot be necessary for the committee to point out the manifest impropriety of applying the contingent fund for foreign intercourse to the purpose of paying lawyers' fees for prosecuting a citizen of the United States for a violation of her penal code. If it be lawful to apply that fund, at the discretion of the Department, to employment of counsel, surely there is no purpose to which it may not be applied, and find its application justified by the exercise of the power in this instance.

The payment of $4,500 as an outfit to John A. King is believed by the committee to be a violation of the plain letter and spirit of the act of 1810. As this act requires that a Chargé d'Affaires should be appointed "by the President of the United States, by and with the consent of the Senate," and that to be entitled to an outfit he should be thus appointed; and as Mr. King was not thus appointed, but was left by his father, the late Rufus King, in charge of the legation, your committee deem this case such a manifest breach of law, notwithstanding the forced analogies from exploded precedents that have been brought forward to sustain it, and the example of such evil omen, that they would recommend that the Committee on the Judiciary be instructed to inquire into the expediency of directing the Agent of the Treasury to require of J. A. King that he refund to the United States the amount of this outfit and his salary as Chargé d'Affaires for sixty-two days, according to the subjoined account:

John A. King, Chargé d'Affaires, London, for his salary from 1st July, 1826, the day on which his duties commenced, to the 31st of August following, when they terminated—62 days, at $4,500 per annum	$758 15
For amount of his outfit	4,500 00
	5,258 15

Endorsed: The President approves the above charges, December 22, 1826.

H. CLAY.

And, in the event of his refusing to refund the same, that the Agent of the Treasury be instructed to direct suit to be commenced against the said John A. King for the recovery of the above sum; deducting

therefrom the amount of his salary as secretary of legation for sixty-two days, at the rate of $2,000 per annum.

The payment of $1,000 to Jonathan Elliott, a printer of a newspaper within the District of Columbia, for 100 volumes of a book printed by him, entitled "The Diplomatic Code," is believed by the committee to be an expenditure not only without any adequate consideration of the public service to justify it, and beyond the value of the article purchased, which it is notorious has been sold by the proprietor for a less price, but is also a misapplication of the contingent fund "for foreign intercourse."

The committee find the amount paid by the State Department for subscription to newspapers for 1825, 1826, and 1827, to be $1,623 16.

Your committee would, in conclusion, recommend the attention of the Committee of Ways and Means to these abuses which they have pointed out, and to require more specific estimates in future from this Department, on which to found the necessary appropriations.

2. TREASURY DEPARTMENT.

"What reduction of expense in the Treasury Department, and whether an effective system of accountability and for the collection of the public dues is there established."

To introduce economy and despatch in this Department it will be necessary to simplify the forms of business and to reorganize its subordinate branches.

The various offices of the Treasury were arranged on their present plan by an act of the 3d of March, 1817, abolishing the accounting officers and establishing an additional Comptroller and four Auditors, with clerks. This arrangement was temporary; so ought to have been its continuance. The war was just then over, and its disbursements threw upwards of forty millions of suspended accounts into the Treasury for adjustment, which amount has since been reduced to two millions, yet the same extensive and somewhat complicated machinery is still in existence. As your committee believe that as much depends on the forms of doing business as on the number of agents employed in any of the Departments, they would state the tedious process of auditing and adjusting an account at the Treasury under the present system. When a claim is presented on the Treasury it is handed to the Auditor, who, aided by his clerks, examines and reports it to the Comptroller; when decided and passed by him, one of the clerks enters it in a book in his office, and it is then sent to the Register to be registered by one of his clerks. The Register transmits a certified copy of the report to the Secretary of the Treasury; one of his clerks prepares a warrant on the Treasurer for the amount, which is entered in the office of the Secretary by the warrant clerk; it is then handed to the Comptroller, who countersigns it; it is then sent by a messenger to the Register's office, where it is registered by another clerk; when registered and thus certified by the Register, it is then presented by the claimant to the Treasurer, when another clerk takes his receipt on the back of the warrant, and on the same warrant authorizes the bank to make payment, and the claimant receives his money. This process is nearly duplicated when it commences in either the War or Navy Department.

Why, for any purpose of public security, an account should make such complicated, various and reiterated transits, your committee are at a loss to perceive; the direct effect, however, is to increase the labor, and consequently the number of public officers. These extraordinary forms may have been considered as necessary forty years ago, but in the present age bookkeeping has participated in cotemporary improvements, and greater simplicity and economy have been introduced in the management of both public and private business. If these forms were simplified, your committee believe that one-fourth, if not one-third, of the offices in the Treasury might be reduced. But even with the existing tedious forms of transacting business, they think there are more clerks than would be required if the labor of the offices was more equally distributed. The First Comptroller's office is evidently surcharged with business, while it is equally certain that some of the other offices connected with the Treasury are almost *sinecures*. A portion of the business of the First Comptroller might well be assigned to the Treasurer and Register's offices, where the clerks cannot be fully employed.

Besides simplifying the forms of business, and distributing the duties of the offices more equally, your committee would recommend a new organization of some of the Departments; to effect which, they would suggest that the Second Comptroller's office be abolished, and that of one of the Auditors, as they think one Auditor for each Executive Department amply sufficient; and so soon as the First Comptroller is relieved, under a new distribution, from some of the duties he now discharges, he will be able to superintend those now performed by the Second Comptroller.

They are of opinion that, in our system, the value of an officer who ought to be so highly accomplished for public business as the Attorney General, is not sufficiently estimated, and that he ought to be considered as the law officer of the Government. They propose enlarging his duties and increasing his responsibilities, by putting under his charge all the suits in which the Government may be interested, throughout the United States, by attaching to his office, and by placing under his immediate control, district attorneys and marshals. That, in addition to these duties, he should preside at a board, to consist of himself, the Comptroller, and four other Auditors, for the examination and auditing of all contested claims and accounts against the United States; to be, if necessary, in daily session. The advantages of this plan would not only consist in a uniform interpretation of the acts of Congress respecting claims, but such an interpretation would be enlightened by the opinions of an officer of first rate legal attainments, and a standard or similar rule as to the allowance of claims would obtain, by those means, through all the Departments, which, at present, is various, depending too much on the discretion of the different Auditors.

The discharge of these duties, together with those which were contemplated in the effort which was made in 1817 to create an office to have been denominated "the Solicitor of the Treasury," will produce the necessity of the Attorney General being prohibited from practicing, excepting in the Supreme Court; to indemnify him for which, and as an offset to a saving which will accrue to the Government by his taking charge of the suits of the United States, and acting on a board for the adjustment of claims, your committee think his salary ought to be on a footing with that of the heads of the Departments. We are satisfied that by his legal skill in directing the mode by which the suits of the United States are to be conducted, and his vigilance and intelligence in adjusting claims against the United States, he would save one hundred fold the amount of his increased compensation.

As it respects the contingent expenses of the Treasury Department, the Secretary has advised us that he is not aware that they can be reduced. In this opinion your committee must withhold their

concurrence. They think there has been a most extraordinary expenditure for newspapers in most if not all the offices. In those connected with the Treasury there was paid for this object in 1825 $751 50; in 1826, $964 10; in 1827, $1,001 12: a steadily progressive and inexplicably stange increase.

The expense of advertising has also been much augmented. This expenditure for this Department, generally, and the Land Office, was, in 1825, $3,507 44; in 1826, $2,164 25; in 1827, $6,503 31. There were, perhaps, reasons why the expenditure should have been greater in the last than in the two preceding years; but the committee cannot understand why the advertising in 1827 should exceed by nearly a thousand dollars the whole expense for advertising in 1825 and 1826.

The aggregate contingent expenses of the Treasury Department, excluding the Land Office, during equal terms of three years, under the late and present administrations, are as follows: In 1822, 1823, and 1824, $63,803 73; in 1825, 1826, and 1827, $72,495 63.

The contingent expenses of the General Land Office during the same periods (which are included among the accounts of the Treasury Department) are as follows: In 1822, 1823, and 1824, $32,603 73; in 1825, 1826, and 1827, $22,549 96.

The contingent expenses in the First, Third, and Fifth Auditors' offices appear to have been moderate and uniform. The expenses in the last year were: In the First Auditor's office, (Mr. Harrison,) $674 51; in the Third Auditor's, (Mr. Hagner,) $880; and in the Fifth Auditor's, (Mr. Pleasonton,) $738 12. The augmentation has principally occurred in the Second (Mr. Lee) and Fourth Auditors' (Mr. Watkins) offices. The contingent expenses of the Second Auditor's (Mr. Lee) office was, in 1825, $1,093 83; in 1826, $970 56; and in 1827, $1,393 96. But the most extraordinary increase has occurred in the contingent expenses of the Fourth Auditor (Mr. Watkins.) To show more clearly how these have been augmented, the committee submit the annual expenditure for the last six years:

1822, when Colonel Freeman was Fourth Auditor	$453 32
1823.....do.....do.....do.....	690 19
1824, Mr. Watkins came in in June	1,636 04
1825	1,226 01
1826	1,732 37
1827	2,132 27

The average amount expended annually for the last three years in each office is, viz:

First Auditor's, (Mr. Harrison,) 10 clerks	$508 52
Fifth Auditor's, (Mr. Pleasonton,) 11 clerks	774 19
Third Auditor's, (Mr. Hagner,) 17 clerks	972 56
Second Auditor's, (Mr. Lee,) 13 clerks	1,151 78
Fourth Auditor's, (Mr. Watkins,) 15 clerks	1,730 22

In four years there have been expended in the Fourth (Mr. Watkins) Auditor's office $6,726 69 for office contingencies. In the last year the contingencies of this office have amounted to the extraordinary sum of $2,132 27. The explanations which have been afforded for this large expenditure are not considered sufficiently satisfactory to furnish a justification for it.

Under the administration of Washington the average contingent expenses of all the Departments did not amount, in the last four years of that administration, to $17,000, a sum very little exceeding the amount which was paid last year for printing and distributing the laws. The average of the first four years of Mr. Jefferson's administration was, for all the Departments, less than $29,000. The average for the same, for the first three years of Mr. Madison's administration—1809-'10-'11—preceding the war, was about $30,000. The war introduced extraordinary expenditures; and it was not until some years after that we could expect the contingencies to return to former rates. That time has certainly now arrived; yet these mere office contingencies of the Departments average $77,454, and in the last year amounted to the extraordinary sum of $82,809. This is far above the expenditure of former periods of peace, and, in the opinion of your committee, is unnecessarily large. A portion of this augmentation is, without doubt, to be attributed to the additional offices created in 1817; but much of it is owing to the absence of some proper check.

In relation to one of the discretionary powers which the Secretary of the Treasury exercises in the appointment of examiners of the Land Offices, with or without the sanction of the President, and which amounts to the appointment of an officer without the advice and consent of the Senate, your committee would refer to the testimony of the Commissioner of the General Land Office (Mr. Graham) for his opinions on this subject. They are satified that it is a power liable to great abuse; that it is an employment which has sometimes been given to members of Congress during a recess, in violation of the spirit, if not the letter, of the Constitution and the laws,* which prohibits a member from holding an office under, or participating in the profits of a contract with, the Government during the period for which he may be elected. Nor does the evil stop here. It is possible to suppose that this irresponsible portion of the Executive patronage may be exercised in a manner still more reprehensible. Your committee would therefore recommend that the present mode of examining the Land Offices be abolished; and that such examination in future be at *occasional*, not *stated*, periods within the discretion of the President; and to avoid the heavy and unnecessary expense of mileage, that the examiners selected shall be some respectable, intelligent, and disinterested citizens residing in the vicinity of the Land Office to be inspected.

As the document recently transmitted from the Treasury, showing the amount of compensation paid to examiners of Land Offices, is not complete in consequence of the account of John Scott, Esq., late member of Congress from Missouri, not having been settled, who was appointed an examiner of the Land Offices in March or April, 1827, your committee have forborne an examination of the statement as to the general disbursements for these services, as in none of these accounts did the amount paid to Land Office examiners generally appear, although, by the evidence of Mr. Graham, it is proved that Mr. Scott has received four hundred dollars, and drawn a bill, not yet paid, for five hundred dollars more, on account of his services.

The expenditures in the Treasury for books, maps, and charts, as well as for other small contingencies, seem large and unnecessary, and, in the opinion of your committee, might be diminished without injury to the public interest.

Your committee, in conclusion on the Treasury Department, would remark that they consider that they have recommended in the new organization of this Department, which they have proposed, "a more effective system of accountability, and for the collection of the public dues," which will likewise operate

* Vol. 4, L. U. S, p. 166. Constitution, Article 1, Secs. 6 and 8.

an essential reduction of expense in the general disbursement of this Department. For all these purposes they ask leave to report a bill.

3. NAVY DEPARTMENT.

"What reductions of expense can be made in the Navy Department in the clerks and officers now acting subordinately to the Secretary of the Navy."

Your committee, not deeming it as any part of your instructions that they should examine the appropriations for what may be called the Navy *proper*—that is to say, the permanent portion of this most valuable establishment, as fixed by law—have confined their attention almost exclusively to contingencies within the discretion of the Secretary; and even these they are unable to scan with the requisite intelligence, as many of them relate to compensations for services purely of a professional character. They therefore abstain from making either an examination of or commenting on sundry allowances to the officers of the Navy for extra duty and expenses; many of them appear to be large and somewhat extraordinary. The contingencies of the naval service ought to be scrutinized annually by the Committee on Naval Expenditures with the utmost care, as it is well known that it is in this branch of the service the greatest abuses have crept into the Navy of Great Britain, in which there is much scope for extravagance and favoritism.

There is, however, one class of contingencies the examination of which has struck your committee with some force; and that is the amount expended for courts-martial, which sum is equal to $18,977 62 for a period of twenty-one months, namely, from January, 1824, to September, 1825, as will appear from the following statement, which may be found in the Senate documents, 1st session 19th Congress:

Aggregate expenses of courts-martial in the case of Surgeon Judson	$515 00
Aggregate expenses in the cases of Captain Smith and Lieutenant Kennon	2,204 80
Aggregate expenses in the cases of Lieutenants Weaver, Warner, Wolbert, Sawyer, Conner, and Sands	2,747 12
Aggregate expenses in the case of Lieutenant Sands	210 00
Aggregate expenses in the cases of Lieutenant Carter, Sailingmaster Mull, and Midshipman Van Dyke	201 50
Aggregate expenses in the court of inquiry in the case of Commodore Porter	2,242 35
Aggregate expenses on his court-martial	2,997 80
Aggregate expenses in the cases of Captain Stewart, Lieutenants Ramage, Whitlocke, and Hunter	7,859 05
Total	18,977 62

A sum nearly equivalent, your committee will venture to assert, to the whole annual cost of the administration of justice in some of the States in this Union. If, however, they have been surprised at this aggregate, they have likewise been astonished that one judge advocate, Richard S. Cox, Esq., who officiated on some of the trials, received for his services nearly one-fourth of the total cost of the trials on which he was employed. For example: he officiated in the following cases, which trials cost the following sums, viz:

On the trials of Lieutenants Wolbert, Warner, Weaver, Sawyer, Conner, and Sands	$2,747 12
On the court of inquiry in the case of Commodore Porter	2,242 35
On the trial of Commodore Porter	2,997 80
On the trials of Captain Stewart and Lieutenants Ramage, Whitlocke, and Hunter	7,859 05
	15,846 32

Of this sum Mr. Cox received for his compensation as follows:

On the trials of Lieutenants Weaver, Wolbert, Warner, Sawyer, Conner, and Sands	$679 33
On the court of inquiry on Commodore Porter	750 00
On the court-martial of Commodore Porter	850 00
On the court-martial in the cases of Captain Stewart, Lieutenants Ramage, Whitlocke, and Hunter	1,350 00
	3,629 33

The committee will now submit a few statements on the office contingencies of the Navy Department. It appears that the contingent expenses of the Navy Department for two equal terms of three years, one beginning with the year 1822 and the other with the year 1825, were as follows:

In the Secretary's Office.—In 1822, '23, '24, $6,942 44; in 1825, '26, '27, $8,886 53.

In the Office of the Commissioners of the Navy Board.—In 1822, '23, '24, $4,933 57; add expenses in Secretary's office, $6,942 44; total, $11,876 01. In 1825, '26, '27, $5,194 83; add expenses in Secretary's office, $8,886 53; total, $14,081 36.

The following statement exhibits, with as much accuracy as the committee have been able to collect and classify the various items in the accounts, some of the principal heads of expenditure, in which the contingent expenses of the Secretary's office have shown the largest increase:

Expenses of stationery.—In 1822, '23, '24, $1,686 30; in 1825, '26, '27, $2,265 99.

Of newspapers.—In 1822, '23, '24, $416 62; in 1825, '26, '27, $624 43.

Of extra clerk hire.—In 1822, '23, '24, $713 03; in 1825, '26, '27, $2,153 45.

Of printing.—In 1822, '23, '24, $89; in 1825, '26, '27, $466 86.

Besides the foregoing heads of expenditure, the committee perceive that a considerable sum, varying from one to two hundred dollars, is annually expended in the purchase of books for the Secretary's office

alone, most of them having no appropriate relation to the naval service of the country—such as reviews, magazines, and other periodical publications, and the fashionable literature of the day.

An expenditure of equal amount for books seems to be annually made in the Commissioner's office.

4. WAR DEPARTMENT.

"What reductions of expense can be made in the Department of War, in the Indian Department, and in the clerks and officers now acting subordinately to the Secretary of War."

In this branch of the public service your committee perceive that the beneficial effects of the organization of the Department under its late administration, and of the industry and intelligence of the excellent officers which were called to the head of the several branches of the staff, are distinctly visible in the rigid enforcement of accountability in the expenditures of the Army.

As it relates to the number of clerks attached to the Department, the Secretary gives it as his opinion that they cannot be reduced with a due regard to the public service. Whether this opinion be correct it is difficult for your committee to form a correct estimate, as the force necessary to conduct the business of the Department is a point connected with the administration which must, in a great measure, be left to the sound discretion of its chief. But they cannot refrain from expressing some surprise that whilst the business of the Department has greatly decreasad in some of its branches, particularly in the Bounty Land and Pension Offices, the number of clerks now employed, it is believed, are as great as they were nine years ago, when the act granting pensions to the officers and soldiers of the Revolution, and those granting pensions and bounty lands to the soldiers of the late war, had so greatly augmented the business of those offices.

Your committee consider that the business tnen was at least twofold what it is at present. In consequence of the diminution of business, a system of reducing the number of clerks had been commenced, as your committee understand, under the late administration of the Department, by refraining from filling vacancies as they occurred, some of which, however, have since been filled by the present Secretary, although it cannot be doubted that there has been a considerable diminution of business since he came into office.

Your committee have been led into a comparison of the relative expenditure of the late and present administration of the Department by the letter of the Secretary which accompanies this report, and regret to state that the improvement which he so confidently asserts to be in progress has not been sustained by the examination.

The Secretary states "that the committee will learn with pleasure that the administration of this Department has continually, for years past, tended to a reduction of its expenditures. To manifest, to the satisfaction of the committee, this economical tendency, I have caused a synopsis to be prepared of the disbursements for the last nine years, divided into three parts. The first embracing from 1819 to 1821, both inclusive; the second, from 1822 to 1824; and the third, from 1825 to 1827.

"By referring to the heads subject to the discretion of the Department it will be seen that the amount of disbursement has been lessened. The item of the Quartermaster Department in the first period was $1,381,045 19, in the last $896,935 89; and, although the great number of troops in the first period must be taken into the account, yet, after making the proper allowance for this circumstance, still the relative saving must be obvious. So also with the contingencies of the Army. In the first period this item of expenditure amounted to $160,100 94, in the latter to $39,391 58; and in comparing the first year, 1819, in the first series, with the last year of the last series, 1827, it will be found in the former case it amounted to $82,563 91, and in the latter to $10,922 34. So also with the contingencies of the Indian Department. In the second period (before which the contingencies were blended with the pay of agents, &c.) it amounted to $315,959 55, in the last to $292,300 33; showing a saving in that branch of expenditure of $23,159 22 in three years."

It will be seen from this extract of the Secretary's letter that he institutes the comparison to prove the diminishing expenditure of the Department; not between the expenses of the first three years of the present administration and those of the last three years of the former, but with the years 1819, 1820, and 1821. Compared with those years the superior economy which he attributes to the present administration might seem to be established; but it is obvious that the comparison is not calculated to make an impression according to the real state of the case.

Passing over the important fact that the number belonging to the Military Establishment during the first period was upwards of ten thousand, whilst in the last it was only six thousand four hundred, the Secretary has omitted to state that the great improvement was effected under the late administration of the Department, through the means of its improved organization which took place in those years, which have been selected by him to compare the disbursements under the present and late administrations.

It is well known that when his predecessor came into office the greatest disorder existed in the Department; but that through his industry and energy, aided by the faithful officers he placed at the head of the several branches of the staff, abuses were corrected and the Department placed in a condition greatly improved; in which condition it was passed over to the present Secretary.

The committee would refer to the report of the late Secretary under the resolution of the House, 1st session 17th Congress, vol. 5, No. 83, as containing a minute statement of the comparative expenses of the Army for those years, which fully shows the rapid improvements which were then in progress. They will present from the report only a few general results. The expenditures of the Army for the years 1819 1820, and 1821, were, respectively, as follows: $3,663,775, $3,061,884, and $2,327,552; showing a reduction of the last year as compared with the first of $1,336,223.

The point under consideration will, perhaps, be more strikingly illustrated by the fact established satisfactorily in the report, that the expense of the establishment in the year 1819 was $434 for each individual, including officers and men actually in the service, while in 1820 it was reduced to $315, and in 1821 to $287; making a difference of $147 in the expense per man between the first and the last of these years. By passing over the period immediately preceding the commencement of the present administration, and taking these three years of progressive improvement as the basis of comparison, the credit which is fairly due to the preceding administration is attempted to be transferred to the present. In order to ascertain whether the improvement of which the Secretary speaks has really been effected under the present administration, a comparison ought to be made between the periods which comprehend the

last three years of the late administration and the first three of the present, which, having been omitted by the Secretary, the committee will proceed to present.

The table accompanying his letter does not show the expenditures under the heads of appropriation; but taking those which they contain it will be found that the aggregate expenses of the years 1825, '26, and '27, as stated in the table, were $5,121,336, whilst those of 1822, '23, and '24 amounted to $4,055,248; making a difference of $1,066,088 against the present administration, and showing a considerable increasing instead of diminishing expenditure, as stated by the Secretary. The addition of the items of appropriation which are omitted in the table of the Secretary would considerably increase this difference. The whole amount of the expenditure of the present administration of the Department in the years—

1825, $5,750,774, E. R, 1st session 19th Congress, vol. 4, No. 69;

1826, 6,195,281, E. R., 2d session 19th Congress, vol. 1, No. 132;

1827, 5,707,899, E. R., 1st session 20th Congress, ——— No. 129; making a total of $17,653,954: whilst those of the years—

1822, $5,467,424, vol. 4, E. P., 2d session 17th Congress, No. 55;

1823, 5,279,740, vol. 4, E. P., 1st session 18th Congress, No. 57;

1824, 5,259,615, ———, E. P., 2d session 18th Congress, No. 67; making a total of $16,026,779: resulting in a difference of $1,627,175 against the present administration.

The committee can perceive no justifiable reason for this increase. The present administration received the Department from its predecessor not only in a highly improved but in a condition still improving, as will be apparent from the disbursements of the years 1822, '23, and '24, in which the expenditure of each succeeding year is less than the preceding, but which is renewed in the first two years of the present administration. What marks more strikingly this contrast between the expenditure of the two periods is the fact that considerable reduction in price has taken place within the last three years of most of the articles which enter into the supplies of the Army, which ought to have been followed by a correspondent reduction of its expenditure instead of an increase, as is the fact. While presenting these results your committee feel bound to state that they have every reason to believe that the officers at the head of the several branches of the staff, who are charged with the details, have performed their duty with fidelity, and strict responsibility has been invariably enforced, no neglect or falling off being perceptible in the respective bureaus; so that whatever may be the cause of the increased expenditure, it cannot, in fairness, be traced to their neglect.

Your committee are constrained to remark that some of the office contingencies of the Department of War appear to be large. They notice the sum of $1,165 20 paid for newspapers; and for printing, $7,679 51. They subjoin the following statement of the contingent expenses of the War Department for two equal terms of three years:

Last administration.—In 1822, 1823, 1824	$21,707
Present administration.—In 1825, 1826, 1827	28,676

Your committee will forbear to exhibit a statement of the expenses for surveys, as that subject has so recently engaged the attention of Congress; but in looking into the specifications of this account they are satisfied that no effectual remedy can be applied to an expenditure so liable to abuse, unless the appropriation itself is made specific for each object contemplated to be surveyed.

The allowances made to officers for extra duty, although in many instances high, appear to have been generally made in reference to the principles of pre-existing usage. As this is a branch of expenditure essentially liable to abuse, your committee think that the House ought early to direct the attention of the Committee on Military Affairs to it. In the meantime your committee have prepared, and will hereafter report, a bill regulating the allowance of forage to the officers of the Army, which will be convenient and beneficial to them, and operate as a saving to the Government.

Your committee will now proceed to exhibit the results of their inquiry into the contingent expenses of the Indian Department, the management of which devolves discretionary trusts on the Secretary of War, important and various.

The average amount per annum of this appropriation may be stated at $95,000.

The relation which the Government of the United States bears to the various Indian tribes creates the necessity of numerous and large expenditures, which cannot be foreseen, and therefore cannot be specified in any appropriation law.

To meet these exigencies it has been the practice of Congress to appropriate a sum in gross and place it under the discretion and control of the Secretary of War, prescribing the mode and manner in which the same shall be drawn from the public Treasury and accounted for.

Such is the nature of the service in which this sum is to be expended that more reliance must be placed in the integrity of the agents employed by Government for its faithful appropriation than upon any *mere system* of accountability which has been heretofore prescribed, or any which the committee can suggest; they recommend as a partial remedy specific appropriations. The rule, important in all public expenditures, and in none more than that of the Indian appropriations, ought never to be departed from by the disbursing or accounting officers of the Government, and that is, money appropriated for one purpose by Congress should never be applied to an object totally different from that embraced within the letter and spirit of the act of appropriation. It is believed that many instances of a disregard of this principle will be found to exist in the accounts which have been submitted to the committee.

For instance, when Congress appropriated $95,000 for the contingencies in the Indian Department, it could not have been the intention of that body that the Secretary of War, or rather his clerk at the head of the Indian office, could, at his discretion, apply any portion of it to the employment of an additional clerk in the Indian office. Witness the payment made to Mr. Thompson of $753.

The expenditure of $310, by a clerk in his office, in the purchase of books, which treat of politics, statistics, history, biography, and theology, is liable to the same objection. If it be competent for the clerk in this office to purchase books and pay for them out of the contingent fund for the Indian Department, it is equally within the competency and unbridled discretion of every other clerk who may desire to constitute a library in his office at public expense.

Another striking illustration of the misapplication and perversion of this fund will be seen in the account and amount paid to Dr. Sibley, of Louisiana, viz: $1,790. The facts of this case are briefly these:

About the period or shortly after the acquisition of Louisiana Dr. Sibley was resident in that country, and, in some way, was employed by the Government as Indian agent or factor, part of the time at four dollars per diem; afterwards at a fixed salary of $1,000, and four rations per day. In August, 1824, Mr.

Sibley wrote to the Second Auditor that "the then member of Congress from the State" (of Louisiana) had a power of attorney to settle his accounts, and was in possession of all his papers.

Dr. Sibley's relations with the Government as agent or factor had ceased many years. In 1823 his accounts, as appears by the papers, were settled, and a balance of $584 03 found due by him. Not until the year 1824, probably in the spring of that year, were the items hereafter referred to ever presented to the Department for payment. They were not *then* allowed or paid.

His demand consists of the following items:

For transcribing answers	$150
For horse	120
Bringing down a boat	120
Three copies of La Harp's Journal	500
Expenses in fitting out and preparing to bring on some Indians to the city of Washington	900
	1,790

The committee will here remark that the whole of these demands originated about the year 1805. The lapse of twenty years before there was any official notice of their being presented for payment of itself furnishes strong presumption against the justice of the claim; nor is that presumption weakened by a critical examination of the evidence upon which the Department directed the claim to be paid out of the contingent fund of the Indian Department in 1826.

No part of the account, except the sum of $900, seems to connect itself with the Indian Department, and your committee are at a loss to discover on what grounds it was paid.

In some instances claims have been passed, so far as the committee have been able to examine them, which, though they appear to connect themselves with the Indian service, seem extravagant in amount, and destitute of exact specification and vouchers, which constitute the best security against fraud and imposition.

The committee now refer to the following items as coming under the one or both of these classes:

Paid James P. Denny, secretary to the Creek delegation, upon his own certificate	$1,365 37
Jesse Brown, for board of Creek delegation from December, 1825, until April, 1826	3,273 88
J. Tennison, board of McIntosh's party	1,040 00
Board of John Crowell, Indian agent, and three Indians	146 00
Paid for boot and shoe blacking for Indians	215 00
*Paid Moritz Furst *for taking President Adams' likeness, &c*	1,000 00
Paid within the last three years for taking portraits of Indians	3,190 00

The amount paid and claimed out of the contingent fund by Thomas L. McKenney, a clerk, who has to a great extent the control of the fund, furnishes another instance of profuseness and want of strict accountability.

Mr. McKenney's salary as clerk is fixed by law at $1,600. In May, 1827, it appears that for some purpose he was sent by the Secretary of War upon a mission to several Indian tribes, and the sum of $1,750 advanced to him. Mr. McKenney was also associated with Governor Cass to hold a treaty with the Indians at Green Bay, for which he charged, as compensation, the sum of eight dollars for every twenty miles travelled, and eight dollars per day while engaged in making the treaty at Green Bay. Mr. McKenney settled his accounts with Governor Cass, or Mr. Forsyth, his secretary, and charged not only his mileage for going, but also $660 for returning from Green Bay to Washington, and which journey he did not make. From this point, in pursuance of the instructions from the War Department, he visited, by way of St. Louis, the Indians in Mississippi, Alabama, and Georgia, thence to Washington. For this latter service, upon his return, he presented his accounts to the Department for settlement, amounting to $4,532.

The Secretary, contrary to the usual practice in the Department, if not in violation of the law of Congress, which directs in what manner the accounts for Indian expenditures shall be settled, issued his requisition for the balance said to be due Mr. McKenney, without requiring or permitting his accounts to be first stated, settled, and vouched at the proper accounting offices, the Second Auditor and Second Comptroller of the Treasury. A long correspondence ensued between the Second Comptroller, Mr. McKenney, and the Secretary of War, which possesses no interest other than it illustrates the fact that the Secretary of War and his clerk claimed the right to use the fund referred to at their discretion, and that no other voucher than the approbation of the expenditure by the Secretary of War was required. This principle was resisted by the Second Comptroller, who referred the subject to the President of the United States, and he decided that the principle contended for by the Second Comptroller was correct in reference to the case of Thomas L. McKenney.

The whole amount received and claimed by Mr. McKenney, and which has received the sanction of the Secretary of War, for his personal services, expenses, and allowance as Commissioner at Green Bay, and for his visiting the southern Indians, was $6,412 for about six months' service. If to this be added his salary as clerk in the Department for the same time, $800, the whole amount which has been paid and allowed him, including the sum of $1,344 for which the requisition of the Secretary of War was issued, for six months, for the objects stated, will be $7,212.

Numerous other instances of extravagant and legally questionable allowances could be cited, but these are deemed sufficient to suggest the propriety of some new organization of the Indian Department by which a more strict accountability will be secured and greater economy established in the expenditures.

Your committee would therefore recommend that the salaries of the interpreters should be specific; all annuities to the Indians; all expenses attending the employment of blacksmiths, strikers, implements, and iron; all expenses of agencies, including the building of houses, repairs, clerk hire, and other expenses; for which purpose your committee will report a bill.

* A literal transcript of the entry in the account sent to the committee.

5. GENERAL POST OFFICE.

"What reductions of expense can be made in the number of officers, and the amount of compensation which they receive, in the Postmaster General's Department?"

The committee would beg leave to refer to the letter of the chief of that Department, marked No. 6, by which it will appear that the efficiency of this branch of the public service is in a condition highly improved and improving; that whilst the sphere of its usefulness is immensely augmented, its revenue is going on in a corresponding ratio of productiveness. Under its present able administration it has been brought up from an annual charge to the Government of upwards of $58,000, to yield, in 1827, a net profit of $100,312, with an extension of post routes and post offices so much increased and increasing that your committee concur in opinion with the head of this Department that Congress must expect rather a gradual augmentation of the clerks and officers in it than that they should be diminished—a fact for which the public will, however, have ample compensation in the extended usefulness and augmenting profits of a branch of our public establishments which subserves so many purposes of commercial communication, political intelligence, and social intercourse.

"6th. And that the committee be further instructed to examine the several contingent funds of each of the Departments, and to report the amount and objects for which disbursements have been made from these funds; and that they report the amounts, vouched and unvouched, which have been paid from the secret service fund since the first day of July, 1790, or the fund regulating the contingencies of foreign intercourse, and of the fund for the expenses of the intercourse with the Barbary Powers."

As your committee have already exhibited, separately, under the appropriate head of each Department, the result of the examination which they have made of the contingencies of all of them, no part of the requirement of this branch of the resolution remains to be performed, excepting the exposition of the expenditures made by the Departments for printing and advertising, which expenditures form what may be well called the

EXECUTIVE PATRONAGE OF THE PRESS.

There are throughout the United States about eighty-two regularly appointed publishers of the laws, who also enjoy the incidental profit of publishing the advertisements of the Government, and about sixteen or eighteen printers, other than those appointed to print the laws, who do occasional advertising or job work for the Government.

The following table will exhibit the amount paid for printing, advertising, and subscription to newspapers by the Executive Departments at the seat of Government for the last three years, and for the General Post Office for the last two years:

War—Newspapers	$1,165 20	
State.....do	1,633 27	
Treasury..do	2,776 73	
Navy.....do	624 43	
		$6,199 63
War—Printing	7,679 51	
State....do	40,706 15	
Treasury do	8,803 99	
Navy... do	466 86	
		57,656 51
		63,856 14
General Post Office		14,174 00
		78,030 14

When your committee look at this amount of patronage, placed without control or responsibility in the hands of the Executive, or in those of the subordinate chiefs of his Departments; and when they reflect on the moral mechanism upon which this patronage acts with a power that seems irresistible, they would deem their duty very inadequately discharged if they did not propose some remedy for abuses already existing, and essentially liable to be augmented.

Your committee will not stop to argue what they predicate as an undeniable fact, that, by the employment of the expenditures of the contingent funds of the Departments, a Government press is, to all intents and purposes, effectually established, as much so as if there were an annual item in the appropriation bill for the purpose of purchasing the joint and harmonious action of one hundred papers in the uncompromising vindication of those in power, and in the unsparing abuse of those who are not. The danger which assails the freedom of the press, through the insinuation of this species of influence, is far more serious than any star chamber code of pains and penalties. For, in the latter case, the pride of man, which revolts at oppression, insures in the end a triumphant resistance; but in the former, the very weakness of his nature invites a subjugation of his independence.

This pecuniary censorship of the press must end in its utter prostitution to an indiscriminate support of the acts of the Government, however injurious to the rights and interests of the people.

Believing that no administration, if it be wise, virtuous, and patriotic, requires the aid of a Government press, and if it be not, that for precisely that reason it ought not have it, your committee propose, as far as practicable, the abolition of this branch of the Executive patronage.

1st. That the laws of the United States, hitherto printed under the directions of the Department of State, should be printed under that of the Clerks of the Senate and House of Representatives; and that they advertise for contracts to print them, giving the contract to the lowest bidder, according to the usual securities provided in all cases of public contracts.

2d. That the Secretary of State shall designate such printers as are appointed by the Legislature of each State to print its laws, to print those of the United States in said State, not exceeding one in each State.

3d. That the printers who print for both Houses of Congress shall print, within the District of Columbia, in their papers the laws of the United States and the advertisements of the Departments.

4th. That the job printing, stationery, and binding of each of the Departments shall be furnished by contract; proposals for which shall regularly be advertised for in the public prints, and according to the usual provisions attending such contracts; the contract given to the lowest bidder.

5th. That the distribution of the laws of the United States by public carriers be abolished, and that the former practice of transmitting them by mail be adopted.

6th. That one and all the Departments be limited by specific and moderate appropriations in subscribing for newspapers at the public expense—a practice which, in the extent to which it has prevailed, is expensive in its cost, and not less so in the diversion of the industry of the officers and clerks of the Departments; and that this privilege be limited exclusively to the head of the Department.

The committee, in terminating their investigation of the several Executive Departments, deem it necessary unequivocally to declare that they considered it no part of their duty in examining present abuses to seek out for precedents, remote or recent, to justify or palliate them; that such might have been found in some cases in the practice of previous administrations is altogether possible. Whenever such an issue has been presented to them, the only question which they have deemed proper for their consideration was, is the expenditure according to law? and was it made with a due regard for the public interest? Indeed, the existence of such precedents would only have called more loudly for reform.

FIXED AND CONTINGENT EXPENSES OF THE HOUSE.

"And that they further report whether the compensation of members of Congress should be reduced, and whether the fixed salaries of the officers of this House and its contingent expenses can with propriety be diminished."

Your committee are aware of the difficulties incident to the first branch of this resolution, as it is a subject which has often been discussed, and upon which there is yet great diversity of opinion. To all per diem compensations there is the intrinsic objection that they are apt to produce a tendency to indolence and waste of time in the agents employed, whilst there are many and serious objections to fixed salaries, in which no time is prescribed which shall be devoted to the discharge of the duties thus remunerated. In considering this subject in many of its relations your committee have deemed the pernicious and inconvenient duration of the alternate long sessions of Congress as one of the most serious evils attending the national legislation of the country, and visiting the heaviest expense on the contingent fund of the House. With a view of reducing the duration of the first session, which, in fact, will reduce very essentially the amount paid to members of Congress for their compensation, they recommend that the compensation of the members during the first session of each Congress be reduced to two dollars per day from and after the first Monday in April, if Congress should sit beyond that day. Before the first Monday in April, as well as during the second or short session to the fourth of March, they do not propose to recommend any reduction.

This plan is founded on the basis that three months for the second session and four for the first will be amply sufficient to do the public business, during which the full compensation now allowed is to be received. But if Congress, either from procrastination, short daily sessions, or an excessive indulgence in debate, should remain in session longer than the first Monday in April, then a sum not more than sufficient to cover the absolute expense of subsistence should be allowed during such prolongation of the session.

Your committee think that a uniform rule should be established in the calculation of mileage; that the cashier of the House be directed to obtain from each of the members the name of the next post office to his residence, and then procure from the Postmaster General an exact statement of the distance of that post office from the seat of Government, on which his mileage is to be computed. We believe great abuses have taken place from the various and arbitrary manner in which members have sometimes estimated their mileage—not taking post routes, but founding their calculations on the navigation of steamboats through all the sinuosities of large and extensive rivers. They would, moreover, recommend that the accounts of each member be certified by him on honor; and that the certificate state that he has deducted from his account every day on which he may have been absent from the seat of Government during the sitting of Congress.

And for all these purposes your committee will report a bill.

As it respects the number and fixed salaries of the officers of the House, they regret that, from the short time allowed them, compared with the comprehensiveness of their labors, they should have been unable to investigate this branch of the subject, together with the contingencies of the House, with the scrutiny they deserve. The opinion of the Clerk (an experienced officer) is certainly entitled to weight; and your committee will not venture to recommend any reduction of the latter, although they think, by a new distribution and classification of the labors of the clerks, it might be effected to perhaps a limited extent.

In relation to the contingent expenses of the House, much depends on the discretion of the Speaker of the House and the vigilance of the Clerk, but much more on the attention of the House to its appropriations and the amount of printing which may be ordered. It often happens that large documents are directed to be printed which, in fact, are altogether useless; and the evil is greatly increased when numerous copies are ordered, which, in many cases, swells the profit of the printer without the smallest benefit to the country.

Your committee consider the size of the documents as unnecessarily large, which arises, first, from a habit of prolixity and detail into which all the Departments are, more or less, liable to fall, more especially as a new practice has been introduced by the Secretaries of the Departments sending the reports of their clerks or heads of bureaus instead of condensing them and making them substantially their own communication; and, secondly, from the practice in printing the communications of using title pages for all of them. If the title be placed at the head of the communication, and the printing of the communication itself immediately follow, an essential saving in expense of binding as well as the cost of printing would accrue. This, together with an alteration of the mode of printing the figure or ruled work by substituting in many cases the octavo for large tables, would be productive of a valuable saving, for which they will report a joint resolution. They moreover strongly recommend to the consideration of the House the expediency of organizing as one of the standing committees of the House a committee to be entitled "The

Committee on Printing," to which the expenditures, alterations, and reforms on this subject should be confided, together with a reference of every document over one hundred pages communicated or reported to Congress, to report on the necessity or propriety of printing it before the House makes such order.

In the course of their examination of the printing of the House your committee ascertained that Messrs. Gales & Seaton, printers of the House, had deviated from the conditions of the resolution of Congress of the 3d of March, 1819, under which they were bound and had contracted to perform the printing.

The resolution directs "that all printing, other than rule or table work, is to be done in a small pica type, on royal paper, in pages of the same size as those of the last edition of the Laws of the United States, including the marginal notes."

By a comparison of the size of a page of the documents printed by Gales & Seaton since the 3d of March, 1819, with that of the edition of the Laws of the United States referred to in the resolution just cited, it is found that each page of the octavo size, small pica type, wants from 150 to 220 ems* of the size of the page of the edition of the Laws of the United States, by which the size of the page of the documents and journals of Congress has been reduced nearly one-seventh from the standard established by law.

By reference to the Appendix, all the information which your committee have collected, together with their correspondence with Messrs. Gales & Seaton, will appear, which they do not conceive that it is necessary to recapitulate. It will be sufficient to say that your committee are satisfied that the abbreviating the length and diminishing the width of the page, contrary to the express injunction of the resolution, have added, on all close printing of small pica type, an expense of seven per cent. excess to the United States. Messrs. Gales & Seaton, however, contend that the Government has gained as largely by the improved and economical mode in which they have brought out the table work, which your committee do not feel competent to decide. Of the default in the close printing they feel convinced, even from the examination of the witnesses of Messrs. Gales & Seaton, whilst they are ignorant how far the United States have been indemnified by the table work, or whether the manuscript documents now sent by the Departments do not coerce the altered mode of printing them, or whether Messrs. Gales & Seaton were not bound to bring them out in the precise and economical form in which they contend they are printed. It is due to these gentlemen to state that the diminution of the printed page was made not by their suggestion, and that they were ignorant of it until informed by their foreman that he had effected an arrangement for such a reduction in the size of the page with the Secretary of the Senate and the Clerk of the House of Representatives.

Your committee, desirous that justice should be done to Messrs. Gales & Seaton as well as to the United States, will hereafter offer a resolution for the appointment of three intelligent and disinterested printers to examine the whole of the documents printed by Gales & Seaton, and to report to the House at the next session the precise variance between the amount of the work actually done by Messrs. Gales & Seaton and the terms of the resolution.

Your committee subjoin a statement from the books of the Treasury of the total amount received by Messrs. Gales & Seaton as printers to Congress to 1827, inclusive.

For the Senate	$89,678 25
For the House of Representatives	182,205 12
	271,883 37

This does not include the printing of the present session, which will make the total received and receivable by them on the 1st of July at least $325,000. They received last year upwards of $72,000—a sum exceeding by $7,000 the total expense of printing and stationery of all the branches of the Government, as estimated by a committee of this House in 1819, which was computed at $65,000.

Among those savings in the contingent expenses of the House which may be called minute, but are valuable on the score of example, your committee would recommend that the practice of folding any other documents in the public stationery, except those printed by order of the House, be prohibited; for on inquiry they find that for documents, speeches, newspapers, pamphlets, &c., about 501 reams, at a cost of about two thousand two hundred dollars, have been already used the present session. And further, that the privilege given to each member to subscribe during the session of Congress for three daily papers at the public expense be abrogated. Independently of this abuse affording an evil example to the other branches of the Government, the indulgence must produce an abstraction of the attention of the member from the business of the House.

Finally, on the subject of retrenching our own expenditures, your committee would recommend that the practice, too often indulged in by the House, of voting to themselves copies of books in cases where extra editions have been ordered, be discontinued; and that all the contingent expenses be rigorously and inflexibly confined to such objects as may be indispensably necessary to the transaction of the public business, not to the luxury, ease, or convenience of the members.

And for this purpose they propose hereafter reporting sundry resolutions.

"*And further, that they inquire whether any modification of the Sinking Fund act can be made, with a view of producing a more speedy extinguishment of the public debt.*"

The views which your committee would have presented, and the measure which they would have recommended for the accomplishment of this most desirable object, have been anticipated by the bill reported, since the commencement of their labors, by the Committee of Ways and Means for carrying certain balances at once to the credit of the Sinking Fund without permitting them to accumulate in the Bank of the United States, producing no interest—they having nothing to add to this branch of the inquiry than to suggest for the consideration of the Committee of Ways and Means the propriety of directing an early exchange of the six per cent. stock now redeemable and hereafter redeemable at the pleasure of the Government for one bearing an interest of four and a half per centum. About half the public debt consists of six per cents, most of which will not probably be redeemed for at least a few years. As a general rule, the committee would abstain from any interference with the public funds or the circulation of the country; but a measure of economy may be adopted in relation to the six per cents actually redeemable, and for the redemption of which the means of the Treasury are not now adequate without in any manner disturbing the currency of the country. The actual Government rate of interest is now only four per cent.; and there is no substantial reason why we should continue to pay annually six per cent. on a stock which we may redeem at any moment we please. If the present holders are unwilling to

* The em is a technical term, and means a square of the size type used.

convert their stocks into others bearing an interest of four and a half per cent., which is above the current rate, your committee would recommend that they be paid off through a temporary loan redeemable at the pleasure of Government. Former measures of this character, before these stocks were actually redeemable, were attended with some difficulty in their execution; but now, that they may be redeemed or not at the option of the Government, it is for us to say whether we will pay from one and a half to two per cent. excess of interest annually on some twenty millions of our debt. By such a measure there would be an annual reduction of the interest on the public debt of about $300,000—a measure of economy not unworthy the attention of Congress.

In closing this report, in which the multiplicity of subjects confided to your committee has baffled every effort to compress it within such limits as would have been acceptable to themselves and not fatiguing to the House, they have supposed that a statistical table would be satisfactory, showing the gradual increase of the income and expenditures of this Government from 1789 to 1827 inclusive, which they have prepared from documents obtained from the Treasury and have appended to this report, marked No. 10. It will be seen by reference to this document that under General Washington's administration the expenses of the Federal Government averaged, from 1792 to 1796 inclusive, $2,794,221 81 annually, excluding, of course, the charges on the Treasury on account of the public debt. For the four years' administration of the elder Mr. Adams, $5,337,087 79. In the eight years under Mr. Jefferson, $5,137,598 61. In 1809, 1810, and 1811, under Mr. Madison's, before the war, $6,106,119 76. In 1822, 1823, and 1824, under Mr. Monroe, (after the expenses of the war and its arrearages were paid,) $9,980,647 60, excluding, for obvious reasons, the five millions which were paid in 1824 on account of the purchase of Florida. Under the present administration the same class of expenses, during the years of 1825, 1826, and 1827, have averaged the sum of $12,427,754 60.

The steadily progressive increase of our expenditure shows the tendency of all Governments, however free, to a gradual accumulation in the variety and expensiveness of their establishments; and although for these aggregate expenses the Executive cannot be held solely responsible, as many of them are the result of the legislation of Congress, yet the amount is made up, in part, of many sums, the disbursement of which depends upon his discretion, to say nothing of the influence which he has the power of exercising over fixed and specific appropriations which are usually made on estimates or recommendations of the Executive, and hence, primarily as well as ultimately, under his control.

That frugality is a virtue not only essential to the purity but to the very existence of a Republic, is a cardinal maxim which cannot too often be inculcated; and your committee know not where to find its lessons better enforced than by the example of that Chief Magistrate who has left us his precepts in these truths which may well be said to form the chart and compass by which this confederate Government ought to be steered, and upon which the safety of its voyage so much depends:

"Considering the general tendency to *multiply offices and dependencies, and to increase expense* to the ultimate term of burden which the citizen can bear, it behooves us to avail ourselves of every occasion which presents itself for taking off the surcharge; that it never may be seen *here*, that, after leaving to labor the smallest portion of its earnings on which it can subsist, Government shall itself consume the residue of what it was instituted to guard. In *our care*, too, of the public contributions intrusted to our direction, it would be prudent to multiply barriers against their dissipation *by appropriating specific sums to every specific purpose susceptible of definition; by disallowing all applications of money varying from the appropriation in object, or transcending it in amount; by reducing the undefined field of contingencies, and thereby circumscribing discretionary powers over money;* and by bringing back to a single Department all accountabilities for money, where the examination may be prompt, efficacious, and uniform."

In conclusion, your committee are aware that the session is too far advanced to allow them to indulge the hope that all of the reforms they propose can be acted on at present; but they must be permitted to remark, that however irksome the task they have performed, and revolting in some of its features, (for retrenchment in the usual understanding of the term is considered as parsimony, and "all parsimony is of a quality approaching to unkindness, as every reform must operate as a sort of punishment,") they will nevertheless be abundantly rewarded if, in the end, they have struck out a single truth which can add anything to the purity, justice, and economy with which the affairs of this Republic should be administered.

APPENDIX.

No. 1.

WASHINGTON, *February* 13, 1828.

SIR: I do myself the honor of transmitting you a copy of a resolution adopted yesterday by the Committee on Retrenchment, and beg leave to solicit your attention to that part of it relating to your Department, from which the committee will be happy to receive the information required.

I have the honor to be, very respectfully, your obedient servant,

J. HAMILTON, JR., *Chairman.*

IN COMMITTEE ON RETRENCHMENT, *February* 12, 1828.

Resolved, That the chairman of the committee address a letter to the head of each of the Executive Departments and of the Post Office Department, requesting information whether, in their opinion, there be any officers in either of those Departments whose services may be dispensed with without detriment to the public interest, or if the salaries of any of them can be reduced consistently with justice and propriety, and, in general, whether any of the expenses incident to those Departments can be reduced without impairing the efficiency of their operations.

No. 2.

DEPARTMENT OF STATE, *Washington, February* 29, 1828.

SIR: I have received the letter which, as chairman of the committee of the House of Representatives on retrenchment, you did me the honor to address to me on the 13th instant, transmitting a copy of a resolution which had been adopted by the committee, and, having given the subject embraced in the resolution attentive examination and the most respectful consideration, I beg leave now to communicate my answer to be laid before the committee. The resolution, in substance, calls for the expression of my opinion, first, whether there be any officers in the Department of State whose services may be dispensed with without detriment to the public interest; secondly, whether the salaries of any of them can be reduced consistently with justice and propriety; and, thirdly, in general, whether any of the expenses incident to this Department can be reduced without impairing the efficacy of its operations.

As to the first two objects of inquiry above mentioned, my opinion is that there can be no reduction in the number of the officers employed in the Department of State without detriment to the public interest, nor in the salaries of any of them without injustice or impropriety. Within a few years past there has been a great increase in the general business of this Department, arising from the progressive increase of the wealth and population of the country, and from the establishment of independent Governments upon this continent. The number of permanent American missions which we now send from this country is equal to the number that we send to continental Europe; and the public interest has required the creation of various consular and other commercial agencies in this hemisphere, but not in the same proportion. Although those missions were authorized and several of them had proceeded to their residences during the preceding administration, most of them have left the United States, and much the greater part of the other appointments referred to have been made during the present administration. These foreign agencies have greatly extended the correspondence of the Department, created a necessity for numerous translations from foreign languages, required much additional copying, and otherwise added to the labors of the Department. The committee will readily comprehend that the new duties arising from the above causes have rendered indispensable additional assistants to perform them, but the number of persons employed in the Department has not been increased in anything like an equal proportion with the increase of its business. So far from its being expedient to discharge any of those persons, the public service would be promoted by some addition to the number of clerks in the Patent Office; and an increase in the salary of its Superintendent, which has heretofore been repeatedly proposed, is again respectfully recommended. The receipts in that office are quite adequate to cover every expenditure already authorized and any that its additional wants may require. In respect to those wants I beg leave to refer to a letter which the Superintendent, though confined by a long and dangerous illness, has recently felt it his duty to address to me, and which, under the designation of the letter A, accompanies this communication.

Before I proceed to answer the third and last inquiry of the committee, whether any of the expenses incident to this Department can be reduced without impairing the efficacy of its operations, I ask permission to present some general and explanatory observations in respect to the disbursements of the public money which are made through the Department of State. These disbursements are made out of appropriations of two kinds; first, those in which both the amount of the appropriation and its particular object are specified; and, secondly, those in which, although the amount of the appropriation is limited and the general purpose of it is mentioned, its particular object is not definitively stated. The salaries of our diplomatic agents form an example of the first description of appropriation, as the contingent expenses of foreign intercourse do of the latter. The first depends exclusively upon the pleasure of Congress; and it is only over the last that a discretionary power is or can be exerted by the Executive, through the Department of State, in a course of administration. During my service in the Department I have endeavored to enforce the most rigid economy which appeared to me compatible with the public interest. Particular items of expenditure will vary from year to year according to exigencies, and the amount of disbursement will consequently be greater or less. There has been, for example, a vast deal of extra copying in the Department during the last two or three years. The papers relating to our northeastern boundary, consisting of upwards of twenty manuscript volumes, and numerous maps and other detached papers, have been twice transcribed in that time. But the total amount of appropriations for the service of this Department has been progressively diminishing during the last three years. On that subject, as well as the expenditures of the Department, I beg leave to present to the committee, from the document marked B, accompanying this letter, the three following views:

The first is a comparison of the amount of appropriations made during each of the last three years of the preceding administration with that made during each of the first three years of the present, applicable to the public service, through the agency of this Department.

LAST ADMINISTRATION.		PRESENT ADMINISTRATION.	
1823	$154,800	1826	$350,932
1824	309,350	1827	290,550
1825	336,050	1828	89,550
	800,200		731,032

The cause of the smaller amount of appropriation for the year 1823 compared with several succeeding years was, that the sum of $100,000, which, by the act of May 4, 1822, was appropriated for such missions to the independent nations on the American continent as the President of the United States might deem proper, had remained in the Treasury unexpended. The appropriation for 1825 is placed under the last administration; because it was, in fact, made, and the estimates for the public service were prepared, under that administration, although the disbursements of it took place, in conformity with those estimates, under the present. The aggregate amount of appropriations during the latter term of three years is less by $69,168 than in the former; and, excluding the appropriation in 1826 of $40,000 for the Panama mission, (of which $26,953 52 only was expended,) which will not be an occasion of permanent expenditure during each successive year of the latter term, the amount appropriated, in comparison with the year immediately preceding, has progressively decreased, until that for the service of the present year has declined as low

as $89,550, a little more than one-fourth of the amount appropriated in the last year of the preceding administration. I do not wish to be understood as stating that the smallness of the sum appropriated for the current year is attributable to permanent retrenchments, and is therefore to be regarded as the standard for future years; but it is the effect of economical savings from former appropriations, all of which might have been disbursed if there had been a disposition to indulge in extravagance.

The next view, which is now offered to the committee, is that of a comparison of the *actual expenditures* during the last three years of the past and the same period of the present administration. The expenditures of—

LAST ADMINISTRATION.		PRESENT ADMINISTRATION.	
1822	$173,879 51	1825	$306,731 74
1823	314,668 56	1826	255,296 20
1824	270,731 27	1827	287,463 42
	759,279 34		849,491 36

The amount during the latter term exceeds that of the former by $90,212 02; but this difference may be satisfactorily accounted for. In the first place, there was a remittance in the month of December last of $70,000 to our European bankers, which is charged to the service of the year 1827, although, in point of fact, it will be disbursed in the year 1828. In the next place, the expenditure of the year 1822 amounted only to the sum of $173,879 51; because the sum appropriated to the missions to the new American nations was not applied in that year. It was in succeeding years that those missions were despatched; and it has been only since the commencement of the present administration that all of them have been put in operation, and that the entire expense, therefore, of maintaining the whole of them has been incurred. A comparison of the expenditure of the last two years of the past administration, with the two years of the present administration, though, for the reasons just mentioned, still operating unfavorably to the latter, will be more just. The aggregate amount of the expenditures of the years 1823 and 1824 was $585,399 83; and the average of each year was $292,699 91½. The aggregate amount of the expenditures of the years 1825 and 1826 was $562,027 94; and the average of each year was $281,013 97. The average expenditure of each of the three years of the present administration, being $283,163 78⅔, although including the before mentioned recent remittance, and the expense of the mission to Tacubaya, is less than the average of the last two years of the past administration. The preceding views of appropriation are exclusive of the salaries of the Secretary and clerks employed in the Department.

I have stated that the small amount of appropriation required for the service of the present year was the result of economical savings out of previous appropriations. This will be manifest from the last view, which I now take the liberty of presenting to the committee, of the appropriations and expenditures during the years 1825, 1826, and 1827, under those heads of appropriation, in the application of which a discretionary control is exercised through the Department of State.

Those heads are, first, contingent expenses of foreign intercourse; secondly, intercourse with Barbary Powers; thirdly, relief and protection of American seamen; and, fourthly, the contingent expenses of the Department. The total amount of appropriations under the first head, for the three years of 1825, 1826, and 1827, was $111,000; and the total amount at the service of the Department, including a balance of appropriation for the year 1824, and also some small items of repayment, was $126,420 05; the actual disbursement during the three years 1825, 1826, and 1827 was $80,567 97; leaving an unexpended surplus of $46,852 08. The total amount appropriated during the same three years, for intercourse with the Barbary Powers, was $80,000; and the entire sum at the disposal of the Department, including a balance of the sum appropriated for 1824, was $100,450. The actual expenditure during those three years was $55,700 29; leaving an unexpended balance of $44,749 71. The total amount for the relief and protection of American seamen at the disposal of the Department during the same three years was $99,678 84; the total expenditure was $87,698 17; leaving an unexpended balance of $11,980 67. The total amount at the command of the Department for its contingent expenses during the same period of three years was $97,863; the actual expenditure for the same term, being $90,305, left a surplus of $7,558.

This third and last view is taken from a summary statement of moneys appropriated and expended under certain heads of appropriations, for the years 1822, 1823, 1824, 1825, 1826, and 1827, which is hereto annexed, designated by letter C, to the whole of which the attention of the committee is respectfully invited.

During the present administration there has been a permanent reduction in the grade of two, and a temporary reduction in another of our missions on this continent, from that of an Envoy Extraordinary and Minister Plenipotentiary to a Chargé d'Affaires. And I am induced to believe that one or two of our American missions may be abolished, at a day not very distant, without injury to the public interest. In respect to those branches of expenditure which have been placed, by long established usage, under the control of the Executive, any retrenchment of which they are susceptible must, from the nature of the case, depend upon the exercise of a sound and responsible discretion. Without being able now to state to the committee any particular reduction which can be made in those branches of expenditure, I can only assure them that, so far as the application of that discretion depends upon me, I shall continue to be animated by the desire I have ever felt to observe all practicable economy.

Without being perfectly sure that the inquiries of the committee extended beyond the officers immediately concerned in the Department of State, and the expenses incident to it within the city of Washington, I thought it safer to act on the supposition of their having contemplated a more comprehensive inquiry into the disbursements of the public money wherever made, and the utility of existing officers, wherever their sphere of action may be, under the direction of the Department of State.

I have the honor to be, with great respect, your obedient servant,

H. CLAY.

Hon. JAMES HAMILTON, Jr., *Chairman, &c.*

P. S.—*March* 5, 1828.—This letter was prepared at the time it bears date; but its transmission has been delayed from that time to procure the certified statements from the Treasury which accompany it, and which, from the press of business, could not be procured until this day.

H. CLAY.

JOSEPH NOURSE, *Register.*

TREASURY DEPARTMENT, *Register's Office, March* 5, 1828.

D.

DEPARTMENT OF STATE, *Washington, March* 17, 1828.

SIR: Your letter of the 14th instant, as chairman of a sub-committee appointed by the committee of the House of Representatives on retrenchment, making certain inquiries in respect of a remittance of $70,000, alluded to in my letter to the chairman of that committee of the 29th ultimo, was received the day after its date, and I have now the honor to communicate the following answer.

The practice of the Department of State is to employ two banking houses in Europe of established credit and character—one at London and the other at Amsterdam—to pay the expenses of the foreign service of the Government connected with our diplomatic corps, consular and other public agencies. For the purpose of defraying those expenses, remittances are made from time to time to the bankers, who regularly account to the Department. This practice is coeval with the Government.

On the 5th day of December last, requisitions were made by this Department on the Treasury for $70,000 to be remitted to our European bankers. The communication which I made to the chairman of the Committee on Retrenchment in respect to the remittance was founded on the day when the requisitions were made at this office, and not on that when the bills were actually purchased at another office, or when they were transmitted to Europe. The prompt attention usually paid at the Treasury did not allow me to doubt that in this instance the requisitions had been complied with without unnecessary delay. It appears, in point of fact, from a statement from the Treasury, herewith transmitted, designated No. 1, that $39,000 was remitted on the 17th day of December, 1827, and $31,000 on the 17th day of January, 1828. The total amount, $70,000, was chargeable to appropriations made prior to that for the service of 1828. The same Treasury statement shows the heads of appropriations on account of which

the remittance has been made, and the object of public expenditure to which it is applicable. The bankers will give credit for the amount in their general account current.

From the time the Treasury received the above-mentioned requisitions of the Department of State, or from that on which the bills were purchased, (as the one or the other mode of keeping the account happens to prevail at the Treasury,) the Department of State became chargeable, and it is presumed to have been charged with the above sum of $70,000; and it must have been so charged on account of appropriations made prior to the year 1828. Its credit, therefore, with the Treasury, in consequence of those appropriations, was reduced by the amount of that sum of $70,000 from the one period or the other above mentioned. But the disbursement of the remittance must be made in the year 1828, or at least subsequent to the year 1827. And in any account exhibiting the actual expenditures of the Department they ought to be strictly charged to the year when incurred.

Hoping that the explanations and Treasury statement now communicated will afford to yourself and the sub-committee all the information requested in your letter,

I have the honor to be, with great respect, your obedient servant,

H. CLAY.

Hon. C. A. WICKLIFFE, *&c., &c.*

I certify the above statement to be correct, and that the remittances therein mentioned were made to the bankers of the United States in London and Amsterdam, in pursuance of requisitions from the Secretary of State now on file in this office.

TREASURY DEPARTMENT, *March* 15, 1828.

EDWARD JONES, *Chief Clerk.*

E.

TREASURY DEPARTMENT, *Register's Office, May* 10, 1828.

SIR: I have the honor to state, in reply to your letter of the 9th instant, that of the $70,000 of remittances contained in the statement of the chief clerk of this Department, the sum of $39,000 only is contained in the statement of expenditures, as prepared at this office on the 5th March last, and that the balance of $31,000 is a charge on the appropriations of that Department for the year 1828. I transmit herewith "a statement of the sums remitted to Europe for the service of the Department of State between the 7th day of October and the last day of December of the year 1824, and the sums remitted to Europe for the service of that Department between the same dates in the year 1827, showing, in each case, the periods when the bills remitted became payable.

I am, sir, very respectfully, your obedient servant,

JOSEPH NOURSE, *Register.*

Hon. JAMES HAMILTON.

Statement of the sums remitted to Europe for the service of the Department of State between the 7th of October and the last day of December of the year 1824, *and the sums remitted to Europe for the service of that Department between the same dates in the year* 1827; *showing, in each case, the periods when the bills remitted became payable.*

JOSEPH NOURSE, *Register.*

TREASURY DEPARTMENT, *Register's Office, May* 10, 1828.

No. 3.

TREASURY DEPARTMENT, *March* 5, 1828.

SIR: I had the honor to receive on the 14th of last month your letter of the 13th, addressed to me in pursuance of a resolution of the Committee on Retrenchment of the House of Representatives, requesting to be informed whether, in my opinion, there be any officers in this Department whose services may be dispensed with without detriment to the public interest, or if the salaries of any of them can be reduced consistently with justice and propriety; and, in general, whether any of the expenses incident to this Department can be reduced without impairing the efficacy of its operations.

In reply I beg leave to state that there are at present ten offices annexed to this Department, viz: the Comptroller's, the Treasurer's, the Auditor's, the Register's, that of the Commissioner of the General Land Office, the Second Comptroller's, the Second Auditor's, the Third Auditor's, the Fourth Auditor's, and the Fifth Auditor's.

There have heretofore existed as appendages to the Department the offices of Assistant Secretary of the Treasury, Commissioner of Revenue, Accountant of the War Department, Purveyor of Public Supplies, Accountant of the Navy Department, and Additional Accountant of the War Department, all of which have been abolished.

Of the ten subsisting offices first above enumerated, six have been coeval, or nearly so, in effect, though not under the same names, with the earliest establishments of the Government. Those of the ten that were created last, viz: the Second Comptroller's, Second, Third, Fourth, and Fifth Auditor's, were created by the act of March 3, 1817, under a special report embodying the reasons for the same, made to the Senate in President Madison's time, (December 16, 1816,) by the heads of the Executive Departments. By the same act the offices of Accountant and Additional Accountant of the War Department and Accountant of the Navy Department were abolished. The further recommendations of that report, to establish an entirely new Executive Department, to be denominated the Home Department, and a solicitorship to the Treasury, were not adopted by Congress.

Of the officers, therefore, who are now auxiliary to the business of this Department, there are, in my opinion, none that can be advantageously dispensed with, or whose salaries can be reduced consistently with justice and propriety. They have all been created by Congress on full deliberation. Dividing the time since the formation of the present Government into three periods, the first from the 4th of March, 1789, to the close of 1800; the second from the 1st of January, 1801, to the close of 1814; the third from the 1st of January, 1815, to the close of 1827, and the average annual revenue of the nation for the first period is found to be $5,637,550; for the second period, $14,000,156; for the third period, $22,277,903. The average annual expenditure for the first period stands at $7,690,830; for the second, at $17,612,434; and for the third, at $27,998,460. The various loans obtained since the formation of the Government are not included in the receipts of revenue. The expenditures embrace all payments on account of the debt, as well revolutionary as that contracted since the purchase of Louisiana and Florida, and other heavy payments for objects not belonging to the ordinary and annual expenses of Government. This progressive increase in the public revenue, the result of the increase in the population, wealth, and general business of the nation, marks the necessity of progressive increase in the establishments of this Department, under the review of which, as to a common centre, every item of revenue and expenditure is brought.

How far all the details of business in the several offices of the Department might be carried on without detriment to the public interest after dispensing with any portion of the clerks at present employed in them, or how far the salaries of any might be reduced consistently with justice and propriety, or, in

general, whether the expenses incident to any of them could be reduced without impairing the efficacy of their operations, I have not on my own view felt able to decide, without more opportunities of investigation than I could command at this season, or more delay than would be compatible with the duty of affording the committee a timely reply. But I called by letter upon each of the officers charged by law with the immediate direction of the business of the ten offices in question to make report to me under each of the points above specified, and to do so in as full and precise a manner as the terms and spirit of the resolution appear to demand. Their reports have been made accordingly, and I have the honor to enclose them herewith, numbered from 1 to 10, inclusive.

Regarding the business of the chief office of the Department, that of the Secretary, it is my opinion that no retrenchments can be made with advantage to the public. On the contrary, I take leave respectfully to state that I think the public interest requires that there should be another principal clerkship established in it. Besides its own proper duties, which are of daily detail, as well as of extensive range, its duty of superintendence over other offices of the Department is constant. Hence, whilst each of the other Executive Departments has had one principal clerk allowed to it, it has been the past policy of the Government to allow to the Secretary of the Treasury two, from the more multifarious and complicated structure of the Treasury Department. The old act of 1792 made provision for two principal clerks for the Secretary's office. Two were also allowed during the incumbency of Mr. Gallatin, each of whom, at the close of that officer's service, received a compensation of two thousand dollars per annum. Under the conviction that the business of the office would go on more to the public advantage in all respects, and especially as regards promptitude and method, by having two principal clerks instead of one, I asked the Committee of Ways and Means for an appropriation for two in 1826. The appropriation was not granted. The whole number of clerks in the Secretary's office at present is nine. The number was six during the whole of the first period of time indicated above, when the average annual revenue of the nation was but a fraction more than one-fourth of its present amount. During a part of the first period the office also had attached to it an Assistant Secretary. The act of May 7, 1822, which provided that all moneys appropriated for the use of the War and Navy Departments should be drawn from the Treasury by warrants of the Secretary, under special requisitions, in every case, from those Departments, instead of being drawn directly upon the Treasurer in capacity of agent of those two Departments, as had been the case before, created of itself a considerable increase of clerical labor in the office of the Secretary of the Treasury apart from the fourfold increase of revenue.

It belongs to this communication to add that, besides the recommendations for creating new offices and a new Department contained in the report to the Senate by the heads of the different Executive Departments in 1816, and which was carried into effect in part only by the act of 1817, as before mentioned, Mr. Secretary Crawford, in a distinct report to the same branch of the Legislature in January, 1818, recommended the appointment of a Solicitor to the Treasury in the strongest and most unequivocal terms. Hence I feel the more fortified in the opinion I presume to give that there are no unnecessary officers in the Treasury now, by referring to other opinions which have pronounced (on full examination more than ten years ago) an augmentation of the present number expedient.

I have not supposed that the resolution of the committee was designed to embrace officers at a distance who are under the direction of the Department as the organ of the President in executing the laws. I mean officers of the customs, and all other officers engaged in the collection of the public revenue in all the States and Territories of the Union. If it were intended to give to the resolution this scope, a reply to it would call for investigations the results of which could not be obtained and digested so as to present them in a shape that would hold out any hope of being satisfactory or useful during the present session of Congress. It may be sufficient to remark that these officers have all been created, the duties assigned, and their compensation fixed, directly or indirectly, by the legislative power of the country; and that I am not, under the existing information and lights before the Department, prepared to express an opinion that any of them could be dispensed with, or their compensation, or official expenditures be abridged, consistently with the principles stated by the committee. In the extensive ramifications of official duty to which the collection of a large revenue under numerous and complicated laws gives rise, it is far from impossible that abuses may exist calling for retrenchments at points that a thorough and searching examination might disclose. The same kind of examination might lead to the knowledge of cases where the public interest and justice to the individual would perhaps suggest the employment of more officers, and with compensations more adequate to the labor performed by them. On the last head there have been both complaints and resignations of late years. I allude more particularly to the Receivers of Public Moneys and the Registers in the land districts, a class of officers exposed to much labor and responsibility, and who are sometimes stationed in parts of the country where the expense of maintaining a family presses heavily.

I have the honor to remain, with great respect, your obedient servant,

RICHARD RUSH.

Hon. J. HAMILTON, Jr., *Chairman of Committee on Retrenchment, House of Representatives.*

No. 4.

NAVY DEPARTMENT, *February* 25, 1828.

SIR: I have had the honor to receive your letter of the 13th instant, transmitting a copy of a resolution adopted by the Committee on Retrenchment.

The Navy Register for 1828, which was prepared at this office and sent to the House of Representatives at the commencement of the year, and a copy of which is now enclosed, exhibits the number and compensation of all the officers who are in any way connected with or under the control of this Department.

They consist of officers of the Navy, properly so called, clerks, navy agents, naval storekeepers, naval constructors, and messengers.

To the first class it is not supposed that the present call applies. Should this suggestion be incorrect, I will cheerfully give the opinion entertained on the questions in the resolution as applicable to them, which will, however, be only a repetition of the views heretofore presented in official reports from this Department.

The navy agents, naval storekeepers, and naval constructors are located at places where such officers are indispensable, and are engaged diligently in the performance of duties which must, from the necessity of the service, be discharged. It is believed that an inspection of the Register will show that they cannot be dispensed with.

The only other persons under the control of this Department are the clerks and messengers.

I enclose a copy of a letter addressed, on the 21st January, 1826, to the Hon. Louis McLane, then chairman of the Committee of Ways and Means, which presented my opinion of the duties, &c., of the clerks at that time. I have seen no cause to change that opinion. On the contrary, it has been confirmed by every day's experience since; and I hesitate not to declare it as my conviction that public money would be saved and the public interest and accommodation promoted if two or three clerks were added to the number already in the Department. A delay of a few days in answering a call of Congress, in expediting a ship to sea, or in giving a direction or order necessary to the proper performance of some prescribed duty, will often occasion much greater loss of money than the amount of their salaries. The business of the Department in all its branches is constantly increasing. The applications for appointments alone have augmented to such an extent that more than one-half of the office hours of the Secretary, especially during the sessions of Congress, is consumed by visits from applicants and their friends. One clerk is almost constantly employed in attending to the correspondence on this subject; nor is it perceived how this can be avoided, although in nine cases out of ten neither the calls nor the correspondence can lead to any valuable end. A refusal to receive the visits or to answer the letters is uniformly followed by complaint and censure.

I believe it has not happened for years past that the Department has been able to perform its duties, after the greatest possible exertions and some delays, without calling in the aid of extra clerks, who, being ignorant of the proper manner of doing the labor assigned to them, often cause delay and inconvenience. Most of the duties performed by the clerks require not merely the ability to write a good hand and copy what is placed before them, but information, intelligence, sagacity, and experience.

I have the honor to enclose copy of a letter from the Commissioners of the Navy, as a part of this answer, and have only to add that I know of no officer in this Department whose services may, in my opinion, be dispensed with "without detriment to the public interest."

The Navy Register also affords a statement of the salaries or compensation received by each officer. Their amount is fixed by law in all cases, except those of the carpenters, who are omitted in the laws fixing the pay of the Navy; of the naval storekeepers and naval constructors, which is determined under the direction of the President, according to the labor and responsibility of the places where they are employed; and of the warrant and petty officers, which is fixed by the President, in virtue of the first section of the law passed on the 18th of April, 1814. In my "opinion" the salaries of none of them "can be reduced consistently with justice and propriety." I have heretofore expressed my "opinion" that "justice and propriety" require that the compensation of some of the officers of the Navy should be augmented.

I am in doubt whether the last inquiry, as to "the expenses incident to the Department," was intended to extend to the general operations of the naval service, or to be confined to the expenses of this office. If to the former, I have, respectfully, to refer to reports heretofore made, and which have repeatedly urged certain changes in the naval service as conducive to efficiency and economy; especially to one to the House of Representatives, dated January 24, 1824, and two to the Senate, of January 1, 1825, and January 12, 1828. I believe that the plans proposed in those reports are calculated to lessen the expenses of the service.

If the inquiry be directed solely to this office, my answer is, that the expenses of it consist of the salaries before mentioned, and of the contingent expenses, which are annually provided for by an appropriation of two or three thousand dollars.

This appropriation is designed to supply stationery, blank and other books, binding, printing, maps, charts, newspapers, fuel, furniture, repairs, &c., &c., and has not heretofore been found too great, nor can it "be reduced without impairing the efficiency of the operations" of the office. The accounts of the expenditure in each year are regularly settled, under vouchers, at the Treasury Department, and may be referred to in the office of the Register of the Treasury.

I have the honor to be, very respectfully, &c.,

SAMUEL L. SOUTHARD.

Hon. JAMES HAMILTON, Jr.,
Chairman of the Committee on Retrenchment, House of Representatives.

No. 5.

DEPARTMENT OF WAR, *March* 3, 1828.

SIR: The documents necessary to furnish a satisfactory answer to the inquiries submitted in the letter which, as chairman of the Committee on Retrenchment, you did me the honor to address to me have this moment been put in my hands, and I hasten to furnish the information, as far as practicable, required by the committee. The enclosed documents, as far as the bureaus are concerned to which they refer, will be sufficient to satisfy the committee that economy has been pursued in the expenditures of the public money to the utmost extent, compatibly with the successful operations of their branches of the public service. On this occasion it may be allowed me to say that, always considering a just economy the true policy of all Governments, and particularly ours, the first measure I adopted on coming into the Department was to assemble the chiefs of the different bureaus and to urge upon them its practice, and that in every official act, as trustees of the people, it was our solemn duty to consider ourselves in their presence, and accountable to them for our conduct; that, with this purpose continually before our eyes, though we might fail to obtain approbation, we should attain what was more valuable, a conviction that we deserved it. As far as I am able to ascertain, the course recommended has been faithfully pursued, and, whenever occasion called for it, retrenchment has been effected by change in the regulations; and the committee will learn with pleasure that the administration of this Department has continually, for years past, tended to a reduction of its expenditures. To manifest, to the satisfaction of the committee, this economical tendency, I have caused a synopsis to be prepared of the disbursements for the last nine years, divided into three periods; the first embracing from 1819 to 1821, both inclusive; the second, from 1822 to 1824; and the third, from 1825 to 1827. By referring to the heads subject to the discretion of the Department,

it will be seen that the amount of disbursements has been lessened. The item of the Quartermaster's Department, in the first period, was $1,381,045 19; in the last, $896,935 89; and, although the greater number of troops in the first period must be taken into the account, yet, after making the proper allowance for this circumstance, still the relative saving must be obvious. So, also, with the contingencies of the Army. In the first period this item of expense amounted to $160,100 94; in the latter to $39,391 58; and comparing the first year, 1819, in the first series, with the last year in the last series, 1827, it will be found in the former case it amounted to $82,563 91, and in the latter to $10,922 34. So, also, with the contingencies of the Indian Department; in the second period (before which the contingencies were blended with the pay of agents, &c.,) they amounted to $315,959 55; in the last to $292,800 33; showing a saving in that branch of expenditures of $23,159 22 in three years.

As it regards a reduction of the number of officers in this Department, I do not believe the public service will justify it. To this remark a trifling exception may be made. During the last year a vacancy occurred among the clerks which I forbore to fill, under a hope that it might be dispensed with without injury to the service, and thereby a small saving be effected. In a year or two more the number of clerks may be diminished in the Office of Land Bounties and Pensions; as it is obvious time will continually diminish the services to be performed in these offices.

As to the just compensation for public employment, it is one of the most difficult problems in political science, and about which much difference of opinion prevails. Even the standard of compensation is yet to be settled. Shall it be confined to a support of the officer; or shall it embrace that of his family, and, beyond their support, enable the incumbent to make for them a reasonable provision? Shall he be enabled to practice the courtesies of hospitality, or be a mere isolated beast of burden? Were we to judge this question by the anxiety to obtain appointments, indicated by the number of candidates for office, and the zeal with which they pursue their object, we should be justified in inferring that the salaries were full high, if not exorbitant. On the contrary, if we advert to the impoverished condition of those, generally, who devote their time to the public service, we should be led to conclude that poverty is almost an inevitable effect of such devotion; and, as a consequence, the salaries, instead of being extravagant, were penurious. Although there are occasional exceptions to this general result, effected by rigid economy and great skill in the investment of money, yet the larger proportion of public servants die in poverty, and leave their families in the most bereaved condition. I therefore content myself, instead of expressing any decisive opinion on the propriety of reducing the salaries of officers, with presenting these difficulties to any satisfactory solution of the question propounded; and I do so the more readily as the committee will be much better able than myself to decide correctly the propriety of reducing salaries. And finally, I am not advised of any expenses incident to this Department which can be reduced without impairing the efficiency of its operations.

I have the honor to be your obedient servant,

JAMES BARBOUR.

WM. LEE, *Second Auditor.*

MARCH 4, 1828.

No. 6.

POST OFFICE DEPARTMENT, *February* 22, 1828.

SIR: In answer to your communication of the 13th instant, inquiring whether there be "any officers in this Department whose services may be dispensed with without detriment to the public interest, or if the salaries of any of them can be reduced consistently with justice and propriety, and, in general, whether any of the expenses incident to the Department can be reduced without impairing the efficiency of its operations," I have the honor to submit a hasty but general sketch of the outlines of the business transacted annually in this Department.

There are in the United States 1,644 mail-routes, 99,134 miles of post roads on which the mail is annually transported, and about 7,000 post offices. The amount of postages which will be collected in the current year will exceed a million and a half of dollars.

The following is a somewhat detailed view of the business for the current year:

1st. Arranging the order and connexions of 411 mail-routes, being one-fourth of the whole, every year.

2d. Examining and recording 6,000 proposals for carrying the mail, comparing them and deciding the right, examining numerous testimonials which accompany them, and furnishing a letter of acceptance to each successful applicant.

3d. Preparing and causing to be reciprocally executed 411 contracts, with triplicates, bonds, and sureties.

4th. Superintending 1,644 mail-routes, regulating the movements of the mail, changing its direction, and examining the reports of the daily performances of contractors.

5th. Appointing, registering, and commissioning more than 1,000 postmasters annually; receiving and registering their bonds; ascertaining the responsibility of their sureties, and establishing hundreds of new offices.

6th. Superintending the management of more than 7,000 post offices, instructing postmasters, furnishing them with constructions of the law, and investigating their conduct when complaints are made.

7th. Receiving, examining, and adjusting more than 28,000 quarterly accounts of postmasters, covering together about 900,000 folio pages, with additions of items, chiefly in cents, amounting, together, to more than $1,500,000.

8th. Entering, in accounts current, 28,000 accounts of postmasters, with all their various items, and furnishing statements to 2,000 postmasters of errors discovered in their accounts.

9th. Opening more than 1,000 dead letters daily, registering and forwarding to their proprietors such of them as contain valuable enclosures.

10th. Tracing lost letters; detecting and prosecuting depredations committed on the mail.

11th. Furnishing from the books of the office about 1,200 postmasters annually with full statements of their accounts.

12th. Settling finally the accounts and collecting the balances of 1,000 postmasters who annually go out of office; instituting and superintending about 200 suits in law for recovery.

13th. Collecting, by drafts and otherwise, quarter-yearly, the revenue arising from more than 7,000 post offices, and reviewing the account of each four times in a year.

14th. Settling the accounts, and paying their amount, four times in the year, of the several contractors on 1,644 mail-routes, making together 6,576 accounts.

* In March, 1827, an advance was made out of the contingent fund of the Indian Department of $6,000, to pay the Seneca tribe of Indians the supposed amount of the interest on $100,000 stock, held in trust for them by the President of the United States; the agent charged to receive the interest ought to have refunded in 1827. This advance would, of course, reduce the expenditure for that year to $87,828 07.

15th. Procuring mail bags for all the routes, locks, keys, paper; the printing and distribution of blank forms for accounts for the different offices, amounting to many hundred reams

16th. Keeping distinct and separate accounts with the post offices, with contractors and other agents, requiring, besides the previous entries in accounts current, pay-books, cash-books, day-books, and journals, 72,000 ledger entries.

17th. Preparing, quarter-yearly, for the Treasury, statements of the whole fiscal transactions of the Department, covering in the year about 1,200 large pages, accompanied with about 15,000 receipts and 28,000 accounts, besides duplicates of all contracts and proposals.

The correspondence growing out of the above operations will exceed six hundred letters daily. I not unfrequently open with my own hands between two and three hundred letters in a day on business relating to the various branches of the office. So extensive and complicated are its details, that an accurate view of the annual amount of labor cannot be formed without some practical knowledge on the subject. There is believed to be no civil branch of governmental operation, in this or any other country, which equals this Department in extent, or which embraces so great a variety of interests. Not less than twenty-five thousand agents are daily and hourly engaged in its service—a greater number than all the agents of the Government beside, including the Army and Navy.

In regulating this immense force, it cannot be organized into masses and controlled by responsible heads, as the Army and Navy. Most of the agents act separately and independently of each other, and are each responsible to the chief of the Department. This arises from the nature of their duties, and causes a more extensive correspondence than is required in the other Departments of the Government.

The public interest is intimately concerned in the faithful conduct of all the persons employed in the operations of the mail; and the slightest omission of duty in any one of them cannot fail to produce some inconvenience, which may afford ground of complaint. Under such circumstances, some idea may be formed of the necessary energy in this office, which controls and is responsible for the individual acts of so great a number of agents. What is necessary to be done to-day cannot be postponed until to-morrow without injury to the public, and probably some loss of character to the Department. Hence the necessity of unceasing vigilance in all the clerks of this office. It is believed that they are as industrious and efficient as any other officers of the same grade employed by the Government, and that the public is as much benefitted by their labors. They receive less compensation than the clerks employed in the other Departments. A reduction of their number, or a failure to authorize the necessary additional aid, will paralyze the operations of the Department, and cause it to take a retrograde movement. The effects of this would be severely felt by the commercial and other interests of the country.

I know of no expenses incident to the Department which can be reduced without impairing the efficiency of its operations. In the making of contracts for several years past there has been a great retrenchment of expenditure, taking into view the amount of service provided for; but this can only be accomplished by the ordinary progress of making contracts.

With great respect, I have the honor to be your obedient servant,

JOHN McLEAN.

Hon. JAMES HAMILTON, *Chairman, &c.*

No. 7.

FEBRUARY 21, 1828.

SIR: Your communication requesting the Clerk of the House of Representatives of the United States to inform the committee "whether any reduction can be made in the number of clerks employed by him, or in their salaries, and in the contingent expenses of the House, without injury to the public service," has been received; and in answer thereto, the Clerk begs leave to state that no reduction can be made in the number of the clerks in his office without serious inconvenience to the business of the House, and without rendering it impossible for him to keep up the present arrangement established during the last two sessions. Their pay I do not think one cent too high, considering the duties performed.

The committee know how many hours are necessarily devoted during the session of Congress—more than in any public office; but I am satisfied no one can know, without being on the spot, the amount of labor done during the recess.

The average *recording* done during a recess, from an estimate made, if paid for at the usual price, would be about $3,400. To this must be added the compiling, alliterating, copying, and correcting proofs of indexes to the journal, executive reports, bill-books, and reports of committees; collecting, examining, rearranging, filing, and endorsing all papers used during the session; arranging printed documents for binding; arranging original executive papers for binding; collecting and arranging all the books; settling all accounts; making detailed abstract for the Treasury and for the House; answering all calls from the different Departments for papers on which legislation has taken place; answering all communications from members and private individuals, including copies of papers; making annual abstract of all appropriations; and a multitude of other matters, which cannot be estimated, incident to an office extending over or connected with all the legislation of the Union. These estimated duties can only be valued by the time employed, which I think could not be done at less than $2,300, in addition to the $3,400, making the work done worth $5,700, or equal to six months and a half of all the salaries.

On the subject of the contingent expenses of the House, I beg leave to refer the committee to the report of the Committee of Accounts at the last session, on the expenditures of the year 1826, as follows:

"The Committee of Accounts, to whom was referred the resolution of the 19th, instructing them to inquire into the expediency of reducing the contingent expenses of this House, beg leave to report:

"That they have examined the expenditures of the House of Representatives as presented in the last account of the Clerk, amounting to $74,788 81; of which sum the standing expenditures, viz: printing, stationary, bookbinding, fuel, newspapers, post office, and messengers, make the sum of $65,990 75.

"Incidental expenditures, new and old furniture, $369 98; the miscellaneous expenses amount to $8,427 98; of which sum, $6,451 33 were expended in pursuance of direct legislation, and orders by the House, leaving only $1,976 65 over which the committee had a control, and all of which was expended by the Clerk and Doorkeeper for objects deemed proper and necessary by the committee.

"The whole of this sum having been expended by the orders of the House, except the small balance

expended by the Clerk and Doorkeeper, deemed necessary, the committee do not find that under the existing resolutions and orders of the House there can be any reduction of the contingent expenses thereof; and ask leave to be discharged from the further consideration of the subject."

From this it will be seen how small a portion of the moneys is expended except by direct legislation.

From the year 1827, the sum expended was $89,537 15; of which sum the standing expenditures, viz: printing, stationery, bookbinding, fuel, newspapers, post office, and messengers, make the sum of $68,760 60. Incidental expenses, new and old furniture, $893 02. The miscellaneous expenses amount to $13,093 53; of which sum, $12,219 25 were expended by direct legislation and by orders of the House, leaving only $874 28 expended by the Clerk and Doorkeeper for objects deemed proper and necessary by the Committee of Accounts. The excess of 1827 arose chiefly from the reprinting the journals up to the 14th Congress; engraving and printing maps and charts; and also providing the stationery for the present session, which heretofore was paid to the contractor after the year expired; so that the account of stationery of 1827, in fact, embraces the last and present sessions.

From the aforegoing statements it will be perceived that the Clerk cannot point to any items of expenditure which might be dispensed with without alleging that the House has directed useless expenditures, which the Clerk most respectfully takes leave to say would be getting "above his business."

The question has often been asked of me, "Why do we have so many messengers?" I can only say that, so long as the same labor is required, not one can be dispensed with.

In truth, from my chief clerk down to the runners, every one "goes for the work" and not by the hour.

Most respectfully, sir, your obedient servant,

MW. ST. CLAIR CLARKE,
Clerk of the House of Representatives of the United States.

Hon. James Hamilton, Jr.,
Chairman Select Committee.

No. 8.

Statement of the sums of money which have been disbursed through the State Department and settled at the Treasury upon the certificate of the President, without specification, since the 1st day of July, 1790, specifying the sum paid in each year; furnished in compliance with a letter of the Chairman of the Committee on Retrenchment of the 13th of February, 1828.

On the 16th September,	1812	$14,000 00
From the 20th November, 1812, to the 10th March,	1813	51,652 56
In the year	1813	11,693 74
	1815	150 00
	1817	700 00
	1820	400 00
	1823	3,000 00
	1824	2,130 32
	1825	1,700 00
	1826	1,666 66
	1827	8,958 01
		96,051 29

Payments of a similar nature to the foregoing were made under the act of the 1st of July, 1790, and subsequent acts; but from the destruction of accounts and vouchers by the conflagration of 1814, the Treasury do not possess the means of ascertaining the amounts expended with any precision. In the printed public accounts for the year 1794, however, the sum of $1,500 appears to have been advanced to Edmund Randolph, Secretary of State, on account of the "contingent charges of Government," pursuant to instructions of the President of the United States; and also, in the same accounts for 1796, the sum of $3,000 appears to have been advanced to Timothy Pickering, Secretary of State, "to defray the contingent charges of Government."

JOSEPH NOURSE, *Register.*

Department of State, *Washington, March* 26, 1828.

Sir: I have received your letter of the 24th instant, containing a copy of a resolution adopted by the Committee on Retrenchment, in which they are pleased to inquire: Did John H. Pleasants go as bearer of despatches from the United States to Rio Janeiro and Buenos Ayres in 1825? Did he deliver the despatches to the proper authority at Rio Janeiro and Buenos Ayres? If he did not go, what became of the despatches; who bore them to the Government of Rio Janeiro and Buenos Ayres? Where did J. H. Pleasants go after he left the United States? Was it not known to the Department, when his account was settled and paid him, that he had not been to Rio Janeiro or Buenos Ayres as bearer of despatches from this Government?

In reply, I have the honor to state, for the information of the committee, that Mr. Pleasants was engaged in the spring of 1825 to carry to our respective Chargés d'Affaires at the Brazils and Buenos Ayres their credentials, commissions, and general instructions, and other despatches from this Depart-

ment; that, with that view, he left the city of Richmond, the place of his residence, on the 19th day of April, and embarked at the port of New York, on the 28th day of May, 1825, on board the brig William Tell, having employed the intermediate time in seeking, from Baltimore to Boston, a vessel in which he could obtain a passage; that, whilst at sea, he was taken so ill as to be apprehensive of his life, which he supposed would be in imminent danger if he continued the voyage, and meeting a vessel at sea bound to Antwerp he transferred himself to her, and committed the despatches with which he was charged to the care of Captain Hinman, the master of the vessel William Tell; that the despatches, both for Mr. Forbes, our Chargé d'Affaires at Buenos Ayres, and for Mr. Raguet, our Chargé d'Affaires at Rio Janeiro, were delivered by the captain of the William Tell to the former gentleman on the 12th day of August, 1825, as will appear by an extract from a despatch from him under date the 15th day of September, 1825, marked A; and that those intended for Mr. Raguet were received by him on the 26th October, 1825, as will appear by an extract from a despatch from him under date of 12th of November, 1825, which is marked B.

I beg leave also to refer to a copy of a letter from Mr. Pleasants, under date of the 7th day of July, 1825, marked C, and to an extract from a letter from him, under date of October 22, 1825, marked D, as explaining more fully the motives which induced him to change his destination and to commit the public despatches in his care to Captain Hinman. During his voyage in the Antwerp vessel Mr. Pleasants met at sea a vessel bound to Liverpool to which he transferred himself, and he arrived in that port on the 1st day of July, 1825. He reached the port of New York, on his return to the United States, on the 22d of October, 1825, bringing with him despatches for this Department from Mr. R. King, our minister at the Court of London.

It was known at this Department when the account of Mr. Pleasants was settled and closed that he had not reached Rio de Janeiro or Buenos Ayres, but it was also known that the despatches which had been intrusted to him had been received by the persons to whom they were respectively addressed, and it was believed that he had been prevented from personally delivering them by the causes already stated. Supposing the affliction of disease did not occasion a forfeiture of all claim for expenses and all compensation for services, the allowances made to him were according to established usage, which has prevailed as far back as any traces of the accounts of bearers of despatches can be discerned, in the Treasury. Agreeably to that usage, they are generally allowed their expenses, personal and travelling, to the port of embarkation, their passage money at sea, their expenses, personal and travelling, from the port of debarkation to the places of their destination, and the like expenses and passage money on their return home; and they receive, moreover, a compensation for their services of six dollars per day, out of which they defray their expenses whilst they remain at the places to which they are sent or may stay at Washington for despatches.

Upon an examination of Mr. Pleasants' account it will be seen that it has been adjusted according to these principles; and, of the sum received by him, $756 was for per diem allowance, and the residue on account of expenses and passage money.

It was not believed that the visitation of Providence with which he was afflicted ought to deprive him of all allowance for expenses and all compensation for services, but it was not thought right that the per diem should be continued during the whole period of his absence from home, and until his return to New York on the 22d of October, 1825. It was therefore limited to the 22d of August, 1825, that being the time when it was estimated he might have returned to the United States, if, after abandoning the voyage to South America, he had sought an opportunity of coming home instead of proceeding to Europe. It was within the discretion of the Department to have compensated him as the bearer of despatches from Mr. King, but it was not deemed proper to make him any allowance for that service.

I have the honor to be, with great respect, your obedient servant,

H. CLAY.

Hon. JAMES HAMILTON, Jr.,
Chairman of the Committee on Retrenchment, House of Representatives.

A.

Extracts of a letter from Mr. Forbes to Mr. Clay, dated Buenos Ayres, September 15, 1825.

"On the 12th of August I received from Captain Hinman, of brig William Tell, my commission as Chargé d'Affaires, together with the instructions you were pleased to send me and some accompanying letters."

"You will long since have learned from Mr. Plasants, the gentleman charged with your despatches, his abandonment of his voyage, and return to the United States; by which I lost, to my regret, the pleasure of his acquaintance and of paying due respect to your recommendation."

B.

Extract of a letter from Mr. Raguet to Mr. Clay, dated Rio de Janeiro, November 12, 1825.

"On the evening of the 23d ultimo I received from Mr. Forbes, at Buenos Ayres, letters dated on the 16th and 31st of August, informing me of the arrival at that port on the 10th of that month of a trunk containing my credentials, with a number of books and other articles, which had been shipped at New York, regretting the delay to which it had been subjected whilst in his charge, owing to the want of opportunity, and finally advising me of its having been embarked on board the Sweedish brig Pallas, the vessel which conveyed the said letter, and which entered this harbor on the day preceding.

"On the following morning I called upon the Acting Minister for Foreign Affairs, informed him of the fact, and requested permission to land the trunk and to pass it through the custom-house without the necessity of its being opened. This he cheerfully promised to grant, but a delay occurring in the Treasury Department the order was not issued until the 26th, when I received the trunk unopened,

containing the several despatches from your Department, numbered 1, 2, 3, and 4, of the 14th, 13th, 16th, and 16th of April last, respectively, together with the books, papers, and documents therein enumerated, *excepting* the 24th 'volume of Niles' Register,' which Mr. Forbes ascertained to be deficient at Buenos Ayres. I have no doubt that Mr. Forbes used all due diligence in forwarding this package, and I have ascertained from Captain Martin, of the Jasseur, that when he offered to bring it he was not certain of a destination direct for Rio de Janeiro, which was the cause of the preference being given to the other vessel."

C.

Mr. Pleasants to Mr. Clay.

LIVERPOOL, *July* 7, 1825.

MY DEAR SIR: If you are surprised at the date of my letter, I am scarcely less surprised at the circumstance myself. To be in England at all is what I never expected. To be here when I expected to have been in Buenos Ayres seems rather the effect of enchantment than of ordinary causation. It remains, sir, for me to account for this apparent dereliction of duty; and I cannot but hope that a plain statement of the circumstances which changed my destination will exculpate me from any blame in your eyes, solicitous as I am to preserve that good opinion which procured for me the charge conferred by the Department of State.

After many ineffectual attempts to secure an earlier passage, in which I was baffled by the diminished intercourse between the United States and the provinces of South America which lie beyond the Spanish Main, I succeeded in procuring a passage in the brig William Tell, which sailed from New York on the 28th of May for the river Plate. This vessel was not such a one as I should have selected had I had my choice. Being simply a merchant ship, it was destitue of comfortable accommodation; nevertheless, becoming impatient for action, and foreseeing that if I neglected that opportunity I might meet with no other, I availed myself of it, and sailed, as stated, on the 28th of May. I speedily had cause to regret my precipitation in choosing such a ship. The cabin, not fifteen feet square, was destined to accommodate, in a voyage which would occupy from sixty to ninety days, twenty-five passengers. The quantity of these individuals was in no respect * * * * * by their respective qualities; they were, for the most part, mechanics emigrating to that country, and the filth of their persons and obstreperous * * * * * of their deportment was by no means corresponding to the republican respectability of their profession. When the horrors of sea-sickness were superadded to the other painful circumstances attending my situation, my sufferings became greater than I can describe. Deprived of every comfort, with not ten feet square for exercise, a pestilential air, and most offensive smell pervading every part of the ship, and even without the most common medicines, I assure you, sir, that death would have been no unwelcome visitor. I was seized with a high fever, and in ten days reduced, in my own opinion and in that of those around me, to the brink of the grave. At this time we spoke an American ship, from New York, bound to Antwerp; the captain, who was likewise ill, was bearing for Fayal, in the Azores, and by great persuasion was induced to take me on board, in a miserable condition. Two days after this removal my new captain recovered his indisposition, and resumed his course for Antwerp. Having no inclination to visit Holland, I determined to avail myself of the next ship that we might speak, and return to the United States or go to England. From the time that I boarded the vessel in which I then was I had begun slowly to recover, from the superior comforts of its accommodations. On the 20th of June we spoke the brig Olive, from New York to this port, and the captain consenting to receive me, I arrived in Liverpool on the 1st instant, having been at sea thirty-three days. The despatches which were intrusted to my care I forwarded to Mr. Forbes, in charge of Captain Hinman, of the William Tell, to whom he was consigned, stating the reasons of my not bearing them in person, and requesting him to forward those for Mr. Raguet, at Rio. If the William Tell goes safely, the despatches will safely reach their destination.

These, sir, are the circumstances which have brought me to England, and I hope that they are such as to excuse my abandonment of my charge. As I am here, I have determined to devote a few weeks to the purpose of seeing the country, after which I shall have the pleasure of giving you, in person, a more detailed account of my voyage.

With high respect, your obedient servant,

JNO. H. PLEASANTS.

D

Extract of a letter from John H. Pleasants to Mr. Clay, dated New York, October 22, 1824,[5.]

"Convinced as I am that my life would have fallen a sacrifice had I persevered in the voyage, and although too ill at the moment to exert any agency in the step, I cannot help feeling uneasiness at the impressions the apparent abandonment of my trip may have made on your mind. This uneasiness is proportioned to the frank confidence with which that trust was conferred. I shall be uneasy until I have the honor of hearing from you; and I entreat you, sir, if your engagements will permit, to address a line to me at this place, where I am forced to remain a few days."

Journal of proceedings of the Committee on Retrenchment.

IN THE HOUSE OF REPRESENTATIVES OF THE UNITED STATES, *February* 6, 1828.

Resolved, That a select committee be appointed, whose duty it shall be to inquire and report to this House if any, and what, retrenchment can be made, with safety to the public interest, in the number of the officers of the Government of the United States, and in the amount of salaries which they may respectively receive; more especially to report specifically on the following heads:

1st. What reductions of expense can be made in the State Department, in the number and salaries of the officers and clerks attached to this Department; in the expenses regulating the foreign intercourse, and in the printing and distribution of the public laws of the United States.

2d. What reductions in the Treasury Department, and whether an effective system of accountability and for the collection of the public dues is there established.

3d. What reductions of expense can be made, in the Navy Department, in the clerks and officers now acting subordinately to the Secretary of the Navy.

4th. What reductions of expense can be made in the Department of War, in the Indian Department, and in the clerks and officers now acting subordinately to the Secretary of War.

5th. What reductions of expense can be made in the number of officers, and the amount of compensation which they may receive, in the Postmaster General's Department.

And that the committee be further instructed to examine the several contingent funds of each of these Departments, and to report the amount and objects for which disbursements have been made from these funds; and that they report the amounts, vouched and unvouched, which have been paid from the secret service fund since the 1st day of July, 1790, or the fund regulating the contingencies of foreign intercourse, and of the fund for the expenses of the intercourse with the Barbary Powers.

And that they further report whether the compensation of members of Congress should be reduced,

and whether the fixed salaries of the officers of this House, and its contingent expenses, can with propriety be diminished.

And further, that they inquire whether any modification of the Sinking Fund act can be made with a view of producing a more speedy extinguishment of the public debt.

Mr. Hamilton, Mr. Ingham, Mr. Sergeant, Mr. Rives, Mr. Everett, Mr. Wickliffe, and Mr. Wright, of New York, were appointed the committee, in pursuance of the said resolution.

FEBRUARY 12, 1828—10 *o'clock.*

Committee met. Present: Messrs. Hamilton, Ingham, Sergeant, Rives, and Wickliffe.

The resolution authorizing the appointment of the committee was read by the chairman; whereupon,

Mr. Rives moved the following resolution, which was agreed to by the committee:

Resolved, That the chairman of the committee address a letter to the head of each of the Executive Departments, and of the Post Office Department, requesting information whether, in their opinion, there be any officers in either of those Departments whose services may be dispensed with without detriment to the public interest; or if the salaries of any of them can be reduced consistently with justice and propriety; and, in general, whether any of the expenses incident to those Departments can be reduced without impairing the efficiency of their operations.

Mr. Ingham moved the following resolution, which was adopted:

Resolved, That the chairman be directed to request the Secretary of the Treasury to lay before this committee a statement of the sums of money which have been disbursed through the State Department, and settled at the Treasury upon the certificate of the President, without specification, since the 1st day of July, 1790, specifying the sum paid in each year.

Mr. Wickliffe moved the following resolution:

Resolved, That the chairman address a letter to the Secretary of the Treasury, requesting a statement from his Department of the amount appropriated for the contingent expenses of the Indian Department for each year since the 1st day of January, 1825, and the objects, specifically, for which the sum has been expended, and the names of the persons to whom paid.

Mr. Sergeant proposed to amend the said resolution by striking out the words "*1st day of January*, 1825," and inserting "*from the date of the change of the regulation of the Indian Department by the last act;*" which amendment was rejected, and Mr. Wickliffe's resolution was then adopted.

Mr. Ingham moved the following resolution, which was adopted:

Resolved, That the chairman be directed to request the Clerk of the House of Representatives to inform this committee whether any reduction can be made in the number of clerks employed by him, or in their salaries, and in the contingent expenses of the House, without injury to the public service.

Mr. Cambreleng appeared in the place of Mr. Wright, of New York, who was excused from serving on said committee by the House.

Mr. Rives moved the following resolution, which was adopted:

Resolved, That the chairman of the committee address a letter to the Secretary of the Treasury, requesting him to cause to be communicated to the committee, with as little delay as possible, a statement showing the amount annually expended on each object of expenditure out of the funds appropriated for the contingent expenses of the several Executive Departments for the years 1825, 1826, and 1827, which has been settled at the Treasury.

Mr. Rives also moved the following resolution, which was adopted:

Resolved, That the chairman of the committee address a letter to the Secretary of the Treasury, requesting him to cause to be communicated to the committee, with as little delay as possible, a statement showing the amount annually expended on each object of expenditure and settled at the Treasury out of the funds appropriated for the contingencies, enumerated and not enumerated, of the naval service, and the contingencies of the military service, for the years 1825, 1826, and 1827.

And then the committee adjourned.

MONDAY, *February* 18, 1828.

Committee met. Present: Messrs. Ingham, Sergeant, Rives, Wickliffe, and Cambreleng.

The following resolution was submitted by Mr. Ingham, and agreed to:

Resolved, That the chairman request the Secretary of the Treasury to lay before the committee a statement of the respective sums disbursed from the appropriations for the outfits and salaries of public ministers; for the contingent expenses of missions abroad; for intercourse with the Barbary Powers; and that part of the appropriation for the contingent expense of foreign intercourse which has been settled at the Treasury in the usual manner; specifying the objects of the disbursements and to whom paid since January 1, 1822.

MONDAY, *February* 25, 1828.

Committee met. Present: Messrs. Hamilton, Everett, Ingham, Cambreleng, and Wickliffe.

The chairman laid before the committee the following copy of the circular addressed to the different Departments, requesting the information by the several resolutions passed:

WASHINGTON, *February* 13, 1828.

"SIR: I do myself the honor of transmitting you a copy of a resolution adopted yesterday by the Committee on Retrenchment, and beg leave to solicit your attention to that part of it relating to your Department, from which the committee will be happy to receive the information required."

Mr. Everett asked permission to have it entered on the journal of the committee that he had been prevented from attending the former meetings of the committee in consequence of absence from Washington in attendance on a member of his family dangerously sick.

The chairman laid before the committee the answers of the Postmaster General and Clerk of the House of Representatives to the resolutions directed to them.

Mr. Wickliffe offered the following resolutions:

Resolved, That the Secretary of the Navy be requested to furnish this committee with a statement

of the amount paid as compensation to the officers of the Navy for and on account of extra duty for the year 1826; showing the amount paid to each officer, and for what duty or services paid.

Resolved, That the Secretary of War be requested to furnish this committee with a statement of the amount paid as compensation to the officers of the Army for and on account of extra duty for the year 1826; showing the amount paid to each officer, and for what services paid.

Mr. Everett proposed to amend these resolutions by striking out of each "for the year 1826," and inserting *from the first of March*, 1821; which amendment was lost, and the resolutions were then agreed to.

Mr. Ingham moved the following resolution, which was adopted:

Resolved, That the chairman request the Clerk of the House of Representatives to lay before the committee the original accounts for printing and other contingencies for the House of Representatives during the last session.

And then the committee adjourned.

MONDAY, *March* 3, 1828.

Committee met. Present: Messrs. Hamilton, Sergeant, Everett, Rives, Ingham, and Cambreleng.

The chairman reported that, on the day after the adoption of the resolutions at the last meeting of the committee, he caused to be communicated to the proper persons copies of the said resolutions.

The chairman also reported and read a communication from the Secretary of the Navy in answer to the resolution of February 12, adopted, which was received by him on the 27th February.

The chairman (Mr. Hamilton) further communicated that the Secretary of the Treasury had, on the 27th February, verbally informed him that the clerks in his Department were busily engaged in making out the documents required by the resolution of the committee of the 12th February, and that the answer would be communicated in the first of the present week.

Mr. Ingham moved the following resolution, which was agreed to:

Resolved, That the chairman address a letter to the Secretary of State, and of the Treasury, and of War, requesting them to inform the committee when they may expect to receive an answer to the letter of the chairman of the 13th February, respecting the reduction in the number and salaries of the officers attached to their Departments, and the contingent expenses of the same.

Mr. Ingham also moved the following resolution, which was agreed to:

Resolved, That the chairman of the committee request the Secretary of the Navy to inform the committee what number of sick officers and seamen and marines were provided for at the several naval hospitals during the year 1826.

The Clerk of the House of Representatives produced his accounts, in obedience to the order of the committee; which, on motion of Mr. Ingham, were referred to a committee of three, and Mr. Ingham, Mr. Sergeant, and Mr. Wickliffe were appointed said committee.

And then the committee adjourned.

SATURDAY, *March* 8, 1828.

Committee met. Present: Mr. Hamilton, Mr. Everett, Mr. Rives, Mr. Wickliffe, Mr. Cambreleng, Mr. Sergeant, and Mr. Ingham.

The chairman laid before the committee reports from the Department of the Treasury, viz:

1. A letter containing documents Nos. 1, 2, 3, and 4, giving amount of the contingent expenses in the Departments of State, Navy, War, and Treasury offices, &c.

2. A letter of the Secretary of the Treasury upon the subject of reducing the number of officers and the amount of salaries.

Also, reports from the Departments of War and State upon the same subject.

Resolved, That the letter of the Clerk of the House on the mode of printing and arranging the documents be referred to the Committee on the Expenditure of the Contingent Fund of the House of Representatives.

Mr. Rives moved the following resolution, which was agreed to:

Resolved, That the communications from the heads of the Executive Departments to the chairman of this committee be referred to sub-committees of three members, with instructions to consider and report thereon to the committee.

The committee then resolved that their next meeting shall be on Thursday next, and every Monday and Thursday morning after at 10 o'clock.

And then the committee adjourned.

THURSDAY, *March* 13, 1828.

Committee met. Present: Mr. Hamilton, Mr. Rives, Mr. Everett, Mr. Sergeant, Mr. Wickliffe, and Mr. Cambreleng.

The chairman announced the following sub-committees under the resolution of the last meeting:

On all communications from the Treasury Department, Mr. Cambreleng, Mr. Sergeant, and Mr. Ingham.

On all communications from the War Department, Mr. Ingham, Mr. Wickliffe, and Mr. Everett.

On all communications from the Navy Department, Mr. Rives, Mr. Sergeant, and Mr. Cambreleng.

On all communications from the State Department, Mr. Wickliffe, Mr. Everett, and Mr. Rives.

The chairman read the communication from the Secretary of War, in answer to the resolution of the 25th February, 1828, upon the subjectment of the extra pay to officers of the Army.

Ordered, That the same be referred to the Committee on the Accounts and Reports of the Department of War.

Mr. Cambreleng moved the following resolution, which was adopted:

Resolved, That the Secretary of the Treasury be requested to furnish a statement exhibiting the present organization of the Treasury Department, and, more especially, showing the mode of presenting, adjusting, and paying accounts with and against the United States and the several Departments, and of issuing drafts and warrants for the payment of money to individuals, or for the several Departments of the public service; also, stating the duties assigned to and discharged by the Secretary of the Treasury,

First and Second Comptrollers, Treasurer and Register of the Treasury, First, Second, Third, Fourth and Fifth Auditors, respectively, under and by existing regulations.

Mr. Everett moved the following resolution, which was adopted:

Resolved, That the Secretary of War be requested to furnish this committee with a statement of the amount paid annually as compensation to the officers of the Army for and on account of extra duty from the 4th of March, 1821, to the present time, showing the amount paid to each officer, and for what service paid, except for the year 1826.

Mr. Rives moved the following resolution, which was adopted:

Resolved, That the Secretary of the Treasury be requested to furnish this committee with statements showing the sums expended on each object of expenditure out of the funds appropriated for the contingent expenses of the several Executive Departments for the years 1822, 1823, and 1824, similar to those already furnished for the years 1825, 1826, and 1827.

And then the committee adjourned.

MONDAY, *March* 17, 1828.

Committee met. All present.

The chairman announced that he had transmitted to the appropriate Departments the resolutions passed at the last meeting; he also announced that he had received no further answers to the previous calls of the committee; but he had understood, verbally, that the contingent accounts of foreign intercourse would be transmitted in the course of a day or two.

On motion of Mr. Everett, the hour of the meeting was changed from 10 to 11 o'clock in the morning.

The committee then adjourned.

THURSDAY, *March* 20, 1828.

Committee met. Present: Mr. Hamilton, Mr. Rives, Mr. Wickliffe, and Mr. Cambreleng.

The chairman communicated that he had received a communication from the Secretary of the Treasury, accompanying the contingent expenses of the Indian Department for each year since the 1st January, 1825, marked A, and numbered from 1 to 14. Also a communication covering a statement for contingencies, enumerated and not enumerated, for the naval service.

The first communication was referred to the sub-committee on the War Department, and the last to the sub-committee on the Navy Department.

Also a communication from the Secretary of the Treasury, covering a statement of sums disbursed from the appropriations for the outfits and salaries of public ministers; for the contingent expenses of missions abroad; for intercourse with the Barbary Powers; and that part of the appropriation of the contingent expenses of foreign intercourse which has been settled at the Treasury in the usual manner; specifying the object of the disbursement and to whom paid since January, 1822.

Which communication was referred to the sub-committee on the State Department.

And then the committee adjourned.

MONDAY, *March* 24, 1828.

Committee met. Present: Mr. Hamilton, Mr. Ingham, Mr. Rives, Mr. Everett, Mr. Wickliffe, and Mr. Cambreleng.

After the reading of the journal, Mr. Everett desired to have it entered on the same that he was prevented from attending the last meeting by the death of a member of his family.

The chairman reported that since the last meeting of the committee no further answers had been received from the Departments to the calls of the committee, but he understood that those remaining were in progress and would be shortly communicated.

Mr. Wickliffe offered the following resolution, which was adopted:

Resolved, That the chairman of the committee address a letter to the Secretary of State to ascertain the following facts:

Did John H. Pleasants go as bearer of despatches from the United States to Rio Janeiro and Buenos Ayres in 1825?

Did he deliver the despatches to the proper authority at Rio Janeiro and Buenos Ayres?

If he did not go, what became of the despatches? Who bore them to the Governments of Rio Janeiro and Buenos Ayres?

Where did John H. Pleasants go after he left the United States? Was it not known to the Department, when his account was settled and paid him, that he had not been to Buenos Ayres as the bearer of despatches from this Government?

The committee adjourned, to meet at 11 o'clock on Thursday next.

THURSDAY, *March* 27, 1828.

Committee met. Present: Mr. Hamilton, Mr. Ingham, Mr. Rives, Mr. Everett, Mr. Wickliffe, and Mr. Cambreleng.

The chairman communicated a copy of his note to the Secretary of State, enclosing a copy of the resolution adopted by the committee at its last meeting.

He also communicated Mr. Clay's reply to the same, containing sundry letters respecting the employment of John Hamblin Pleasants as bearer of despatches to Rio Janeiro and Buenos Ayres; which, after being read, were referred to the sub-committee on the Department of State.

The chairman also communicated a letter from the Secretary of the Navy, covering a statement of the amount paid as compensation to the officers of the Navy for and on account of extra duty for the year 1826; showing the amount paid to each officer, and for what duty or service paid; which was referred to the sub-committee on the Navy Department.

The committee then adjourned, to meet again on Thursday next at 10 o'clock.

THURSDAY *April* 3, 1828.

Committee met. Present: Mr. Hamilton, Mr. Cambreleng, Mr. Everett, Mr. Wickliffe, and Mr. Rives.

The chairman communicated a letter from the Secretary of the Navy, accompanied by a statement

showing the "number of officers, seamen, and marines provided for at the several navy hospitals during the year 1826;" which was referred to the sub-committee on the Navy Department.

Mr. Wickliffe offered the following resolution, which was adopted:

Resolved, That the chairman ask of the House leave to send for persons and papers.

The committee then adjourned to Saturday at 10 o'clock.

SATURDAY, *April* 5, 1828.

The chairman met to adjourn the committee, by instructions of a majority of the committee during its recess, in consequence of the continued indisposition of Mr. Sergeant and the absence of Mr. Ingham.

The members of the committee were then summoned to meet on Monday, April 7, at 10 o'clock.

MONDAY, *April* 7, 1828.

The committee met pursuant to adjournment. Present: Mr. Hamilton, Mr. Cambreleng, Mr. Everett, Mr. Wickliffe, and Mr. Rives.

The chairman communicated the resolution adopted by the House on the 4th instant, in the following words:

"*Resolved*, That the Select Committee on the subject of Retrenchment be empowered to send for persons and papers."

The chairman also communicated a letter from the Secretary of the Treasury, accompanied by statements of the contingent expenditures of the State, Treasury, War, and Navy Departments for the years 1822, 1823, and 1824, together with a general abstract thereof; which were severally referred to the sub-committees on those Departments.

The chairman also communicated a letter from the Secretary of the Treasury on the organization of the Treasury Department, &c., accompanied by communications from the subordinate officers of the Treasury, numbered from 1 to 9, being in compliance with a resolution of the committee adopted on the 13th March; which papers were referred to the sub-committee on the Treasury Department, &c.

Mr. Wickliffe offered the following resolution, which was adopted:

Resolved, That summons be issued for Thomas B. Dashiel and G. W. Dashiel, James McCleary, and James Laurie, to attend the committee on Wednesdry next at 9 o'clock.

The committee then adjourned to Wednesday at 10 o'clock.

WEDNESDAY, *April* 9, 1838.

The committee met. Present: Mr. Hamilton, Mr. Cambreleng, Mr. Everett, Mr. Wickliffe, and Mr. Rives.

Several witnesses, to wit, Thomas B. Dashiel, George W. Dashiel, Dr. Laurie, and James McCleary, attended, in pursuance of a summons from the chairman.

Thomas B. Dashiel, George W. Dashiel, and Dr. Laurie were severally sworn and examined.

The following are questions propounded to Thomas B. Dashiel and answers given:

Question. In what office are you clerk?

Answer. In the office of the Treasurer.

Question. Who is the chief clerk in the Treasurer's office?

Answer. I am acting as chief clerk *pro tempore.* Samuel Brooks who has retired for twelve months, from old age, from the office, is the regular chief clerk of the office.

Question. What is his salary as fixed by law?

Answer. His salary is $1,700 per annum.

Question. How long since he has done any duty in the office of the Treasurer?

Answer. About twelve months.

Question. Who performs the duties of chief clerk in the Treasurer's office?

Answer. I do.

Question. Did or did not the said Samuel Brooks agree with you, or some other of the clerks in the Department, that if you or they would do his business as chief clerk he would give you $900 of his salary? If he did not make such agreement, state what agreement he did make.

Answer. Mr. Brooks made no agreement with me; when he retired from the office Mr. Tucker directed me to do the business. There was no agreement between Mr. Brooks and myself whatever.

Question. Has he received any portion of his salary since he left the office and ceased to do business?

Answer. Mr. Brooks received a salary at the rate of $1,400 per annum for the first three months after he retired, since which time he has received at the rate of $800 per annum.

Question. Who receives the balance of the $1,700 appropriated by law?

Answer. I receive, in addition to my salary, $300 as fixed by law, making my compensation equal to $1,700; George W. Dashiel receives, in addition to his salary as fixed by law, the sum of $250; B. B. Beall receives, in addition to his salary, $160; G. Beall receives, in addition to his salary, $200; and the duties heretofore performed by G. Beall are performed by Mr. Moore, the messenger, who receives as assistant clerk a fixed salary of $400; he does duty as an assistant clerk to the chief clerk. The same quantum of labor is now performed in the office by those persons above mentioned as was performed by the whole of the clerks when Mr. Brooks was in the office; no inconvenience results from the absence of Mr. Brooks.

Question. What are the age and circumstances of Mr. Brooks, and how long has he been in office?

Answer. His age is about 77 years; his circumstances are considered good. He entered the office about 1792; he has occasionally been indisposed; sometimes confined for a week or ten days. The assistant clerk was granted in 1818, as well as I can recollect.

Question. Why was the assistant clerk granted?

Answer. He was granted in consequence of the old age of Mr. Brooks, who could not get along with the business as well as was required.

George W. Dashiel states, upon interrogatories, that Mr. Brooks retired from the office on account of his inefficiency to perform the duties of chief clerk; he rather retarded the business than otherwise; he received his salary for about three months after he retired. Some time after he retired, the arrangement was made by the Treasurer by which he was to receive $800 of his salary, and the promotions took place with the increase of salary as stated by Thomas B. Dashiel. Mr. Brooks has no wife or family. He is unable to state what are his circumstances.

Questions propounded to Dr. Laurie:

Question. What portion of time does Anthony Morris devote to public duties in the office of the Register of the Treasury, and what duties has he performed for the last twelve months?

Answer. I am not employed in the same room in that office, and, therefore, cannot say to what extent of time devoted or duties performed by Mr. Morris.

Mr. Wickliffe offered the following resolution, which was adopted:

Resolved, That a summons be issued for Michael Nourse to attend as a witness before this committee.

The chairman communicated a letter from the Secretary of War, with communications from the Second and Third Auditors, &c., which were referred to the sub-committee on the War Department.

The committee then adjourned to Saturday, 9 o'clock.

SATURDAY, *April* 12, 1828.

Committee met. Present: Mr. Hamilton, Mr. Ingham, Mr. Everett, Mr. Wickliffe, and Mr. Cambreleng.

The chairman then stated that a subpœna had been returned as duly served on Mr. Michael Nourse, the chief clerk of the Register's office, who now attended to answer such questions touching any inquiry the committee might make of him.

Mr. Nourse being sworn,

Mr. Wickliffe propounded the following questions:

Question. Are you acquainted with Mr. Anthony Morris, clerk in the Register's office? State the duties he performs, and the proportion of time throughout the year he is engaged in the discharge of the same.

Answer. Witness says he is acquainted with Mr. Morris. He is a clerk in the Register's office. He does not know the duties he performs. Mr. Morris is in a room by himself, and he does not know how much he is engaged.

Question. Do you believe his services to the Government essential to the regular discharge of the business of the Register's office; and are they, in your opinion, worth the salary of $1,400 paid him?

Answer. Witness does not feel himself authorized to express an opinion, as he is not particularly acquainted with the duties performed by Mr. Morris.

By Mr. Everett. When and by whom was Mr. Morris appointed clerk?

Answer. He was appointed, witness thinks, about three years ago next fall; his appointment was made by the Register, with the approbation, he thinks, of Mr. Crawford.

By Mr. Cambreleng. Who filled the office before Mr. Morris' appointment?

Answer. Mr. Charles Dawson.

By Mr. Wickliffe. Do you know what duties Mr. Dawson performed?

Answer. He kept the impost book and assisted in forming the commercial statements.

By Mr. Cambreleng. Does Mr. Morris now keep the impost book and commercial statements?

Answer. No; Mr. Patterson attends to the first, and the labor of the second is divided between different clerks.

By Mr. Everett. What is the usual way in which clerks in the Register's office are appointed?

Answer. They are appointed by the Register, generally, with the approbation of the Secretary.

By Mr. Ingham. Do you know whether the Secretary of the Treasury has appointed a clerk in a branch of the Treasury without an application from the head of that subordinate branch?

Answer. I do not know that he has.

Question. Do you know whether any of the duties which were performed by Mr. Dawson are now or ever have been discharged by Mr. Morris?

Answer. They are not now performed by Mr. Morris; but when Mr. Morris first entered the office he entered on the duties of Mr. Dawson.

By Mr. Everett. How long did Mr. Morris perform the duties of Mr. Dawson, and why did he cease to perform them?

Answer. Witness does not recollect; he believes less than a year. He does not know why he ceased to perform them.

By Mr. Wickliffe. Do you not know that Mr. Morris is often absent from his duties in office hours?

Answer. Witness answers, that he does not know, when in the city, how much or how often Mr. Morris may be absent in office hours; but that he has been absent since his appointment about three months in each year, in consequence of his own ill health and that of his daughter, as he believes.

Mr. Nourse asked permission to state that he had been informed that Mr. Brooks' circumstances were not good; that he was in debt, and that he had not a clear income of more than $100 or $200.

Mr. Ingham submitted the following resolution, which was agreed to:

Resolved, That a subpœna be issued to the Register of the Treasury.

The committee then adjourned to meet on Wednesday next at 9 o'clock.

WEDNESDAY, *April* 16, 1828.

Committee met. Present: Mr. Hamilton, Mr. Everett, Mr. Wickliffe, and Mr. Cambreleng.

The chairman stated that, in conformity with the directions of the committee, he had issued a summons to Mr. Nourse, the Register of the Treasury, who had attended, and was now present to give testimony.

Mr. Nourse was accordingly sworn, and the following is his testimony:

Question. What is the nature and extent of duties performed by Mr. Morris?

Answer. Mr. Morris was absent when the other clerks were directed to state their duties; consequently, did not render a statement, but has since written a letter.

[Letter of Mr. Morris read and filed.]

Witness had classed Mr. Morris' service under three heads: correspondence, statistics, miscellaneous. With regard to correspondence, in which Mr. Morris is his aid, he is the only literary man in the office on whom witness can call. Witness being conversant with the details of matters relative to the old Government, is often written to on them, and calls on Mr. Morris to aid in answering.

2d. *Statistics.* Mr. Morris was put on the books as a man of education, better adapted to that branch than to common clerical duty, and was employed to carry on the work of Seybert, as an undertaking of

great use and convenience to the Government. Has made a great many selections of a statistical nature, but principally employed in preparatory researches.

3d. Mr. Morris has charge of *statement* books; has arranged the index to fifteen volumes, and prepared a great mass of papers relative to old Government transactions. It is the situation of his family which has called him away.

Question. At what hour does Mr. Morris come to the office every day?

Answer. About 10 o'clock every day.

Question. How long does he stay?

Answer. Excepting when he is wanted, he generally goes away at half past two, or a little before three o'clock, as he lives at a distance from the office.

Question. Is he not absent, on an average, at least from two to three months each year?

Answer. Witness has not taken a particular record; refers to the letter of Mr. Morris. Witness thinks he is absent on an average of two months; but probably will not be hereafter, in consequence of the death of his daughter.

Question. Is this a customary indulgence?

Answer. The clerks are not indulged in absence, unless called by circumstances. Witness considers himself as standing in a paternal relation to the officers under him.

Question. Do you consider his services necessary?

Answer. Thinks that, at witness' time of life, such an aid to himself is required.

Question. Do you consider his services deserving the salary of $1,400 per annum?

Answer. Thinks an officer of his talents deserving the salary of $1,400.

Question. Has Mr. Morris made out an answer to any call within twelve months relative to any matter contained in the fifteen volumes?

Answer. The call relative to the claim of Walter Livingston, requiring laborious research, was referred to Mr. Morris, and the answer prepared by him.

Question. Were not the duties performed by Mr. Morris formerly those of Register and chief clerk?

Answer. These duties were witness' own, and he considers Mr. Morris more particularly as his aid. Mr. Morris was appointed in November, 1822, by Mr. Crawford, with the concurrence of the Register and implied patronage of Mr. Madison, who had sent him on a private mission to Spain, and was paid out of the $100,000 granted during the war for special services.

The chairman then submitted a letter from Mr. Nourse, Register of the Treasury, as to the duties performed by Mr. Morris.

He also submitted a letter from Mr. Lee, Second Auditor, containing a list of the clerks in his office, and the duties they perform.

And then the committee adjourned to meet when summoned by the chairman.

THURSDAY, *April* 24, 1828.

The committee met. Present: Mr. Hamilton, Mr. Everett, Mr. Rives, Mr. Wickliffe, and Mr. Cambreleng.

The chairman stated to the committee that he had not previously summoned them in consequence of the continued indisposition and sickness of Messrs. Sergeant and Ingham.

He also communicated the following letter from Mr. Nourse, the Register of the Treasury, explanatory of his testimony, viz:

TREASURY DEPARTMENT, *Register's Office, April* 16, 1828.

Recollecting one of the questions of this morning before the committee in respect to occasional absence of the other clerks, I answered, "It was not." At that moment the period of two months was in my mind. I should have said, "It is usual, on application of clerks, on special applications to be absent with leave, and the period of distance has in a measure governed the grants as to the time of absence; but not generally for 'two months,' unless sickness intervened."

I have the honor to be, &c.,

JOSEPH NOURSE.

The following resolution was offered by Mr. Wickliffe and agreed to:

Resolved, That summons issue for George Graham, the Commissioner of the Land Office, Richard Cutts, and Colonel McKenney to appear at the next meeting of the committee and give testimony.

The chairman was then instructed by the committee to apply to the House for leave to sit during the sessions of the House.

And then the committee adjourned to meet at half past 9 o'clock to-morrow morning.

FRIDAY, *April* 25, 1828.

The committee met. Present: Mr. Hamilton, Mr. Rives, Mr. Everett, Mr. Wickliffe, and Mr. Cambreleng.

The chairman stated to the committee that George Graham, R. Cutts, and Colonel McKenney attended to give testimony.

Upon Mr. Graham being sworn, he testified as follows:

Question. What is the utility of continuing the system of inspecting the Land Offices?

Answer. The duty of the examiner is to examine and count the money reported to be in the hands of the Receiver; to compare the books of the Register and Receiver together in order to see whether they correspond; to make a report as to the manner in which the books are kept, in respect to neatness and correctness, and whether they are brought up to the period of examination. The practice of these examinations has existed since 1804, in pursuance of law, although with some variations in the mode.

Question. Could not the business be as well done by some citizen in the neighborhood?

Answer. In the early period there were few offices, and Mr. Gallatin generally employed some one in the neighborhood to examine them, with a per diem of $6 while actually engaged, and $5 or $6 per 20 miles for mileage. After Mr. Crawford came into office he thought it expedient to employ persons not residing in the neighborhood on the same allowance per diem while actually engaged, and $5 or $6 mileage for all expenses.

Question. Could not the examination be made as efficiently, and at a great reduction of expense, by a person living in the neighborhood of the offices?

Answer. Witness thinks it might, and that it is not necessary to have an annual examination as now prescribed by law. An occasional examination will be sufficient. In some offices it should take place annually; but where the books were found, on one examination, well kept and brought up, an examination the next year might be dispensed with. Some offices should be examined, and the money counted, oftener than once a year. The frequency of examination might be in the discretion of the President.

Question. When was John Scott appointed to examine Land Offices, and what amount of compensation was made or to be made to him?

Answer. Thinks he was appointed in March or April, 1827; examined the offices in the course of last summer and fall in Missouri and Arkansas. Has made report of the examinations, but has rendered no account for his services. Has received from the different Receivers about $400, as appears from their returns, and has drawn a bill on the Department for $500, which has not been paid in consequence of his not having yet rendered his accounts. He will be entitled to $6 per diem for every day employed in actual examination, and $5 or $6 for every 20 miles computed from his residence, such being the standing allowance. This compensation has been paid in various ways; no specific appropriation has been made by law for its payment. Each examiner, when appointed, is furnished with a letter of credit to the Receiver of each office which he examines. Amount paid on such letter is charged to the contingencies of the sale of public lands. It is an indefinite letter of credit, but agents seldom draw more than $100 from any office. Examiner reports the number of days that he has been employed in each office; if an unreasonable number of days be reported, an inquiry will be ordered. Witness does not recollect any case of more than four or five days reported for one office. Where the examiner does not receive all that he is entitled to at the offices, he sends his account to the Treasury, and is paid out of the annual appropriation for payments of accounts not otherwise provided for, or by order on some one of the Receivers.

Question. What mileage was Mr. Scott entitled to?

Answer. The amount of miles travelled by him is not known as yet at the Land Office, and for this reason the settlement of his account has been suspended. Mr. Scott has made all his reports and finished his agency. His reports were delayed by sickness, but his accounts are not yet rendered; and not knowing what he is entitled to as mileage, his draft has not been paid. He examined seven offices in Missouri and Arkansas.

The committee then proceeded to the examination of Mr. Cutts, Comptroller of the Treasury, who, being sworn, was merely interrogated in explanation of certain items in the account of the contingent expenses of the Indian Department; but as a reference to the vouchers in his office was necessary before he could render his answers, his examination was postponed, as well as that of Colonel McKenney.

The chairman then stated to the committee that he felt it his duty to mention that a citizen, now a resident of this District, had inquired of him whether, in any of the accounts of the contingent expenses of the Government, the United States were debited with the sum of five thousand five hundred dollars, paid to the late Daniel P. Cook, late Representative in Congress from the State of Illinois, for certain diplomatic services upon which Mr. Cook was supposed to have been sent abroad during the last summer.

The individual making this communication also stated that he had good reason to *believe* that the Hon. Mr. Barton, of the Senate, and the Hon. Mr. Letcher, of the House of Representatives, were acquainted with this fact, and that he had good reason *to know* that John McLean, Esq., Postmaster General, was also cognizant of the circumstances connected with this transaction.

The chairman stated that he did not feel at liberty to communicate the name of his informant, but in regard to the purport of the communication he felt no such reserve, and it was for the committee to make such order on the statement as they might deem proper.

It was, on motion of Mr. Cambreleng,

Resolved, That the committee consider the communication; when Mr. Wickliffe moved that the committee proceed to the examination of the fact stated, and that the chairman request the attendance of Messrs. Letcher and Barton, and issue a summons for the Postmaster General.

Mr. Everett stated to the committee that, desiring to confer with Mr. Sergeant, who was absent from indisposition, on the very important subject involved in the communication, he would move that its consideration be postponed until to-morrow, Saturday, the 26th, at 12 o'clock, (meridian,) which was carried *nem. con.*

Then the committee adjourned to meet to-morrow at 12 o'clock.

SATURDAY, *April* 26, 1828.

Committee met. Present: Mr. Hamilton, (chairman,) Mr. Sergeant, Mr. Rives, Mr. Everett, Mr. Wickliffe, and Mr. Cambreleng.

The chairman submitted the following letter from Mr. Graham, Commissioner of the General Land Office, explanatory of his testimony taken on yesterday:

"GENERAL LAND OFFICE, *April* 25, 1828.

"SIR: In the statement made by me to the committee I omitted to mention that, in a conversation had with the Secretary of the Treasury last autumn, previous to the session of Congress, I understood him to say that, for the future, the letter of credit given to the examiners of the Land Offices should be more restricted and limited in its terms. If deemed necessary, you will please file this as a part of my testimony.

"With very great respect, &c.,

"GEO. GRAHAM."

The committee then proceeded to the consideration of the motion that the committee proceed to the examination of the fact stated in the communication of the chairman, and that the chairman request the attendance of Messrs. Barton and Letcher, and issue a summons for the Postmaster General *forthwith.*

And, upon the question being taken, Messrs. Rives, Wickliffe, and Cambreleng voted in the affirmative, and Messrs. Sergeant and Everett in the negative.

The chairman then transmitted notes to Messrs. Barton and Letcher, and issued a subpœna to the Postmaster General, all of whom attended.

The Hon. Mr. Barton, of the Senate, attended as a witness, and, being sworn, testified as follows:

Question. Are you acquainted with the fact that the late D. P. Cook was employed by the Government of the United States on foreign service at the commencement of the last summer?

Answer. Witness understood from Mr. Cook himself that, as Mr. Cook was going to the island of Cuba for his health, he was, while there, to be employed in the service of the Government to collect such information as the Government might wish to have relative to that country. He was sick at the close of the session, and witness remained with him, and went with him to Philadelphia, where he left witness and went to New York. Witness had intended to go round with him by the way of Cuba, but declined doing so on account of the advanced season.

Question. Did you understand what compensation Mr. Cook was to have for his services?

Answer. Witness understood that an advance was made to him of $1,000.

Question. Did you learn what additional sum he was to receive for his services, or whether he was to receive any?

Answer Witness did not understand whether there was to be any further compensation.

Question. What was the situation of Mr. Cook's health at the time he received this appointment?

Answer. He was supposed to be recovering from the sickness which he had had during the session. At the close of the session he was very ill. Witness remained with him till about March 20, when he was much better, and then accompanied him to Philadelphia, where witness stayed with him until April, and he continued to get better.

Question. Did Mr. Cook stop at Philadelphia on account of his health?

Answer. When he left Washington he had the intention to sail from Philadelphia or New York, but designed also to stop at Philadelphia and consult Dr. Physick with respect to his health.

Question. After Mr. Cook concluded to go out to Cuba in the service of the United States, was he obliged to stay here on account of his health?

Answer. It was not long before witness started for Philadelphia that witness heard Mr. Cook would be thus employed.

Question. Do you know if Mr. Cook spoke the Spanish language?

Answer. Witness does not know whether he did or not, but thinks, from his acquaintance with him since he was a boy, that he did not.

Question. From the situation in which you left Mr. Cook in Philadelphia, did you think him capable of attending thoroughly to his business, public or private?

Answer. Did not think him so at the time; but if his health had continued to improve as it had done from the adjournment, witness thinks he would soon have been able to attend to business. Did not, however, think he would permanently recover from a pulmonary complaint with which he was seriously afflicted.

Question. Do you or do you not know that at the time Mr. Cook was sick he was an applicant for the appointment of minister to Colombia?

Answer. He had heard such a thing spoken of, not only at that moment, but during that spring. Witness lived with Mr. Cook.

Question. On what points did you understand that Mr. Cook was to collect information?

Answer. On the state of public affairs generally; witness thinks he heard no particulars.

Question. Did you hear the reason assigned why he did not receive the appointment to Colombia?

Answer. Witness did not hear any special reason assigned, or if he did, does not remember it.

Question. Have you any recollection of hearing that this mission to Cuba was an alternative for the mission to Colombia, which for certain reason could not be given him?

Answer. Witness heard no such idea suggested. Witness had probably about the same knowledge of the application for the appointment to Colombia that most members of Congress had, which was, in general, that he desired it but did not obtain it.

Question by Mr. Wickliffe. Do you know when Mr. Cook returned?

Answer. Thinks it was the latter end of May, or beginning of June, that he returned?

Question. When did Mr. Cook probably sail from New York?

Answer. Does not know, but presumes some time in April. Witness parted from him between the 5th and 10th of April, at Philadelphia, when Mr. Cook went to New York to sail.

Question by Mr. Cambreleng. Do you know that Mr. Cook did not receive anything more than the $1,000 advanced to him when he left Washington?

Answer. Witness does not know that he received no more.

Questions by Mr. Everett. Do you know who was Governor General of Cuba at that time?

Answer. Thinks it was General Vives, formerly minister in this country.

Question. Have you any reason to believe that while General Vives was in this country he learned to speak the English language?

Answer. Thinks while he was here he might have made some progress.

Question by Mr. Cambreleng. Do you know General Vives?

Answer. Witness saw him while he was here; had no personal acquaintance with him; was, perhaps, introduced to him; does not recollect that he ever conversed with him.

Question by Mr. Sergeant. Do you recollect whether Mr. Cook had formerly been employed abroad by the Government?

Answer. Was sent (witness believes) to London, by Mr. Madison, to carry despatches.

Question by Mr. Rives. Do you know that he returned from London with Mr. Adams?

Answer. Thinks he has heard Mr. Cook say so?

Question by Mr. Cambreleng. Was Mr. Cook able to go out when he was here and attend to business?

Answer. Not much, but rode out occasionally to the public offices. Before he left Philadelphia was able to walk out on business.

Mr. Letcher was next sworn, and testified as follows:

Question. Have you any knowledge whether Mr. Cook received an appointment from the Government of the United States in March or April last?

Answer. Witness has no knowledge, but has understood so, during this session of Congress, from the Postmaster General or Mr. Clay in some casual conversation. Does not certainly remember to have heard Mr. Clay say so. Is pretty confident it was one of the two, and is not sure which.

Question. Did you remain here at the close of the last session of Congress?

Answer. No. Witness left Congress a few days before the adjournment.

Question. Did Mr. Cook ever tell you he applied for an appointment?

Answer. He never did; but witness knows he was desirous of one.

Question. What was the state of Mr. Cook's health at the close of the session?

Answer. It was delicate.

Question. Did you think him fit to attend to business at that time?

Answer. It will depend on the nature of the business. Did not think him capable of attending to laborious business.

Question. Do you know whether Mr. Cook was an applicant for the appointment of minister to Colombia?

Answer. He was. Mr. Cook having expressed his desire to procure that appointment in conversation, asked witness' opinion of his fitness for the office, and prospect of getting it. Does not know that he ever applied to the President, but has no doubt he did, (from his conversation,) either by himself or friends.

Question. Did you ever hear, from any person connected with the Government, the reason why he did not receive that appointment?

Answer. Never did.

Question. Do you know whether Mr. Cook spoke the Spanish language?

Answer. Thinks he did not; if he did, witness has no knowledge of it.

Question by Mr. Cambreleng. Do you recollect that Mr. Cook was unable to attend in Congress at the close of the session?

Answer. He was unable to attend, although he had a bill of interest before the House. Some time before he had been diligent in his attendance as chairman of the Committee of Ways and Means.

Question. Do you know anything about the sum of money he was to receive?

Answer. Does not.

Question by Mr. Everett. Did you understand what was the nature of the duties to be discharged by Mr. Cook in Cuba.

Answer. Witness did not, but has the impression that when he understood from Mr. Clay or the Postmaster General that he had had such an appointment, he was told that he had done all that was expected.

Mr. John McLean, Postmaster General, appeared, was sworn, and the following is his testimony:

Question. Have you any information touching an appointment which the late D. P. Cook received last spring?

Answer. Witness understood from Mr. Cook that he was appointed as a secret agent to Cuba. He was sick some weeks at witness' house, and the subject was mentioned rather confidentially to witness, but without any injunction of secrecy. Does not know that he has ever mentioned it to any one, but may have done so to Judge Letcher, and possibly to some other person, but cannot recollect with certainty.

Remark by the Chairman. The committee are not acting under any information that they have any reason to think was derived from witness.

Question. Did you understand from Mr. Cook the amount of compensation he was to receive?

Answer. Something was said by Mr. Cook on the subject. The sum of $5,000 per annum was named, but witness does not recollect to have heard that any sum was fixed, and this sum may have been mentioned before the appointment was made or the sum fixed.

Question. Was not Mr. Cook confined by illness at the time at your house?

Answer. He was some weeks sick at witness' house, being there by invitation, in order that he might have more comforts than he could otherwise have. Witness thought him near dying.

Question. Did you, at that time, think that he was able to attend to any business?

Answer. Witness thought, by change of climate, he would be able to attend to business. He recovered so much as to be able to travel to New York with considerable comfort; and witness thought, at the time he left his house, that he would be able to attend to the business confided to him.

Question. Was Mr. Cook acquainted with the Spanish language?

Answer. Witness does not know that he was.

Question. What was the nature of his disease?

Answer. Pulmonary; but it was thought by his physician that he might live some months, or perhaps some years.

Questions by Mr. Rives. Do you know how much money he received before he left the country or after his return?

Answer. Witness does not know.

Question. Have you any knowledge of any application made by Mr. Cook for the place of minister to Colombia?

Answer. His name was before the President.

Question. Did you ever learn that this secret mission was an alternative for the mission to Colombia?

Answer. Witness understood that it was not thought expedient to send a minister to Colombia, and that Mr. Cook accepted of this mission. Witness does not know that it was an alternative.

Question by Mr. Wickliffe. Was not his application to be minister *or* Chargé d'Affaires to Colombia?

Answer. Witness thinks it was to be minister. Mr. Cook wrote a letter to witness on the subject of the appointment; witness having a high opinion of his capacity, integrity, and fitness for the office, sent the letter to the President, but had no conversation with the President or Mr. Clay on the subject; that was the application.

Question by Mr. Rives. Did you understand that, on the return of Mr. Cook to the country, he had performed all the services expected from him?

Answer. Has no distinct impression on that head.

Questions by Mr. Cambreleng. Had you any knowledge of the way in which he performed the duties of his appointment?

Answer. Not any. Witness understood his health became worse on his return.

Question. Did you ever tell any one that he had performed the duties expected of him?

Answer. Witness has no distinct recollection of doing so; if he has told any one so, it has escaped his recollection; presumes he could not have said so, as he had no particular information on the subject.

Question by Mr. Everett. Had you any understanding as to the general nature of the duties to be performed by Mr. Cook?

Answer. Witness had not; did not see his instructions, nor did Mr. Cook go into any detail in conversation.

Questions by Mr. Cambreleng. Do you suppose that Mr. Cook disguised anything from you, or were the conversations frank?

Answer. They were frank. Mr. Cook said he expected special instructions; that he had some con-

versations with the President or Secretary of State, and found the business to be confided to him of more importance than he had expected, but did not go into detail, nor did witness think it proper to inquire more particularly.

Question. Do you know whether his duties were of a diplomatic character?

Answer. Does not. His impression was, that the agency was of a secret nature, but could not state positively.

Question by Mr. Everett. What is your recollection as to the sum of $5,000 mentioned by Mr. Cook?

Answer. It is very indistinct. It may have referred to a probable sum to be fixed.

Question by Chairman. Did you or did you not hear Mr. Cook or some of his friends make a comparative estimate of the value of this mission and of that to Colombia, as an inducement to accept the appointment?

Answer. Witness may have conversed with Mr. Cook on this point, and may have stated that if a fixed sum of $5,000 were given, as less expense would be incurred, it would be as good, in a pecuniary point of view, as the mission to Colombia.

Question by Mr. Everett. Do you remember to have heard that if Mr. Cook had not received this appointment it would have been necessary to send some other person?

Answer. Witness may have heard something like this from Mr. Cook, but does not recollect it.

The committee adjourned to meet again on

WEDNESDAY, *April* 30, 1828.

Committee met at ten o'clock. Present: The Chairman, Mr. Wickliffe, Mr. Sergeant, Mr. Cambreleng and Mr. Everett.

Mr. Sergeant requested that it might be entered on the journal of the committee that his absence from the meetings of the committee had been occasioned by indisposition, which had confined him to his room.

Ordered, That Messrs. Way and Weightman be summoned as witnesses to attend the committee, and that Messrs. Gales and Seaton be invited to give such explanations relative to the printing of the House as may be required.

The chairman submitted a letter from Mr. Letcher, explaining his testimony before the committee at the last meeting, which is as follows:

HOUSE OF REPRESENTATIVES, *Monday morning, April*, 25, 1828.

SIR: In answer to an inquiry propounded to me by one of the Committee on Retrenchment, Saturday evening last, whether I was here at the close of the last session of Congress, I replied I was not, that I left the city a few days before the termination of the session. Such was my unqualified opinion at the moment. I find, however, upon reflection, I labored under a misapprehension, and that I remained here until the close of the session. Although the mistake might not be very material in reference to the subject-matter about which I was examined, yet, as I am desirous of being accurate, I must ask the favor of the committee to allow me to correct my statement in the aforesaid particular.

With great respect, your obedient servant,

R. P. LETCHER.

Hon. J. HAMILTON, *Chairman, &c.*

The committee adjourned to meet again at 12 o'clock.

The committee met pursuant to adjournment:

When Mr. Andrew Way appeared, was sworn, and testified as follows:

Question. 1. What is the difference between the number of ems contained in a page of the size of the edition of the laws of 1815, and in a page of the size of the documents as printed by Gales and Seaton?

Answer. About one hundred and fifty-five; making from one-third to one-half a page in eight of continuous printing. In printing a work like the journal, containing numerous breaks, the difference in the number of ems in the width would produce little or no saving. The difference in the number of lines on the page of the journal, and that of the laws, might amount to a third of a page in eight. The charge of printers for seven full pages, and a part of the eighth or a blank page, would be the same as for eight full pages.

Question. 2. In consequence of the difference between the two sizes of the pages, might not the printer, in printing a document that might be compressed into four pages of the large size, occasionally extend it to a fifth page, and thus lead to an extra charge for the fifth page and the sixth blank page?

Answer. He would not go over the fourth page for a few lines, but if it were necessary to go over the fourth page, would charge for half a sheet.

3. *Question by Mr. Everett.* On what proportion of the printing done for the House would the loss arising from the different size of pages accrue?

Answer. It would be impossible to say exactly, without carefully examining the whole. It would accrue on a small part only of the printing. It would accrue on large continuous documents only, and not at all on table work, nor on documents containing from four to sixteen pages each.

4. *Question by Mr. Everett.* Would not the printer, for his own convenience and interest, crowd a small excess over a signature into the signature, rather than subjoin an additional leaf?

Answer. He would, because he would suffer more in filling up the blank page and in the extra stitching than he would gain by the extra charge. It would be considered discreditable to throw a few extra lines on a ninth page and charge accordingly.

5. *Question by Mr. Seaton.* From your knowledge of the manner in which the public printing has been done by the present printers, and by any others, do you not think that it has been done very much better, in respect to economy and despatch, by the present printers, than by any others?

Answer. Witness thinks it has decidedly; has been astonished at the expedition with which the printing has been done by the present printers; thinks it was never so well done before; has been as neatly executed, but never with so much expedition.

6. *Question by Mr. Wickliffe.* What is the loss sustained in Senate document No. 102, of the 1st session 19th Congress, making 840 pages, in consequence of the size of the pages?

Answer. About fifty pages in consequence of the reduced length of page. Very little effect in that document would be produced by the difference in width; but it is impossible to speak accurately.

7. *Question by Mr. Everett.* What would be the loss on House document No. 112, 1st session 19th Congress, which is rule work?

Answer. There would be no loss.

8. *Question by Mr. Everett.* Are there not many more documents of the same kind as the last named document than the former?

Answer. There are. There are a few documents where the loss would accrue. Does not know certainly what proportion of long documents are now published. In former years there were very few.

9. *Question by Mr. Everett.* What is your opinion of the difference in respect to economy of the mode in which such statistical tables as document No. 133, 2d session 15th Congress, printed by De Krafft, and document No. 120, 2d session 19th Congress, are printed?

Answer. The difference is very great. The expense of the former mode would be four times that of the present, at the same rate per page.

10. *Question by Mr. Wickliffe.* Was not the former document printed by contract, and before the resolution of 1819?

Answer. It was.

11. *Question by Mr. Everett.* What was the nature of the contract under which the printing was formerly done?

Answer. Thinks it was so much per sheet or half sheet.

12. *Question by Mr. Everett.* Might not document No. 120, making 283 pages of rule and figure work, 2d session 19th Congress, under the resolution of 1819, have been printed in the same form as No. 133, 2d session 15th Congress?

Answer. According to witness' understanding of the rule it might.

13. *Question by Mr. Everett.* About how many more pages would document No. 120, 2d session 19th Congress, make if printed in the manner just described?

Answer. Witness thinks it would make five or six times as many pages; cannot speak with certainty.

14. *Question by Mr. Wickliffe.* Is it the practice of printers, in rule and table work, to charge the same price for the blank pages as for the printed?

Answer. It is. The compositor would charge it to the printer, and consequently the printer would charge it. If the document consisted only of one page, two would not be charged; but in a continuous work, one blank page would not be excepted.

The committee adjourned to meet again to-morrow at 12 o'clock.

THURSDAY, *May* 1, 1828.

Committee met. Present: The Chairman, Mr. Sergeant, Mr. Wickliffe, and Mr. Everett.

Mr. Cutts was again called—testified as follows:

Question by Mr. Wickliffe. What was the amount of compensation per diem of Thomas L. McKenney, clerk in the War Office, for his tour to Green Bay the last summer?

Answer. Mileage eight dollars per twenty miles, and compensation eight dollars per day while in the discharge of his duties attending the negotiation of the treaties with the Indian tribes?

Question by Mr. Wickliffe. By whom was that compensation paid?

Answer. By Mr. Forsyth, amounting, so far as witness recollects, to $1,880.

Question by Mr. Wickliffe. What amount of money was advanced Colonel McKenney from the Treasury last year, on or before his departure from Washington, for the expenses of his tour from Green Bay to the south?

Answer. $1,750.

Question by Mr. Wickliffe. What amount, in addition to the $1,750, did he claim on his return for his expenses after he left Green Bay?

Answer. $2,782. In making this charge he credited the United States with $1,438, being the amount of certain sums advanced to him by Governor Cass, P. B. Key, P. Lindsley, and J. Crowell; reducing the balance claimed by him on his return to $1,344.

Question by Mr. Wickliffe. Are the sums just named all that he received from Indian agents and others on his tour?

Answer. He received $1,880, mentioned in the answer to former question; $660 of which was for mileage from Green Bay to Washington, which sum was disallowed at the Treasury and debited in his account in consequence of his not having returned directly from Green Bay to Washington, and having charged his travelling expenses on another route.

Question by Mr. Wickliffe. Is paper marked No. 17, in the file presented by witness, a correct copy of a letter of the 28th of January, 1828, from Colonel McKenney to the Secretary of War, explaining his accounts?

Answer. It is. After the letter of witness of the 28th of January, which is appended to that of Colonel McKenney of the same date, witness received another letter from Colonel McKenney of the 26th; in consequence of which, witness withdrew his own letter of the 28th, and required Colonel McKenney to furnish Mr. Schoolcraft and Forsyth's accounts.

Question by Mr. Wickliffe. Is not the paper No. 2 a requisition from the Secretary of War for the balance of Colonel McKenney's account as claimed by him, sent directly to witness as Comptroller, without being first passed upon by the Second Auditor, in the usual manner, according to law?

Answer. It was.

Question by Mr. Wickliffe. Why was not this account settled in the usual manner?

Answer. Because it was not made out in the usual form, nor with sufficient vouchers.

Question by Mr. Everett. Do you know what reasons induced the Secretary of War to grant the requisition under these circumstances?

Answer. Does not know.

Question by Mr. Wickliffe. Do you know of any account presented by Colonel McKenney for the expenses of an entertainment given at Green Bay?

Answer. Witness does not know anything of such an account. If it had been presented for an entertainment given on Colonel McKenney's late tour, witness would have known it.

Question by Mr. Wickliffe. How long was Colonel McKenney absent on his tour?

Answer. Witness thinks he went in May and returned in November.

Question by Mr. Everett. Was the compensation allowed to Colonel McKenney on the tour to Green Bay that which is usually paid for similar services?

Answer. It was. But the allowance for his subsequent tour to the southern tribes being a gross sum, witness does not know whether it is the same usually paid for similar services.

Question by Mr. Everett. In what way are accounts of this nature usually settled?

Answer. They are first passed upon by the Auditor, who reports to the Second Comptroller, by whom they are revised, and the balance due certified to the head of the Department in which the expenditure was incurred. On this report or certificate of the Second Comptroller a requisition of the head of the Department issues to the Secretary of the Treasury.

The following are the documents referred to in Mr. Cutts' testimony:

No. 17.

TREASURY DEPARTMENT, *Second Comptroller's Office, January* 28, 1828.

SIR: It is the opinion of the President that inasmuch as Governor Cass' accounts and those connected with them are not in the office to enable you to make out a statement of your accounts, as required in my letter of the 26th instant, the two former will be dispensed with.

That, in presenting your account for expenses, services, and presents to Indians from Green Bay, &c., you must designate the amount due under each head, with a particular statement of the amount given to Indians.

Respectfully, sir, your obedient servant, RICHARD CUTTS.

THOMAS L. MCKENNEY, Esq.

JANUARY 28, 1828.

SIR: I have received the enclosed note from Mr. Cutts. I am not able, sir, to decide how much I paid under the several branches as enumerated in my account. I will not pretend to be particular even as to the estimate which follows; it is but an *estimate*, and one, too, without data.

I travelled 4,000 miles at least after leaving Green Bay, and in the execution of your instructions, which are *wholly* separate from all others in which I was connected with Governor Cass, and have no more to do with his accounts than with your own private funds. I had for about one thousand miles of the way, besides a delay owing to the rain of weeks, independent of the time I was travelling or voyaging, eleven persons to support, and eight of these to pay; and on entering on the fourth Chickasaw Bluff I had to procure two horses, a light wagon, (for which I claim the hire, they having been bought on my own account and sold afterwards on my own account,) and I had to hire guides, Indians and half-breeds, and interpreters, and all these to feed and pay; and then come home from the Creek agency, with a servant and baggage, in the mail stage, a servant having accompanied me the whole way.

I estimate the cost, under these heads, from Green Bay, at one thousand dollars; I have allowed me thirteen hundred and forty-four dollars, rather $1,244; the $100 being added to repay me for so much paid on account of my expenses, since I returned, for my services. These two deducted from $4,532, the total account, would leave $2,188 to have been given away as presents among *three nations of Indians*, besides fragments of four others. So the item will stand thus:

Supposed cost of expenses	$1,000
Specific allowance for services	1,344
Leaving for presents	2,188
Total of the account	4,532

As rendered, and now with the Second Comptroller.

THOMAS L. MCKENNEY.

The SECRETARY OF WAR.

No. 2.

No. 1100.] WAR DEPARTMENT.

SIR: Please cause a warrant for thirteen hundred and forty-four dollars — cents to be issued in favor of General John Tipton, per order, for which sum Thomas L. McKenney is to be held accountable; to be charged to undermentioned appropriations.

Given under my hand, this ninth day of January, 1828.

JAMES BARBOUR,
Secretary of War.

$1,344.

The SECRETARY OF THE TREASURY.

Countersigned, ——— ———,
Second Comptroller.

Registered, ——— ———, *Auditor.*

Appropriations.

Contingencies of Indian Department $1,344

The chairman submitted the following letter for the adoption of the committee:

COMMITTEE-ROOM OF THE SELECT COMMITTEE ON RETRENCHMENT, *May* 1, 1828.

SIR: It having been ascertained, in the course of our examination, that the late Daniel P. Cook, late Representative in Congress from the State of Illinois, received a sum of money from the Government during the spring or summer of the last year, for certain services, supposed to have been either foreign or diplomatic, I addressed a note to Joseph Nourse, Esquire, Register of the Treasury, of which the following is a copy:

"SIR: With a view of elucidating a subject of inquiry now before the Select Committee on Retrenchment, I am desirous of knowing whether it appears on any of the books of your office that a sum of money

was paid to the late Daniel P. Cook, formerly representing the State of Illinois in Congress, since the 4th of March, 1827, and if any, to what amount, and for what service stated to have been rendered.

"J. HAMILTON, *Chairman.*

"JOSEPH NOURSE, Esq., *Register of the Treasury.*"

In reply to which, Mr. Nourse has enclosed me the following certificate:

"TREASURY DEPARTMENT, *Register's Office, April* 30, 1828.

"I do hereby certify that, from an examination of the books of this office, it does not appear that any money has been paid Daniel P. Cook, formerly representing the State of Illinois in Congress, from the 4th of March, 1827.

"JOSEPH NOURSE, *Register.*"

As in the account of the various expenditures of your Department transmitted from the Treasury no such item appears, I am instructed by the committee to request you to inform us where we are to look for the auditing of the sum said to have been received by Mr. Cook; and, if not audited in the usual course, what was its amount.

As the committee are very desirous of bringing their labors forthwith to a close, your early reply will be esteemed a favor.

I have the honor to be, very respectfully, sir, your obedient servant,

J. HAMILTON, *Chairman.*

Hon. HENRY CLAY, *Secretary of State.*

Mr. Everett then moved the following resolution:

Resolved, That the following be added as a postscript to the aforesaid letter:

"I am further directed by the committee to request you to state to the committee, confidentially or otherwise, if the public service will now permit, what was the nature and necessity of the services on which Mr. Cook was employed in the island of Cuba."

And on the question that the foregoing be adopted as a postscript to the letter, it was decided in the negative—Mr. Everett and Mr. Sergeant voting in the affirmative, and Mr. Chairman, Mr. Wickliffe, and Mr. Cambreleng in the negative.

Mr. George M. Grouard appeared, was sworn, and testified to the following:

Questions by Mr. Everett. Are you the foreman in the printing office of Messrs. Gales & Seaton?

Answer. I am.

Question. How long have you been in their service in that capacity?

Answer. Since 1815.

Question. Will you state to the committee what took place when Messrs. Gales & Seaton were elected printers of Congress, in reference to directions given by the Clerk of the House and Secretary of the Senate, as to the mode in which the printing was to be done?

Answer. Witness was directed by Messrs. Gales & Seaton to make all the arrangements for the printing. Witness sent sheets of the printed documents to Mr. Cutts, then Secretary of the Senate, and to Mr. Dougherty, Clerk of the House, as specimens, informing them that the page was a little smaller than that of the Laws, but that the convenience of binding would be greatly promoted, and that, from the shortness of the greater part of the documents, no loss to the public would accrue. Mr. Cutts approved the size of the page, as submitted by witness, and directed the printing so to be done. Witness also understood from Mr. Gales or Mr. Seaton (he does not recollect which) that Mr. Dougherty approved the size of the page as proposed by witness.

Question. On what proportion of the documents printed would any loss accrue in consequence of the small size of the page?

Answer. On much the greatest part of the documents no loss would accrue. It would only accrue on the documents over 50 pages.

Question. Is the size of the page of the Laws uniform?

Answer. It is not; it varies considerably. Fifty pages might be pointed out in a volume of the Laws smaller than those of the documents as printed by Gales & Seaton.

Question. Were the reasons stated by you in answer to the second question the sole reason which induced the adoption by you of a smaller page?

Answer. They were.

Question. Has the reduced size of the page ever been objected to by any Committee of Accounts of the House of Representatives or Senate?

Answer. It has not, nor by anybody else, as far as witness knows.

Question. Is it within your knowledge that on the committee by whom the resolution of 1819 was reported there were one or more gentlemen who were printers by profession?

Answer. Witness has understood that Mr. Wilson of the Senate, and Mr. Rogers of the House of Representatives, were printers, and were on that committee.

Question. Have you no knowledge of any complaint made by those gentlemen, or any other member of Congress, of the reduced size of the page?

Answer. Has not.

Question. Would it be considered dishonorable, under the circumstances in which Messrs. Gales & Seaton were chosen printers, had they reduced the size of the page for the sake of the emolument that would accrue to them?

Answer. It would have been dishonorable; it was no object to the office.

Question by the Chairman. Does not the profit of Messrs. Gales & Seaton depend on the number of pages printed by them?

Answer. It certainly does in general; but a few lines of extra printing could be no object in a business of such extent.

Question by Mr. Wickliffe. Are the pages in small pica type, close print of the documents as printed by Gales & Seaton, smaller than the pages of the Laws?

Answer. They are smaller than some pages, but not smaller than all. They are less in general; but the pages of the Laws are not of a kind to furnish a uniform standard.

Question by Mr. Wickliffe. What is the difference between the number of ems in the page of the Laws and of the documents?

Answer. One hundred and forty-two.

Question by Mr. Everett. Where it is stated in the resolution of 1819 that the page of the documents was to be of the same size as the page of the Laws, would that be understood, in a strict technical sense, as referring to the number of ems, or to the general size of the page, as duodecimo, octavo, royal octavo, &c.?

Answer. It would be understood in the latter sense. Witness certainly understood that it required only a royal octavo page of good proportions.

Question by Mr. Wickliffe. Are not, on a general comparison, the pages of the documents as printed by Gales & Seaton shorter than those of the Laws?

Answer. They are generally shorter.

Question by Mr. Wickliffe. What would be the difference in expense in printing 6,000 copies of the report of the Select Committee on the Georgia Affairs, containing 846 pages of the reduced size?

Answer. It would be about 50 pages, and would amount to $500.

Question. What is the whole amount of the expense of printing the aforesaid document?

Answer. About $8,000.

Question. What would be the cost of the document No. 158 of the present session?

Answer. About $2,290.

Question by Mr. Sergeant. Did Messrs. Gales & Seaton have anything to do with fixing the size of the page?

Answer. They had nothing to do with it. They did not interfere in it. The printing was witness' own business, who always supposed it was under the direction of the Clerk of the House and Secretary of the Senate.

Question by Mr. Sergeant. In fixing the size of the page as you did, had you any view to increase the gain of the printers, or solely to carry into effect the resolution?

Answer. The gain was not thought of.

Question by the Chairman. Were Messrs. Gales & Seaton aware of the alteration in the size of the page?

Answer. Witness stated it to Mr. Gales at the time, but did not consult him; does not think it can be called an alteration.

Question by Mr. Sergeant. Was it after you had sent the specimens to the Clerk of the House and Secretary of the Senate that you spoke to Mr. Gales?

Answer. Thinks it was after.

Question by Mr. Everett. Did you understand the Clerk of the House and the Secretary of the Senate distinctly to authorize the size of the page as exhibited in the specimens sent by you?

Answer. Witness did so understand it. Mr. Cutts, Secretary of the Senate, told me so personally. Mr. Dougherty witness did not see, but sent him the specimens with a letter, and understood he approved them.

Question by the Chairman. Have you ever read the resolution directing the mode in which the printing should be executed?

Answer. Witness has read it.

Question by the Chairman. Do you conceive that the Secretary of the Senate and the Clerk of the House could repeal the resolution?

Answer. Does not conceive they could.

Question by Mr. Everett. Did you not conceive the page of the documents, as arranged by you, to be conformable to the spirit of the resolution?

Answer. Witness did so consider it.

Mr. George Clark Smoot appeared and was sworn:

Questions by Mr. Wickliffe. You are a printer, and at this time foreman of the printer to the Senate.

Answer. I am.

Question. What is the difference of the size of the page in the Report of the Select Committee on the Georgia Affairs and of that of the Laws of the United States?

Answer. The page of the Laws contains 1,732 ems, the page of the document 1,508; difference 224.

Question. What is the excess paid for 600 copies of the said document as printed, over what it would have cost if printed on a page of the size of the Laws?

Answer. The excess would be 132 pages, and the excess in price $1,023.

Question. What would be the loss to the United States, in the printing generally, in consequence of the smaller size of the page?

Answer. In documents making a closely printed volume of plain matter of any size the difference would be great. In small documents it would be less. In some small documents it would be very great, in consequence of the excess of the matter over the half sheet.

Question. Were you a long time in the office of Gales & Seaton?

Answer. I was; employed in the public printing.

Question. What difference does the reduced size of the page make in some descriptions of cap tables?

Answer. It increases the price two-thirds. A page of brevier rule and figure work costs $3 50, while a cap table costs three times that sum; and on a large page the same matter might be reduced to one page, which, on the small page, would be thrown into a cap table.

Question. Is the printing done for the Senate at the present session done on a page of the same size as that done for the House by Gales & Seaton?

Answer. It is; when the present printer of the Senate was chosen, Mr. Lowrie sent a document to him, directing to take it as the standard. Orders have been given to alter it at the close of the session.

Mr. Meehan appeared and was sworn:

Questions by Mr. Wickliffe. Are you a printer by profession?

Answer. Witness is a printer by profession, and now a proof-reader.

Question. What is the difference in the size of the page of the Laws of the United States and the Report of the Select Committee on the Georgia Affairs?

Answer. The page of the document is 224½ ems less than that of the page of the Laws.

Question. What number of pages would the same document be reduced if printed on a page of the same size of the Laws?

Answer. About 106 pages less, or about one-eighth.

Question. When the size of a page is spoken of, do you always understand precisely the number of ems which it contains, or only whether it be duodecimo, octavo, royal octavo, &c.?

Answer. Witness always understands the number of ems which it contains.

Mr. S. A. Elliot appeared and was sworn:

Question by Mr. Wickliffe. Are you acquainted with the printing business?

Answer. Witness is a book printer by profession.

Question. What is the difference of the size of the page of the Report of the Select Committee on the Georgia Affairs and the page of the Laws of the United States?

Answer. The document contains 1,538 ems to a page; the page of the Laws contains 1,705. Difference, 168 ems in a page—about 92 pages in the whole document of 848 pages.

On motion of Mr. Wickliffe,

Ordered, That a summons issue to William Stewart and William Peters, clerks in the Second Auditor's office.

The committee adjourned to meet to-morrow at 12 o'clock.

FRIDAY, *May* 2, 1828.

Committee met agreeably to adjournment. Present: The Chairman, Mr. Rives, Mr. Sergeant, Mr. Wickliffe, and Mr. Everett.

The chairman submitted to the committee the following letter, received from the Secretary of State, in answer to the letter of the chairman yesterday:

DEPARTMENT OF STATE, *Washington, May* 1, 1828.

SIR: I have received your letter under date this day, stating that "it having been ascertained that the late Daniel P. Cook, late a Representative in Congress from the State of Illinois, received a sum of money from the Government during the spring or summer of the last year for certain services supposed to have been either foreign or diplomatic, you are instructed by the Committee on Retrenchment to request me to inform you where they are to look for the auditing of the sum said to have been received by Mr. Cook, and, if not audited in the usual course, what was its amount."

Without admitting or denying the correctness of the information which the committee are stated to have received, I have the honor to observe that I am not aware of the disbursement of any money through the agency of this Department the account of which has not been, or in a regular course of settlement is not to be, audited in the usual way at the Treasury, or passed upon a certificate of the President, in conformity with the provisions of the 3d section of the act of May 1, 1810, entitled "An act fixing the compensation of public ministers and consuls residing on the coast of Barbary, and for other purposes." I cannot presume that it was the intention of the committee to inquire into any disbursement which may have been made agreeably to that section, and all others are accessible to them in like manner with other expenditures. I have, however, the authority of the President for saying, that I will make to the committee a *confidential* communication in relation to the expenditure to which they are supposed to allude, if they will signify their desire for such a communication. In that case I should be glad to learn their pleasure as soon as convenient, as I purpose leaving the city on the 4th instant a few days on account of the state of my health.

I have the honor to be, with great respect, your obedient servant, H. CLAY.

JAMES HAMILTON, Jr., Esq., *&c., &c., &c.*

Mr. Wickliffe moved the following resolution:

Resolved, That the chairman inform the Secretary of State that, from the views the committee entertain of their duties as well as their powers, they do not feel themselves at liberty "to signify a desire for a *confidential* communication from the Executive" on the subject referred to in the letter of the Secretary of State of the 1st instant.

To which Mr. Everett moved the following amendment:

Strike out all after the word "that," and insert the following:

"The Secretary of State be requested to inform this committee, confidentially, (the said information to be communicated to the House confidentially, if the committee shall think expedient,) whether the late D. P. Cook was employed in the foreign service of the country during the last year; what amount of compensation was paid him; and what was the nature of the services performed by him."

And on the question to strike out and insert, it was decided in the negative.

Messrs. Sergeant and Everett voting in the affirmative.

Messrs. Hamilton, (chairman,) Rives, and Wickliffe, in the negative.

The question then recurred on the resolution of Mr. Wickliffe, and was decided in the affirmative.

YEAS—Mr. Chairman, Mr. Rives, and Mr. Wickliffe.

NAYS—Mr. Sergeant and Mr. Everett.

The following resolution was moved by Mr. Wickliffe, and adopted without a division:

Resolved, That the chairman return the Secretary of War the paper yesterday presented to the committee by Richard Cutts, Esq., as stated by him, at his (the Secretary's) request; and as the account of Governor McMinn, of which it purports to be a part, is not before the committee, that the chairman inquire what is his (the Secretary's) object in presenting it to the committee.

The chairman submitted to the committee the following letter from Mr. Smoot:

OFFICE OF PRINTER TO THE SENATE, *May* 2, 1828.

DEAR SIR: When I made the calculation of the Georgia correspondence, yesterday, before the committee of which you are chairman, I omitted to make any allowance for lines in the page which could not be varied by the size; after I left the committee I recollected the omission, and through the politeness of Mr. Wickliffe, who has been kind enough to loan me the volume, I have been enabled to correct that calculation.

I have made an allowance for lead lines, blank lines, &c., which would not vary the result in any

measure 24 ems per page, which leaves the difference between the correct and the present size 200 ems; 200 ems in 848 pages make 111 pages; the composition on these would amount to $111; press work and paper on the same, at 87½ cents, $97 12; making the difference on the whole volume, for 600 copies, $208 12; making the total difference, in 6,000 copies, $968.

The above calculation I think correct; and if the volume were to be reprinted in the correct measure, I am firmly of the opinion that the cost of the same would not differ from my calculation ten dollars.

Very respectfully, your obedient servant,

GEORGE C. SMOOT.

Hon. Mr. HAMILTON, *Chairman, &c.*

The chairman submitted the following letter from Messrs. Gales & Seaton, which was laid on the table:

WASHINGTON, *May* 2, 1828.

SIR: Since it has been discovered, as we are given to understand by the nature of questions put to witnesses before you, that the page of the documents as printed by us is smaller than that which a rigid construction of the law calls for, although the very fact is new to us, and still more surprising the discovery of the profit from it, we wish to be allowed to show, by disinterested testimony, that we have refrained from making such profit as we might have legally made from our public employment to an amount far exceeding any possible loss that the public has sustained in the other way. The proceeding in the committee having been in the nature of an inquest into our official conduct, we claim, as a matter of courtesy, not to say of right, that the committee will select any number (say five) of respectable printers to make an accurate examination and statement upon that particular point, which we trust will result in showing that, on the whole view of the case, thousands of dollars have been *gained* to the United States by the manner in which we have done the printing, as distinguished from that in which we might have done it, had the paltry consideration of desiring to squeeze out of the United States as much profit as we could influenced us.

Very respectfully, your obedient servants,

GALES & SEATON.

Hon. JAMES HAMILTON, Jr., *Chairman of the Committee on Retrenchment.*

Mr. William Stewart appeared and was sworn:

Is a clerk in the Second Auditor's office.

Question by Mr. Wickliffe. In what business was Mr. William Thompson employed last summer in the Indian Bureau?

Answer. He was employed by the day, without any particular services being specified.

Question. During what months was he in the office?

Answer. Cannot say exactly, but the report from the office will show; thinks two hundred and odd days, but is not certain.

Question. How many clerks are there in the Indian Department, including Mr. McKenney?

Answer. There are four.

Question. Do you know anything of an account having been presented in the Indian Department, during the last year or the year before, for an entertainment at Green Bay, Mackinaw, or Fond du Lac?

Answer. Does not know anything about it, of his own knowledge, but has understood there was such an account from Mr. Peters.

Mr. William Peters appeared and was sworn:

Is a clerk in the Second Auditor's office.

Question by Mr. Wickliffe. Have you any knowledge of an item of about $5,000 for an entertainment at Fond du Lac, Mackinaw, or Green Bay, in an account presented at the Indian Department?

Answer. There was an account for the expense of a former treaty, at which General Tipton, George Ray, and Governor Cass were Commissioners, which was suspended for want of vouchers. Witness gives this answer, because he understood the question to refer to this matter; knows nothing of the matter referred to in the question as he now understands it.

Question. Was the account recommended for payment by the head of the Indian Department?

Answer. It was not. The head of the Department recommends only in the case of contingent expenditures. There was a specific appropriation of $15,000 for the treaty in this case, out of which fund this account would be paid if allowed.

Question. What were the nature and objects of the expenditure referred to?

Answer. The ordinary expense of holding a treaty with the Indians, excepting the rations daily issued to the Indians, according to an explanation given to witness by Governor Cass.

The committee adjourned to meet to-morrow at 12 o'clock.

SATURDAY, *May* 3, 1828.

Committee met. Present: The Chairman, Mr. Sergeant, Mr. Wickliffe, Mr. Cambreleng, and Mr. Everett.

The chairman submitted the following copy of a letter addressed by him to the Secretary of State:

COMMITTEE-ROOM OF THE SELECT COMMITTEE ON RETRENCHMENT, *May* 2, 1828.

SIR: The Select Committee on Retrenchment have taken into respectful consideration that part of your communication of yesterday in which you say that you "have the authority of the President for saying that you will make to the committee a *confidential* communication in relation to the expenditure to which they are supposed to allude if they will signify their desire for such a communication," and have instructed me to transmit you the subjoined copy of a resolution adopted by the committee this day.

Resolved, That the chairman inform the Secretary of State that, from the views the committee entertain of their duties as well as powers, they do not feel themselves at liberty to signify a desire for a *confidential* communication from the Executive on the subject referred to in the letter of the Secretary of State to the chairman of this committee dated the 1st instant.

I have the honor to remain, very respectfully, your obedient servant,

J. HAMILTON, JR.

Hon. HENRY CLAY, *Secretary of State.*

Mr. Everett submitted the following resolution:

Resolved, That the Secretary of State be requested to inform this committee, confidentially or otherwise, if the public service will now permit, (the said information to be communicated confidentially to the House, if the committee shall deem it expedient,) what portion of the secret service money paid since the 4th March, 1825, was paid for services directed to be performed under the administration of James Monroe, late President of the United States.

And on the question whether the committee will adopt this resolution it was decided in the negative:

YEAS—Mr. Sergeant, Mr. Everett.

NAYS—Mr. Chairman, Mr. Wickliffe, and Mr. Cambreleng.

The following letter from Messrs. Gales & Seaton was read, and a motion was made by Mr. Cambreleng that it be postponed till Monday, and determined in the affirmative.

YEAS—Mr. Chairman, Mr. Cambreleng, Mr. Wickliffe.

NAYS—Mr. Sergeant, Mr. Everett.

To the Committee on Retrenchment:

GENTLEMEN: Conscious that we have endeavored faithfully to execute the trust reposed in us by the House of Representatives, we are satisfied that if a single day were allowed for an examination of the mass of documents which we have printed for the House during the eight years which we have been employed by it, and a comparison of them with the same or similar documents printed by our predecessors, we could show a saving of many thousand dollars to the Government in consequence of the practice we adopted of compressing the tabular documents into the smallest compass and most economical form for the public; which, however, there was no obligation on us to adopt either in the law or in the mode pursued by our predecessor. But as we understand that the committee is anxious to close its proceedings, and not wishing to delay its report to the House, we have made a hasty examination in the course of this morning, and have selected a few of the most striking cases of saving which has resulted from our mode of executing the work.

For example: The document H. R. No. 120, of which the House orders every year 6,000 copies. By the old mode of printing this document, (see No. 133, 2d session 15th Congress,) and which we should be perfectly justified in pursuing now, it would make 938 pages, and would cost, for 6,000 copies, upwards of	$10,000
The cost of the same document, as printed by us last year, was	3,600
Leaving a gain to the Government in a single year, in printing one document, of	6,400
Again: The document of last year, H. R. No. 35, 2,600 copies. If we had printed it in single columns on each page, as we might have done, instead of double columns, we should have received	$850
By the form which we adopted in printing it we received but	424
Gain to the Government	426
For document H. R. No. 145, making 184 ruled pages, we received	$520
If we had placed the pages horizontally or lengthwise, the document would have made 158 pages rule-work more, and would have cost	974
Gain to the Government	454
Again: Document H. R. No. 56, of 24 ruled pages and tables. We received for this document	$88
If the pages had been put horizontally instead of perpendicularly, 17 pages more would have been made, and the document would have cost	138
Gain to the Government in this case	50

There is also at all times a considerable body of small type thrown in, sometimes in the text and sometimes in notes, for which the printer is entitled to charge, but seldom does it. Reference is made to document H. R. No. 45 of last session to sustain the position. The loss to the printer in this case, it will be obvious, is considerable.

[For the lucrative manner in which we might have executed the business, see also the following documents: Rep. 92 and Ex. Doc. 125, 2d session 15th Congress.]

The above comprises three or four of the documents of the last session only. They are annually printed, however, and a great many others of the same character; but the above are offered to the notice of the committee by way of illustrating what the printers might have done if they had been governed by other motives than a faithful and honest discharge of their duty.

We are positive that if time were permitted us to make a rigid examination of all the public documents printed by us for the last eight years, we could show to the satisfaction of every unprejudiced mind that, if a disposition had existed in us to make the most of our business, and confining ourselves within the letter of the law as well as following the precedents of our predecessors, our accounts against the Government would, after every possible allowance for errors of calculation, be found to have exceeded their present amount at least $40,000. This we pledge ourselves to prove by disinterested and competent testimony, if it shall be the pleasure of the committee to afford us the opportunity of doing so. We ask the delay of but a single day.

It is probably unknown to the public as well as to Congress that the printers execute a very considerable and expensive business for the Government for which they receive no compensation at all, which has devolved upon them through mere custom from the infancy of the business to the present time, and which, if charged for at a fair price, would form no inconsiderable aggregate in the business of eight years.

For instance: Congress has enacted at different times that the various officers of the Government and foreign ministers resident here shall receive each a certain number of copies of all public documents,

amounting altogether to upwards of one hundred; but no person has ever been designated to deliver them, nor has any appropriation ever been made to pay the expense. It has consequently fallen upon the printer, and he is obliged throughout the year to keep a person in attendance daily to put up and deliver these papers, to keep accounts of what he has so delivered, as well as to answer a very considerable correspondence which must take place in relation to them. An allowance of $800 a year for this object would be but a moderate compensation, which would amount, in eight years, to $6,400.

Respectfully submitted. GALES & SEATON.

WASHINGTON, *May* 3, 1828.

The committee then adjourned to meet again on Monday, 12 o'clock.

MONDAY, *May* 5, 1828.

The chairman attended, to adjourn the meeting of the committee until to-morrow, 12 o'clock, owing to the necessary attendance of the members of the committee to business in the House.

TUESDAY, *May* 6, 1828.

Committee met. Present: The Chairman, Mr. Sergeant, Mr. Cambreleng, Mr. Rives, and Mr. Everett.

Mr. Everett submitted the following resolution:

Resolved, That the following commission be issued by this committee:

To Messrs. ———

The committtee of the House of Representatives on the subject of retrenchment request of you the favor to look over the tabular documents printed for the House by Gales & Seaton since the year 1819, and, by comparing them with those printed for the House by their immediate predecessor, ascertain and report to the committee, by to-morrow, if practicable, whether any, and if any, what, saving has accrued to the Government by the manner in which Gales & Seaton have executed the printing, in cases where they would have been authorized by law and by usage or precedent to execute it in a different and more lucrative manner to themselves. A very minute and particular report is not asked, but one as full as the short time allowed will permit to be made.

On the question, Shall this resolution be adopted? it was decided in the negative.

YEAS—Mr. Sergeant, Mr. Everett.

NAYS—Mr. Chairman, Mr. Rives, and Mr. Cambreleng.

Mr. Rives then moved the following resolution:

Resolved, That the chairman address a letter to Messrs. Gales & Seaton, and inform them that it would be impracticable, within the limits now allowed them to close their labors, to go into the investigation proposed in their letter of May 3, which would involve the careful examination and comparison of every document which they have printed for the last eight years. They will, however, report a resolution for the adoption of the House, providing for such examination during the recess of Congress, to be conducted by experienced printers, and the result to be reported to the House at the next session, by which justice may be done both to the United States and Messrs. Gales & Seaton.

And on the question, Shall this resolution be adopted? it was decided in the affirmative.

YEAS—The Chairman, Mr. Cambreleng, Mr. Sergeant, and Mr. Rives.

NAY—Mr. Everett.

A report was read by Mr. Rives, from the sub-committee on the Navy Department.

Mr. Sergeant moved the following resolution:

Resolved, That the chairman be requested to communicate to the Secretary of the Navy the several matters mentioned in the report of the sub-committee on the expenditures of the Navy, and to inform him that the committee will receive from him any explanations he may have to offer in relation to them prior to the hour of the meeting of the committee on the 8th instant.

Mr. Cambreleng moved to strike out all after the word "*Resolved*," and insert the following:

"That in consequence of the first letters which the chairman of this committee has received from the heads of the different Executive Departments in reply to his first call upon them, which will appear in any report this committee may make, in which most or all of them entered into a preliminary vindication of their respective Departments from any charge of neglect of duty, waste, or abuse, it is inexpedient and impracticable, from a want of time, for the committee to transmit the substance of the reports of the sub-committees to the different heads of the Departments for further explanation."

And on the question, Whether the foregoing amendment be made? it was decided in the affirmative.

YEAS—Mr. Chairman, Mr. Cambreleng, and Mr. Rives.

NAYS—Mr. Sergeant and Mr. Everett.

Mr. Wickliffe submitted a report of the sub-committee of the State Department, which was referred to the chairman.

The committee then adjourned to meet at 12 o'clock to-morrow.

WEDNESDAY, *May* 7, 1828.

Committee met. Present: The Chairman, Mr. Rives, Mr. Wickliffe, Mr. Cambreleng, and Mr. Everett.

The chairman submitted the following letter, of May 3, 1828, from the Secretary of War, in answer to a letter of the chairman of the 2d instant, transmitting a resolution that day adopted by the committee:

DEPARTMENT OF WAR, *May* 3, 1828.

SIR: In answer to the inquiry presented in the resolution of the Committee on Retrenchment, I have to state that Mr. Cutts informed me that he had been instructed by the committee to furnish several accounts connected with Indian affairs for their inspection, which I directed him promptly to do. Taking it for granted that the object of the committee was to ascertain the regularity of this Department as to the manner of its adjusting accounts, and supposing that long established usage would be of great weight in forming a decision, I caused the document sent to be furnished as one among many to possess the committee with that usage.

I have the honor to be your obedient servant, JAMES BARBOUR.

Hon. JAMES HAMILTON, Jr., *Chairman of the Committee on Retrenchment, House of Representatives.*

A report was made by Mr. Cambreleng from the sub-committee on the expenses of the Department of the Treasury.

The chairman submitted, on behalf of Mr. Ingham, a report from the sub-committee on the War Department, on the general organization of the Department.

The committee then adjourned to meet at 2 o'clock to-morrow.

THURSDAY, *May* 8, 1828.

Committee met pursuant to adjournment. Present: The Chairman, Mr. Sergeant, Mr. Cambreleng, Mr. Everett, and Mr. Wickliffe.

The chairman submitted the following letter from the Postmaster General, explanatory of his testimony before the committee:

WASHINGTON, *April* 4, 1828.

SIR: As inquiries were made of me the other day, while under examination before the Committee on Retrenchment, respecting conversations held between Mr. Cook and myself in reference to his being named to the President for a certain office, it has since occurred to me that it would have been proper to have stated that Mr. Cook consulted with me as to the propriety of such a step. This was induced, no doubt, from the friendly relation which had always, since our first acquaintance, existed between us, and from his knowledge of the fact that I was intimately acquainted with the circumstances under which his vote was given for Mr. Adams. Believing that in giving this vote he was influenced by the purest motives, indulging a known preference for Mr. Adams, under an expression from his constituents, as ascertained at the time, which left the fact of the majority doubtful, I had no hesitation in saying that there could not be, in my opinion, the smallest impropriety in his applying for office, or in its being conferred on him by the President.

I hope the above statement may be received as a part of my examination before the committee. I deem it an act of justice to the character of a deceased friend.

With great respect, your obedient servant,

JOHN McLEAN.

Hon. Mr. HAMILTON, *Chairman*.

A report from the sub-committee on the War Department, relative to Indian affairs, was submitted by Mr. Wickliffe.

The committee adjourned to meet again on to-morrow, 2 o'clock.

FRIDAY, *May* 9, 1828.

The committee met. Present: Mr. Chairman, Mr. Sergeant, Mr. Rives, Mr. Wickliffe, Mr. Cambreleng, and Mr. Everett.

The sub-committee on the Navy Department submitted a report, which was referred to the chairman.

Resolved, That the chairman take the documents and papers in the possession of the committee and prepare the report of the committee with all convenient despatch.

The committee then adjourned to meet again when they should be summoned by the chairman.

THURSDAY, *May* 15, 1828.

The committee met agreeably to summons from the chairman. Present: The Chairman, Mr. Sergeant, Mr. Everett, Mr. Rives, and Mr. Wickliffe.

The chairman submitted a report in part to the committee, which was read and adopted.

YEAS—Mr. Chairman, Mr. Rives, and Mr. Wickliffe.

NAYS—Mr. Sergeant and Mr. Everett.

Mr. Cambreleng moved that the report of the committee be made to the House this day.

Mr. Everett moved, as an amendment, that the report of the committee be made at the usual hour to-morrow morning, which was decided in the negative.

YEAS—Mr. Sergeant and Mr. Everett.

NAYS—Mr. Chairman, Mr. Rives, and Mr. Cambreleng.

The question recurred on Mr. Cambreleng's motion; which was decided in the affirmative.

YEAS—Mr. Chairman, Mr. Rives, and Mr. Wickliffe.

NAYS—Mr. Sergeant and Mr. Everett.

The chairman submitted a letter of Messrs. Gales & Seaton on the subject of the printing, which was read; and

Mr. Sergeant moved that it should be entered on the journals of the committee; which was agreed to.

WASHINGTON, *May* 12, 1828.

SIR: We had the honor to receive, some days ago, the resolution adopted by the committee in regard to the application which we submitted to it on the 2d instant. As the examination which we invited would have required the attention of two or three experienced printers not more than four or five hours, we did not presume that it would cause any delay incompatible with the public interest. We had no expectation that the committee would undertake the examination themselves, had they been able to give to it any length of time, because it was an investigation requiring a practical knowledge of the printing business, which no member of the committee is supposed to possess. As to the investigation which the committee propose to institute after the adjournment of Congress, although we are far from offering any objection to it, we take the liberty to observe that it would follow at too great a distance, whatever unfavorable impression, if any, should be made by the report of the committee. Conscious of the fidelity with which we have discharged our duty as public printers, and proud of an unimpeachable conduct therein, we have no desire to make a vain boast of the disinterestedness we have shown in the manner of executing the public printing; but, understanding that a question has been raised upon that point before your honorable committee, we have thought it advisable to request of the two oldest printers in the district, who themselves, for many years before us, were printers to Congress, to examine the documents printed by us, in connexion with the prices of printing. They have done us that favor. Rejecting com-

parative economy, as a test too favorable to us, and which might be received as invidious towards others, they have made their estimate on a rule of strict right, and arrived at the conclusions stated on the paper which we have now the honor to enclose. If comparative economy *had* been made the test, the amount of saving stated by them might have been doubled.

We ask, if any report be made on the subject of the printing, that this statement may accompany it.

With the highest respect, we have the honor to be your faithful servants,

GALES & SEATON.

Hon. JAS. HAMILTON, Jr., *Chairman of the Committee of Retrenchment.*

WASHINGTON, *May* 10, 1828.

Having been requested by Messrs. Gales & Seaton to examine the documents printed by them for Congress, with the view of ascertaining what saving has accrued to the Government by the manner in which they have executed the printing, in cases where usage and the law prescribing the form and prices of the public printing would have authorized them to adopt a course more lucrative for themselves, we have complied with their request so far as to examine a few of the principal documents, time not allowing us to go into an examination of the numerous small documents printed in the course of eight years for both Houses. The first which we shall refer to, as an instance in which a great saving has been made by the mode in which it was printed, is the House document No. 120, 2d session 19th Congress. This document makes 296 pages brevier. If it had been printed in the *most compact form*, on the larger type authorized by Congress, (small pica,) it would have made not less than 600 pages, (but might, by a little ingenuity, have been extended to 900,) which 600 pages, at the prices prescribed by the resolution of Congress, for 6,000 copies, (the number printed,) would have cost..... $6,678 00
But in the compressed form in which it was printed by Gales & Seaton, 6,000 copies cost only 3,854 00

Saving to the United States in this document..... ..... 2,824 00

We have examined the same document printed for the Senate, (No. 72,) which, if printed compactly on small pica type, would have cost..... $2,704 00
But, as printed by Gales & Seaton, cost only..... 1,830 00

Making a difference in favor of the United States of..... 874 00

Constituting a saving in this document for the two Houses, *every time it was thus printed*, of... 3,698 00

This appearing to be an annual document, the saving in the nine years it has been printed by Gales & Seaton for the two Houses would, of itself, make an aggregate of many thousand dollars.

We have particularly examined, also, House document No. 111, 2d session 17th Congress. The tables in this document might easily have been swelled by the printers to double the size into which they compressed them, and would have cost the United States $3,000 more than has been charged.

We have examined many other documents printed by Gales & Seaton which might have been so printed as to conform literally to the resolution of Congress, and yet have increased the cost to the United States and the profit of the printers considerably; but it did not seem to us necessary to go into a minute exposition of the saving in each case, presuming that the above will be sufficient evidence of the economy and fidelity with which the public printing has been executed by Messrs. Gales & Seaton.

ANDREW WAY.
R. C. WEIGHTMAN.

Personally appeared before the subscriber, a justice of the peace for the county of Washington, Andrew Way and R. C. Weightman, who made oath, in due form of law, to the foregoing statement, to which they have subscribed their names.

JAMES YOUNG, *J. P.*

And the committee then adjourned to meet again when summoned by the chairman.

WASHINGTON, *March* 28, 1828.

SIR: We have the honor to acknowledge the receipt of your letter of this date, asking information on some points in relation to the public printing.

With regard to the first item of inquiry, we respectfully state that it is not the practice to charge, in any case, blank pages as rule. It is believed, however, in printing a *volume* of rule work the printer would be justified, by the "usage of business," in charging the introductory part, title, &c., as well as occasional and necessary blank pages, as rule work also. To avoid all cavil, however, we have purposely waived that privilege, for we so consider it, and have charged as rule work no other than such as was distinctly defined to be so. If it has happened otherwise in "some cases" it has been through inadvertence.

With respect to the second inquiry, the size of the page, we beg leave to observe that, on the first occasion of our being elected printers to Congress, we consulted the then Secretary of the Senate and Clerk of the House of Representatives as to the manner, &c., of executing the printing, when it was suggested, probably by us, that, by narrowing the page a little, a larger margin would be afforded the binder, to enable him to avoid stitching (as would have been the case, and is now, sometimes, probably) through the printed pages—the page being so very wide as to render it impossible, with so little room, to avoid it. Those gentlemen approved, and instructed us to adopt this arrangement. It was considered to be perfectly in accordance with the spirit, if not the letter, of the resolution fixing the prices, &c., of the public printing.

The circumstance of the page being a little smaller is of no pecuniary advantage to the printer to Congress, nor, on the other hand, is it any disadvantage to the public; though it is certainly a convenience, for the reason before assigned. The great body of the public printing consists of small documents of 2, 4, 8, and 16 pages each, and rule work, the whole mostly open and blank. Now, the circumstance of the page being the one-sixth of an inch narrower in any of these documents would make no difference in the expense of printing, nor in the aggregate number of pages. To make them wider would be only taking so much type from the bottom of the page to put it on the side, and then to fill up the bottom with

blanks. In a document making as many as a hundred continuous pages, the difference between the two widths would be three or four pages at most. It is observed that the documents printed by order of the Senate correspond, in this particular, precisely with ours.

While on this subject, we beg leave particularly to call your attention to the fair and economical manner with which, we flatter ourselves, we have executed the printing since it came to our hands, by instituting a comparison of it with the printing done for Congress in other days, and more especially at the period immediately preceding our election as printers to Congress. We have before us at this moment, for example, the documents of the second session fifteenth Congress, to which we respectfully invite your attention. By our improved manner of printing, in a single document in this series (Statements of Foreign Commerce, No. 133) we have saved thousands of dollars every year to the Treasury. And this example by no means stands alone, as you will be convinced by an inspection of the documents referred to.

We return our acknowledgments for the civility which dictated your letter. Should any further explanation be desired, it will give us pleasure to afford it. And should disinterested testimony be desired as to the practice of the profession, we shall be obliged to the committee to call before them either of the veterans of the profession, Mr. Weightman, Mr. Way, or Mr. Force, who are practically acquainted with the public printing, and take their evidence on the subject.

Very respectfully, yours,

GALES & SEATON.

Hon. SAMUEL D. INGHAM, *of the Committee on Retrenchment.*

REPORT OF THE MINORITY OF THE COMMITTEE.

GENERAL EXPENDITURE.

The minority of the committee on the resolutions of the 6th February last, having differed from their associates, think it right to submit their views of the several matters which have been under their consideration, and therefore offer the following report:

Excluding for the present the Legislative Department and the public debt, the expenditures of the Government may be divided into two general heads:

1. For objects of public service.

2. For the official agency by means of which that service is carried on, and the expenses incident to that agency.

The former of these heads includes all those items of expenditure which are applied to purposes deemed necessary for the public good—such as the judiciary, the military and naval establishments, light-houses, internal improvement, foreign intercourse, and the like. These constitute the great mass of payments from the Treasury.

The second includes the expenditure for the Executive Departments. It is very small in comparison with the former. Thus, in the year 1826, when the whole of the annual expenditure, public debt included, was $24,103,398 46, the expenses of the Executive Departments of the Government, including the staff of the Army, were $489,776 07, or rather less than one-fiftieth part of the whole.

The expenditures of the first class, constituting, as has been remarked, (if the public debt be excluded,) the great mass of payments from the Treasury, are entirely dependent upon the wisdom of Congress, inasmuch as they are regulated by the nature and extent of the establishments which Congress think it proper to maintain, and the services they direct to be performed for the benefit of the nation. Thus, for example, the Army, the Navy, the light-houses, works of internal improvement, and the like, are created and continued by Congress. The expense of maintaining them is the consequence of their being established; and the amount of that expense is according to the extension which may be given to them. As it is in the power of Congress to increase, so is it in the power of Congress to reduce them; and, in case of necessity, such reduction would undoubtedly, as far as practicable, be made.

The greater part of the expenditures of the second class (those of the Executive Departments) are also regulated by Congress. They consist chiefly of salaries fixed by law, payable to officers created by law. The number of clerks, messengers, and other persons employed in each Department and in every subordinate division of a Department, and the compensation to be received by each, are fixed by acts of Congress, and cannot be altered but by new legislation. For those expenses which cannot be precisely ascertained, such as fuel, stationery, office furniture, and the like, an annual sum is allowed by law, which is not to be exceeded; and this sum is allowed for each principal and subordinate office, upon estimates furnished annually to Congress, and there subjected to a rigid examination. The proportion it bears to the whole of the expenditure is small. Thus, when the whole executive expenses were $489,776 07, the allowance for contingencies, as part of that sum, was $80,905.

The expenditure of the sum thus allowed, which, as has been stated, can never exceed the appropriation, and in fact generally falls short of it, is accounted for to the accounting officers of the Government, where it undergoes the same scrutiny as all other accounts, and not a dollar can be allowed which is not fully vouched.

It may be further remarked, that the expenses of the Executive Departments, as well those fixed by law as those which are contingent, are in other ways dependent upon the will of the Legislature. One of the modes in which they may be increased will be best illustrated by an example. By the acts of Congress for fixing the Military Peace Establishment, the staff of the Army was assembled at Washington, and their expenses, to an amount exceeding thirty thousand dollars, are now charged as a part of the executive expenditure. This arrangement, therefore, made with a view to economy and to the greater efficiency of the Army, and probably in both respects answering its purposes, has the appearance of swelling the expense of the Executive Government, when, in fact, it only transfers a charge from one head of service to another, and perhaps with a saving in the transfer.

But there is another and a more constantly operating action of the legislative will upon the business and consequently upon the expenses of the Executive Departments. As it is the duty of those Departments, within their limits, to execute the laws, every enactment increasing the branch of public service

confided to their care necessarily has the effect of augmenting their expenses. Thus, when the House of Representatives, by the resolution of the 28th of March, 1822, signified its opinion that missions ought to be instituted to the new States of America, and both Houses of Congress, by the appropriation law, appropriated money for the missions, this enlargement of our foreign relations not only increased the diplomatic expenses of the Government, but it added to the Department of State the labor and the expense of instructing and corresponding with six additional agents abroad. If the Navy be increased or a greater number of vessels put into service, this, in like manner, increases the labor and the expense of the Navy Department. All such additions, in like manner, act upon the Treasury and upon the accounting officers by increasing the accounts to be settled and the payments to be made. Of the policy to be pursued, Congress is to judge, and that judgment can never be materially affected by a consideration of the slight addition it will make to the contingent expenses of the Departments.

The different branches of the Government are intimately connected with each other. Congress originates and sanctions the measures to be pursued, and provides the means of carrying them into effect; and it is for the executive officers, with the means thus furnished, to execute the will of Congress. Upon that will, therefore, must depend the aggregate of expense occasioned by the execution of the laws; and the expense of the Executive Departments must bear some relation to that aggregate, though constituting but a very small part of it.

Having made these remarks, the minority of the committee will proceed to state their views upon the different branches of the duty assigned to them as they understand it. The resolution of the House, under which they had the honor to be appointed, was founded upon no precise allegation, and gave no particular direction as to the inquiry to be made. It seems, therefore, to have intended that there should be a general examination of expenditure of every kind; not with a view to retrench any expenditure *known* to be useless or wasteful, or to reform and correct any abuse *known* to exist, (for there is no such thing alleged,) but to ascertain whether there are not abuses or expenditures that are useless and wasteful. This duty the minority of the committee have endeavored to perform; and they will now submit their views in the following order, which they suppose best calculated to present them distinctly, according to the intentions of the House, to wit:

1. The aggregate expenditure of the Government.
2. The expenditure of the Departments mentioned in the resolution.

Under the first of these heads it may be proper to state what the expenditures are, in order that the remarks hereafter to be made may be the better understood.

Taking, then, for example, the year 1826, and omitting, for the present, the payments on account of the public debt, which amounted in that year to $11,041,082 19, the heads of expenditures are as follows, to wit:

1. Civil, miscellaneous, and diplomatic..... $2,600,177 79

Including under this head—

Civil.—Legislature, Executive Department, offices of the Mint, Surveying Department, Commissioner of Public Buildings, Governments of Territories, and the judiciary, amounting together to $1,256,745 48.

Miscellaneous.—Which comprehends, among others, the Mint establishment, light-house establishment, surveys of public lands, marine hospital establishment, public buildings, roads and canals, and subscriptions to stock of canals, payment for buildings destroyed, per act of March 3, 1825, and a number of others, $1,110,713 23.

Diplomatic.—Including expenses of foreign intercourse, relief and protection of American seamen, payments under various treaties, &c., $232,719 08.

2. Military establishment..... 6,243,236 03

Including, besides pay and subsistence of Army, invalid and half-pay pensions, $251,399 01; revolutionary pensions, $1,305,199 82; continuation of Cumberland road, $125,469, &c.

3. Naval establishment..... 4,218,902 45

Making a total of expenditures for that year of..... 13,062,316 27

The total expenditure for 1827 was 12,730,464 87

If it should be made a question whether this aggregate expenditure is greater or less than it ought to be, it might be difficult to find any certain standard by which to ascertain its propriety. It is obvious, however, from a mere inspection of the items, that the aggregate is the result of the deliberate exercise of the wisdom of the Legislature upon the several branches of the public service, pronounced after a careful examination of the wants and the means of the nation, and approved by every subsequent Congress. Thus the military establishment and the naval establishment, embracing more than ten-thirteenths of the whole expenditure, have frequently occupied the careful attention of Congress, and were originally fixed, and have been suffered to remain, as they now are, because the representatives of the people have deemed them suitable to the circumstances of the country. They have been repeatedly discussed, not only in general, but in detail, and every year have been under the consideration of the appropriate committees, as well as brought into the view of the House by the appropriation bills. The presumption, therefore, is that they are not greater than they ought to be. Differences of opinion there will be, and differences of opinion there have been, but they have had no other effect than to draw the attention of Congress, from time to time, more closely to the subject, and, on that account, to give to its decision the greater weight.

It may be remarked, however, that the expenditure, whether great or small, has kept within the income. In the year 1826, after paying more than eleven millions on account of the public debt, and providing for all expenses, there remained in the Treasury a surplus of above six millions; and, at the end of the year 1827, there also remained a surplus in the Treasury of above six millions. This cardinal maxim, therefore, has not been violated. The income has not been exceeded; no debt has been contracted; no just claimant has been left unpaid; but, on the contrary, a large amount of pre-existing debt has been discharged, and the resources of the country liberated, for the future, from the payment of its interest; while, at the same time, the nation is advancing in an uninterrupted career of prosperity. The same course of conduct in the case of an individual would be deemed wise and prudent, and it is not perceived how it can be thought otherwise in a nation.

The mere fact that the expenditures have been greater for some years past than they were at an earlier period of our Government is, in itself, a circumstance whose value and bearing, in a comparative estimate, depends upon other circumstances with which it may happen to be connected. With us it will readily be perceived that it ought to occasion neither alarm nor apprehension. On the contrary, it is what every one would have expected, and, when rightly examined, what every friend of his country would have wished. It is the effect, as it is also in some measure the cause, of the growth of the country, and of its constantly increasing prosperity, which has fully kept pace with its expansion. If, for example, we institute a comparison with the early period of our Government, it will be seen at once that the expenditure, in its rate of increase, has not exceeded the necessary demands arising out of every other increase, nor borne any proportion to the increase of our ability, nor to the benefit the citizen derives from the acts of the Government. Assuming for the comparison the average expenditure of the first eight years under Washington, it is stated to be $2,794,221 81; but the average population of the United States during that period was but about four millions and a half, whereas it is now supposed to be about twelve millions. Considering the comparative value of money at the two periods, the increase is not out of proportion. Considering the comparative ability of the country, it is far below it. Of this some idea may be formed from the fact that the valuation of lands, lots, and dwelling-houses, in the year 1799, amounted to $619,977,000, and (such was the improvement of the country) in 1815 it amounted to $1,902,296,000. At the period first mentioned there were but thirteen States, represented in Congress by 65 members of the House of Representatives (increased in 1794 to105) and 26 Senators. Now there are twenty-four States, represented by 213 members, and three delegates from Territories, and 48 Senators. The expenses of the Legislature alone, at the present time, amount to 50 per cent. more than the whole civil list at the period first mentioned. The latter, in the year 1796, (the largest of the period,) was but $447,139. In the year 1824 the expenditure for the legislative branch alone was $600,955 99; and in 1826, $567,698 40. The contingent expenses of both Houses in 1796 were $11,550; in 1826 they were $66,000. At the period first mentioned it must also be remembered that there was no Navy Department in the Government, and there was no Navy. Authority was given by law, in the year 1794, to build six frigates; but the whole expenditure on that account in the year 1796 was less than $300,000, and was managed by the Department of War. The Navy Department was instituted in the year 1798. In that and the two following years the Navy was established upon a permanent foundation by an expenditure of $7,688,144, constituting a very large addition to the general expenditures of the nation for the period, but now universally considered as a most beneficial expenditure. At present it costs upwards of $4,200,000 a year, and is fully worth what it costs. It is unnecessary to dwell upon the territory that has been acquired, the extension over it of the cares of Government, and the consequent increase of expense. But one branch of the public service may be sufficient to show how the operations of the Government, and, at the same time, the accommodation and convenience of the citizen, have grown with the growth of the nation. In the year 1791 there were but 89 post offices in the United States; the amount of postages was $46,294; and the extent of post-roads was 1,905 miles. In the last year (1827) there were 7,617 post offices; the amount of postages was $1,473,551; and the extent of post-roads was 99,134 miles.

Comparisons of one year with another, or of one period with another, must, however, be extremely unsatisfactory and inconclusive. By this process it might be proved that one administration, or even one and the same Congress, was extravagant, as compared with itself. For example: in the year 1793, under the presidency of Washington, the expenditure was $1,718,129; in 1794, $3,500,348; and in 1795, $4,350,596. In 1796, also under his presidency, it was reduced to $2,531,930. So, in the presidency of Mr. Jefferson, the expenditure was, in 1802, $3,737,079; in 1803, $4,002,824; in 1804, $4,452,858; in 1805, $6,357,234; in 1806, $6,080,209; and in 1807 it was reduced to $4,984,572; and in 1808 it rose again to $6,504,333. In the first year of Mr. Madison's presidency the expenditure exceeded that of the preceding year about one million of dollars. It must be obvious, from this view, that the mere amount of expenditure in any given year can furnish no evidence that the Government was either extravagant or economical. Nor can the comparison of the averages of expenditure for given periods lead to any more satisfactory conclusion. For such a comparison would show that the average expenditure of the Government during the presidency of Mr. Jefferson was nearly double that during the presidency of Washington, from which it was separated by an interval of only four years; the former being $5,137,598 61, and the latter, $2, 794,221. It would also show that under the presidency of Mr. Madison, which immediately succeeded that of Mr. Jefferson, there was an addition to the average annual expenditure of one million of dollars, or one-fifth of the whole. Besides it is perfectly familiar to every one that the expenditure of a given year may, and generally does in part, arise from appropriations made and authorities given at antecedent periods.

If it should be said that, at the times referred to, the expenditures were for useful and valuable purposes, the answer would undoubtedly be correct. It is the only true answer in all such cases; and it brings us at once to this conclusion, which is believed to be entirely just, that it is the character of the expenditure and not its amount which must determine whether it is extravagant or economical. To arrive at any certain or satisfactory result, it would be necessary, therefore, to examine each object of expenditure; to consider it by itself, and in its relation to the general concerns of the country; and then to decide whether it is worth what it costs. Such an inquiry would in effect be an examination of the whole structure of the Government in its general bearing and in all its details. But this is the very work which Congress is constantly engaged in, and has been engaged in from the beginning to the present time. Every expenditure has had its origin in some measure which Congress has deliberately decided to be proper and directed to be carried into effect, and every such expenditure owes its continuance to the continued conviction of Congress that the measure which occasions it is suited to the circumstances and wants of the country. What the system is which has thus been successively built up, what are the parts of which it is composed, and what each of them costs, may be seen from the statement of expenditures already presented. Some of the items will be referred to hereafter. In the meantime it is only necessary to remark, as a further exposition of the views intended to be presented, that if the same amount of service should be found at one period to cost more than another, this would naturally lead to inquiry, though it might still be very satisfactorily explained. But if the amount of service has been increased, or the objects of expenditure multiplied, the increase of expenditure is a matter of course, and can occasion neither surprise nor inquiry. Now, this is precisely the fact in regard to the Government. It follows, then, that to establish that a greater amount of money was expended in the years 1822–'23–'24 than in the years 1809–'10–'11, or that a greater amount was expended in 1825–'26–'27 than in 1822–'23–'24, proves no more than it does to show (as the fact was) that the expenditure of 1809–'10–'11 exceeded by a million a year the average expenditure of the eight preceding years.

It comes exactly to this, and this is the utmost that can be made of it, that Congress, in the just exercise of its constitutional power, for which it is accountable to the people, has thought it conducive to the public good to enlarge or to multiply the objects of public expenditure, and has found it practicable to do so without inconvenience to the public.

But there is a limit and a check to public expenditure of a much more precise kind than any of those which have been adverted to, and furnishing a good test of the economical character of a Government, or the contrary; and it is now brought into view with great satisfaction and is deserving of much consideration, because it evinces the practical excellence of our institutions, as well as a continued conformity to their true spirit in those who have been and continue to be intrusted with the conduct of our public affairs. The expenditure of Government must, in some shape or other, be provided by contributions of the citizens. The revenue from the customs falls upon the consumption; it has the advantage of being cheaply and easily collected, and the further and greater advantage, mentioned by Mr. Jefferson, that "the great mass of the articles on which impost is paid are foreign articles, purchased by those only who are rich enough to afford themselves the use of them." Still, when levied for the purpose of revenue, it is a contribution by the citizens for the support of the Government. The total revenue derived from contributions of every kind exhibits the amount contributed by the citizens, and, compared with the whole number of citizens, exhibits the proportion of an individual. These contributions may be termed the burdens upon the people; and, as these burdens are lighter or heavier, the condition of those subjected to them is, in this respect, better or worse. This, then, is the limit and the test referred to. The minority of the committee do not mean to institute a comparison with any other Government. It has often been made, and every one knows how much to the advantage of our own. But this they do intend to say, and they think it deserving of the closest attention, that the burdens upon the citizen have not been increased; that is to say, that the contribution of each individual for the support of Government is not greater at the present time than it was thirty years ago, nor greater than at any intervening period since that time. This interesting fact they will proceed to endeavor to make apparent. In the year 1796 (by which time the organization of the fiscal system was producing its results) the income from impost was $6,567,987, and from internal revenue $475,239, making a total of $7,042,376. The population of the United States at the same period, estimated from the preceding and following census, was about 4,760,384. The public contributions, therefore, were within a small fraction of $1 50 for each citizen. In the year 1827 the total receipts from customs, being the only contribution of the citizen for the support of the Government now required, as the internal revenue is abolished, amounted to $20,190,522. The population of the United States is estimated to be about 12,000,000—some suppose it to be more by 1,000,000. The public contribution, therefore, is scarcely more now than it was in the year 1796, that is, within a small fraction of $1 66 for each citizen. Averaging the two years 1826 and 1827, it will be a fraction above that sum. It is unnecessary to do more than to state the fact. The change in the value of money, the increased wealth and greater ability of the country, and other like considerations tending to show that the contribution, though nominally nearly the same, is really less, will readily present themselves and have their due weight. The fact that the contribution now is not sensibly greater than it was thirty years ago is the highest evidence of the excellence of our institutions and the purity with which they are administered. It is impossible, however, to forbear remarking, in connexion with this fact, how greatly extended and multiplied are the benefits the citizen now enjoys for this contribution in the protection given to commerce by the Navy; the facilities and securities afforded to it by light-houses, piers, harbors, and various other aids; the security provided against war by a system of fortifications; the assistance to internal trade and intercourse by surveys, improvements in roads, and in a thousand other ways; besides the incalculable advantages he derives from the progressive prosperity of the nation; her increased strength, reputation, and standing in the world; and his entire exemption from all taxation and from all contribution but such as he may choose to impose upon himself by the consumption of imported articles. Upon the most sober and reasonable estimate, this is a state of things which does not seem to suggest the necessity of change. It is believed that it may be advantageously contrasted with any instance which the history of the world can produce, and that the best friend of his country can desire nothing better than its continuance.

During all the period from 1801 to 1807 it will be found that the public contributions amounted to something more than $2 for each citizen. This fact is noted, not for the purpose of any comparison, but to bring into view a high authority upon the subject under consideration, and the just conclusions to be made upon it. In the year 1806 the revenue gave promise of a surplus in the Treasury, and the question naturally presented itself, whether this accumulation should be prevented by reducing the income, or, being suffered to occur, should be distributed in useful and fructifying expenditure? Mr. Jefferson, whose opinions upon points of economy have been deemed sound, always erring, if at all, upon the side of frugality, unhesitatingly recommended the increase of expenditure in preference to the reduction of the revenue. In his message of December, 1806, he says:

"When both of these branches of revenue shall in this way be relinquished, there will still, ere long, be an accumulation of moneys in the Treasury beyond the instalments of public debt, which we are permitted by contract to pay. They cannot, then, without a modification, assented to by public creditors, be applied to the extinguishment of this debt, and the complete liberation of our revenues—the most desirable of all objects; nor, if our peace continues, will they be wanting for any other existing purpose. The question, therefore, now comes forward, to what other objects shall these surpluses be appropriated, and the whole surplus of impost, after the entire discharge of the public debt, and during those intervals when the purposes of war shall not call for them? Shall we suppress the impost and give that advantage to foreign over domestic manufactures? On a few articles of more general and necessary use the suppression, in due season, will doubtless be right; but the great mass of the articles on which impost is paid are foreign luxuries, purchased by those only who are rich enough to afford themselves the use of them. *Their patriotism would certainly prefer its continuance and application to the great purposes of the public education, roads, rivers, canals, and such other objects of public improvement as it may be thought proper to add to the constitutional enumeration of federal powers.* By these operations new channels of communication will be opened between the States, the lines of separation will disappear, their interest will be identified, and their union cemented by new and indissoluble ties."

So far as, of late years, the expenditures have increased, it has been precisely within the limits and for the objects here prescribed.

Beginning with the period when the nation was relieved from the charges of war, that is, with the year 1816, it must be observed, in the first place, that no new burden has been imposed upon the citizens;

but, on the contrary, the direct tax, and all the internal taxes, have been taken off, to the amount of more than twelve millions and a half of dollars per annum. The whole revenue, with the exception of the sales of the public lands, is now derived from the customs, as it was at the time of Mr. Jefferson's message just quoted. The duties upon importation have not, since that time, been increased for the purpose of augmenting the income. Where they have been increased at all it has been with a view to protect domestic industry, and was calculated rather to reduce the revenue.

The public debt has, in the same period, been rapidly diminished. On the 1st of January, 1816, it amounted to $127,334,933 74. On the 1st of January, 1828, it was but $67,413,377 92, from which must be deducted the $7,000,000 subscribed to the Bank of the United States, which is represented by an equal amount and a greater value in the stock of that bank. The amount of the debt, therefore, on the 1st of January, 1828, was reduced to $60,413,377 92, and on the 1st of July next it will be still further reduced (by the payment of $5,000,000) to $55,413,377 92; from this must also de deducted the $5,000,000 of debt contracted for the purchase of Florida, leaving $50,413,377 92. So that, in twelve years, besides discharging the various claims growing out of the war, paying the interest of the debt, which, in the beginning, must have been about six or seven millions a year, providing for the support of Government, and paying all other necessary expenditures, there has been paid of the principal of the public debt no less a sum than $76,921,555 08, or upwards of $6,400,000 per annum.

The revenue is sufficient, after providing for all other necessary expenses, to pay the public debt as soon "as we are permitted by contract to pay;" and if no national exigency should occur to compel a greatly increased expenditure, the whole of the public debt may be paid off by the year 1835, besides "an accumulation of moneys in the Treasury" and a very large annual surplus afterwards.

With respect to particular expenditures making up the aggregate, it has already been remarked that they were authorized by law. They have received the sanction of Congress, and it is believed they have, in general, met the approbation of the country. The provision made for the declining years of the soldiers of the Revolution, which brought a considerable charge upon the Treasury, but acquitted a heavy debt of gratitude; the system of fortifications for the defence of our maritime frontier; the aid given to internal improvement by roads and canals, and by removing obstructions in rivers for the great purposes so strongly enforced in the message above quoted; the establishment of the Army and Navy, and all the other leading objects of the public care and concern, have been settled by the decisions of Congress, and it is believed have been satisfactory to the nation. Not that there has been entire unanimity of opinion. Upon some of these great points, besides other grounds of discussion, there has been what may be termed a radical difference of opinion as to the extent to which the faculties of the Government of the Union ought to be exercised for the benefit of the nation; and though this seems to belong rather to the political than to the financial history of the Government, yet it must be apparent that it will have an influence upon the question of expenditure, and upon the views taken of that question. Those who would narrow down the exercise of power to the most restricted limits so as to deprive the Government of the Union of its beneficent faculties—such, for instance, as that of internal improvement, or of protecting domestic industry—and limit even its admitted faculties to the minimum of activity, will very naturally object to expenditures, because expenditure is the instrument by means of which these faculties are for the most part exercised. They will regard it with jealousy, and be disposed to check it, as tending to overturn their favorite doctrines. They dislike the means because they are opposed to the end. But those who hold the contrary opinion, who believe that the Government possesses and may beneficially exercise these powers, who think that its just powers ought to be exercised, (and they are a great majority of the nation as well as of Congress,) regarding the objects as at once legitimate and advantageous, will approve of such reasonable expenditure as the circumstances of the country will bear and the public good requires. They will be content to enjoy the benefits derived, even though they should be derived through the instrumentality of the Government of the Union.

This difference of opinion which manifests itself upon particular measures will also have an influence upon the view taken of past and of current expenditures. Those who are opposed to the measures or to the system will be dissatisfied with the expenditure, and will think it has increased too fast. Those who supported them will come to a different conclusion. But both must agree that they have received the constitutional sanction, and both must also agree that nothing but the same power of a constitutional majority can arrest them. So that, in fact, the question of expenditure becomes a question of the policy of the country, and connects itself with the great principles that for some years past have guided or influenced the deliberations of Congress. The same motives which have determined that policy must, of course, justify the expenditure it has occasioned. The cost has not been greater than was anticipated, nor the benefits less. And therefore the real question is, whether the system shall be abandoned or reduced, merely for the purpose of reducing the expenses, at a time when there is nothing in the circumstances of the Treasury to call for a reduction.

Whether the expenditure shall be further increased, and what disposition shall be made of the surplus that will remain in the anticipated event of a final extinguishment of the public debt, are points to be decided by the wisdom of future Congresses, enlightened by the knowledge which time will disclose. But considering that the revenue is more than sufficient to meet the current expenses and to provide for the payment of the public debt within the time which the contract with the creditors will allow; that the revenue (so far as it falls upon the citizens) is derived entirely from the customs; that the expenditure has not outgrown the growth of the country, nor even kept pace with its advance in population, wealth, and prosperity; that the contributions of the citizens, light in themselves, are not sensibly greater now than they were thirty years ago, and are less, it is believed, than they have been at the average of any intermediate period; and that the expenditures are for the benefit of the nation, and are calculated to advance her prosperity and to promote her welfare and happiness; the minority see nothing in this aggregate of expenditure to lead to a belief that there is extravagance or abuse, or to indicate the necessity of retrenchment or reform, or to occasion an apprehension that the Government has at all departed from its original purity.

THE EXPENDITURES OF THE EXECUTIVE BRANCH OF THE GOVERNMENT.

It has already been observed that this head embraced for the year 1826 an expenditure of $489,776 07, being about one-fiftieth part of the aggregate expenditure of the Government. It consists of two parts: First, salaries and compensations established by law, including the salaries of the President, Vice President, heads of Departments, and the subordinate officers of the Departments, down to the messengers of the

offices. The payments thus fixed by law, and which can neither be exceeded nor diminished, amount to more than $400,000. The residue, say for the year 1826 about $80,000, is for what are termed contingent expenses, the nature of which will require but one word of explanation. There is no uncertainty or contingency as to the necessity of these expenses for the public service. The Departments must be provided with fuel, stationery, furniture, books, and whatever else is wanted for the business of the nation. They are uncertain and contingent only as to the amount, and because the respective items cannot be estimated with perfect precision in advance. The great bulk of them is, however, absolutely indispensable. A small portion may possibly be liable to some difference of opinion in the judgment of different men, according to the views they are inclined by temperament or habit to take. It would be a very large allowance to suppose that one-tenth part could be subject to debate or question, even with those whose notions on such points are most rigid. But for the present purpose let it be assumed that one-tenth part is debatable. Then the case will stand thus:

The total expenditure in the year 1826, debt included, being.....	$24,103,398 46
The expenses of the Executive Department, including the staff of the Army, are one-fiftieth, or.....	489,776 07
The expenses termed contingent are not quite one-sixth part of that sum, or, say.....	80,000 00
And of these contingencies it is supposed for the present that there may be one-tenth subject to dispute, as before stated.....	8,000 00

which latter sum may be considered as furnishing the field of retrenchment.

Then, the expenses of the Executive Department being one-fiftieth of the whole expenditure, and the contingent expenses one-sixth of the expenses of the Executive Departments, they are one-three-hundredth part of the whole; and the debatable part of the contingent expenses being but one-tenth part, it amounts to but one-tenth of one-three-hundredth part, or one-three-thousandth part of the whole expenditure—that is to say, one-thirtieth part of one per cent.

This statement is made simply for the purpose of correcting any vague and erroneous notions that may prevail upon the subject of this branch of expenditure, and to show how very incorrect must be the opinion that any serious retrenchment in it is required or practicable, or that any formidable extravagance or abuse can there prevail. From the attention which has of late been bestowed upon this subject, one might be led to conclude that the Treasury was supposed to be grievously burdened by it, and that some sensible relief might be had by reduction at that point. And yet it appears, when examined, to be so minute as, upon the largest allowance, not to exceed one-thirtieth part of one per cent. It is exactly the same as the annual expenditure of one dollar is to an individual whose whole expenses amount to three thousand dollars a year. If, instead of an abundant revenue, untouched resources, freedom from taxation, an adequate provision for the rapid extinction of the public debt, and a state of progressive prosperity, which happily is our actual condition, the revenue were inadequate, the debt stationary or increasing, and the public burdens heavy, it must be admitted that a reduction of expenditure would be necessary. But what reduction could be effected within the limits of one-thirtieth of one per cent., or one-three-thousandth part of the whole? In such circumstances, and with such views, the utmost saving that could be effected would not pay the expense of the inquiry. It is far too minute to afford any hope of relief.

In thus exactly stating the scope of the inquiry, it is not meant to be conceded that, even within the very narrow limits mentioned, there has been any extravagant or improper expenditure, nor to be asserted that an extravagant or improper expenditure ought to be permitted, however small. The minority of the committee have seen nothing to induce them to believe that there has been any such expenditure. Reserving for examination hereafter some particular items, about which there would seem to be a question, it may be proper, once for all, to state the general footing upon which this matter stands, so as to exhibit the grounds of the opinion they entertain and intend, in conclusion, to express. It will also exhibit the guards and checks already provided by law, or by the practice of the Government.

For the expenditures of each Department, as well as of every branch of service, provision is annually made by the appropriation bill. The appropriations for the Departments are made upon detailed estimates annually presented to Congress and printed for the use of the members. The estimate for the present year is a printed document of fifty-seven pages. Where a Department comprehends subordinate offices, separate and distinct estimates are made for each of them. Thus, the estimate is separately made for the Treasury and for each of the ten subordinate departments belonging to it. So of the War Department and the eight subordinate offices. The estimates and the appropriations for contingencies are also, as far as it is practicable, divided into heads or parts. For instance, in the estimates for the Department of State at the present session the contingencies are arranged under fifteen heads, and the appropriation asked for each, including books, stationery, fuel and candles, newspapers, extra copying, printing of the laws, distribution of the laws, &c.

The estimates being placed in the hands of the Committee of Ways and Means and of every member of Congress, they have the opportunity (which they have not failed to improve with becoming vigilance) of judging of the reasonableness of every item proposed. In forming this judgment they have the means of comparison with the preceding expenditure, and if they find any new head of expense introduced or any old one swelled beyond its former size, or if they entertain a doubt of the propriety of any part of the expenditure, they have the right of asking for explanation, which they always exercise, as in duty they ought. Upon the result of this examination, rigorously made, first by the committees and then by both Houses of Congress, the judgment of Congress is formed, and that judgment is expressed in the appropriation bill as applicable to the services of the year. The appropriation bill, therefore, pronounces the opinion of Congress upon each and every item embraced by it as necessary for the public service, and also upon the amount which may be applied to each and every item. The discussions upon the appropriation bills have for many years past been rigorous and faithful.

The amount thus appropriated cannot be exceeded. This is true, not only in general, but also in every detail. The head of a Department is limited in his contingent expenses to the amount which is appropriated for his Department. The head of a subordinate branch is confined to the sum estimated for that branch. Neither can draw from the Treasury one dollar beyond the appropriation; and each in his respective expenditures is to keep within the bounds prescribed for the particular head of expenditure, so that what is assigned for one service cannot be employed for another. It is obvious, therefore, that as to the amount to be expended for contingencies, or the objects for which it is to be expended, very little is left to the discretion of the officer; and it ought to be remembered that, as it is his first duty to see that the

public service is performed, he must not sacrifice *that* for the purpose of saving the money placed at his disposal for its performance.

The expenditure itself next comes under review. It is presented annually, in a condensed form, in tables accompanying the letter of the Secretary of the Treasury, at each session of Congress, under its appropriate heads. In pursuance of a standing order of the House, made December 30, 1791, there is also published an annual account of all receipts and payments for the year, giving the name of every individual to whom a payment has been made from the Treasury. And still further to secure the faithful application of the public moneys, there is a standing committee appointed at every Congress upon each of the Departments of the Government, whose business it is to examine into their expenditures; to see whether "they are supported by proper vouchers, establishing their justness, both as to their character and amount," and "whether any retrenchments can be made." So that after undergoing the scrutiny of the accounting officers, where, like all other accounts, they must be supported by proper vouchers, they are again examined by a committee of the House. It ought to be further remarked that every officer is liable at all times to be called upon by a resolution of the House; and that by the prevailing practice this power really belongs to every member, for no call is ever resisted or opposed.

It would be difficult to devise any plan by which this point of the contingent expenses of the Departments could be more closely brought or more continually kept under the notice of Congress for its approbation or censure, or a more rigid accountability exacted. But this (though highly important) is not so much the occasion of the observations which have been made, as another remark to which they naturally give rise and which is deemed worthy of attention. The minority of the committee will endeavor to explain what they mean so distinctly as not to be misunderstood.

As the appropriations of each year for the contingent expenses of the Departments are founded upon estimates for that year, and adapted to the service expected to occur, it will follow, in general, that the mere fact that the expenditure is greater or less than in any preceding year, taken by itself, cannot be evidence of extravagance or economy, nor be the just occasion of praise or censure. In an expenditure no greater than that of the contingencies, a small addition might be the cause of a considerable comparative increase. An instance in point will be found among the accounts furnished from the Treasury. In the years 1825, 1826, and 1827, it became necessary, in consequence of the provisions of the law authorizing the loans of 1813 and 1814, that the certificates to be paid off should be determined by lot, and that the holders of them should have "due notice." The necessity was thus produced for publishing advertisements throughout the United States, stating the numbers and amounts of the certificates to be redeemed. This had not occurred before for many years. To provide for the expense of advertising, the appropriation bill of 1826 allowed the sum of $6,000, and the appropriation of 1827 a like sum—being the amounts estimated for that service for the three years. This single addition, incident to the discharge of the public debt, was sufficient to vary considerably not only the contingent expenses of the Treasury, but even of the whole of the Executive Departments.

The use of this illustration is not to be considered as admitting that the contingent expenses of the Treasury have increased. In the last three years, 1825, 1826, 1827, they are actually less than for the three years preceding, 1822, 1823, 1824, as will hereafter be shown.

It will further follow that no just inference can be made from the comparison of one officer with another, though having the same title, or of a succeeding officer with his predecessor. Each must be determined by itself. The expense must depend upon a variety of circumstances, and, among the rest, it may be that an apparent saving in one year will occasion an increased expense in another, as if it be caused by letting the bills remain unpaid or the business of the office fall in arrear. The annual estimates are founded upon a view of each particular office, and of its wants at the very time. Thus the estimate for the Fourth Auditor in 1822 was $1,000; in 1823, $1,650; 1824, $1,800; 1825, $2,000; 1826, $2,000; 1827, $2,000; making a total of $10,450; and the total expenditure in the same period was but $7,870 20. It is very true that the expenditure for the last three years has been somewhat greater than for the three preceding, but they have not exceeded the estimates, and the appropriation in pursuance of them, founded upon the necessity at the time; and as they will be again referred to, no further remark need be made than this: that the increase in the latter years may have been owing (among other things) to the diminished expenditure in the immediately preceding ones.

If there be any generally operating cause which may be supposed to have a constant though not exactly regular influence, it can only be the one before referred to, viz: that the extension of the public service will be attended with an enlargement of the expenditure, and, among the rest, with an increase of the contingent expenses of the Executive Departments. Should it then appear to be correct (as stated) that the public service authorized by law occasioned an average expenditure in 1822, 1823, 1824, of $10,000,000; and that, in the years 1825, 1826, 1827, it occasioned an average expenditure of $12,500,000; and that the average of the contingent expenses in the former period was $66,793, and in the latter period was $77,454, (which statements, though not particularly examined, are probably correct,) then it will follow that the total expenditure has been increased by an addition of one-fourth, and the contingent expenses by an addition of only one-sixth, or rather less than one-sixth. If they had gone on at the same rate as the general expenditure they would have averaged $83,491. This comparison, therefore, if it establish anything, establishes that there has been an improved economy in the Executive Departments of the Government.

It is admitted not to be an absolutely conclusive test, but it is an approximate or probable test, which may be resorted to for want of a more certain one; and the minority are of opinion that the result is satisfactory, as showing a relatively diminished expense quite equal to what could have been reasonably expected, and sufficient to allay apprehension.

Having made these general remarks, the minority of the committee will proceed to state the results of the examination of the several Departments, referring only to such things as they have understood to be objected to or questioned, and availing themselves of reference to the papers and accounts before the committee. They think it right, however, first, to say that they did not suppose, nor have the committee experienced, any backwardness on the part of the officers of the Government to communicate information. Every inquiry has been fully and promptly answered; and if there be any points upon which explanation would have been useful or acceptable, they have no doubt that, if applied for, it would have been readily furnished. It is undoubtedly true that the heads of Departments, and of subordinate branches of Departments, have, in general, answered that they have no more clerks or other persons employed than the efficiency of the service requires; and considering how recently and deliberately they have been established upon their present scale by Congress, the minority of the committee did not expect any other answer. So far as it is matter of opinion, there is no doubt it is sincere and founded upon experience,

and the same that would have been given under any other circumstances, even such as it is intimated would be more favorable to harmonious co-operation. In the general correctness of that opinion the minority are disposed to concur, not only because it is the opinion of those who have had instruction from experience, but also because it corresponds with their own impressions. Congress has never been profuse in the number of clerks, nor in the allowances made to them. They have barely had enough to subsist them while they lived, and some of them, it is known, have not left enough to bury them when they died. Besides, extra clerks are occasionally employed in all the offices, and have long been so, without incurring any disapprobation, which is of itself sufficient evidence that the clerks permanently employed are not equal to more than the ordinary business of the office. That practice (of extra clerk hire) the minority of the committee would not be understood to condemn or disapprove. On the contrary, they believe it to be conducive to economy. Upon the same principle that a farmer employs additional hands in harvest time, or at any other season when work presses, it is right in the Departments to engage occasional assistance, when, from calls made by Congress, or other urgent cause, the regular clerks cannot do what is required with the speed that is necessary, or without neglecting other matters. A different plan would be followed by this result: either some portion of the business must be neglected, or the establishment of clerks must be raised up to the maximum which, at any particular time, might be required to do it.

DEPARTMENT OF STATE.

In proceeding to inquire into the condition of the several Departments in reference to the disbursements of the public money, the minority of the committee first direct their attention to the Department of State. On the organization of the committee a letter of general inquiry was addressed by the chairman to the heads of the several Departments, and answers, accompanied with documents, were received from them all. The answer of the Secretary of State presents a view of the condition of his Department, fully sustained by the official documents from his own and the Register's office, and highly satisfactory. From this view, which the minority of the committee will presently lay before the House, it appears that there has been a continued economy in the expenditure of the Department. While the minority of the commitee make this remark, however, they would not be understood as sanctioning the principle that the greater or less disbursement made in a Department is the only measure of the success and fidelity with which it has been administered. In the Department of State, particularly, the expenditures necessary to be made depend, in part, on our relations with foreign Powers, and on incidents in our intercourse with other nations, which this Government is unable to either foresee or control. In some respects an increased expenditure indicates abroad an extension of friendly relations with foreign Powers, and at home an increase of public business, arising out of the augmented population, multiplying pursuits, and growing prosperity of the country.

As it is in the foreign affairs of the country that the greatest fluctuation is likely to arise, so it is in the *appropriations* for this branch of the service that the greatest diversity exists in one year compared with others.

In the year 1823 the appropriations were, omitting parts of a dollar	$154,800
In the year 1824 ..... do ..... do ..... do	309,350
In the year 1825 ..... do ..... do ..... do	336,050
In the year 1826 ..... do ..... do ..... do	350,932
In the year 1827 ..... do ..... do ..... do	290,550
In the year 1828 ..... do ..... do ..... do	89,550

The great inferiority of the appropriation of 1823 arises from the fact that the sum of one hundred thousand dollars, appropriated in 1822 for the expense of the missions to the new American Governments, was not expended during that year, and was accordingly at the service of the Department for the next. The great inferiority of the appropriation for 1827, and particularly that for 1828, is owing to economical savings in the application of former appropriations and to reductions in some of the objects of expenditure—as, for instance, in some of the missions to the new Governments in South America, as is more fully explained in the note of the Secretary.

If the *expenditure* of the three years of this administration be compared with that of the three preceding, some increase will appear. To this increased expenditure the remark above made applies with full force. It has grown out of the extension of our relations with foreign Powers, and other causes connected with the growing prosperity of the country. The same variation from year to year will here also be found, showing that, with the same officers at the head of the Department, and with the same individuals composing a Congress at successive sessions, it is impossible to bring the expenditures in this branch of the public service to an uniform condition, either of increase or diminution.

In the year 1822 the expenditure was	$173,879
In the year 1823 the expenditure was	314,668
In the year 1824 the expenditure was	270,731
In the year 1825 the expenditure was	306,731
In the year 1826 the expenditure was	255,296
In the year 1827 the expenditure was	287,463

Arranged in the order of diminishing expenditure, the years would accordingly stand as follows:

1823	$314,668
1825	306,731
1827	287,463
1824	270,731
1826	255,296
1822	173,879

It may be added that the expenditure of the present year, for which only $89,550 are appropriated, will probably fall as low as that of the lowest years in the foregoing catalogue. It will also be observed, as stated in the letter of the Secretary, that the apparent expenditure of 1827 is swelled above its real amount by a sum of money remitted to Europe, for which the requisition was granted in December, 1827, for the foreign service of 1828.

With regard to the expenses of the Department of State proper, the small increase of expenditure in

the present administration over that of the last, is fairly referable, in part, to the natural increase of business, and to the known accumulation of some extra items of necessary expenditure. Thus, the transcription of the immensely voluminous papers relative to the northeastern boundary, which it has been necessary to make twice, would of itself account for a considerable part of the increase. The preparation of the schedule of American claims on foreign Powers was also an exceedingly laborious and expensive task imposed on the Department of State by a resolution of the House of Representatives. The transcribing of the papers relative to the claims on France prior to 1800, in obedience to a resolution of the Senate, under the last administration, but which it was impossible to comply with till the year 1826, (papers filling a printed volume of 840 pages,) was also a heavy item of extra expenditure. The increased expense of special messengers grows out of the extension of our intercourse with those parts of the world where suitable opportunities for conveyance, in the usual channels of commercial intercourse, (a mode of transporting important official documents, at best, open to objection,) do not often present themselves, and the increased number of treaties and conventions which have been negotiated and transmitted. The invariable usage of the Government, and the manifest propriety of the thing, require that conventions and treaties, general instructions of great importance transmitted to the foreign ministers, and confidential despatches, should be intrusted to special messengers; and the minority of the committee have not found that these have been employed in any case not required by the public service.

The following is a copy of the letter of the Secretary of State referred to:

DEPARTMENT OF STATE, *Washington, February* 29, 1828.

SIR: I have received the letter which, as chairman of the committee of the House of Representatives on retrenchment, you did me the honor to address to me on the 13th instant, transmitting a copy of a resolution which had been adopted by the committee; and having given the subject embraced in the resolution attentive examination and the most respectful consideration, I beg leave now to communicate my answer to be laid before the committee. The resolution, in substance, calls for the expression of my opinion: first, whether there be any officers in the Department of State whose services may be dispensed with without detriment to the public interest; secondly, whether the salaries of any of them can be reduced consistently with justice and propriety; and thirdly, in general, whether any of the expenses incident to this Department can be reduced without impairing the efficacy of its operations.

As to the first two objects of inquiry above mentioned, my opinion is, that there can be no reduction in the number of officers employed in the Department of State without detriment to the public interest, nor in the salaries of any of them without injustice or impropriety. Within a few years past there has been a great increase in the general business of this Department, arising from the progressive increase of the wealth and population of the country, and from the establishment of independent Governments upon this continent. The number of permanent American missions which we now send from this country is equal to the number that we send to continental Europe. And the public interest has required the creation of various consular and other commercial agencies in this hemisphere, but not in the same proportion. Although those missions were authorized, and several of them had proceeded to their residences during the preceding administration, most of them have left the United States, and much the greater part of the other appointments referred to have been made during the present administration. These foreign agencies have greatly extended the correspondence of the Department, created a necessity for numerous translations from foreign languages, required much additional copying, and otherwise added to the labors of the Department.

The committee will readily comprehend that the new duties arising from the above causes have rendered indispensable additional assistants to perform them; but the number of persons employed in the Department has not been increased in anything like an equal proportion with the increase of its business. So far from its being expedient to discharge any of those persons, the public service would be promoted by some addition to the number of clerks in the Patent Office, and an increase in the salary of its Superintendent, which has heretofore been repeatedly proposed, is again respectfully recommended. The receipts in that office are quite adequate to cover every expenditure already authorized and any that its addditional wants may require. In respect to those wants I beg leave to refer to a letter which the Superintendent, though confined by a long and dangerous illness, has recently felt it his duty to address to me, and which, under the designation of the letter A, accompanies this communication.

Before I proceed to answer the third and last inquiry of the committee, whether any of the expenses incident to this Department can be reduced without impairing the efficacy of its operations, I ask permission to present some general and explanatory observations in respect to the disbursements of the public money which are made through the Department of State. These disbursements are made out of appropriations of two kinds: first, those in which both the amount of the appropriation and its particular object are specified; and, secondly, those in which, although the amount of the appropriation is limited and the general purpose of it is mentioned, its particular object is not definitively stated. The salaries of our diplomatic agents form an example of the first description of appropriation as the contingent expenses of foreign intercourse do of the latter. The first depends exclusively upon the pleasure of Congress; and it is only over the last that discretionary power is or can be exerted by the Executive, through the Department of State, in a course of administration.

During my service in the Department I have endeavored to enforce the most rigid economy which appeared to me compatible with the public interest. Particular items of expenditure will vary from year to year according to exigencies, and the amount of disbursement will, consequently, be greater or less. There has been, for example, a vast deal of extra copying in the Department during the two or three last years. The papers relating to our northeastern boundary, consisting of upwards of twenty manuscript volumes, and numerous maps and other detached papers, have been twice transcribed in that time. But the total amount of appropriations for the service of this Department has been progressively diminishing during the last three years. On that subject, as well as the expenditures of the Department, I beg leave to present to the committee, from the document marked B, accompanying the letter, the three following views:

The first is a comparison of the amount of appropriations made during each of the last three years of the preceding administration with that made during each of the first three years of the present, applicable to the public service through the agency of this Department.

LAST ADMINISTRATION.		PRESENT ADMINISTRATION.	
1823	$154,800	1826	$350,932
1824	309,350	1827	290,550
1825	336,050	1828	89,550
	800,200		731,032

The cause of the smaller amount of appropriation for the year 1823 compared with several succeeding years was, that the sum of $100,000, which, by the act of the 4th of May, 1822, was appropriated for such missions to the independent nations on the American continent as the President of the United States might deem proper, had remained in the Treasury unexpended. The appropriation for 1825 is placed under the last administration, because it was, in fact, made, and the estimates for the public service were prepared under that administration, although the disbursements of it took place, in conformity with those estimates, under the present. The aggregate amount of appropriations during the latter term of three years is less by $69,168 than in the former, and, excluding the appropriation in 1826 of $40,000 for the Panama mission, (of which $26,953 52 only was expended,) which will not be an occasion of permanent expenditure during each successive year of the latter term, the amount appropriated, in comparison with the year immediately preceding, has progressively decreased, until that for the service of the present year has declined as low as $89,550, a little more than one-fourth of the amount appropriated in the last year of the preceding administration. I do not wish to be understood as stating that the smallness of the sum appropriated for the current year is attributable to permanent retrenchments, and is, therefore, to be regarded as the standard for future years; but it is the effect of economical savings from former appropriations, all of which might have been disbursed if there had been a disposition to indulge in extravagance.

The next view, which is now offered to the committee, is that of a comparison of the actual expenditures during the last three years of the past and the same period of the present administration. The expenditures of the—

LAST ADMINISTRATION.		PRESENT ADMINISTRATION.	
1822	$173,879 51	1825	$306,731 74
1823	314,668 56	1826	255,296 20
1824	270,731 27	1827	287,463 42
	759,279 34		849,491 36

The amount during the latter term exceeds that of the former by $90,212 02; but this difference may be satisfactorily accounted for. In the first place, there was a remittance in the month of December last of $70,000 to our European bankers, which is charged to the service of the year 1827, although, in point of fact, it will be disbursed in the year 1828. In the next place, the expenditure of the year 1822 amounted only to the sum of $173,879 51, because the sum appropriated to the missions to the new American nations was not applied in that year. It was in succeeding years that those missions were despatched, and it has been only since the commencement of the present administration that all of them have been put in operation, and that the entire expense, therefore, of maintaining the whole of them has been incurred. A comparison of the expenditure of the last two years of the past administration with two years of the present administration, though, for the reason just mentioned, still operating unfavorably to the latter, will be more just. The aggregate amount of the expenditures of the years 1823 and 1824 was $585,399 83; and the average of each year was $292,699 91½. The aggregate amount of the expenditures of the years 1825 and 1826 was $562,027 94; and the average of each year was $281,013 97. The average expenditure of each of the three years of the present administration being $283,163 78⅔, although including the before mentioned recent remittance and the expense of the mission to Tacubaya, is less than the average of the last two years of the past administration.

The preceding views of appropriation and expenditure are exclusive of the salaries of the Secretary and clerks employed in the Department.

I have stated that the small amount of appropriation required for the service of the present year was the result of economical savings out of previous appropriations. This will be manifest from the last view, which I now take the liberty of presenting to the committee, of the appropriations and expenditures during the years 1825, 1826, and 1827, under those heads of appropriation in the application of which a discretionary control is exercised through the Department of State. Those heads are, first, contingent expenses of foreign intercourse; secondly, intercourse with Barbary Powers; thirdly, relief and protection of American seamen; and fourthly, the contingent expenses of the Department. The total amount of appropriations, under the first head, for the three years of 1825, 1826, and 1827 was $111,000; and the total amount at the service of the Department, including a balance of appropriation for the year 1824, and also some small items of repayment, was $127,420 05; the actual disbursement during the three years of 1825, 1826, and 1827, was $80,567 97; leaving an unexpended surplus of $46,852 08. The total amount appropriated during the same three years for intercourse with the Barbary Powers was $80,000; and the entire sum at the disposal of the Department, including a balance of the sum appropriated for 1824, was $100,450. The actual expenditure during those three years was $55,700 29; leaving an unexpended balance of $44,749 71. The total amount for the relief and protection of American seamen, at the disposal of the Department, during the same three years, was $99,678 84; the total expenditure was $87,698 17; leaving an unexpended balance of $11,980 67. The total amount at the command of the Department for its contingent expenses during the same period of three years was $97,863. The actual expenditure for the same term, being $90,305, left a surplus of $7,558.

This third and last view is taken from a summary statement of moneys appropriated and expended under certain heads of appropriation for the years 1822, 1823, 1824, 1825, 1826, and 1827, which is hereto annexed, designated by letter C, to the whole of which the attention of the committee is respectfully invited.

During the present administration there has been a permanent reduction in the grade of two, and a temporary reduction in another of our missions on this continent, from that of an Envoy Extraordinary and Minister Plenipotentiary to a Chargé d'Affaires. And I am induced to believe that one or two of our American missions may be abolished at a day not very distant without injury to the public interest. In

respect to those branches of expenditure which have been placed, by long established usage, under the control of the Executive, any retrenchment of which they are susceptible must, from the nature of the case, depend upon the exercise of a sound and responsible discretion. Without being able now to state to the committee any particular reduction which can be made in those branches of expenditure, I can only assure them, that, so far as the application of that discretion depends upon me, I shall continue to be animated by the desire I have ever felt to observe all practicable economy.

Without being perfectly sure that the inquiries of the committee extended beyond the officers immediately concerned in the Department of State, and the expenses incident to it within the city of Washington, I thought it safer to act on the supposition of their having contemplated a more comprehensive inquiry into the disbursements of the public money wherever made, and the utility of existing officers, whevever their sphere of action may be, under the direction of the Department of State.

I have the honor to be, with great respect, your obedient servant,

H. CLAY.

Hon. JAMES HAMILTON, Jr., *Chairman.*

MARCH 5, 1828.

P. S.—This letter was prepared at the time it bears date, but its transmission has been delayed from that time to procure the certified statements from the Treasury which accompany it, and which, from the press of business, could not be procured until this day.

H. C.

Before proceeding to comment on separate items of expenditure, the minority of the committee would observe that there is one general point in relation to the expenditures of the Department of State upon which objection has been made, and on which, for that reason, a remark will be offered. It is as to the mode of disbursing the moneys for the contingent expenses of the Department. The disbursements are made by the agency of a designated clerk, who, for that purpose, is intrusted with moderate sums, which he deposits in bank, and draws from time to time, as small payments are made, accounting for the expenditures in the same manner as other accountants

To this course no well-grounded objection appears to the minority of the committee. It is that which is adopted by individuals who have large concerns. A cash-keeper in a counting-house, and an account of petty cash, are familiar to every body as things not merely of convenience but of necessity.

This plan, however, is not new, nor has it been unknown to Congress. In the year 1822 the then Secretary of State, now President of the United States, addressed a letter (dated the 18th April, 1822) to the committee of this House on the expenditures of the Department of State, in which he states this practice to have existed before his coming into the Department. That letter is on the files of this House, and a copy was laid before this committee with the letter of the present Secretary of State. The committee of 1822 (reports No. 106) reported as follows: "The expenditure of the moneys appropriated for the contingent expenses of the Department is confided to one of the clerks of the Department." "The committee have examined the accounts of these expenditures, with the vouchers for the said accounts, as far as they judged necessary. The objects of expenditure appear to be such as are necessary to the execution of the duties of the Department, and must, therefore, be authorized by law. The expenditure is within the appropriation, and is supported by sufficient vouchers. The accounts are regularly kept; the expenditures appear to be made with fidelity and economy; and the committee are unable to suggest any subject of retrenchment compatible with the public service."

It is natural now to inquire what better mode can be suggested or adopted? or, if this may be objected to, what is there that may not?

The minority of the committee will now proceed to examine particularly some of the items of expenditure in the State Department, which have been or may be thought to require explanation.

One of these is the outfit allowed to Mr. John A. King as Chargé d'Affaires at London, which has been said to have been made in violation of law and out of a fund appropriated for other objects. This subject having been brought before the House of Representatives at the last session of Congress, and having, in obedience to a call of the House, been reported upon by the Secretary of State, the minority of the committee will only observe that, from the Secretary's report at that time, it appears that Mr. King's appointment was made conformably to the construction which has been given to the law of May 5, 1810, by every succeeding administration, and that the allowance made to him was a medium between the highest and lowest rate of allowance made in similar cases. That it was made out of the contingent fund for foreign intercourse was, in the opinion of the minority of the committee, both necessary and proper. The expense occurred on the contingency of the sickness of the minister at London. The service began and terminated in the recess of Congress; it was, consequently, one for which no previous appropriation could be made; and the minority of the committee are not aware that Congress have ever considered it a branch of legislative duty to decide what part, or whether any part, of an outfit should be allowed to a Chargé d'Affaires after his return from his post. In the numerous instances which the records of the Government exhibit of the settlement of the accounts of functionaries of this class, it is the belief of the minority of the committee that, when the same have not previously been appropriated for, (which in the majority of cases they have not been,) the Executive has decided the rate of allowance, and ordered its payment out of the contingent fund for foreign intercourse. The minority of the committee are aware that "precedents made in violation of law" are not entitled to respect. But when they consider that the intercourse of the Government with foreign nations is confided by the Constitution, to a considerable extent, to the President, and that down to the present day there is no specific act of Congress creating any foreign mission, they cannot but think that it would now be hazardous to preclude the Executive from the application of the contingent fund to the exigencies of the foreign service which arise during the recess of Congress, and which the minority of the committee regard as a part of the objects peculiarly intended to be provided for by that fund. The minority also think it an undue measure of severity towards any administration to charge it with the violation of positive law in cases where its acts have been in conformity to an unvarying usage in the construction of that law from the time of its enactment and under the most approved administrations of the Government. It may also not be improper to recall to the House that neither the outfit nor any other allowance made to our foreign agents is a gratuitous pecuniary emolument. In most instances it falls below, and never, it is believed, rises above, the necessary expenses of their stations. Most of our citizens in the foreign service leave it with circumstances not mended by having discharged important duties to the country; and the minority of the

committee have no reason to believe that allowances like those made to Mr. King are even an indemnity for the sacrifices which every individual must make in his domestic establishment by entering the public service under the like circumstances.

On the subject of the employment of J. H. Pleasants as a special messenger for bearing despatches, commissions, and instructions to our Chargés d'Affaires at Rio de Janeiro and Buenos Ayres, the minority of the committee deem it unnecessary to say anything in addition to what is stated in the letter of the Secretary, which is here subjoined:

Mr. Clay to Mr. Hamilton.

DEPARTMENT OF STATE, *Washington, March* 26, 1828.

SIR: I have received your letter of the 24th instant containing a copy of a resolution adopted by the Committee on Retrenchment, in which they are pleased to inquire:

"Did John H. Pleasants go as bearer of despatches from the United States to Rio de Janeiro and Buenos Ayres in 1825? Did he deliver the despatches to the proper authority at Rio Janeiro and Buenos Ayres? If he did not go, what became of the despatches? who bore them to the Government of Rio Janeiro and Buenos Ayres? Where did John H. Pleasants go after he left the United States? Was it known to the Department when his account was settled and paid him that he had not been to Rio Janeiro and Buenos Ayres as bearer of despatches from this Government?"

In reply I have the honor to state, for the information of the committee, that Mr. Pleasants was engaged in the spring of 1825 to carry to our respective Chargés d'Affaires at the Brazils and Buenos Ayres their credentials, commissions, and general instructions, and other despatches from this Department; that with that view he left the city of Richmond, the place of his residence, on the 19th day of April, and embarked at the port of New York on the 28th day of May, 1825, on board the brig William Tell, having employed the intermediate time in seeking, from Baltimore to Boston, a vessel in which he could obtain a passage; that whilst at sea he was taken so ill as to be apprehensive of his life, which he supposed would be in imminent danger if he continued the voyage; and meeting a vessel at sea bound to Antwerp he transferred himself to her, and committed the despatches with which he was charged to the care of Captain Hinman, the master of the vessel William Tell; that the despatches, both to Mr. Forbes, our Chargé d'Affaires at Buenos Ayres, and for Mr. Raguet, our Chargé d'Affaires at Rio de Janeiro, were delivered by the captain of the William Tell to the former gentleman on the 12th day of August, 1825, as will appear by an extract from a despatch from him under date the 15th day of September, 1825, marked A.; and that those intended for Mr. Raguet were received by him on the 26th October, 1825, as will appear by an extract from a despatch from him under date the 12th of November, 1825, which is marked B.

I beg leave also to refer to a copy of a letter from Mr. Pleasants, under date the 7th day of July, 1825, marked C, and to an extract from a letter from him under date 22d October, 1825, marked D, as explaining more fully the motives which induced him to change his destination and commit the public despatches in his care to Captain Hinman. During his voyage in the Antwerp vessel Mr. Pleasants met at sea a vessel bound to Liverpool, to which he transferred himself, and he arrived at that port on the 1st day of July, 1825. He reached the port of New York, on his return to the United States, the 22d of October, 1825, bringing with him despatches for this Department from Mr. R. King, our minister at the Court of London.

It was known at this Department when the account of Mr. Pleasants was settled and closed that he had not reached Rio de Janeiro or Buenos Ayres; but it was also known that the despatches which had been intrusted to him had been received by the persons to whom they were respectively addressed; and it was believed that he had been prevented from personally delivering them by the causes already stated. Supposing the affliction of disease did not occasion a forfeiture of all claim for expenses and all compensation for services, the allowances made to him were according to established usage, which has prevailed as far back as any traces of the accounts of bearers of despatches can be discerned in the Treasury. Agreeably to that usage they are generally allowed their expenses, personal and travelling, to the port of embarkation, their passage money at sea, their expenses, personal and travelling, from the port of debarkation to the places of their destination, and the like expenses and passage money on their return home; and they receive, moreover, a compensation for their services of six dollars per day, out of which they defray their expenses whilst they remain at the places to which they are sent or stop at Washington for despatches. Upon an examination of Mr. Pleasants' account it will be seen that it has been adjusted according to these principles, and of the sum received by him seven hundred and fifty-six dollars was for per diem allowance, and the residue on account of expenses and passage money.

It was not believed that the visitation of Providence with which he was afflicted ought to deprive him of all allowance for expenses and all compensation for services; but it was not thought right that the per diem should be continued during the whole period of his absence from home and until his return to New York, on the 22d October, 1825, that being the time when it was estimated he might have returned to the United States, if, after abandoning the voyage to South America, he had sought an opportunity of coming home instead of proceeding to Europe. It was within the discretion of the Department to have compensated him as the bearer of despatches from Mr. King, but it was not deemed proper to make him any allowance for that service.

I have the honor to be, with great respect, your obedient servant,

H. CLAY.

Hon. JAMES HAMILTON, Jr., *Chairman of the Committee on Retrenchment, House of Representatives.*

Among the items of expenditure which have been objected to is the sum paid for the publication of the notice of the provision made by the Governments of France and Hayti for indemnity for the sufferers by the revolutions in St. Domingo. It will probably be in the recollection of the House that the notice in question was of considerable length, directing, in detail, the course to be adopted by the unfortunate persons in question to obtain their portion of this long-delayed indemnity. No other principle, it must be allowed, called upon the United States to aid them by giving extensive publicity to this notice than that of comity to the friendly foreign Power communicating the documents to this Government and liberality toward the unfortunate exiles, who for thirty years of peaceful submission to our laws have many of them discharged all the duties of good citizenship to the country. The sums paid for printing were, in every instance, those which a private individual would have been charged for the same service. The

minority of the committee believe that the same principles which actuated the Government of the United States in extending a generous measure of relief to the unfortunate sufferers of St. Domingo at the period of the disasters in that island equally justified the comparatively trifling expenditure necessary for the printing and circulation of the notice referred to of the provision made for their relief. That a part of the expense of this publication should have been paid out of the contingent fund for foreign intercourse, and a part out of the contingent fund of the Department of State, the minority understand to be owing to the circumstance that the amount paid (about $4,000) was greater than could conveniently be spared from either fund alone, at the same time that the nature of the service brought it as properly within the province of one fund as the other. The minority of the committee see the less ground to censure the Secretary of State for this expenditure, (not large in itself,) inasmuch as the portion of the indemnity paid to those for whose benefit the notice was published, being received and expended in this country, will add so much to the aggregate of the public wealth.

An objection has been taken to the allowance of $500 as a fee to the Attorney General for his professional services in a suit at Baltimore. The minority of the committee understand the objection to this allowance to be that it was made from the contingent fund for foreign intercourse. They are, however, not acquainted with any specific fund provided by Congress for services of this kind. The traffic in slaves on the coast of Africa must be considered as falling generally within the province of the foreign affairs of the country, and has been matter of negotiation with foreign Powers. The defence of the interests of the United States in the suit in question is of course a service of a contingent nature. The minority of the committee understand that the duty devolved on the Attorney General by his employment in this case, requiring his attendance for near a fortnight, was not unreasonably compensated by a fee of this amount; nor have they heard any fund suggested out of which it could with greater propriety have been paid.

The purchase of one hundred copies of Elliot's Diplomatic Code is objected to as being made out of this fund. It occurs, however, to the minority of the committee that the very valuable work in question is purely and essentially connected with the foreign service of the country, and the copies of it purchased by the Department of State were designed chiefly for distribution to the foreign ministers and other persons engaged in the public service abroad. A considerable number of copies of the same work were purchased this winter by the House of Representatives and paid for out of the contingent fund of the House; and the same reasons, in the opinion of the minority of the committee, justify its purchase by the Department of State out of the fund expressly devoted to the contingencies of that branch of the service to which the work in question refers itself.

Some objection has been made to the number of newspapers which are taken in the Department of State, and which are said to have increased within the last three years. On this head the minority of the committee ask to be indulged in a remark. The public press is a vehicle of communication in this country which is growing in importance with the augmentation of the population and resources of the Union. In an Executive Department of the Government whose duties are of a nature so miscellaneous as those of the Department of State, it is absolutely necessary to a faithful discharge of them to be possessed of the contents of a considerable number of leading journals in every part of the country. It has also been the usage of the Government, in every period, to furnish the foreign ministers with some of the principal newspapers, and these are procured and transmitted through the Department of State. These considerations will show that some little increase of this expenditure will take place with the extension of our diplomatic relations abroad and the growth of the country at home.

In the course of the last summer an original portrait of Washington, by a distinguished American artist, was offered for sale to the Department of State. The portrait had the merit of being a good painting, and of presenting a likeness of somewhat different character from that of the usual portraits of Washington, and consequently affording the means, by comparison, of attaining and transmitting to posterity a more exact conception of the countenance of the Father of his Country. The Secretary accordingly made a purchase of it at a reasonable price, as a part of the furniture of the Department of State, which he had already found ornamented with the likenesses of all the Presidents of the United States, except the second. This purchase has been objected to, but the minority of the committee find nothing to censure in it. It is certainly sanctioned by the example of Congress, in the large appropriations they have made to adorn the Capitol with historic paintings. Two years ago a resolution passed the House of Representatives, without a division, to purchase, at an expense of $1,500, a portrait of Washington for the hall of the House, to be paid for out of its contingent fund The minority would not intimate that a head of a Department possesses a like discretionary authority with a branch of the Legislature, but in the present case they think the Secretary of State to have been strongly countenanced by the precedents alluded to in purchasing a portrait of Washington as a portion of the furniture of the office of the Department.

A view somewhat similar is taken by the minority of the committee of the purchase of a silver medal of the present Chief Magistrate for ten dollars, which has also been objected to. A meritorious and unfortunate artist, who represents himself as having been invited to the country by Mr. Jefferson to be employed as an engraver at the Mint, and who failed to obtain that occupation, (a disappointment, as he represents, ruinous to his affairs,) had executed medals of the late President Monroe and of other eminent citizens, among them of the President of the United States. One of the latter was offered for sale by the artist at the Department of State, who represented, at the same time, the losses which he had encountered by not receiving in this country the employment which had been, as he alleged, promised him as an inducement to resort hither from Italy. Partly from a sentiment excited by this consideration, and partly from a willingness to preserve in the appropriate Department a specimen of the progress of the art as introduced into this country, and a likeness of the individual who was pronounced when called to it, "the best person to fill the Department of State that could be found," and who did fill it for eight years with singular diligence, integrity, and success, the Secretary of State was induced to purchase, for ten dollars, the silver medal in question. The minority of the committee perceive nothing objectionable in this act, nor hazardous in the precedent. On the contrary, they think there would be a manifest propriety in purchasing, as a part of the appropriate furniture of the Department, a similar medal of all those who have successively been called to the Chief Magistracy of the country.

The minority of the committee would now submit some observations suggested by some of the examinations which were taken before the committee, and connecting themselves with the supposed employment of the late Daniel P. Cook, in the confidential service of the country in the island of Cuba, during the past summer.

In the management of the foreign concerns of the United States, it was well known, not only from the nature of the thing, but also from experience in the short period of our history as a nation, that occasions would arise where the public interest would imperiously require that confidential agencies should be employed abroad, and that the whole value of such employment might depend upon its entire secrecy. This lesson had been sufficiently learned during the struggle for independence. Among the earliest acts of the Government provision was made for this branch of the public service; and it has been continued by successive acts of Congress to the present time as an authority indispensably necessary. The duty of deciding upon the cases in which it shall be exercised, the extent of its exercise, and, in general, all the discretion which belongs to it, have been enjoined upon the President of the United States by those acts of Congress which have provided that the accounts of "such expenditures as he may think it advisable not to specify" shall be settled upon his "certificate." From the passage of the act of the 1st of July, 1790, there never has been a moment when this duty has not been enjoined by law; and it is believed that no one who has reflected upon such subjects, or observed the course of public events in the world, would consent that our Government should be deprived of the benefits of this exercise of authority.

Upon every view of this branch of the public service, therefore, it is manifest that among the solemn obligations incurred by a citizen exalted to the high office of Chief Executive Magistrate of this Republic, it is one that he will execute this law. He is not at liberty to avoid the responsibility. Whenever, in the exercise of that discretion with which he is charged, it seems to him that the exigency of circumstances is such as to require from him the execution of the authority, his course is too plainly prescribed to him to allow of any doubt or hesitation. He can no more abstain from the performance of this than from any of the other high functions with which he is charged. Such is his just responsibility.

It cannot be denied, however, that the best performance of this duty, imperious and indispensable as it is, is, from its nature, easily made obnoxious to suspicion. We all remember the clamor that was raised some years ago on account of the supposed use of a large portion of this fund by a former President of the United States in a crisis of great public importance. The very terms employed in common parlance to express the use of the money have been perverted to a bad sense, and are often applied reproachfully. "Secret service money" is a phrase which is made to carry with it a certain degree of odium, simply because it is forgotten that the "service" is to our own country, and the "secrecy" is in relation to foreign countries, and both are for our own benefit. If Congress has thought fit to enjoin or to permit secrecy at home, it is only because that is necessary to prevent injurious publicity abroad, which would defeat the very purpose of the provision. Foreign nations have their agents here, who would at once transmit intelligence that was common among us, and thus disappoint our objects.

If, in the performance of the duty thus assigned to the President, and which he is not at liberty to decline, his conduct may be questioned only because it does not carry with it its own full explanation, it is obvious that he is placed by the law in a condition to suffer injustice; for the absence of explanation is itself a part of his duty. He is bound, by the most solemn obligation, to keep secret what he believes it will be incompatible with the interests of the nation to make public. If such be not the just interpretation of the law it ought immediately to be repealed.

When the duty in question was enjoined, it could not but be foreseen by those who framed the law that its performance might, and in times of party excitement probably would, afford plausible grounds for attempting to awaken distrust. But they deemed it necessary for the good of the nation; and every citizen who is worthy to be President of the United States, regarding it as they did, will, while it remains a law, go on to execute it, whatever may be the hazards, just or unjust, to which he may expose himself by so doing. His reliance against all such attempts must be on his own conscious integrity, and on the justice of Congress and his fellow-citizens. His great reward in every extremity, the patriotic conviction that even if he must for a moment endure the effect of such attempts, he endures it for the sake of his country and his country's service. Accordingly, it appears that this fund has been employed, it is believed, by every President of the United States.

Of the propriety of the expenditures from the contingent fund for foreign intercourse, settled upon the certificate of the President, including the whole from the commencement of the Government, the minority of the committee have never perceived the least reason to doubt. Of those of more recent date, and especially during the last and present administration, there are some materials for forming a judgment of their probable necessity, which, being open to all, may be adverted to without injury. He must be a very superficial observer of passing events who has not remarked that, by the force of circumstances, not depending upon ourselves, our foreign relations in the course of the last ten years have become more complicated with the general concerns of the civilized world than at any former period; and that the mere attention to our own extended trade, and to our own preservation, have imposed upon us the necessity of watchfulness at points heretofore, perhaps, deemed to be of little consequence. The danger to be guarded against has neither been trifling nor remote. It has appeared to many to be imminent, and to be of the greatest consequence; and while it has occasioned the most anxious solicitude, has seemed of a nature to be likely to impose upon the Government the duty of peculiar vigilance and the occasion of a somewhat increased expenditure. They think, too, that it must be very manifest to every one who reflects upon the course of events that they were of a nature to call peculiarly for the employment of confidential agents, and that the efficacy of such agencies might depend upon their being secret.

The witnesses say, as above intimated, that the destination of Mr. Cook was the island of Cuba. And can any one think of the island of Cuba without perceiving, by his sensibilities as well as by his understanding, that its fate and fortunes, involved in the uncertainty of various apprehended movements, external and internal, were of the deepest interest to our country, and especially to that portion of it which is peculiarly susceptible of impression from some of the shocks to which that dependency of Spain seemed to be liable?

Whether they direct their attention to this particular spot, or to the state of things in other parts of the world, the minority of the committee would not have been surprised to find that, in the course of the last seven years, there had been an increased expenditure from the fund in question.

It is proper to make one further remark upon this subject. The expenditure from the fund for contingent intercourse, settled upon the certificate of the President, appears upon the accounts under the date of the settlement of the Treasury. It is evidence, therefore, of nothing more than the single fact that the settlement was then made; *when* the service was authorized, or *when* it began, or even *when* it was completed, does not appear. In general, it seems reasonable to conclude that the authority, the service, and all the responsibility growing out of them, must have belonged to an antecedent period. It does by no means follow that the administration under which the settlement is made and the charge appears is the

administration which directed the services that caused the expenditure. The contrary would in many cases be fairly and almost inevitably inferable, and this inference ought always to be applied in examining the account of the contingent fund thus settled.

How far it may be proper or consistent with the design and the efficient administration of this fund to inquire into the expenditure, the minority of the committee will not now undertake to decide. It must be admitted to be a matter of great delicacy. But this they do not hesitate to affirm, as their clear and deliberate opinion, that if any inquiry is to be instituted, it ought to be done in the mode best calculated to bring out all the facts material to the purpose of inquiry, (whatever that may be,) to do the least injury to the public service, and to give the least offence to that branch of the Government which is intrusted with the expenditure.

It was on this account that they objected, at the outset, to the examination of witnesses to prove that the late Daniel P. Cook was supposed to have been employed by the Government. The knowledge of the witnesses could only be imperfect and unsatisfactory, and could not conduce to any just conclusion. Besides, it appeared to them to be due to the courtesy which ought to be observed between co-ordinate branches of the Government, that the inquiry should be made of the Executive; and to be due to the nature of the case, and to a proper regard for this branch of the public service, (which it is important to preserve unimpaired,) that the inquiry should be confidential.

It was on this account, also, that the minority of the committee proposed, after the inquiry had been entered upon, that it should be so extended as to ascertain whether the expenditures from this fund settled during the present administration, and appearing charged in the accounts, or any, and what part of them had been incurred during that period, or whether they were not in fulfilment of engagements made by a former administration. The resolutions offered for these purposes appear among the minutes. They were negatived by the majority of the committee; as was also the offer of the Secretary of State to communicate in confidence to the committee the amount paid to an individual supposed to have been employed confidentially abroad, with respect to whom the evidence of witnesses had been received.

The evidence received and the evidence rejected has thus had the precise effect of showing that the late Mr. Daniel P. Cook, a distinguished citizen of the United States, well known for his integrity, talents, and long public service, was supposed, after the termination of his services in Congress, to have been employed by the President in a confidential agency, which he, in the exercise of his discretion, thought necessary; and it shows nothing more. That for his services, if he was employed, Mr. Cook was paid, is not only probable, but may be taken for granted. There was no particular reason known to us why he should not be paid. That he was not paid more than he was justly entitled to is perfectly certain. The minority of the committee have no doubt he was paid, as such agents usually are, at the rate of $4,500 a year for the time he was actually employed, and, therefore, that he received about $1,500 or $1,600. Those who doubt of this, if any such there be, may make the inquiry. The committee not having thought fit to make it, the minority, submitting to the decision, are bound to believe that *they* entertained no doubt; and, indeed, it seems to them impossible that a just man can bring himself to any other conclusion than the one which the minority have arrived at. If there be any such, his duty is plain before him, and he ought at once fairly to assume the responsibility of performing it, or else to refrain from injurious surmises.

The evidence received and the evidence rejected also concur to leave the whole matter of the account of moneys to be settled upon the certificate of the President upon the same footing exactly as if no inquiry had been made. It was in the power of the committee to have gone into an examination of the expenditure, and to have appropriated it specifically to those illustrious men who have enjoyed the high distinction of being placed by their country in the office of President. A resolution for that purpose was offered. It was rejected. The minority of the committee, therefore, confidently pronounce their deliberate conviction that, up to the present moment, that fund has been, and still continues to be, sacredly devoted to the purposes for which it was designed, and that nothing has occurred in the least calculated to disturb or weaken that conviction. If there be any who differ from them in opinion, (which they cannot believe possible,) they repeat that the path of duty is plain before them, and they are bound by every obligation to follow it, or to abandon unjust suspicion.

THE TREASURY DEPARTMENT.

And, first, as to the general contingent expenses of the Treasury Department, including the ten subordinate offices.

The aggregate of the contingent expenses for the years 1825–'26–'27, being the period during which the present Secretary has been at the head of the Department, is as follows:

1825	$28,792 50
1826	30,966 10
1827	35,286 99
Total for three years	95,045 59

The contingent expenses for the three years preceding were as follows:

1822	$32,874 99
1823	30,402 49
1824	33,130 09
Total for the three years	96,407 57
Difference in favor of the last three years	$1,361 98

It appears, therefore, that the expenses during the last three years not only have not exceeded those of the three preceding years, but have actually been less by the amount above stated. It will presently appear that the saving, so far as the question of economy is concerned, is much greater.

Of the value of such comparisons the minority of the committee have already expressed their opinion, and they do not mean to depart from it. But it seems to them very clear that, if this test is to be applied at all, it ought to be applied throughout, and where it would establish an improved economy due credit ought to be given. Policy, no less than justice, requires this. They therefore submit the comparison.

Two remarks, however, are made on these contingent expenses which seem to require attention. The first is, that the contingent expenses have increased during the last three years, as compared with each other. They stand thus:

1825	$28,792 50
1826	30,966 10
1827	35,286 99

The second remark is, that the expense of advertising (a part of the above) has much increased. It stands thus:

1825	$3,507 44
1826	2,164 25
1827	6,503 01

The fact is certainly so; but it is easily and satisfactorily explained. It must be observed, in the first place, that the increased expense of advertising is of itself sufficient to account for the increase of the aggregate annual expenses, of which it forms a part; and therefore the whole matter resolves itself into a question of the expense of advertising. If *that* be satisfactorily accounted for, the whole is explained and justified.

This new and additional expense of advertising has already been alluded to for a different purpose. It has been stated that, in the redemption of the debt, (sixes of 1813–'14,) it became necessary to determine by lot what certificates should be redeemed, and, according to the provisions of the law under which the loans were obtained, to give "due notice" to the holders. Even without such obligation it would have been obviously just and expedient to do so, as the money would otherwise have lain dead in the Treasury till the holder might learn that it was there, and in the meantime he, as well as the country, would have lost the benefit of its employment. In the estimates for the year 1825, either from oversight, or, which is more probable, because when the estimate was prepared (January 10, 1825, printed documents, 1824–'25) it was not foreseen that such a payment would be made, there was no allowance for this new expenditure incident to the discharge of the public debt. In the estimates for 1826, (January 5, 1826, printed documents, 1825–'26,) it was specially presented in these words: "For advertising Treasury notices of the reimbursement of certain portions of the public debt, and also for proposals for loans, $3,000. To make good a deficiency for the same objects for the year 1825, $3,000." In the estimates for 1827, (January 4, 1827, printed documents, 1826–'27,) it is found in these words: "Advertising Treasury notices in relation to the reimbursement of the public debt discharged by lot, and specifically advertised, $6,000." The appropriation bills founded upon these estimates made provision for this specific expense, amounting for the three years, 1825–'26–'27, to $12,000; so that these expenditures actually were founded upon *estimates laid before Congress.* The accounts before the committee show that the payments actually made out of the Treasury in three years, for this description of advertising, amounted to $9,274 35; a part of it, probably, yet remaining unpaid. The whole amount stated to have been paid for advertising, including both descriptions, $12,174 70, from which deducting the above sum for special advertisements, $9,274 35, it will leave for the ordinary advertising for the three years $2,900 35, or less than $1,000 a year, which is believed to be very reasonable.

Now, passing by the very obvious remark that this special advertising was sanctioned and provided for by Congress as a necessary expenditure, the only question is, whether it could be dispensed with? The answer is, that it could by refraining from the payment of the public debt. And what would have been the gain? The amount of principal of the public debt paid in 1825–'26–'27 is $16,313,388 83, bearing an annual interest of $97,880 03, or about $298 a day. So that every day's delay would have cost $298, and every year's delay $97,880 03. Upon such a question it is impossible there should be a difference of opinion. It is an instance, however, to show that the small saving of an incidental expense might occasion a heavy loss, and it is applicable as an illustration to all the other branches of service.

Having been led into this train of remark, it may be proper now to say that, in a comparative estimate, the extraordinary expenditure for special advertising ought to be deducted from the aggregate of contingent expenses. The case will then stand thus:

The total of contingent expenses for 1825–'26–'27 being	$95,045 59
Deduct for special advertising	9,274 35
Leaves for the three years	85,771 24
The total for 1822–'23–'24, as before stated, being	96,407 57
The difference in favor of the last three years is	10,636 33

Being a clear reduction of $3,545 44 a year

Without intending to intimate that the expenditure during the first of these periods was excessive or extravagant, (which they deem it just to declare they do not believe,) they still aver, as a matter of fact, that the expenses have not increased but have been reduced, and, as far as that fact goes to establish it, that there has been greater economy.

After this exhibition of the general expenditure of the Treasury Department under the present Secretary, showing that there is no extravagance, but the contrary, it will be the less necessary to dwell at much length upon the several subordinate offices, whose expenses are items of the aggregate expenditure. If there has been economy in the aggregate, it is not easy to understand how there can have been a want of it in the parts.

The minority of the committee will now proceed to state their views as to such of the offices as have occasioned remark. Of the Treasury and its ten subordinate offices nothing having the appearance of an objection has been offered with respect to any but two; which seems to establish that it is the opinion of the committee that in the office of the Secretary of the Treasury, and in eight of the subordinate offices,

there was nothing to object to. The inquiry is, therefore, limited to the remaining two as affording the only possible occasion for retrenchment; and as with respect to them it would only apply to the contingent expenses, the subject is of very little importance so far as saving is concerned. Small as it is, however, it is believed that the expectation of realizing it is founded in error.

The Fourth Auditor's Office.

It is remarked that in this office there has been extraordinary increase of expenditure. For the last six years it stands thus—

1822	$453 32
1823	690 19
1824	1,636 04
1825	1,226 01
1826	1,732 37
1827	2,132 27

It is necessary here to repeat a remark which has been already made, namely, that the expenditure of a given year being greater than that of a preceding year is no proof of extravagance, but may really be owing to the smallness of the preceding expenditure. That this was the case in the Fourth Auditor's office is quite certain. For, upon estimates furnished by the Department, Congress, in the year 1822, appropriated for this office one thousand dollars, which was thought necessary for the service, yet in that year only $453 32 were expended; in 1823 $1,650 were estimated and appropriated, and only $690 19 expended; in 1824, before the present Auditor was appointed, $1,800 were estimated and appropriated, being within $200 of what has been allowed for any subsequent year. Now, if in two years $2,650 were thought necessary for the service, and only $1,143 51 were expended, it must be evident that the apparent saving could not have been without the consequences already mentioned, and explains sufficiently why the expenditure afterwards was greater. But it is due to the present officer to say that the increase has not been owing to him, for the estimate of $1,800 was made some four or five months before he came into the office. The cause of the reduced expenditure in 1822–'23–'24 is to be found in the history of the office. The predecessor of the present officer died in the month of June, 1824, of a lingering illness, as appears from the fact that the appropriation law of 1826 allowed to Thomas H. Gillis, chief clerk in the office, a compensation of $950 "for performing the service of the said Auditor during his last illness, from the 8th of October, 1823, to the 23d of June, 1824." Recurring now to the items of expenditure in the remainder of that year and the three following years, it will be found that in 1824 and 1825 they consisted chiefly of the necessary stationery, including blank books, forms, &c., and of necessary repairs and office furniture. In 1826 there was added extra clerk hire, $677, and in 1827 extra clerk hire $300, which must, of course, have been authorized by the Secretary of the Treasury upon the ground of their necessity. These, it will readily be observed, are precisely the items in which an increased expense would be required to bring up arrears and put the office upon an efficient footing. Besides, the number of vessels and men employed in the naval service has been augmented, and of course the number of accounts to be settled. The total estimates and appropriations for the last six years were $10,450, and the total expenditure was $7,870 20, the estimates and appropriation being as follows:

1822	$1,000
1823	1,650
1824	1,800
1825	2,000
1826	2,000
1827	2,000
	10,450

Being $2,579 80 more than the expenditure.

It must be evident, upon a little reflection, that no conclusion to be relied upon can be derived from comparing one office with another, as for example, the Fourth Auditor with the Third or the Fifth. The expense of each must depend upon the nature of its business. The Fourth Auditor is the accounting officer of the Navy, and his service requires very expensive books and forms, which swell the account of stationery. Something, too, may depend upon the mode of charging the contingencies, whether to the particular office or to the general Treasury contingencies; to either of which some may be thought to belong.

Neither is the comparison to be relied upon which supposes the contingencies to bear a proportion to the number of clerks. In addition to the reasons already given, there is one which is entirely conclusive. Among the contingencies of the Fourth Auditor's office for 1826 there is an item for *extra clerk hire* of $677; and in 1827 of $300; together, $977. Now, this is owing to the small number of clerks, and not to the great number. The extra clerk hire was necessary, because the permanent clerks were not equal to the business.

But, after all, the difference is not so great as seems to be supposed. Taking six years past, they stand thus:

Third Auditor	$5,605 93
Fourth Auditor	7,870 20

For the same period the First and Third Auditor stand thus:

First Auditor	$3,017 89
Third Auditor	5,605 93

A greater difference than between the two former, but by no means leading to any belief that the latter are extravagant. It depends upon the nature of the office.

That this difference is well understood, and the manner of its operation exactly considered, is evident from this, that the estimates and appropriations for one office differ from those for another quite as much as the expenditures. In the years 1824–'25 they were as follows:

	1824.	1825.
First Auditor	$800	$800
Second Auditor	600	600
Third Auditor	1,000	1,000
Fourth Auditor	1,800	2,000
Fifth Auditor	1,200	1,200

The whole question is, therefore, a question of details, and not of comparison of one year with another, or of one office with another. It requires an examination of the items and of the vouchers; and as that has been done in preparing the estimates and in settling the accounts; as the expenditures have been annually presented, and the vouchers remained open to the inspection of the committees of the House for that purpose appointed; and as, withal, the service has been efficiently performed, the minority of the committee see no ground for doubt. They think the explanation of the Fourth Auditor in his letter laid before the committee entirely satisfactory. As to the necessity of *annual estimates*, they fully agree to it, and it would be inexcusable in Congress if they were not required. But they are required, and they are furnished.

It may be thought that the minority of the committee have dwelt too long and too minutely upon this part of the inquiry. But it seemed due to the officer who might appear to be implicated, and it was due to the House and the country, that every suggestion of extravagance should be thoroughly investigated, in order that, if found to exist, it might be corrected, and if not found to exist, the public mind might be informed and quieted.

There will be no necessity to go into an investigation of a similar kind as to the Second Auditor, or any other of the officers. Their accounts were before the committee. The principles of investigation are the same, and the results would be the same Of this the minority of the committee are well satisfied, and it would be a *useless expenditure* of time and trouble to go through them.

They will only add, therefore, that, by the act of 20th February, 1819, the Second Auditor, in addition to his former duties, was charged with the examination of all unsettled accounts arising out of Indian affairs.

While upon the subject of the Treasury, it may be proper to advert to an occurrence in the office of the late Treasurer of the United States, one of the oldest and most approved officers of the Government, and a most estimable citizen. It appeared from the examination of witnesses that the chief clerk of the Treasurer, Samuel Brooks, who had been for thirty years employed in that service, became infirm from age, and his strength and faculties declining, he was, at length, rather a hindrance than a help to the business. His salary was $1,700 a year. That the growth of his infirmities was known to Congress is very evident; for, in the year 1824, an assistant was by law allowed to the "chief clerk," with a compensation of $400 a year, which has since been provided for by the appropriation laws. The infirmity of this aged servant of the public having at last arrived at the point of incapacity above stated, and he being in very poor circumstances, as appears from the testimony of Mr. Nourse, an arrangement was made by which the salaries of the other clerks were respectively advanced, in the whole $900, and he was reduced to the salary of $800, being the lowest in the office, except of the assistant clerk. By this arrangement it will be seen that the whole amount of clerk hire was not increased. The other clerks did more work than they had done before, or otherwise would have done. Their pay was as follows:

T. B. Dashiel received	$1,400	+	$300	$1,700
G. W. Dashiel	1,150	+	250	1,400
B. B. Beall	1,000	+	150	1,150
G. Beall	800	+	200	1,000
Samuel Brooks, who had before received $1,700				800
James Moore				400
Being the same as was paid before				6,450

But Mr. Brooks continued to receive the salary for a year after he became incapacitated for service, during the first quarter, at the rate of $1,700, and for the remaining three quarters at the rate of $800.

This, it will be seen, is precisely one of those cases which will sometimes, but very rarely, occur, presenting difficulties not easily disposed of. Congress seems to have felt their full force. In an instance stated, incidentally, in the letter of the Fourth Auditor, his predecessor appears to have reported the fact that one of his clerks, who had been more than twenty-five years in the office, had become blind and superannuated, and unable to render any service; yet Congress had continued the annual appropriation for his compensation. It further appears that Congress allowed a compensation to Mr. Gillis for his services during the protracted last illness of the late Fourth Auditor. And in the very case now under consideration they allowed an extra clerk to assist the chief clerk in the performance of the duties which age and infirmity rendered him unable to perform. That, under these circumstances, and with this intimation of the opinion of Congress, it was the duty of the late Treasurer to turn out the aged servant to starve is what the minority of the committee would be sorry to be obliged to affirm. There is something in it which shocks the feelings of every man. Yet there is strong objection to allowing much discretion in such cases. It is not in accordance with the spirit of our Government. Perhaps, then, it is best to leave the matter as it now stands, each instance (and they will be very rare) to be determined upon its own circumstances, Congress having the power to lay down a rule whenever it may seem necessary and practicable. In the meantime (if the late Treasurer made the arrangement above stated) it is due to his memory to say that he did it with the knowledge of Congress, and that it seems equitable and just, and that it ought not to be alluded to reproachfully.

There was an examination of witnesses, also, before the committee, with respect to a clerk in the office of the Register of the Treasury; but as it did not establish anything calculated to disparage the services of the individual in question, and the Register, an old and valuable public servant, and a good judge, estimated them highly, (as will appear from his evidence,) it is unnecessary to make any remark upon the subject.

And here the minority of the committee will conclude their observations upon the expenditures of the Treasury, satisfied that the facts they have stated are sufficient to show that there is no ground whatever for supposing extravagance or want of economy.

The organization of the accounting branches of that Department, and the forms of proceeding, and whether, in these particulars, greater efficiency and economy might be attained, are questions of grave import, upon which the minority of the committee are not prepared to express an opinion. The forms of proceeding, or what may be termed the system of the Treasury, is venerable from its origin, being coeval with the establishment of the Government, and has hitherto been preserved through all the changes which have occurred in the administration of the Department, from a conviction of its practical excellence. It has the full sanction of experience. The checks which it contains, constituting a principal object in the proper arrangement of a Treasury, have been supposed to be well adapted to their purpose, of securing the faithful application of the public moneys, and preventing them from being improperly drawn out. In this respect it is believed that no defect has hitherto been discovered.

The simplification of this system, or the taking away of some of the established forms, intended as checks, it is supposed, would render it more easy to get money out of the Treasury. But is there no danger that excess in that direction may render it too easy, and thus defeat the great object of guarding the Treasury from improper drafts? This is a question of vast importance, and involves considerations of a much more serious character than those which belong to the question of contingent expenses of the Departments. It is not alleged, and the minority of the committee do not believe, that those who are entitled to receive money from the Treasury experience delay or inconvenience. Facilities to those who are not entitled is precisely what ought to be avoided. They would expose the Treasury to be plundered, and the money placed there for the public service to be applied to improper uses.

That this system is the *best* that could be devised is more than the minority of the committee would take upon them to assert. But if, in the experience of forty years, it has been found to be free from defect, and fully to answer its purpose, and so continues to the present moment, they have no hesitation in saying that they do not know how there can be a *better;* and in this they are supported by the authority of all the distinguished citizens who have been at its head, including the very eminent man who devised the system.

To give up what is certain for what is uncertain; to propose reform where no defect exists; to administer medicine to the well; is contrary to every dictate of prudence. A wise man has said "it is good also not to try experiments in States, except the necessity be urgent, or the utility evident; and well to beware that it be the reformation that draweth on the change, and not the desire of change that pretendeth the reformation."

At all events, it must be admitted that before an existing system is changed the system to be substituted ought to be clearly stated, in order that we may have the benefit of estimating, at least, its probable operation, before we allow it to supersede one which has borne the test of experience. And even then we should ponder and hesitate before we allow an untried theory to supplant what has been proved to be good. There is much weight in the maxim, "let well enough alone."

It has been suggested, also, that the *organization* of the accounting department of the Treasury might be reduced, and some of the officers dispensed with.

This organization was established by the act of the 3d of March, 1817. Referring to that act for the details, the minority of the committee will only observe that it abolished three officers and established five.

The act of the 3d of March, 1817, was passed upon great deliberation, and with the benefit of the best lights that could be obtained. By a resolution of the Senate of the 20th of April, 1815, the Secretaries were required jointly to report "a plan to insure the annual settlement of the public accounts and a more certain accountability of the public expenditure in their respective Departments." On the 6th of December, 1816, a report was made, signed by James Monroe, William H. Crawford, George Graham, (Acting Secretary of War,) and B. W. Crowninshield. This report, the result of much investigation, by men of high standing and great experience, thoroughly acquainted with the working of the system, recommended, among other things, the organization now existing, and stated their reason at large, for which we refer to the report among the documents of Congress. The act of March, 1817, adopted the plan recommended, established the offices, and assigned to them their respective duties, subject to certain alterations, permitted to be made by the Executive. The minority of the committee perceive nothing in the history of this plan to induce a belief that it was temporary, or intended only for a particular occasion. On the contrary, it was evidently meant to be a permanent arrangement, provided (the only sense in which any such plan can be intended to be permanent) it should be found to answer its purpose.

It may be affirmed, therefore, in the first place, that it has great authority in its favor, from the character and knowledge of those who devised and of those who adopted it, as well as from the deliberation with which it was introduced.

In the next place, it may be observed, that its objects were of the highest importance "to insure the annual settlement of the public accounts and a more certain accountability of the public expenditures," in which the former plan is supposed to have been deficient.

And, in the last place, it may be observed, that it has not disappointed the expectations that it would "insure the annual settlement of the public accounts and a more certain accountability of the public expenditure."

Its having been attended with some small increase of expense (if the fact be so) would be no argument against it; nor would a possible small saving be an argument of any weight in favor of a change. It is not a question of expense, but of efficiency. The whole expense might be saved by abolishing the accounting department. But what would be the consequence? That no accounts would be settled. Those who proposed and those who adopted the plan foresaw that it would, perhaps, occasion some small increase of expense; but what was that in comparison with the prompt settlement of accounts and certain accountability? The whole expenditure from the Treasury, to the amount of millions, is authorized and checked by this Department. *There* every individual must exhibit his accounts and vouchers. He cannot receive payment or acquittance until his account is settled. *There*, too, the Treasury finds its protection against unjust claims. The citizen ought not to be delayed in receiving what is due to him; the Treasury ought not to be burdened with payments he is not entitled to. Upon this principle the organization rests; and if it be effectual, great caution ought to be used in permitting a change. The loss to the citizen or to the public consequent upon an error would greatly outweigh any small saving of expense, even if that be practicable.

If it be within the range of their duty, the minority of the committee would state that they fully concur in the suggestion of the report of 1816, that there ought to be a law officer connected with the Treasury to superintend the suits brought by the United States. It is believed that there are at times some millions of dollars in controversy. Up to the time of suit brought the concern is fiscal; thence-

forward it is legal, and requires the superintendence of a mind accustomed to, and employed in, legal pursuits. Whether this duty might be devolved upon the Attorney General, with an increase of salary and a restriction of practice, is a question upon which they would not undertake to speak too positively. It depends upon considerations which they have not had time nor opportunity sufficiently to examine. But it appears to them that the other duties of the Attorney General, in themselves of great magnitude, require in that officer an extent and variety of knowledge and of professional skill which must be kept up by study and by familiar and daily converse with the business of the profession, so as to place him at least upon a footing of equality with the eminent lawyers of the United States. They doubt whether restricting him to a bureau would be compatible with such attainments.

For fuller explanation the minority of the committee refer to two letters from the Secretary among the papers of the committee, which will be found to be interesting and satisfactory.

In conclusion, they would remark that the expenses of all the Departments, especially in the articles of extra clerk hire and stationery, are much increased by calls, during the sessions of Congress, made by the House or by committees, which calls have of late become very numerous. They must be answered without delay; and they involve the necessity of either suspending some portion of the current business (which cannot well be done) or of employing additional clerks for the occasion. Whether, in this respect, any corrective is necessary or advisable, which would reduce the number of calls, belongs to another head of inquiry. Unless the Legislature can apply a remedy, the officers must continue to comply with every call; for the most ardent enthusiast will not contend that they have, or ought to have, any discretion.

WAR DEPARTMENT, INCLUDING CONTINGENCIES OF INDIAN DEPARTMENT.

The minority of the committee next ask the attention of the House to the Department of War. Within the wide limits of this Department is included nearly one-half of the entire expenditure of the Government, with the exception of the national debt. It will be recollected, however, that under this head are comprehended various items of expenditure, such as fortifications, pensions, Indian affairs, and internal improvements, not strictly connected with the cost of the Army.

The magnitude of the expenditure necessarily provided for under the head of this Department, together with the jealousy naturally felt in free countries on the subject of the maintenance of a military force in time of peace, has ever made an economy of disbursement in this branch a favorite object with patriotic statesmen. On the accession of Mr. Monroe to the presidency, a more efficient organization and a more energetic administration were introduced into the Army by the late Secretary of War. Three years afterwards a reduction took place of the Army itself to three-fifths of its former size, by an act of Congress passed for that object. A corresponding diminution of expenditure of course resulted from this reduction; and from that time to the present the tendency of the Department has been to a retrenchment of expense; and in the items and branches dependent on the administration of the Department, a diminution of expenditure has been effected under its present head.

On the organization of the Committee on Retrenchment a copy of the circular letter already alluded to was sent to the Department of War. From the communication of the Department, received in reply, the minority of the committee beg leave to make the following extract: "To manifest to the satisfaction of the committee this economical tendency, I have caused a synopsis to be prepared of the disbursements for the last nine years, divided into periods: the first embracing from 1819 to 1821, both inclusive; the second, from 1822 to 1824; and the third, from 1825 to 1827. By referring to the heads subject to the discretion of the Department, it will be seen that the amount of disbursements has been lessened. The item in the Quartermaster's Department in the first period was $1,381,045, (omitting parts of a dollar;) in the last, $896,935; and although the greater number of troops in the first period must be taken into the account, yet, after making the proper allowance for this circumstance, still the relative saving must be obvious. So, also, with the contingencies of the Army. In the first period this item of expense amounted to $160,100; in the latter to $39,391; and comparing the first year, 1819, in the first series, with the last year in the last series, 1827, it will be found in the former case that it amounted to $82,563, and in the latter to $10,922. So, also, with the contingencies of the Indian Department. In the second period (before which the contingencies were blended with the pay of agents, &c.) they amounted to $315,959; in the last to $292,800; showing a saving in that branch of expenditure of $23,159 in three years."

It will be observed that the foregoing summary statement was accompanied, as is observed by the Secretary, with tables showing the amount of expenditure of the three periods of three years each. It could not, therefore, have been the object of the Secretary to suppress the second period, and bring that of his own administration into a comparison with the first period alone. Neither could it have been his design to conceal the fact that a part of the reduction of the expenditure was owing to the reduction of the army from 10,000 men to 6,000; for he expressly refers to this reduction, and makes allowance for its effect. His object was to illustrate the position, that the tendency of the Department was to economy *in those branches of expenditure which are within the control of the Department;* and certainly no better method of doing this existed than to compare the first period with the last, showing, thereby, the extent to which the retrenchment had gone; but with no illiberal design of intimating that the reduction had not been progressive through the second period, or that the credit of it was due exclusively to the present administration of the Department.

If, indeed, it can be made to appear either that the process of retrenchment has been checked or that discretionary expenditure has unnecessarily increased under the present administration, then of course it must forfeit all claim to the credit of a wise frugality of the public money.

The minority of the committee will accordingly examine the facts on which both these charges have been intimated against the present administration of the Department. It has been stated that while the business of the Department has greatly decreased in some of its branches, particularly in the Bounty Land and Pension offices, the number of clerks now employed is as large as it was nine years ago, when the business was, perhaps, tenfold as great. In consequence of the diminution of business, it has been alleged that a system of reducing the number of clerks had been commenced under the late administration of the Department by refraining from filling vacancies as they occurred, which, however, have since been filled by the present Secretary, although it cannot be doubted that there has been a considerable decrease of business since he came into office.

There appears in this assumed statement of facts some misapprehension, which the minority ask leave to rectify. In 1819 there were thirty-seven clerks in the Department proper. On the accession of

the present Secretary he found seventeen clerks in the Department authorized by law. In 1827 one more was added to the Bureau of Indian Affairs, by the act of Congress, and on the recommendation of a Committee of Indian Affairs, headed by a member of singular vigilance and caution in the expenditure of the public money.* In the same year a vacancy of a clerkship occurred in the Pension office, *which the Secretary did not fill.*

It appears, therefore, that so far is it from the fact that the same number of clerks is now employed which was employed nine years ago, that the number is less by twenty; this reduction took place under the late head of the Department, in consequence, of course, of the great reduction in the business of the office, but the present head of the Department has not filled these twenty vacancies, as alleged, (which he could not have done by law,) but has, on the contrary, forborne to fill a vacancy which has occurred in the Pension office. The additional clerk in the Bureau of Indian Affairs was provided for in consequence of the increase of business in that bureau and by act of Congress.

It does not appear that there is, or naturally could be, any diminution in the general business of the Department under the present administration, the Army remaining the same, and some of the relations intrusted to the War Department, such as Indian affairs, having become more extensive and complicated. In the Bounty Land and Pension offices there has been some diminution of business; and, as has been already seen, a vacancy in the latter has not been filled. But it will be borne in mind that the decrease in the number of pensioners does not imply a decrease, in any degree proportionate, in the business of the office. The labor of the office is mainly in examining applications; and unsuccessful applications generally speaking, cause more labor than the successful. They involve a larger correspondence with the applicants, and the examination of informal or inadequate testimony, which is generally more in detail than regular vouchers. The officers and soldiers of the Revolution, and more especially their heirs, are daily presenting claims for land bounties. The imperfection of the records makes the search after the evidence of their service exceedingly laborious. There are but two clerks engaged in that particular duty; and if indisposition, casualty, or a press of inquiry as to claims exist, delay would be the result of weakening the force applied to this branch of the business; and this delay would produce injury to just claimants, and dissatisfaction to all. The Pension office, during the present session of Congress, has been so crowded with business that, notwithstanding the well-known vigilance and fidelity of the officer at the head of that bureau, it was in arrears near two months. Such, often during the session of Congress, is the pressure on this office that there is the best authority for stating that it would require double the number of clerks actually employed to keep up the current business, and a portion of it is necessarily postponed till the summer. The minority of the committee, therefore, conceive that the statement that a disposition to check the progress of reduction in the number of the clerks in the War Department exists on the part of the head of that Department rests on misconception, and is unsupported by the facts of the case.

Equally unfounded, in the apprehension of the minority of the committee, is the suggestion that, on a comparison of the three years of the present administration with the three immediately preceding, an increase instead of a diminution of expenditure of the Army has taken place in any item *within the control of the Department.*

The majority of the committee, by instituting a comparison between the gross expenditure of the Department of War for the years 1822, 1823, and 1824, and the gross expenditure of 1825, 1826, 1827, find an excess against the Department for the last three years, of $1,627,175. That this is an *apparent result,* and not a *real* one, justifying a charge of needless expenditure on the part of the Department, will be made clear by a very few statements. Those parts of the expenditure *only* which depend on the discretion of the Department can be fairly made the basis of praise or censure in reference to their economy or profuseness. To charge the head of a Department with an extravagant increase of expenditure because Congress have deliberately enacted laws extending the establishments of the country, or adding to their expensiveness, is manifestly unjust. On applying this principle it will be found that, in the single article of fortifications, an increase of appropriations has taken place in the last three years, compared with the three preceding, of more than $800,000, as appears from the following table:

Expended on fortifications.

In 1822	$330,062, omitting parts of a dollar.
In 1823	510,206
In 1824	528,164
	1,368,432
In 1825	$755,400
In 1826	754,656
In 1827	659,592
	2,169,648
Difference	$801,216

The expenditure of the Indian Department was likewise much increased in the year 1826 by events over which the head of the Department of War had no control. More than $500,000 were appropriated that year for carrying into execution the Creek treaty, over and above the other Indian expenditure, which in some other branches had increased with the extension of our relations with the native tribes. The appropriations for arming the fortifications, for erecting new arsenals, for extending the Cumberland road, &c., all items of expense, either wholly or additional, or of greater amount than the corresponding items of the former period, and all authorized by acts of legislation, go to relieve the administration of the Department from any blame on the score of the alleged increase of expenditure.

If we take a view of the expenditure of the *Army proper* for the last three and the three preceding years, and make allowance for some items of increased expenditure required by acts of Congress, it will be found that a saving has occurred indicative of a vigilant and well-directed economy.

For the more full understanding of the annexed table (A) it is necessary to remark that, in the article

* Mr. Cocke, of Tennessee.

of clothing, the Department, during the years 1822, 1823, and 1824, had the advantages of the supplies on hand before the reduction of the Army. For the four years, 1818, 1819, 1820, and 1821, the expenditure for clothing, though constantly diminished, was, on an average of the four years, $403,048 per annum. On the reduction of the Army a proportionate amount of surplus stock was placed at the disposition of the Department, and for the three succeeding years the aggregate of clothing was but $448,651. But the stock now becoming exhausted, it has risen in 1825, 1826, and 1827, to $690,886 in the aggregate; this, however, includes an extra preparation of one thousand suits of clothing in the year 1826, placed in the remote *depots* to meet the casualties of service, and still remaining in *depot*. This led to an increased expenditure in that year (1826) of $44,473. In the same year an additional pair of shoes was granted to each soldier, the former supply having been found inadequate. This added $7,029 to the annual cost of the clothing of the Army proper beyond previous years, and makes for the two years of 1826 and 1827 the sum of $14,058. In the same year the forage cap of the Army underwent an improvement in quality and fashion, in pursuance of an alteration made by the late Secretary of War, in the revised regulations published in March, 1825, by which the price of that article was increased from fifty cents to $1 70, and an expenditure for that object was produced in 1826, over what it had cost in previous years, of $7,370. In 1827 it was deemed necessary to make an *extra* preparation of a year's supply for two regiments of infantry, to be placed in *depot* at New Orleans and Detroit, to remain as *depots* of reserve, by which an increased expenditure was occasioned of $40,383. In the same year a preparation was made of *tents*, the war supply having become exhausted, and none of that article having been before procured since the peace. This occasioned an increased expenditure beyond that of any former year of $10,425. The aggregate of the increased expenditure on these several items for objects not comprehended in the expenditure of the years 1822, 1823, 1824, is $116,709. The House will perceive that they are all objects required by the exigency of the service, and that for many of them the full worth of the expenditure is on hand, in the form of supplies, in the public *depots*.

By an act of Congress of March 2, 1827, an increase of pay was allowed to captains and subalterns. The addition made by this act to the expense of the Army was for pay $10,566, and for subsistence $27,511, making a total of $38,077 of increased expenditure for the year 1827, arising from positive legislation. The increase of the expense in the Quartermaster's Department, in consequence of the movement of the troops on the western frontier, ought not to be forgotten in this comparative survey, inasmuch as it was obviously not within the control of the Department.

When the proper deductions are made on the foregoing grounds, it will be perceived that a considerable reduction of expenditure must have taken place; and that the increase of the disbursements of 1826 over those of 1825 was owing to extra appropriations, and to other causes over which the Department has no control. In making this statement it is not the design of a minority of the committee to institute an invidious comparison between the present and a former administration of the Department, but to assert the claim of its present head to a full share of all the credit due for an economical, efficient, and prudent administration of its affairs.

The Indian affairs of the United States form a very important branch of the duties of the Department of War, and to these the attention of the minority of the committee has been particularly directed

A.

Comparative statement of the expenditures of the Army proper for the years 1822, 1823, 1824, 1825, 1826, 1827.

Years.	Pay and subsistence.	Subsistence of the Army.	Clothing of the Army.	Purchase of woolens.	Bounties and recruiting expenses.	Contingencies of the Army.	Quartermaster's Department.	Forage.	Medical and Hospital Department.	Aggregate for each year.
1822.....	$847,494 78	$243,700 17	$173,317 31	.....	$34,363 43	$10,867 99	$370,973 44	$15,677 85	$15,078 65	$1,711,473 62
1823..	963,075 48	276,054 75	126,975 66	$75,000 00	35,292 02	16,065 73	263,530 22	35,420 97	18,868 43	1,810,283 26
1824.....	1,081,954 36	262,271 76	148,358 93	20,000 00	42,095 48	13,841 41	291,341 18	34,172 92	23,384 38	1,917,420 42
	2,892,524 62	782,026 68	448,651 90	95,000 00	111,750 93	40,775 13	925,844 84	85,271 74	57,331 46	5,439,177 30
1825.....	961,617 38	286,190 35	205,173 86	20,000 00	39,412 12	17,697 56	289,825 75	37,087 62	22,747 93	1,879,752 57
1826.....	996,444 28	257,876 27	*255,792 95	20,000 00	28,450 07	10,771 68	284,420 66	31,993 90	21,676 15	1,907,425 96
1827 †.....	1,023,332 67	227,769 10	229,919 25	20,000 00	29,113 39	10,922 34	322,689 48	44,900 40	27,598 77	1,936,245 40
	2,981,394 33	771,835 72	690,886 06	60,000 00	96,975 58	39,391 58	896,935 89	113,981 92	72,022 85	5,723,423 93

* In 1826 an additional appropriation has been made for 1,000 complete suits of extra clothing, to be put in depot, and for one additional pair of shoes, to be allowed for each enlisted soldier per annum, amounting to $51,502 45.

† On the 2d of March, 1827, an act was passed by Congress allowing each captain and subaltern in the Army one additional ration, and every officer in the actual command of a company ten dollars per month additional pay. $38,077 08 were required in 1827 under this act.

WILLIAM LEE.

TREASURY DEPARTMENT, *Second Auditor's Office, May* 8, 1828.

CONTINGENCIES OF THE INDIAN DEPARTMENT.

The relations of the Government of the United States to the tribes and remnants of tribes of Indians within our territorial limits are important and complicated. These relations are productive of very considerable and probably growing expense, of a nature not admitting of that degree of specification in the appropriations which is attainable in most branches and desirable in all. Their state of barbarism, or very imperfect civilization, gives to our control over them the form of parental discretion rather than that

of legal authority. The peculiar nature of their right in the soil; the conditions on which their cessions have been made to the United States; their connexion with us as temporary or permanent annuitants; the obligations of the United States to effect the extinguishment of the title of some of the tribes to their lands within the limits of States; the condition of some others that have migrated under our patronage; the proneness of some of the more warlike tribes to disturb the peace of the frontiers by wars among each other; the effects of the gradual advancement of our own population upon the confines of Indian territory; and the tenderness which reason and humanity require to be exercised towards an inferior and unfortunate race of men daily vanishing before us, are considerations which will readily lead to the inference that our relations with these tribes cannot be successfully administered without the control of a considerable fund for contingent expenditure—in many cases without any other security for its proper application than the oaths and honor of the head of the Department, the general fidelity of the accounting officers, and the want of strong temptation to corrupt expenditure among remote and scattered savages, exercising no control over the ends which corrupt expenditure of public moneys is naturally designed to effect.

A reorganization of the Indian Department took place, in part, in 1822, and more effectually in 1824, and from the former period a considerable and permanent economy has taken place in the contingent expenditure, as will appear from the following abstract of appropriations:

In May, 1822, appropriated for contingent expenses of Indian Department	$75,000
For deficiency of previous year	70,000
In May, 1823, for contingencies	90,000
And for May, 1824, down to the present time	95,000
Before this system commenced there were appropriated, in 1821, for arrearages	132,205
Current expenses	100,000
In 1820, for current expenses	200,000
In 1819, for the Indian Department	240,000

It is to be observed that a considerable portion of this seeming reduction has been produced by making specific appropriations for objects formerly comprehended under the contingent expenditure. The minority of the committee are pleased to see, in the various estimates for the Indian service which have proceeded from the Department of War, that there has been a constant tendency to refer everything to specific appropriation which it was possible beforehand to provide for; and that, though the amount of requisite contingent expenditure would in itself naturally increase as our relations with the Indian tribes grow more complicated, and a larger number of these, our unfortunate fellow-beings, are brought within the reach of our Government, (as has actually been the case, more and more, from the foundation of the Government,) yet the contingent fund has, by applying the principle of specifice appropriation, been kept within the limits at which it stood five years ago; it ought, proportionably, to have been much greater. Whoever shall pass in review our Indian relations for the last three years will admit at once that nothing but the most rigid and well-digested economy on the one hand, and a resort to specific appropriations on the other, could have produced this result.

In examining the accounts which have been submitted to them of the expenditure of the contingent fund for the Indian Department, although there are several items which, of course, cannot be understood without explanation, (from the impossibility of bringing within a line or two in an account the history of an extensive transaction,) yet the minority of the committee have discovered no item which, in their judgment, has not been or might not be rendered perfectly intelligible and justifiable by an application for information to the proper quarter. On a few of the items of these accounts, to which exception has been or possibly may be taken, the minority of the committee ask the attention of the House.

One of these is a payment of $753 to William Thompson, who, during a period of twenty-one months, commencing in August, 1824, under the Secretaryship of Mr. Calhoun, and terminating in May, 1826, was occasionally employed in the Indian Bureau in rendering services as an assistant clerk. The minority of the committee have no reason to think that any blame ought to be attached to the former head of the Department for the commencement or to the present head of the Department for the continuance of this trifling article of expenditure down to the time when it was specifically provided for by law by the creation of another clerkship. Mr. Thompson was not permanently taken into the service as an additional clerk, but was occasionally employed under a press of business, as is and has been done of necessity in every department of the Government from its foundation. He was paid only for the time actually employed by him in the public service, and that at a rate of compensation calculated on a salary of $1,000 per annum. The necessity of his services was sufficiently indicated by a report from a committee of the House of Representatives recommending another clerk in the Department, which recommendation was sanctioned by an act of Congress the succeeding year. The minority of the committee can perceive no objection whatever to this transaction; and as Mr. Thompson's employment was an extra and incidental service in the Indian Bureau, they know of no fund but the contingent fund of that Department out of which his allowance could have been properly paid.

The expenditure of the sum of three hundred and ten dollars for books in the office of the chief clerk for Indian Affairs may require a brief explanation. These books are represented as treating of "politics, statistics, history, biography, and theology." The minority of the committee believe that most of the volumes thus deposited in the Indian Bureau have been purchased with a view to assist the rosponsible officer at the head of it in the discharge of the various and multiplied duties of his office. One of the most expensive of the works, itself costing between a third and a fourth of the whole sum expended, certainly a small one, is Niles' Register, a work of indispensable necessity in almost every public office of the Government, and one of frequent use for reference in the Indian office. Not unlike in general utility is the work of Dr. Seybert, believed to be the only work on "statistics" which the little collection contains, and in which very important information touching the regions occupied by some of the tribes of Indians is contained. Some of the historical and biographical works have connexion with Indians and Indian affairs. Those said to be on "theology" are supposed to be the periodical journals published by the different religious and charitable associations who have the direction of the missionary schools among the Indians, and the expenditure of a portion of the fund for their civilization; and it is well known that in these volumes is embraced a great amount of information of all kinds relative to the condition and character of the Indian tribes. These works seem generally, to the minority of the committee, of a class likely to be useful in the office of Indian Affairs, and to the head of the Department, in preparing their

reports and discharging other official duties connected with Indian affairs. They have, of course, been collected from time to time as occasion required or opportunity offered. They have properly, therefore, been considered as an item of contingent expense, in like manner as much larger expenditures of the same kind are made by the House of Representatives out of its contingent fund. A few of the volumes might, perhaps, have been dispensed with, unless they may be brought by a liberal discretion within the limits of furniture to the office. In general, the minority of the committee, instead of censuring this item of expenditure, are apprehensive, from its smallness, that many works of practical utility in the office must still be wanting, and they would see with pleasure that care was taken by the head of the Department gradually to collect within the Indian office all such works, printed and manuscript, as are required for the intelligent and efficient discharge of its duties. It occasionally happens in the history of a people that the most important national questions are seriously affected by the authority of a few books or a map. By such authorities at the present time a controversy respecting a tract of land about as large as the State of Massachusetts is to be decided on the northeastern frontier of the Union. The minority of the committee will have occasion presently to allude to an expenditure for a single manuscript book contracted for by Mr. Jefferson to an amount three-fifths larger than the whole sum now under consideration, with a reference to the southwestern boundary of the Indian territory of the United States. And the minority of the committee are fearful, even now, that if either House of Congress were to call upon the Department for a statement of the boundaries, numbers, history, and present condition of the several Indian tribes within our territorial limits, (a statement closely connected with matters in legislation at the present moment,) that the Department would find itself in want of some of the printed and manuscript works needful to furnish the answer to such a call.

The settlement and payment of the accounts of Dr. John Sibley, formerly employed by Mr. Jefferson as an Indian agent and on general confidential service, have been the subject of animadversion. It appears from a letter of Mr. Jefferson, which the minority of the committee herewith submit, that great importance was attached to his services, and that he acquitted himself highly to the satisfaction of the Executive in the discharge of his duties. Dr. Sibley continued in the service of the Government till 1814; his accounts were regularly rendered; his drafts were always accompanied by letters of advice; and he never overdrew. On the termination of his agency, in 1814, he claimed a balance due him, and in 1816, and repeatedly for several years, application was made to the Department by the honorable Josiah S. Johnston, as attorney of Dr. Sibley, for the settlement of his accounts, the allowance of which had been delayed, according to the official statement from the Second Auditor's office, on account of "some slight informality." These repeated applications of Mr. Johnston for the settlement of Dr. Sibley's accounts proved ineffectual, in consequence of the vast accumulation of business in the office growing out of the war. During this interval, viz: from July, 1818, to February, 1821, Dr. Sibley was again employed in the public service as surgeon to the troops stationed at Natchitoches, and on forwarding his account for services as such to the amount of $502 50 payment of it was withheld in consequence of the appearance of a balance against him on his old account as Indian agent. This led to an investigation of that account, which was adjusted and allowed as far as vouchers could be found; but for want of vouchers, (which had been duly forwarded at the time to the Department, and lost,) several items were disallowed, and a balance found against Dr. Sibley of $584 03. Against this settlement Dr. Sibley, by his letter of May 28, 1821, protested, and alleged that the United States would be found, on the just settlement of his accounts, which he had for some years solicited by his attorney, considerably indebted to him. In support of this allegation, Dr. Sibley again collected, or caused to be collected, such documents and vouchers as could be procured by him after so long a lapse of time to substantiate his claims. The last of these was a letter from Mr. Jefferson, which the minority of the committee submit as a satisfactory attestation to Dr. Sibley's character and the value of his services in the estimation of the administration that employed him. The minority of the committee have examined all the other vouchers and documents in support of these claims. They deem them full and sufficient, and more ample than could have been expected after such a lapse of time. They forbear from making them a part of this report solely from a desire to keep it within moderate limits, and from a persuasion that, upon the whole, the House will be of opinion that none of the parties to this transaction are capable of having participated in a corrupt and fraudulent settlement. They will ask permission to call the attention of the House to the importance attached by Mr. Jefferson to the procuring of a manuscript work of a French missionary among the Indians in Louisiana, the transcribing of which forms a considerable item in the accounts in question. The copies of this work were prepared by express direction of President Jefferson; it is a folio volume of three hundred or four hundred pages; two persons were employed two or three months in transcribing it, during which time they were boarded and lodged in Dr. Sibley's house and furnished with stationery. The minority of the committee deem this a reasonable charge. As half of the sums claimed by Dr. Sibley were for the expenses of an Indian deputation, and that and all the rest connected with services performed by him while filling the office of Indian agent, the minority of the committee perceive no objection to the payment of the sum allowed out of the contingent fund for the Indian Department.

They will only observe, in conclusion, that it is an erroneous supposition that these claims were brought forward *for the first time in* 1824, as has been stated. It is supposed by the minority of the committee that this statement was founded on a note of the chief clerk in the Second Auditor's office, representing that they were then for the first time submitted to "the Secretary." The minority of the committee have no reason to doubt that they formed a part of Dr. Sibley's charges against the Government at the time they accrued, and they have evidence that they were included among those of which payment was urged on behalf of Dr. Sibley by Mr. Johnston in 1816.

The following is the copy of Mr. Jefferson's letter above alluded to:

MONTICELLO, *February* 13, 1825.

SIR: Your favor of the 3d was received some days ago, and I have taken time to make a thorough search among my papers for whatever might relate to Dr. Sibley, but to no effective purpose. The part of his correspondence which related to public matters was with the Secretary of War. The few letters I have of his respect matters of curiosities, Indian vocabularies, and things of that kind. When we acquired Louisiana we were exceedingly uninformed of everything relating to it. I addressed inquiries to every individual of the country who I thought might give us information, and I remember that I considered that furnished by Dr. Sibley as distinguished in its value. At the ensuing Congress I communicated the whole to that body, and it was printed, and made a large octavo volume. The originals and their printed copy were probably burnt by the British, but the printed copy which I had kept for myself

went afterwards to Washington with my library, and may there be turned to. It will be found entered in the printed catalogue, page 104, No. 261, under the title of "State Papers, 1793, 1812, 36 v. octavo." The date of the communication, November 14, 1803, will point to the particular volume. In this will probably be found much of the information received from Dr. Sibley, which will give an idea of the extent and value of his services to us on that occasion.

With respect to the two articles particularly stated in your letter, I have carefully examined all my papers and letters of the years 1804 and 1805, and do not find the scrip of a pen relative to them. My memory furnishes me with some *general* recollections on which I can depend as to De la Harpe's Journal, but several of the particulars are too faintly recalled to be depended on. For example, I am not certain whether the correspondence and orders on that subject passed between Governor Claiborne and myself or the War Office and Dr. Sibley. My impression, although faint, is, that it was Governor Claiborne who informed me of the existence of that book in the hands of an individual and that it could be purchased, giving such a description of its contents as showed it to be highly important to us in our then uninformed state. I think he had got his information of it from Dr. Sibley. We directed the purchase to be made, and that, before trusting the original to the mail, *a* copy should be taken (as I think, but your letter says *two*, and it may be so,) and sent by successive mails. They were safely received, and I have believed that the whole had been promptly reimbursed either to Claiborne or Dr. Sibley, through whose agency it was obtained. The importance of the work consisted in this: De la Harpe was in some considerable office in the Government of Louisiana, and kept a private and regular journal of the public transactions. The French considered the Rio Bravo as the western boundary of Louisiana, but the Spaniards claimed indefinitely to the east of that river. The French and Spanish neighboring Governors, with certain mercantile associates, entered into a contraband commerce, the former furnishing French merchandise and receiving from the latter hard dollars in exchange; but the distance between New Orleans and the Rio Bravo occasioned inconveniences and difficulties, and therefore the French Governor winked at the Spaniards' taking a small post at the Nacogdoches, and made his reclamations so faintly as not to disturb the post. I cite these transactions by memory, but believe without material error. When we acquired Louisiana we considered it as extending to the Rio Bravo, and so Bonaparte declared to our Commissioners, and that he should have taken possession to that extent; but Spain, under color of the corrupt foothold she had got of this and one or two other small posts, claimed the country against us on the ground of possession. This journal of De la Harpe clearly proved how fraudulently it had been obtained, and was therefore of the utmost importance to us. Hence our anxiety to guard against its loss by having it copied and trusted to different mails. The original being lodged in the office of the Secretary of State, I retained a copy in my office, to be recurred to in preparing instructions to our minister at Madrid. When I removed from Washington this was inadvertently packed with my own books and papers, and not attended to until the burning of the public records at Washington brought the thing to my mind. I immediately sent the copy to the Secretary of State, in whose office it doubtless now is, and will prove that its importance justified the price it cost us.

Of the other transaction, respecting the purchase of horses, &c., to bring a party of Indians to Washington, I have not the slightest trace, either in writing or recollection. To the great value which was set on Dr. Sibley's services by the administration of that day, I bear testimony willingly as an act of duty and of truth.

I am sorry that the decay of my memory does not permit me to offer anything further, and pray you to be assured of my great respect and esteem.

THOMAS JEFFERSON.

Hon. J. S. JOHNSTON, *of the Congress of the United States, now at Washington.*

TREASURY DEPARTMENT, *Second Auditor's Office, February* 28, 1825.

I certify that the foregoing is a true copy of the original, which was on file in this office, and which was returned to the Hon. J. S. Johnston.

JAMES EAKIN, *Chief Clerk.*

Exceptions have been taken to other items in the account of the contingent expenses of the Indian Department, as being either "extravagant in the amount or destitute of exact specification and vouchers. which constitute the best security against abuse and imposition."

The following items have been referred to "as coming under one or both of these classes:"

1.	Paid James P. Denney, secretary to the Creek delegation, upon his own certificate.....	$1,365 37
2.	Jesse Brown, for board of Creek delegation from December, 1825, until April, 1826.....	3,273 88
3.	J. Tennison, for board of the McIntosh party.....	1,040 00
4.	Board of J. Crowell, Indian agent, and three Indians.....	146 00
5.	Paid for boot and shoe blacking for Indians	215 00
6.	Paid within the last three years for taking portraits of Indians	3,190 00
7.	Moritz Furst, for taking President Adams' likeness (for Indian medals)	1,000 00

On these items of expenditure the minority of the committee would make the following remarks:

The first five items, and the sixth, in part, relate to the expenditures of the two delegations of Creek Indians that visited Washington during the first session of the nineteenth Congress with a view to settling the serious and embarrassing controversies and difficulties that had sprung up in the Creek Nation. It is perfectly well known that the Executive was pressed, on all sides, to come to an amicable arrangement with the two Creek parties, and that such an arrangement was thought desirable at almost any price. The Indians of the two parties arrived in Washington in an irritated and suspicious temper of mind, and it was doubly necessary to lose no opportunity and to neglect no means of soothing their feelings and acquiring their confidence. This could only be done by extending to them a full measure of those accommodations and indulgences which, under all circumstances and at all periods, they have expected and received when treating with the Government of the United States or its agents.

The first item of expenditure objected to above as extravagant or unvouched is the pay of James P. Denney, who acted as clerk to one of the Indian parties. It is well known that the Indians, illiterate themselves, choose the person whom they will trust to write for them. To deny them this privilege would be to destroy all the confidence they might otherwise repose in us. They chose Denney as their clerk, and agreed to give him the pay which he received. He was known by the Department to have performed the service; and it does not appear to the minority of the committee that it required or admitted any other

voucher than his own certificate. When the importance of the transaction is considered, the extent of the cession obtained, and the political magnitude of the whole affair, it may be thought that the sum paid was properly allowed under the circumstances of the case.

The next items for remark are the accounts of Brown and Tennison, for the board of the two delegations. To the expediency of allowing these accounts, a part of the preceding remarks apply. It was absolutely necessary to treat the Indians in such a way as to gratify their feelings and inspire their confidence. In respect to these two items, the minority of the committee find that the Department, instead of being chargeable with profuseness, is entitled to the praise of frugality. In 1824 a Choctaw delegation visited Washington, and was boarded at Tennison's. No previous contract having been made for their expenditure, it amounted to nearly seven thousand dollars. When the Creeks came to Washington, under the present administration of the Department, to avoid the recurrence of a similar overcharge, a bargain was made with the two innkeepers to board them at $1 25 per diem for each individual. If, in consequence of their large number, and the length of time they stayed, this allowance amounted to a considerable sum, no blame can on that account be attached to the Department, which had taken every practicable precaution to limit their expenditure, and, by bringing their business to a close, to hasten their departure. The board of the agent, who repaired to the seat of Government by direction of the Department, was allowed for 27 days, in conformity with invariable usage and the obvious reasonableness of the thing. The charge for blacking boots will, perhaps, be found not out of proportion to what is commonly paid for that service, when the number of Indians and the length of time they were here are taken into consideration; although the minority of the committee have not investigated the item with great precision, but were rather disposed to let it pass as a small affair.

Exception is taken to the charge for painting the portraits of Indians. The minority of the committee would observe, on this head, that it is an item of expenditure which has annually appeared in the returns of the Department since the year 1822, and no expression of an opinion, on the part of either House of Congress, disapproving of such an expenditure has come within their knowledge. Every person acquainted with the Indian character must perceive that this application of the arts of civilized life for their personal gratification must be of great importance in conciliating their good will. A small sum of money expended in this way would, no doubt, very often produce as desirable a result as much larger sums laid out in a manner less adapted to strike the imagination of the uncivilized. So far from censuring this expenditure, either in the past or the present administration, the minority of the committee are of opinion that, were a larger apartment provided for the Bureau of Indian Affairs, in which might be more advantageously exhibited the portraits in question, and others which may be added to them, together with an ample collection of the arms, costumes, household implements, and all other articles appertaining to Indian life and manners, it would be productive of a happy effect on the imagination and disposition of the Indian deputations which from time to time repair to Washington, and with which this Government transacts very important business, and also form a repository possessing a high degree of scientific and historical value.

With a view to a similar effect, and to gratify the taste of the Indians for articles of ornament, it has been the practice of all the modern nations in their intercourse with them to furnish them with medals. In the case of the European nations these medals have borne the likeness of the sovereign. Since the Government of the United States succeeded to the foreign monarchical Governments in their relation to the Indians, medals have, in like manner, been distributed to them, from the time of General Washington to the present day, bearing the likeness of the President for the time being. Orders were given by the late Secretary of War for such a medal of Mr. Monroe, when he succeeded to the presidency. On the election of Mr. Adams the like order was given to the same artist to execute for the same price a requisite die for a similar medal. The minority of the committee find no objection to make to this charge. They have no reason to believe that its amount is excessive, nor do they perceive out of what other fund it could, with more propriety, be paid.

Some objections have been taken to the allowances made to Mr. McKenney, the chief clerk in the Indian Bureau, for his services during the past year at Green Bay, and on his tour among the southwestern Indians. Before entering on the explanation of this matter the minority of the committee will observe that Mr. McKenney's pay as a clerk is fixed at $1,600. When the present organization of that bureau was effected by the late Secretary of War, the minority of the committee understand that Mr. Mr. McKenney was prevailed on, at the instance of Mr. Calhoun, to accept the place he now fills, with the admission that the salary was inadequate to the labors of the place and to his qualifications, and with assurances that no proper effort should be spared to procure an increase of his compensation by law. At the first session of the nineteenth Congress a bill for this purpose was reported to the House by Hon. John Cocke, chairman of the Committee of Indian Affairs, and the same bill has been reported from the same committee at the present session. The minority of the committee consider these facts as evincing the opinion of competent judges that the Department of Indian Affairs requires a more efficient and responsible organization, and that the individual at present at the head of it has, by the same judges, been considered a meritorious and valuable public officer.

Such, unquestionably, was the opinion entertained of him when, at the commencement of the last year, the Secretary of War was solicited by several members of Congress to send him on a tour of inquiry among the southwestern Indians. Their letter to the Secretary, preferring this request, is in the following terms:

CITY OF WASHINGTON, *January* 25, 1827.

SIR: We beg leave to state that in our opinion much good would result to the various Indian tribes within our jurisdiction, and the humane objects of the Government be greatly promoted, by sending some intelligent individual to visit those tribes, upon whom it is deemed most important to make a favorable impression as to their settlement west of the Mississippi.

Colonel McKenney is not only fully possessed with the views of the Government, but, in our opinion, he possesses more of the confidence of the Indians than any other person in the United States who could so easily be employed for this desirable object. He has, perhaps, likewise, equal, if not a superior knowledge of the Indian character and disposition to that of any person who would be likely to undertake this work. We would, therefore, suggest the propriety and expediency of directing him, under proper instructions, to visit the Chickasaws, Choctaws, and other southern tribes, after he has completed his work at the north with Governor Cass, this coming summer. The seat of that operation will be at Green Bay, we understand, from which point it would be easy and convenient for him to pass through the

western States to the southwestern tribes, and visit most, if not all, of them previous to the next session of Congress.

There is a peculiar propriety in devolving this duty upon the person who is at the head of the Bureau of Indian Affairs; and if he should fail in making as deep and favorable an impression in a first visit as may be anticipated or desired, yet the information which he would acquire and bring back to the Government of the condition, feelings, and disposition of those tribes, would be, in our opinion, exceedingly valuable; and the good resulting from such a tour in this respect would be worth the trouble and little expense attending such a work. With these impressions we recommend that such information be obtained as to what are the real views and feelings of those tribes; and we respectfully recommend that Colonel McKenney be employed to ascertain and report them, and to execute such other trust as you may deem it proper to confide to him.

With great respect, &c.,

RH. M. JOHNSON.
THOS. B. REED.
W. H. HARRISON.
WILLIAM HENDRICKS.
H. W. CONWAY.
J. S. JOHNSTON.
H. W. EDWARDS.
E. F. CHAMBERS.
T. P. MOORE.
WM. McLEAN.
WM. HAILE.
JOS. M. WHITE.

The SECRETARY OF WAR.

With the foregoing request the Secretary of War complied; and, for the same reasons which led to the recommendation of Mr. McKenney for the tour among the southwestern Indians, he was also associated, by the Secretary, with Governor Cass, to negotiate the treaties at Green Bay. For this latter service Mr. McKenney received the same compensation as Governor Cass, with whom he was associated. He did not (as has been erroneously supposed) settle his own account for this service. It was settled by Governor Cass and by Mr. Schoolcraft, as the minority of the committee have reason to think, without any interference on the part of Mr. McKenney. On this head, the following copy of a letter from Governor Cass to Mr. McKenney is referred to:

ALBANY, *April* 19, 1828.

DEAR SIR: I have mislaid your letter, and cannot, therefore, answer your inquiries as specifically as I otherwise would do. Your compensation at the Fond du Lac treaty was calculated by Mr. Schoolcraft and myself, and that at Green Bay by me. You received no part of the appropriation for either treaty but the amount due to you for your services.

I am, dear sir, sincerely yours,

LEWIS CASS.

Col. McKENNEY.

The above is a true copy.

D. KURTZ.

The employment of an officer of the Government on a commission of this kind is sanctioned by long established usage, and grows out of the necessity of the case, inasmuch as those persons only, in general, who have been officially connected with the Indians possess that familiarity with their character and manners which is required for successful negotiation with them. On this principle officers of the Army, Governors of Territories, and Indian agents have been usually designated for these services; and the minority of the committee regard the selection of Mr. McKenney as fully justified by the knowledge he is known to possess of the Indian character, and the confidence which the Indians are supposed to place in him.

On the conclusion of his labors at Green Bay Mr. McKenney entered upon the discharge of the duties of his special mission to the southwestern tribes, taking the route of the Fox, Wisconsin, and Mississippi rivers. His duties on this mission, as prescribed by his instructions of March 28, 1828, were "those of obtaining local and other information of the country between the lakes and the Mississippi; the condition and disposition of the Indian tribes which are scattered over it; and especially to ascertain the disposition of the tribes within the States, the Chickasaws, the Choctaws, and, if practicable, the Cherokees, on the subject of emigration to lands west of the Mississippi."

He was directed to note down "whatever incidents" he might "esteem to be valuable, and that in any manner may be connected with the subject of our Indian relations, and that may tend to enlighten the Department in matters pertaining to their judicious disposition and application." He was also directed to visit the Indian "agencies, and such Indian schools as might be within" his "reach, and inform" himself "of their condition and prospects, and generally to collect such information as may be necessary to a prompt and efficient discharge of the duties arising out of our Indian relations."

By subsequent instructions of April 10, 1828, Mr. McKenney was directed, if possible, to return through the Creek country; to employ all proper means, in his discretion, to procure of the Creeks a cession of the remaining portion of lands in the State of Georgia unceded in the treaty of Washington. In his first letter of instructions, Colonel McKenney was informed that his "compensation" would "be paid on his return, and made equivalent to the extent and value of" his "services."

It appears from documents that have been submitted to the House of Representatives at the present session that, in the great object of closing the Creek controversy, Mr. McKenney was successful, a service which, on any equitable estimate of its "extent and value," the minority of the committee cannot but deem to be meritorious to a degree far beyond the whole amount paid to Mr. McKenney, or claimed by him as compensation. The other objects of his mission, of a less specific nature, were also performed with success. In the discharge of these interesting and confidential duties, Mr. McKenney performed a journey of four thousand miles, much of it through a wilderness and among Indian tribes, exposed to great hard-

ships, and occasionally to peril. These considerations united to authorize the allowance of a liberal compensation, on the principle announced to him in his instructions, that it should be fixed on his return, "and made equivalent to the extent and value of his services."

On his departure from Washington he received $1,750 as an advance toward defraying the expenses of his expedition. At the close of his commission at Green Bay his accounts were made up by Governor Cass and Mr. Schoolcraft, and he was allowed and paid the same rate of compensation which was paid to his associate, Governor Cass, viz: $8 per diem while employed on duty, and $8 per 20 miles travel. The whole amount paid him for his services as Commissioner was $1,880. In the course of his expedition to the southwestern Indians he drew on the Department of War for $1,438, and claimed on his return a balance due of $1,344. The payment of this balance was suspended by the Second Comptroller on the ground that the expenditure on the southern tour was partly unvouched, and that the sum of $660 was allowed Mr. McKenney, on the statement of his account at Green Bay, for mileage back to Washington. Mr. McKenney did not return directly to Washington, and it was stated by the Second Comptroller, in his evidence before the committee, that he charged his travel homeward in the subsequent account of his southwestern tour. The minority of the committee do not find that, strictly speaking, Mr. McKenney charged "mileage" at all on his second tour; that is, he made no charge on the principle of a certain allowance for a certain number of miles travelled; and in the estimate of travelling expenses on that tour the sum of $660, already received as return mileage, was taken into consideration and deducted from what might otherwise have been claimed under that head. If, therefore, the $660 paid at Green Bay be now recharged to him he is equitably entitled to that additional allowance for travelling expenses on the southwestern tour.

In regard to the want of vouchers for a portion of the expenditure on the expedition to the southwest, the minority of the committee conceive that it may be partly accounted for by the nature of the service. In many cases no other voucher than the marks of Indians could, in the nature of the case, have been had, and such vouchers would be of no value. The expense of travelling, if estimated on the mileage principle, at $8 per 20 miles, would have amounted to $1,632. Of this no voucher could be had of the nature of the bills furnished at public houses in the civilized parts of the country, and perhaps the notoriety of the fact that the journey was performed and its objects accomplished may be regarded as a sufficient voucher for its expense within the limits of the usual allowance. A sum of something over $2,000 is represented by Mr. McKenney to have been given as presents to Indians. Their receipts would of course have been of no value as vouchers, and the minority of the committee have reason to think that it has always been found necessary, in treating with the Indians, to accept the certificate of the person employed as a sufficient voucher for expenditure of this kind.

The absence of vouchers of course made the settlement of Mr. McKenney's account a matter for the exercise of the discretion of the Department, the rather as his compensation was originally stipulated to be an equivalent to the nature and extent of his services, of which the head of the Department was the responsible judge. In the exercise of this discretion the Secretary of War granted his requisition in favor of Mr. McKenney to the amount of $1,344. By the statement of the expenses of his journey and of presents to Indians, partly sustained by vouchers and partly resting on estimate, which the minority of the committee see no reason to distrust, it would appear that a part only of this sum of $1,344 would remain to Mr. McKenney, as the compensation for his services, over and above the defraying of his expenses on his tour. When the nature of the trust is considered, or even the importance of the single object of settling the Creek controversy is taken into view, in connexion with the encouragement which Mr. McKenney has had in the reports of committees of Congress, of an increased compensation, and also the contract in the present instance that his allowance should be proportioned to the nature and extent of his services, (of which the head of the Department must be the judge,) the minority of the committee are not disposed to accuse the Secretary of War of undue facility in admitting the claim for a balance, which, if paid, would leave Mr. McKenney about $1,200 of net compensation for his services. Had his accounts been originally made out on the mileage principle they believe the balance due him would have been more than he claimed. In exercising his discretion, and in issuing his requisition in favor of Mr. McKenney for the balance claimed, the Secretary of War did no more than it was his duty to do if he believed the services to have been faithfully performed. To insist on the principle that no expense should be allowed without specific vouchers would be to destroy all confidential service, and to throw on innocent persons the greatest inconvenience and risk in the discharge of many highly important functions. It is believed that the records of the Department under every administration, and particularly in the conduct of the Indian affairs, furnish instances of the settlement of accounts believed to be honest and just by the head of the Department, and on the best evidence which the nature of the case admits.

The minority of the committee are of the opinion that a more efficient organization might be given to the Indian office by separating it more distinctly from the Department of War, on the principles recommended in a communication from the chief clerk of that office to the Secretary of War, and by the Secretary in a letter to the honorable John Cocke, both contained in the House document No. 146 of the 1st session of the 19th Congress, and which is substantially embraced in the provisions of a bill now pending before the House.

Statement of the expenses of the Legislature from the commencement of the Government to the session ending on the 3d of March, 1827.

Year.	No. of Senators paid.	No. of Representatives paid.	Compensation to Senators.	Compensation to members of the House of Representatives.	Contingent expenses of both houses.	Officers & clerks.	Total.

TREASURY DEPARTMENT, *Register's Office, May* 10, 1828.

JOSEPH NOURSE, *Register.*

NAVY DEPARTMENT.

It is remarked, upon the contingent expenses of the Navy Department, that, taking two periods of three years each, that is, 1822–'23–'24, and 1825–'26–'27, the expenses of the latter are greater than of the former. They stand thus:

1822–'23–'24	$6,942 44
1825–'26–'27	8,886 53
Difference	1,944 09

This is equal to an average increase of $648 03 a year.

It is remarked, also, that there is a small increase in the office of the Commissioners of the Navy Board. It will be found to be about $87 08 a year.

Before proceeding to observe upon this statement, it is proper to notice that there was not (as would seem to be supposed) any excess of expenditure beyond the appropriation. This could not happen. The difference was made up from surpluses of appropriations remaining unexpended.

It must also be noticed that the expenditures of the Navy Commissioners are in no manner subject to the control of the Secretary of the Navy; and if they required any examination (as they certainly do not) it would be necessary to make it separately. The Commissioners, no doubt, would give explanations if required so to do.

The mere circumstance of an increase of contingent expenditures in one period compared with another, it has already been remarked, amounts to nothing. The question is, whether they were necessary for the public service; and this can only be ascertained in one of two ways—either by examining the items in detail, with the explanations of the Department, or, if that be not done, looking at the state of the business of the Department. The number of vessels in commission, and the number of officers and men in service, will have an influence upon the expenses of the Department.

In the first period mentioned, (1822–'23–'24,) the amount appropriated for the naval service was		$8,646,577 51
In the second period (1825–'26–'27) it was		10,601,836 53
Making a difference of		1,955,259 02

This is an addition to the business of the Department of nearly one-fourth; and the addition to the expenses of the office is very little more than in the same proportion.

The difference, however, is satisfactorily accounted for in two items appearing upon the accounts:

In the first period, the extra clerk hire paid was	$713 00	
In the second	2,153 45	
		$1,440 45
In the first period, the stationery	1,686 30	
In the second	2,265 99	
		579 69
Making together		2,020 14

Which is more than the whole difference in the expenses of the two periods. There was an increase in the amount paid for printing, also for forms, instructions, &c., of $377 86.

Supposing these expenditures to have been necessary, (of which it is impossible to entertain a doubt,) it will follow that, in the other expenses of the Department, there must have been a saving, and therefore greater economy than before.

If it be inquired why these items have increased, the answer is very plain. It is, in the first place, that which has been already given, that the service has increased, which operates especially upon these items of extra clerk hire, of printed forms, blanks, instructions, &c., and of the quantity of stationery consumed. The Secretary stated in a communication to a member of the committee, laid before the subcommittee, that since the first of January last there have been received, noted, filed, and answered, about three thousand letters, a large proportion of which have related to appointments; that during the present session of Congress about four hundred letters have been written to members principally on that subject; and that an examination of the records and other writing in the Department will show that in the last term (1825–'26–'27) there has been an increase of more than fifty per cent.; for example, for 2,000 pages of record made in the first term, more than 3,000 have been made in the second.

There is another cause which operates upon the clerk hire and stationery, and which has very much increased of late, that is, the number of calls made by Congress and committees requiring immediate attention.

This sufficiently accounts for the increase of these items, and their increase, as already observed, more than accounts for the increased average expense. But it may be remarked, in addition, that these expenditures have passed under the examination of the committees on expenditure of the Department, who have no doubt been able to examine them particularly, and been satisfied they were correct.

It is not the purpose now to go into all the items of expenditure, but only to notice such as have been remarked upon, else the minority would state that among them there is an amount of $600 for repairs and improvements of the buildings and premises.

Newspapers and books.

These are small items. They have always been deemed proper and necessary for the Departments, and it may be supposed that there is some reason for it, or they would not have continued to be allowed. In the year 1823 the House, by a resolution, called upon the then Secretary of the Navy for a statement on this subject, and of the books purchased, &c. His answer to that resolution was dated the 31st January, 1823, and he sent with it a list of papers and books, to which it is not known that any objection was at that or any subsequent time made by Congress. The practice is, therefore, supposed to be sanctioned.

But, as to newspapers, there is an obvious propriety, and even necessity, for furnishing to the Department the information they contain for current use, and also for future reference to the files of them preserved in this office. Some increase has been owing to the practice of taking a copy of two newspapers for each squadron at a distance from the United States—a practice, it must be admitted, conducive to the good of the service, and very grateful to the officers in their long absence from home.

As to books, it is not understood that they are objected to, but a question seems to be made, as to some of them, whether they are precisely appropriate to the use of the Department. This is very much a matter of taste and opinion; and there is no way in which it could be precisely regulated, unless Congress were to prescribe the books to be purchased. The books recently bought do not seem to vary materially in character from those contained in the list presented by the late Secretary in January, 1823. There are no books that, in the opinion of the committe, fall properly within the description of "fashionable literature." Two reviews have been taken—The American Quarterly Review and The Western Review. But reviews were taken before. And as to reviews, it must be remarked, that they are no longer devoted to criticism, but have become, as every one knows, essays upon various topics of interest, and contain a great body of useful knowledge upon almost every subject. A secretary may derive useful information from them. One work particularly alluded to is the work of a surgeon in the Navy, connected with the profession of medicine, and, therefore, with one branch of the service. There is a remark, however, to be made upon this subject, which may serve to show how incorrect it is to suppose that the small libraries of the Departments can be so precisely limited. If four years ago a work on silk worms had been found in the Treasury Department, it might have been thought very inappropriate to the office; yet, the Secretary has been directed to prepare a compilation on that subject, and what he has caused to be compiled has been printed by order of the House.

In regard to this Department there is nothing else requiring to be noticed. The contingencies of the SERVICE are, as far as possible, enumerated in the appropriation bills, and the amount upon which any discretion can be exercised is very small. Abstracts of them were furnished to the committee, and if particular information had been required, it might have been had. They therefore require no remark. And for further information they refer to the letter of the Secretary to the committee.

The minority of the committee are satisfied that the concerns of this interesting branch of service have been managed with fidelity, and its expenditures with due regard to efficiency and economy.

COURTS-MARTIAL.

Not supposing that this subject would be introduced into the report, the minority of the committee have not prepared their statement upon it. Reserving to themselves, however, the power, at a future time, of submitting their views, and referring to a communication made by the Secretary to the House in the year 1825, in which he proposes to systematize this branch of service and reduce its expense, and also adverting to the fact that the identical account now objected to has been for several years before the House without objection from Congress to the public, they are prepared to show, by comparison with former courts, (the accounts of some of which are on the files of this House,) as well as from an examination of the particular courts in question, that there has been a due attention to economy, as far as the public service would permit, and that, in this particular, there has been as much improvement as it was in the power of the Secretary, without the aid of Congress, to make.

The necessity of these courts, it is perceived, is not disputed. They were required by the service. The greater part of the expenses are regulated by law or by established usage. The only item, perhaps, that is open is that of compensation to the judge advocate. In the absence of any provision by law, the Secretary is obliged to employ the requisite professional talents, and for these he must pay according to the usual scale of compensation to professional men. In this respect the expenditure is less than in former instances, as the reference above mentioned will show.

LEGISLATIVE DEPARTMENT.

A few statements will be sufficient to exhibit the facts, and the inferences from them will be very obvious.

Taking three periods, embracing four years each, so as to include two long and two short sessions, when the members were respectively 65, 105, and 213, and the Senators were from 26 to 48, the statement will be as follows:

	Pay of Senators.	Pay of Representatives	Contingent expenses of both Houses.	Officers and clerks.
Average, per annum, for 1789, 1790, 1791, 1792	$28,210 37	$74,806 73	$9,705 07	$9,186 27
Average, per annum, for 1794, 1795, 1796, 1797	42,732 48	119,536 75	12,075 00	11,186 76
Average, per annum, for 1824, 1825, 1826, 1827	78,496 10	312,482 60	88,251 53	31,356 79

From this statement it will appear that the amount paid to Senators has increased from the first to the last period in the proportion of about 78 to 28, or 2 11-14 to 1; the amount paid to Representatives in the proportion of about 312 to 74, or 4 2-9 to 1; the pay of the officers of the two Houses in the proportion of 31 to 9, or 3 4-9 to 1; and the contingent expenses in the proportion of 88 to 9, or 9 7-9 to 1.

The pay and mileage of Senators and members have been augmented by two causes: the increase of their numbers and the increase of their pay. The latter is one-fourth of the whole, being the amount added by the act of 1818, which advanced the pay from $6 a day to $8 a day. As applied to the average of the last four years, therefore, the total pay and mileage being $390,978 90, the advance of the pay by the act of 1818 made an additional annual charge to the Treasury for the Legislative Department of $97,744 67.

The increase of pay of officers and clerks of both Houses is not more than might have been expected from the necessary increase of their numbers and duties. It seems moderate.

The contingent expenses of the Legislature, it will be seen, have increased in the proportion of 9 7-9ths to 1. This is a great augmentation, and far beyond the increase of any other Department of the Government. The contingent expenses of the Executive Departments, in the same period, have increased in the proportion of about 4 1-2 to 1, or less than one-half of the increase in the Legislative Department. If the contingent expenses of the Legislature had only increased in the same ratio as the contingent expenses of the Executive, they would have been less than $44,000, instead of being $88,251 53. If, on the other hand, the Executive expenses had increased in the same ratio as the expenses of the Legislature, they would now have been more than double what they are, or (averaging the last three years) above $155,000, instead of about $77,000.

As both these heads of expenditure are influenced by the same general cause, that is, the growth of the nation and the growth of the business of the nation, it would seem that there has been far greater economy in the Executive than in the Legislature; that the greatest scope for inquiry and retrenchment is in the latter; and that we ought to keep our eye fixed upon that point as the most profitable and promising occupation, until we can effect a reduction. But this would probably be found to be a hasty conclusion. The minority of the committee (fully satisfied that there is economy in the Executive Departments) would not recommend a comparison as the ground of a judgment. Here, as in the other Departments of the Government, it is essentially a question of details. Every expenditure must be looked into, in connexion with the service to be performed; and if the service be necessary, the expense is also necessary, so far as it must be incurred.

Various suggestions have been made upon this subject, all, however, tending more or less to abridge the privileges of members, or to assign limits to what ought to be free. There is no doubt, for example, that it would be desirable to shorten the sessions of Congress, to reduce the number of calls, and to prevent useless printing. In these points, in general, there seems to be no difference of opinion. But when you come to the application, there is at once found to be difficulty. The present session, for example, has been a long one, and yet it is likely to be too short for the necessary despatch of business. So with respect to calls; each particular one is supposed to have its merits, as each paper is supposed to have a special title to be printed. And it must be admitted that, considering that the public business and the

public information are the chief end and aim of our doings, we ought not too readily to yield to any plan that would have the effect of defeating either. The privileges of the members are the privileges of their constituents, and cannot be curtailed without infringing upon the rights of the people. This consideration imparts to the question a peculiar interest, requiring that its treatment should be delicate and cautious. It is not the intention of the minority of the committee to offer an opinion upon any of the projects which have been suggested, not having been able to bestow upon them the deliberate attention they so well deserve; and they would not hastily touch a point which appears to be connected with the representative system, though quite willing to lend their aid to retrenchment.

In examining the contingencies of the House, it appeared that in one branch of the printing, that of reports and documents, there had been a deviation in the size of the page from the requirement of the resolution of 1819, under which the printers were appointed, supposed to be disadvantageous to the United States. For a more particular explanation of the matter, the minority of the committee refer to the evidence taken before the committee, and the several communications from Messrs. Gales & Seaton.

Two things are very clear in regard to this deviation: 1. That the size of the page which causes it was fixed upon with the full knowledge and sanction of the Clerks of the two Houses, to whom the first forms, under the system established by the resolution, were submitted. 2. That it was not done with any view to the profit of the printers nor to the prejudice of the United States, but solely for the public convenience. Messrs. Gales & Seaton, indeed, do not appear to have known of the arrangement till after it was made by their foreman with the Clerks, to whom he submitted forms or specimens of the manner in which he proposed to execute the different parts of the work, including this page. He (the foreman) was not aware of the operation, nor did he do it for the sake of additional gain.

That the deviation in question is not, in its nature, beyond the fair limits of a discretionary interpretation of the resolution of 1819, may be further inferred from the facts that, at the commencement of the present session of Congress, the printer of the Senate was especially directed, by the highly respectable Secretary of that body, to pursue precisely the same mode of printing as that adopted by Messrs. Gales & Seaton, and that no Committee of Accounts of either House has ever (as far as the committee know) objected to it.

The deviation stated is supposed to have caused some loss to the United States; and it probably must have done so, the work being paid for by the page, and there being less matter in a page than if it had been of the size prescribed in the resolution. What the amount of loss may have been does not appear. There is a difference of opinion about it, which it belongs to professional men to decide.

Messrs. Gales & Seaton, on the other hand, allege, and seem to have supported their allegation, that in other parts of the work, particularly the tables, they have abstained from using the rightful advantages which the resolution allowed them, and adopted a plan recommended by its convenience and economy, by which there has been a gain to the United States, at their expense, far exceeding the supposed loss from the size of the page. Of this they have produced evidence.

The question, altogether, is one for professional men to decide, who can alone understand it, and to respectable professional men it ought to be referred.

To Messrs. Gales & Seaton it is justly due to say, that they have at all times executed the public work with neatness and despatch, and fulfilled their duties in an able and obliging manner. The improvement in this branch of the service, since it has been in their hands, is well known and highly satisfactory; as also is the liberality with which they have been ready to make any exertions and sacrifices to comply with the wishes of the House.

Still, if there has been an error, the minority of the committee are of opinion that it ought to be corrected, so as to do justice to both parties.

In conclusion, the minority of the committee would remark that, from the manner in which the report of the majority was prepared, it has been impossible for the minority to examine its contents and present their observations upon them as fully as they could have wished, or as the importance of many of the topics would require. The different subjects of investigation were, at an early period, referred to sub-committees, of each of which one of the minority was a member. Toward the close of their labors, sketches of their reports (generally brief) were exhibited by the chairman of the sub-committees to the individual forming the minority. In most cases these sketches were in the hands of that individual but a few days, and in one case, at least, but a few hours. These sketches being then returned to the chairman of the committee, were by him made the basis of a general report, in which, however, new matters were introduced, of which the minority, having no previous notice of them, will be found to have prepared no explanation. It has of course been impossible for them to explain what they did not know to have been objected to. This is now mentioned, not as a matter of complaint, but as matter of fact, relative to the mode in which the minority of the committee have discharged their duty.

All which is respectfully submitted.

JOHN SERGEANT.
EDWARD EVERETT.

20TH CONGRESS.] No. 923. [1ST SESSION.

IN FAVOR OF IRON FOR RAILROADS FREE OF DUTY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MAY 16, 1828.

OFFICE OF THE BALTIMORE AND OHIO RAILROAD COMPANY, *April* 16, 1828.

ESTEEMED FRIEND: I have thy favors of the 14th and 15th instant. The insinuations which appear to be thrown out against the Baltimore and Ohio Railroad Company are evidently the result of a hostile

feeling, arising from sectional jealousy; and if it were not that they might, perhaps, impose upon and mislead some well disposed individuals unacquainted with the true state of this business, they would not be worthy of notice. We encountered the same hostility at Annapolis, and I regret to learn that it still pursues us.

I enclose a printed list of the directors of the railroad company. Their character and standing in this community at once will satisfy every *honest* man of the falsity of the charge against them of undertaking this enterprise from any other than honorable and patriotic motives.

I also enclose a list of upwards of thirty of our largest stockholders, and will leave thee to judge if the stock is not held by wealthy and competent stockholders. To this I can add, that, since the first subscription, not one share has yet ever been sold by one of the directors, nor is there one that I know of who has any inclination to sell.

I enclose a copy of the charter as granted and confirmed by Maryland, Virginia, and Pennsylvania.

From the best information we can collect, it is no longer doubtful but that it will be impossible to procure iron for our purposes in this country. We advertised for supplies of *wood*, *stone*, and *iron*, and whilst we received numerous offers of *wood* and *stone*, in abundant quantities and at very cheap rates, we received from the whole United States but *two* proposals for *iron*, and these were for a small quantity, and at a price 100 per cent. higher than the Manchester and Liverpool Railroad Company pay. We must, therefore, in any event, procure our iron from abroad; and the only question now is, will the Government impose a burden upon this enterprise to the amount of half a million of dollars, and thus, perhaps, stifle the work in its infancy, or at least greatly abate the ardor and confidence of its patrons, or will it at once come forward and lend to the undertaking the very reasonable accommodation its friends ask?

In reply to thy several specific inquiries upon the subject of iron, I enclose a letter from our mutual friend, Joseph W. Patterson, Esq., who is largely in this trade, and his letter will, I am confident, satisfy thy mind upon the subject of an American supply of this indispensable material.

I am, very sincerely, thy friend,

P. E. THOMAS, *President.*

List of large stockholders.

To the above it may be added, that the stock is diffused amongst all classes of the people, including laborers, draymen, mechanics, merchants, and private individuals of fortune. The whole number of stockholders is about 1,400, and there is a universal confidence in the practicability of the undertaking, which is the true cause of *the current value of the stock*, and which does not arise from any effort on the part of the directors to create an artificial value in it, as has been falsely stated.

The above list is extracted from the stock ledger.

J. N. BROWN, *Transfer Clerk.*

BALTIMORE, *April* 16, 1828.

MY DEAR SIR: Mr. Thomas has handed me your letter of the 14th, asking information as to the resources of the iron establishments of this country for furnishing iron for the railroads. Exclusive of the mills at Pittsburg, and at other places in the western country, there are from ten to twelve on this side of the mountains which are now prepared to roll bar iron from the bloom—say three in Maryland, three in Pennsylvania, two or three in New York, two in New Jersey, and one in Connecticut; and all the common rolling-mills now making hoops from imported bar iron may be altered to make bar iron also. The objection to purchasing the rail iron in this country is not on account of any difficulty in rolling it, (as our mill alone could make the rails faster than the Baltimore and Ohio Company could or would wish to lay them down,) but *to the established fact that the forges could not supply the material.* The ordinary consumption of the country requires from twenty-five to thirty thousand tons of iron annually, beyond what our furnaces and forges have yet been able to make, although the latter have, for some years past, been paid $100 per ton; whereas iron manufactured in the same manner, from charcoal, in Sweden and Russia is shipped from their ports at about half the price that our forge-masters receive. English bar iron is sold there still lower, say from £8 to £10 sterling. It is, however, made with stone coal, and, although the quality is not as good as that made with charcoal, will answer for railroads and for many other purposes. Our mill is now employed in making blooms into bars and then into nail plates. The blooms are bought from the Pennsylvania forges at from $75 to $80 per ton. Our coal comes from Richmond and costs us twenty-five cents per bushel. We use only from four to five hundred tons of blooms a year, and have difficulty in getting that amount; we also collect large quantities of old or scrap iron, which, requiring to be worked several times, enables us to keep the mill at work. If we saw a possibility of obtaining the material, it would be our interest to make rails for the company, but there is none; and if, by legislative arrangement, the different projected companies are compelled to rely on the establishments of this country, and they proceed with their works, every pound of iron consumed in the country will be materially enhanced in cost, as the extra demand can only be met by the creation of new forges and furnaces; and situations must be resorted to which cannot afford to make iron and carry it to market at $100 per ton.

I remain, respectfully, yours,

J. W. PATTERSON.

General S. SMITH.

BALTIMORE, *May* 1, 1828.

SIR: In answer to the inquiry made of me, what quantity of bar iron General Ridgely's rolling-mill is capable of *rolling from the bloom*, I beg leave to add a copy of a letter on the subject which I have received from Mr. James Tucker, manager of General Ridgely's forges, and I am confident of the accuracy of his statement.

Yours, respectfully,

HENRY B. CHEW.

Hon. JAMES BUCHANAN, *Washington, D. C.*

RIDGELY'S FORGES, *Baltimore County, April* 30, 1828.

Having been requested to state the capacity of General C. Ridgely's (of Hampton) bar iron rolling-mill, I have computed that, with the addition of two furnaces to heat the iron, his mill is competent to roll three thousand three hundred and eighty tons of bar iron per annum, taking into consideration all interruptions from ordinary casualties.

JAMES TUCKER.

BALTIMORE, *May* 12, 1828.

SIR: Having understood that representations have been made of the incapacity of the American manufacturers to supply the quantity or quality of the iron wanted by the Baltimore and Ohio Railroad Company, and that, on their advertising for proposals offering to furnish the wood, stone, and iron that would be required, they received no specific offers for iron but from one individual, and that, at the utmost, for only 360 tons per annum, we deem it our duty to state that, at the request of General Charles Ridgely, of Hampton, we called at the office of the Baltimore and Ohio Railroad Company with a view of obtaining the necessary information relative to the supply of iron before he offered his proposals. In answer to the inquiries made of the president and engineer, the plan or model of the iron bars for the rails which they said would be wanted was exhibited, showing that they intended to have the iron 2½ inches wide by half an inch thick, with a rounding form for the upper surface. We then stated, taking into consideration the time which we were informed they expected it would require to complete the road, that all the iron could be furnished in the vicinity of Baltimore as fast as it would be wanted by the progress of the work; that the iron could be made corresponding to the form then shown, or of any form, shape, or description, the company might think proper to adopt; that machinery would be put up expressly for the purpose should a contract be made. We were told by Mr. Thomas (the president of the company) and Colonel Long that only 30 tons of iron per month would be wanted for the first year; and understanding from these gentlemen that it would be fully satisfactory that proposals should be then offered for that quantity, we reported the fact to General Ridgely, who, supposing it would meet the views or wishes of the company, limited his proposals to furnish only 30 tons per month, although he was desirous, and it was his intention, to offer for the supply of a much larger quantity.

HENRY B. CHEW.
JAMES TUCKER.

OFFICE OF THE BALTIMORE AND OHIO RAILROAD COMPANY, *May* 16, 1828.

SIR: Your letter of the 15th, addressed to the president of the Baltimore and Ohio Railroad Company, has been received, containing the following statement:

"Mr. Buchanan read me a letter from Mr. Chew, agent of General Ridgely, stating positively that the smallness of their offer was caused by yourself and the directors stating that but 360 tons would be required by the company during the present year; that it was their design to have offered to supply any quantity that could be required, having due notice to make preparations," &c.

We deem it only necessary, in reply, to assure you that there is a mistake in this statement, and that we severally declare that no conversation has taken place between either of us and General Ridgely, his agent, or any other person, that warrants it.

The Baltimore and Ohio Railroad Company have ten years allowed by their charter to finish the road; and it has been estimated that 15,000 tons of iron will be required for the rails only, exclusive of the iron required for machinery, wagons, &c. It is therefore manifestly clear that should the company occupy the whole time allowed them, more than 1,500 tons per annum must be obtained, and still a greater quantity will be required in proportion as the work is accelerated.

Very respectfully, &c.,

P. E. THOMAS, *Prest. B. & O. R. R. Co.*
WM. PATTERSON.
CH. CARROLL, *of Carrollton.*
WM. STEUART.
TALBOT JONES.
GEO. HOFFMAN.
WM. LORMAN.
ROBERT OLIVER.
ISAAC McKIM.
SOLOMON ETTING.
JOHN B. MORRIS.
ALEX. BROWN.

Hon. JOHN BARNEY.

BALTIMORE, *May* 16, 1828.

SIR: I have your letter of this date requesting me to inform you what quantity of iron is usually made at the establishment of General Ridgely, and what quantity they are capable of making annually.

I was agent for the entire sale of General Ridgely's iron from February, 1824, to February, 1827, during which time, say three years, the total amount made was 1,214 tons 13 cwt. 3 qrs. and 27 lbs., that is, about 404 tons in each year.

We received orders every year for a much larger quantity than the works were able to furnish, though great efforts were made to increase the supplies.

Yours, respectfully,

HENRY THOMPSON.

P. E. THOMAS, Esq., *President Baltimore and Ohio Railroad Company.*

BALTIMORE, *May* 17, 1828.

In addition to the facts already placed in thy hands in reference to the relative cost of iron in this country and in Europe, I annex a copy of a letter from William & J. Brown & Co., by which it appears that the New York, Hudson, and Delaware Canal Company have contracted for their entire supply, delivered free of expense in Liverpool, at £8 6*s.* 9*d.* sterling, say $37 06
Exchange 10 per cent. above par 3 70
Freight 3 24

Total cost 44 00

I trust this will satisfy every one that the iron makers in this country, with one hundred per cent. usual profits, cannot nor ought to expect to supply our road. The only question, therefore, as I before stated, is not between the railroad company and them, but whether the Government will burden our enterprise with a tax to the amount of the proposed duty, seeing the article must and will come from abroad, or will it extend its patronage so far only as to leave us without a tax?

Hon. JOHN BARNEY.

Copy of a letter from W. & J. Brown & Co.

LIVERPOOL, *March* 28, 1828.

We have seen Mr. Allen since his return from Cardiff, and understand from him that the following are the terms of the agreement for the railroad iron for which we are to pay:

The quantity to be about three hundred and ninety tons of good No. 2 bar iron; the bars to be sixteen feet long, two and a quarter inches broad, by half an inch thick, the upper corners rounded to a quarter inch, of three-sixteenths of an inch radius; the bars to be let one into the other by a square tongue three-fourths of an inch broad and half inch long, the end of one bar being made to notch the end of the adjoining one, fitting each other snugly, without any lateral play; each bar to be pierced by oblong holes to receive a screw with a counter-sink head, each hole nine-sixteenths of an inch long by three-eighths of an inch wide;

have the sides of the hole and counter-sink straight for three-sixteenths of an inch, and the ends of the holes rounded to a semicircle of three-eighths of an inch diameter. The counter-sink to be seven-thirty-seconds of an inch deep, and bevelling with an angle of forty-five degrees; the holes to commence at an inch from the end of the bar, and to be placed eighteen inches apart through the whole length. The bars to be rolled with smoothness and uniformity, as is usual in best rolled bar iron; particular care to be taken, in straightening, to get the edges and upper surface free from crooks and undulations, and, in forming the counter-sink, that the uniformity of the upper surface and straightness of the inside edge be not impaired. The price to be £8 6*s.* 9*d.*, delivered at Liverpool, by bills on London not exceeding one month from the time of delivery; and if we pay cash in London, we are entitled to one month's interest. The rolling to be commenced immediately; fifty tons per week to be shipped from Cardiff until completed.

We remain, gentlemen, respectfully, yours,

W. & J. BROWN & CO.

N. B.—Mr. Allen is an engineer in the service of the Hudson and Delaware Canal and Railroad Company, and has been sent out to England by that company.

20TH CONGRESS.] No. 924. [1ST SESSION.

AMOUNT OF DUTIES AND DRAWBACKS IN 1824–'25–'26.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MAY 16, 1828.

TREASURY DEPARTMENT, *May* 16, 1828.

SIR: I have the honor to transmit herewith a statement exhibiting the amount of drawback payable on merchandise exported from the United States during the years 1824, 1825, and 1826, compared with the amount of duties which accrued on the same, respectively.

I have the honor to remain, very respectfully, your obedient servant,

RICHARD RUSH.

Hon. the SPEAKER *of the House of Representatives.*

Statement exhibiting the amount of drawback payable on merchandise exported from the United States during the years ending December 31, 1824, 1825, *and* 1826, *compared with the amount of duties which accrued on the same, respectively.*
